A good deal of speculation has taken place the past week regarding the Danubian Principalities. Those who profess to know what is going on in the various Cabinets affirm that the English and French Governments are inclined to place Wallachia and Moldavia under the sceptre of a Sovereign taken from one of the European princely houses, to which plan neither Austria nor Turkey is willing to consent. The Western Powers are naturally anxious to settle the question of the reorganisation of the Principalities during the winter, but Austria cunningly urges that it will be better to leave it in suspense until the war is ended. She holds that the affairs of Wallachia and Moldavia cannot be definitively settled without Russia; but if the Allies agree to postpone the matter until hostilities have ceased, they will always find Russia and Austria opposed to them in the council chamber. It is obvious that both the Czar and the Emperor will endeavour to prevent the establishment of any strong Government on the west coast of the Black Sea; and it is equally clear that the Western Powers ought to seek to render the Principalities as independent of their two powerful neighbours as possible. The Bund has declared that the question of the Danubian Principalities is of vital importance to Germany; and therefore the Western Powers have a right to demand that it should join them in guaranteeing the future independence and integrity of the Walachian and Moldavian territory.

Prince Gortschakoff, in Vienna, is said to have received a confidential despatch from Count Nesselrode instructing him to protest against all and any resolutions that may be arrived at with regard to the future constitution of the Government of the Principalities.

BALTIC FLEET.

On the 23rd ult. the *Lightning* left the fleet at Kiel, on her way to England direct. On the [illegible] arrived at Kiel from Faro, bringing word that Admiral Baynes, with a part of his squadron, had passed there. The weather in the Gulf of Finland still continues mild for the season; but in the Gulf of Bothnia it has been very severe. The *Dragon* was frozen in a few days ago a little [illegible], but soon broke her way out with her paddles. She is said to have made some valuable prizes. On Monday last another division of the fleet left Kiel on its way to England. It consisted of the *Nile* and *Colossus*, who started in the morning, followed by the *Royal George* about noon. Other ships are expected to leave in a few days. The weather has lately been fine and mostly, with occasional slight showers of snow or sleet.

AMERICA.

The steam-ship *Baltic*, which sailed from New York on the 14th ult., arrived at Liverpool on Monday. The American papers are chiefly taken up with speculations relating to the reinforcement of our West Indian squadron. The *New York Herald* says:—

The object of the new West Indian squadron is not to protect Ireland, it is to watch this country. There are four subjects of pending dispute between the United States and Great Britain—all relate to American territory alone

The *Herald* goes on to state that there are differences between the two Cabinets with regard to Cuba, to St. Domingo, to Honduras, and to the Sound Dues question:—

In view of all these contingencies the presence of a British fleet in the West Indian Islands would be useful to England, and might operate as a check on the administration of this country. There are peculiar reasons why it might be serviceable at present. The Presidential election is at hand—the reckless character of the President is well enough understood in England for the supposition to exist that if any opportunity offered he would endeavour to repeat the Grey Town infamy in the hope of making capital. From so unscrupulous a man as Mr Pierce—from one who has so little to lose and everything to gain from the contingencies of a general row—anything may certainly be expected. It would not be a matter of surprise if we heard some day that he had fitted out an official filibustering expedition against Cuba, or bombarded and seized St. Thomas, or sent down half-a-dozen ships to help or capture Kinney or Walker on the Mosquito shore. He would do anything that would be likely to make a noise in the world, and which might, by some strange turn in the chapter of accidents, give him a gain of popularity were it to occur during the Presidential canvass; but, if he knew that half-a-dozen British men of war were cruising off the Central American coast, a dozen Grey-towns may flourish, and a score of Mosquito Kings might set up colonies with perfect impunity; it would be the same thing with the Danish colonies. It is likely enough that St. Thomas would be the point aimed at by the Administration, if trouble arose between Denmark and this country; but, if three or four ships lay there, Mr. Pierce would no more venture to attack it than he would dare to carry the Scarlett letter. These, depend upon it, are the real reasons for the equipment of the new British fleet. It is a watch on the folly of President Pierce, and the move of Great Britain for our next Presidential election.

The *New York Shipping List* says:—

The alarmists of Wall-street have endeavoured to make a little capital out of what they call the belligerent attitude of England towards the United States, but their efforts have not been attended with very flattering results, indeed, since we have held their own remarkably well considering the currency of the money-market, and some of the prominent descriptions have even improved slightly since our last issue. The London *Times* thinks we are filibustering too much, and talks grandly about the British squadron now in the Gulf. Sundry American papers have taken up the same tune, and new gravity incensed. The better-informed journals, however, tell us that it is only the relief squadron sent out to the West Indies, and a part of the Baltic fleet sent into winter quarters. There will hardly be war between this country and England while bread is so much desired abroad. Both nations are a little nettled, no doubt—the one at unauthorised recruiting, the other at an imaginary invasion of Ireland; but no fighting can come of it, and sensible people treat the fulminations of the *Times* with indifference.

All the leading New York papers agree in stating that the United States Government is sending a naval force to the neighbourhood of Central America. The *New York Daily Times* says:—

The United States sloop-of-war *Saratoga* is lying at Sandy Hook, provisioned for a cruise, and bound on a special mission to the West India Islands. Her precise destination is kept secret, but rumour says she is bound for St. Domingo. The United States frigate *Potomac*, flag-ship of the home squadron, Commodore Paulding, and the sloop-of-war *Dyane*, are fitting out with all possible despatch, and will soon leave the navy-yard for the West Indies. All three of these vessels are very effective. The two sloops have 150 men each, and the frigate 500 men. The officers and crews are aboard, and the ships are overhauling and taking in provisions and water. The *Release*, lately on the Arctic Exploring Expedition, is to be fitted out immediately, by direction of the Secretary of the Navy, as an exercising ship for naval apprentices, by which they may be made practical seamen. She will be under the command of Captain Hartstein. There are now four hundred recruits and about two hundred apprentices, who daily practise at the guns, reef, spince, &c. The two vessels engaged in the expedition lie side by side, and appear little worse for their experience in Arctic ice. Their outwaters are deeply bruised from contact with the ice, and the iron plates securing the bows are considerably torn and broken. With these exceptions, they appear to be in good order. Mr. Steers is making a strong effort to launch the U.S. steam propeller *Niagara* before the 1st of January; but the short days and bad weather may foil him in the attempt. A large force is employed under Chief Engineer Gray in prosecuting the work on the large machine-shop and other buildings connected with it, so that it is expected they will be ready for the manufacture of steam machinery for war-vessels of the largest size in six or seven months.

The Philadelphia *Pennsylvanian* publishes a rhapsodical advertisement from three Irishmen, calling on their countrymen to "either do or die in endeavouring to accomplish that for which Emmett mounted the scaffold."

The New York State election had resulted in the success of the new-Nothing candidate. The same party was successful in Massachusetts, Maryland, and Louisiana, and had gained a victory at New Jersey.

In reference to the Danish Sound dues, the *New York Herald* says:—"The question, on account of a new treaty, will be settled next year. The first American vessel that then goes to the Sound on a Baltic voyage will ascertain for us whether Denmark will submit or not." From Nicaragua we learn that General Walker, as Commander-in-Chief of the Democratic Army in the occupation of Grenada, had concluded a treaty of peace with General Corral, acting on behalf of the forces and people adhering to the Comerro party. Reinforcements had arrived from San Francisco.

THE OVERLAND MAIL.

The steamer *Calcutta* arrived at Trieste on Tuesday morning, with intelligence from Calcutta of the 22nd October; Bombay, 2nd November; Hong Kong, 15th October; Canton, 12th October; and Shanghai, 8th October. The Santhals were still in rebellion. From China we learn that the Imperialists have been defeated by the Patriots near Chin-Keang-Foo.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS.—*Canonries:* The Rev. E. J. G. Hornby to an honorary canonry in Manchester Cathedral; Rev. J. G. Lonsdale to a canonry residentiary in Lichfield Cathedral; Rev. J. Underwood to a canonry in Hereford Cathedral. *Rectories:* The Rev. T. H. Marsh, M.A., to Cawston, near Reepham; Rev. G. B. Bill, to Collingtree, near Northampton; the Rev. J. H. Young, to Kirkby Mallory, Leicestershire; Rev. T. Woodward, to Thundridge, Hertfordshire; Rev. H. H. Still, to Cattistock, near Dorchester; Rev. W. T. Freer, to Houghton on the Hill, near Leicester. *Vicarages:* The Rev. R. Morton, to Rothwell, Northamptonshire; Rev. W. Leeper, to All Saints', South Lynn; Rev. H. Bromfield, to Blockley, near Chipping Campden; Rev. O. M. Ridley, to West Harling, Norfolk; Rev. W. Windle, to Kirtling, near Newmarket. *Incumbencies:* The Rev. F. H. Addams, to St. Peter's, Nottingham; Rev. F. H. Gray, to Borley, near Sudbury; Rev. P. S. Aldrich to Boyton, near Heytesbury; Rev. F. A. Morton, to Christ Church, Milton next Gravesend; Rev. T. Bromley, to St Paul's Church, Tiverton; Rev. F. Elmer, to St. Paul's Church, Over Tabley; Rev. C. F. Priddle, to St. Luke's Church, Liverpool; Rev. H. Hampton, to the temporary Church, Barnsbury-place, Islington; Rev. J. Luken, to Hewelsfield, Gloucestershire.

PRESENTATION.—A handsome silver tea-service and silver have been presented by the congregation and inhabitants of St. Mary Magdalen, Southwark, to their retiring Incumbent, the Rev. Christopher Bowen, as a testimonial of their respect and esteem.

PROMOTION OF SIR EDMUND LYONS.—We are happy to announce that her Majesty has been pleased to promote Rear-Admiral of the Red sir Edmund Lyons, Bart., G.C.B., K.C.H., Commander-in-Chief of the fleet in the Black Sea and Mediterranean waters, to the rank of Admiral of the Blue, the first exercise of the Royal prerogative in such matters since the new order in Council was adopted.

A CURRENCY EXPERIMENT.—As the stock of bullion in the coffers of the Bank is not likely to be very much increased for some time to come, and consequently the circulation of the Bank of England notes must necessarily continue to be restricted, and more especially so when the Bank is called upon to pay the dividends due in January, Mr. Burn, of Manchester, suggests that a sum equal in amount to those dividends should be prepared in notes of five pounds and upwards, stamped "Dividend notes," and that the Bank shall be authorised to pay the claimants of such dividends exclusively with this paper; and further, that these notes shall be made legal tenders, and not convertible into bullion at the Bank, but to be received back in payment of the national taxation, and then cancelled. This, he says, would give a steady and wholesome relief to our circulation for some time, and be a test of the value of a paper currency, as compared with a metallic one, and, if found to answer, future dividends might be paid in a similar manner.

BREAKING WINDOWS was, in olden times, "a Star Chamber matter." Thus, among the proceedings of that inquitous Court, we find that the Earl of Surrey, Thomas Wyat, and young Paul Inge, were each fined to the Star Chamber for breaking windows, and were committed to the Tower.

ARRIVAL OF THE KING OF SARDINIA AT PARIS.—(SEE NEXT PAGE.)

RECEPTION OF THE KING OF SARDINIA AT THE TUILERIES.—(SEE NEXT PAGE.)

THE KING OF SARDINIA AND THE EMPEROR OF THE FRENCH AT THE GRAND REVIEW AT PARIS

VISIT OF THE KING OF SARDINIA TO FRANCE.

THE enthusiasm with which the King of Sardinia has been received by the people of France, is another proof of their heartiness in the great cause to which that Monarch has given his adhesion. Along the line from Lyons to Paris, all the stations exhibited considerable decorations; and not only at those places, but at all points whence a good sight of the Royal train could be had, the people had assembled in crowds to greet their ally with every testimony of sympathy and welcome.

ARRIVAL AT THE PARIS STATION.

It was about one o'clock on Friday when he arrived in Paris, accompanied by his suite, and by the officers of the Emperor's household who went to Marseilles to attend him. At the Paris station the decorations were exceedingly handsome. Numerous trophies formed out of the flags of the Allied Powers graced the entrance from the Lyons side. The interior exhibited a further display of the various national standards; and the landing-place itself was converted into a magnificent apartment, covered with rich carpets, with splendid *fauteuils*, and rows of raised seats at the sides, also covered with velvet, and still further embellished by the occupancy of ladies in evening costume.

Towards mid-day detachments of the Grenadiers and Voltigeurs of the Imperial Guard, and various regiments of the Line, accompanied by their bands, took up their position within the station, and extending without, in lines three deep, from the Boulevard Mazas to the Pont d'Austerlitz. Nine of the Imperial carriages, with the attendants in full State liveries, awaited the arrival of his Majesty; and a squadron of the Cent Gardes, commanded by its Colonel, and two squadrons of the Guides, with a Lieutenant-Colonel, were in readiness as an escort. M. Fleury, Aide-de-Camp and First Equerry to the Emperor, presided over all the detail of the reception. Before one o'clock his Imperial Highness Prince Napoleon, in a General's uniform, Marshal Magnan, and various high officials, took their places in the splendidly-adapted salon to receive his Majesty on his arrival. Several Sardinian officers in full uniform were also in attendance.

At ten minutes past one the Royal train arrived; and, on stepping out of the carriage, King Victor Emmanuel of Sardinia was welcomed by a cordial grasp of the hand from the Prince, who led him into the reception-room, and presented Marshal Magnan and several of the other personages of distinction. His Majesty, who is of good stature and of very martial appearance, was dressed in the highly-picturesque uniform of a Colonel of the Sardinian Hussars. Of his immediate suite there were present in the Royal train the Duke Pasqua, Prefect of the Palace; Baron Nigra, Comptroller of the Household; and his Majesty's Aides-de-Camp, Major-General Count Morozzo de la Rocca, Major-General the Marquis d'Angrogna, and Major-General the Chevalier Garderina. The Count de Cavour, the Pre-

sident of the Sardinian Council, and the Chevalier d'Azeglio, who met his Majesty at Lyons, were also in the Royal train, along with the French officers who had been dispatched by the Emperor to Marseilles to accompany his illustrious visitor to Paris.

The band of the Guides greeted his Majesty with the Piedmontese National Hymn immediately on his getting out of the train, and the air was afterwards repeated by the different bands outside the station. But little time, however, was spent in these forms of reception ere the cortège moved off amid the thunders of artillery and the hardly less deafening cheers and huzzas of the immense crowd that had assembled. The order of the procession was as follows:—The Guides, the Court carriages, and then that in which the King himself and Prince Napoleon were seated. The Cent Gardes preceded and followed the Royal carriage—the Emperor's First Equerry being at one door, and the Colonel of the Cent Gardes at the other. The route taken was along the Boulevard Mazas to the Pont d'Austerlitz, the quays on the right bank of the river to the Hôtel de Ville, and through the Rue Rivoli to the Tuileries, which was entered by the Arc de Triomphe.

RECEPTION AT THE TUILERIES.

At the Tuileries the Emperor, attended by the great officers of the Crown and of his household, received the King at the foot of the grand staircase of the Palace. His Imperial Majesty embraced his august ally, and conducted him to the Empress, who, with her ladies, was at the top of the staircase. Their Majesties then proceeded to the white drawing-room, where the grand officers and the officers and ladies of the households of the Emperor and Empress had the honour of being presented to the King. After the presentations, the Emperor conducted the King of Sardinia into the apartments which had been prepared for him in the Pavillon Marsan, where most sumptuous furniture had been placed, under the direction of M. Fould, Minister of State. The manufactory of Sèvres was some time back directed to prepare a magnificent service in porcelain for his Majesty, with the arms of Sardinia on each piece, and the workmen only brought it to the King's apartment the day before his arrival.

The following is an authentic programme of his Majesty's proceedings while in England, as at present arranged:—

On Saturday (this day) the King will visit Woolwich.
On Monday (probably) a Royal visit to Portsmouth will take place.
On Tuesday his Majesty will visit the City.
On Wednesday there will be a Chapter of the Order of the Garter at Windsor, when his Majesty will be formally installed a Knight of the Most Noble Order.
On Thursday the King will take his departure.
Great preparations are being made at the Guildhall for the purpose of giving *éclat* to the approaching Royal visit to the Corporation. It is intended to follow out the interior preparations and decorations as in the case of the recent visit of the Emperor and Empress of the French. The entertainment will consist of a *déjeûner*, to be furnished immediately after the reception of, and reply to, the Address by his Majesty.

CALENDAR FOR THE WEEK.

Sunday, Dec. 2.—Advent Sunday. Battle of Austerlitz, 1807.
Monday, 3.—Flaxman died, 1826. Belzoni died, 1823.
Tuesday, 4.—Cardinal Richelieu died, 1642.
Wednesday, 5.—Mozart died, 1792.
Thursday, 6.—St. Nicholas.
Friday, 7.—Algernon Sidney beheaded, 1683.
Saturday, 8.—Mary Queen of Scots born, 1542.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 1, 1855.

We believe that we are not incorrect in stating that it is not the intention of her Majesty's Government to dissolve the present Parliament; at least until a majority by a hostile vote, upon the management of the war, or any other essential question, shall compel it to have recourse to that exercise of the prerogative. We believe also that among many other reasons for this patient endurance of a Parliament that no longer truly represents the country, [or at least such portions of the country as have deputed the functions of legislation to Mr. Cobden, Mr. Bright, Lord John Russell, Mr. Gladstone, Mr. Laing, and one or two other gentlemen of great power of tongue,] is the notion, prevalent in the Ministerial mind, that Russia is about to sue for peace. It is believed in high circles that the Czar only seeks a decent pretext for withdrawing from an untenable and most damaging position, and that renewed overtures will speedily be made both by Austria and Prussia (secretly prompted to the step by Russia) for establishing the bases of a satisfactory negotiation. All that can reasonably be said upon this subject is, that, if Russia really desire peace, she can have it for the asking. On every side of her she meets failure and discomfiture. The Czar has not a friend on whom he can rely. He has not a population that can supply him incessantly with new armies. He cannot have in his own secret heart the sentiment of right that upholds men in the day of danger and distress, and that creates heroism where it did not find it. He cannot defraud his own conscience into the belief that the sympathies of the world are with him, or that he is not surrounded by jealous enemies, treacherous dependents, and vindictive tributaries, ready to strike a blow to expedite his downfal whenever the moment shall seem to be most propitious. He cannot but feel that his great predecessor made a terrible mistake and miscalculation, and that in his own person he has inherited a claim and position which he must abandon voluntarily or involuntarily; and that the longer he affronts a world in arms the more weighty will be the retribution exacted of, and the penalties imposed upon, him. The months that have elapsed since April last,—when, through his Ambassador at Vienna, he was so haughty and supercilious, so dictatorial and unyielding, must have convinced him that he then allowed a golden opportunity to slip unheeded away; and that he might then have purchased peace at a much smaller loss of power and dignity than he can now expect. We sincerely trust that these anticipations of the leading statesmen of Great Britain and France are well founded; but we must express our own belief that they are not sufficiently founded in fact to warrant any present speculation upon them. We may be certain, however, that the Allies will in no case suffer themselves to be vindictive. They did not take up arms for revenge, but for justice. For justice they still fight; and for justice they will continue to fight, until the Emperor of Russia,—for himself and his successors—shall give security for the future and indemnification for the past. The Allies, though not revengeful themselves, will not, from any sentimental or selfish love of present peace, give defeated Russia any opportunities for taking against them the vengeance which they are too magnanimous to seek. What they must have is adequate security; and we may be assured, however greatly the Czar may stand in need of peace, and however much the cowardly Courts of Berlin and Vienna may desire it, for reasons of domestic, no less than of foreign policy, they will not relax in their efforts until they obtain it. If "nations," as Lord Palmerston said, "have no cousins," nations, in like manner, can have no sentimental sympathies with a falling or fallen foe. War is so mighty an evil that it must not be rendered probable in the future, by ill-judged leniency in the present. The Allies must in the first place be just to themselves and to all Europe, whose interests they represent. When justice is done, it will be time enough to talk of mercy.

We are glad to observe that the great majority of the American press has treated with dignified contempt the big-mouthed braggadocio of some unwise journals in this country—which did their worst, a few weeks ago, to foment ill-feelings between the two great Anglo-Saxon nations of the Old and New World. There is no cause of quarrel between the two. If there were, the people of this country would do their utmost to remove it. If our Government were in the wrong, they would compel it to make atonement; and if, on the other hand, the American President had given cause of offence to this country, they would offer him every facility of withdrawal from a false position, and exhaust patience itself before they would shut the door of negotiation and resort to violence. And, while such is the feeling of this country, we do not think that there is much, if any, risk that it will be misunderstood by the sensible public opinion of America. England hates war; and, in the case of Russia, only resorted to it as an imperative necessity, and after all negotiation had failed. But if it hate war, even with Russia, it would hate it still more cordially with America—not because it thinks itself too weak for such an enterprise; not because it values peace above justice and honour; not because it begrudges the money-cost of war as the wise men of the Manchester Gotham do; but because war with our brethren in America—if anything consistent with our self-respect could be done to avoid it—would be considered monstrous and unnatural wickedness by every sane and true-hearted Briton. We do not judge so ill of Mr. Pierce and his advisers, however much the luckless electioneering necessities, or presumed necessities, of his position as an outgoing President desirous of being re-elected may compel him to make "political capital" out of the popular passions of the unreasoning multitude, as to imagine that he would look upon a war between Great Britain and America in any other light than as a disgrace to his Government and a misfortune to humanity. But there is too much gunpowder scattered about in the highways of the world at the present moment, to render it other than criminal for men in high places to run about with lighted torches. A firebrand, like Mr. Caleb Cushing, may do more mischief in a week than negotiation or the sword could set right in a lifetime; and an intemperate article in any London journal, supposed, however erroneously, to express the sentiments of the British Government or people, might, by wounding the pride of the Americans, exasperate feelings to an extent that might render calm judgment impossible. But we trust these things will not be; and that there are powerful and sensible men in sufficient numbers on both sides of the Atlantic to estimate at their proper value the reckless electioneering "dodges" of New York or Washington, or the equally reckless diatribes of the men in this country who write what they consider "powerful leaders," or launch their mock thunderbolts into the midst of every public question, heedless of the evil they may do, provided only that they create a sensation. There is no ill-will towards, or jealousy of, America in England. On the contrary, our best and foremost men but express the general feeling which animates the breasts of their humbler countrymen—of all ranks and classes—when they form wishes for the permanent and cordial friendship of the two nations. Englishmen look upon the progress of the United States feel as much satisfaction as fathers take in the welfare of their sons; and with honest pride that they are of the same race, speak the same language, and are in the main animated by the same free and independent spirit. We in this country may be somewhat disappointed that the Americans do not sympathise as heartily with us as they might, in our war against Russia; but, strong in our sense of right, we can trust to the future for the growth of a better feeling. At all events, though we may deplore the fact, we certainly shall not go the length of quarrelling with the Americans for their want of taste. Perhaps, after all, those who are guilty of it are in the minority?

Visit of her Majesty and Prince Albert to Chatham.—On Wednesday morning her Majesty and Prince Albert and suite arrived in London from Windsor, by the South-Western Railway; and afterwards proceeded from the Vauxhall Station to the Bricklayers' Arms Station of the North Kent Railway, when, having entered the Royal carriage, a special train started at two minutes past eleven, conveying her Majesty and Royal Consort to the Strood terminus, where her Majesty was received by Colonel Eden, the commandant of the garrison, a guard of honour, consisting of the Royal Marines, with their band, being stationed within the terminus. Her Majesty then proceeded through Rochester to Fort Pitt Hospital, containing about 500 patients, as also the military hospitals in the garrison, and at Brompton, where over 200 patients are accommodated; as also the invalid depôt at St. Mary's, where her Majesty inspected nearly 500 sick and wounded non-commissioned officers and soldiers recently returned from the Crimea. The visit of her Majesty was private, the officials only being present. After the inspection her Majesty and Prince Albert returned to London, and proceeded by the South-Western Railway to Windsor.

THE COURT.

There has been little variety in Court life during the past week. On Saturday the Duke of Cambridge arrived at the Castle on a visit to the Queen, in the evening accompanying her Majesty and the Prince Consort to Frogmore, to dine with her Royal Highness the Duchess of Kent.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. The Duke of Cambridge was also at the service.

On Tuesday Major-General Knollys, commanding the troops at Aldershott Camp, arrived at the Castle on a visit to the Queen. On the same day Lord Bloomfield, her Majesty's Minister at the Court of Prussia, and Sir Hamilton Seymour, had audiences of her Majesty.

On Wednesday the Queen and Prince, attended by the Hon. Caroline Cavendish, the Hon. Flora Macdonald, Major-General the Hon Charles Grey, and Captain Du Plat, left Windsor by a special train of the South-Western Railway, at ten o'clock, for Chatham. On arriving at the Waterloo station, the Royal party proceeded in the Queen's carriage to the Bricklayers' Arms station, and travelled by a special train to Strood, where her Majesty was received by Colonel Eden, commanding the garrison, who conducted the Queen and Prince through the hospitals of Fort Pitt and Brompton, where her Majesty inspected a large number of invalids, and returned to the Castle at five minutes before five o'clock in the afternoon.

The marriage of the Marquis of Winchester with the Hon. Miss Montague took place on Thursday last at St. James's Church, Piccadilly.

Viscount Palmerston gave a dinner to his colleagues in the Cabinet on Wednesday last.

Approaching Marriages in High Life.—The preliminaries are arranged for a matrimonial alliance between the Lady Augusta Hay, eldest daughter of the Earl and Countess of Kinnoul, and the Hon. John Twisleton Fiennes, eldest son of Lord Saye and Sele. A marriage is also about to take place between the Lady Elizabeth Rligh, sister of the Earl of Darnley, and Mr. Cust, son of Col. the Hon. Peregrine Cust, brother of the late Earl of Brownlow.—The Lady Bertha Hastings, daughter of the Marchioness of Hastings, will shortly be led to the altar by Mr. Clifton, younger brother of Mr. Talbot Clifton, and brother-in-law of the Lady Edith Clifton.

Note.—The sign ° denotes below the average and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The recding of the barometer increased from 29.75 inches at the beginning of the week to 30.31 inches by the 26th; decreased to 29.57 inches by the 27th; increased to 30.10 inches by the 28th; and decreased to 30.04 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30·00 inches.

The mean temperature of the week was 38°2—being 3° below the average.

The range of temperature during the week was 20·7°.

The mean daily range of temperature during the week was 10·8°.

Rain fell during the week to the depth of rather more than one-tenth of an inch

The weather throughout the week was dull and the sky at times covered with cloud.

Lewisham, Nov. 30, 1855. James Glaisher.

Health of London.—During the week ending last Saturday the births of 826 boys and 755 girls, in all 1614 children, were registered within the metropolitan districts—exceeding the average of the ten preceding weeks of the years 1845-54 by 213. The deaths during the week were 1073—viz., 547 males and 526 females—and is an increase of nearly 100 on the week. To the increase in the mortality, as a result which is for the most part to be referred to the recent depression of temperature, as shown in our weekly reports above.

"Wesleyton v. Liddell."—St. Paul's and St. Barnabas, Pimlico.—The long-deferred judgment in this case is fixed to be delivered by Dr. Lushington, on Wednesday next, in the Consistorial Court, Doctors' Commons, at eleven o'clock.

Smithfield Club Prize Cattle Show, 1855.—An impression having arisen that this show has been removed from the Baker-street Bazaar, where it has been so long held, we are authorised to say that this is not the case, and that it will take place as usual on the 11th, 12th, 14th, and 14th of December, at the Bazaar. The success of the show, which has annually increased in public interest, is the best proof of the good selection of the locality.

The Nightingale Fund.—On Thursday afternoon a public meeting was held at Willis's Rooms, St James's, for the purpose of inaugurating a subscription to commemorate the services of Miss Nightingale and her associates in the hospitals of the East. His Royal Highness the Duke of Cambridge presided, supported by the Dean of St Paul's, Hon Sidney Herbert, M.P., Rev C E Lefroy, Chaplain, Hon. and Rev. S G Osborne, Rev Dr Cumming, Duke of Argyll, Marquis of Lansdowne, Marquis of Clanricarde, Lord Stanley, Monckton Milnes, M.P.; Sir J Pakington, Duke of Richmond, Mr Layard, A Pellatt, M.P., Sir W Heathcote, Bart., Viscount Goderich, M.P., Mr. Oliveira, M.P.; Major McDonald, Alderman Wire, F. Bennoch, Esq., &c. It was resolved—That the noble exertions of Miss Nightingale and her associates in the hospitals of the East, and the invaluable services rendered by them to the sick and wounded of the British forces, demand the grateful recognition of the British people. That it is desirable to perpetuate the memory of Miss Nightingale's signal devotion, and to record the gratitude of the nation, by a testimonial of a substantial character; and that, as she has expressed her unwillingness to accept any tribute designed for her own personal advantage, funds be raised to enable her to establish an institution for the training, sustenance, and protection of nurses and hospital attendants.

Memorial to the late Joseph Hume.—A committee meeting of the promoters of a memorial to the late Joseph Hume was held on Tuesday at Radley's Hotel; J. A. Roebuck, Esq., M.P., in the chair. The minutes of previous meetings having been read and adopted, the Chairman informed the meeting that Mr. Osborne, M.P., had intimated his readiness to co-operate in the general object. The Secretary said that Sir J. Duke had promised to move the matter in the City. On the subject of preliminary expenses, Mr. Roebuck observed that so confident was he of the result of the subscription that he had empowered the chairmen of the local committees to draw on him, if necessary, for any preliminary expenses that might arise. Mr. Roebuck said that he considered it in the light of a duty on his part to do everything he could to promote the expression of the public feeling towards the memory of the late Mr. Hume (Cheers). Mr. Hume it was who had introduced him (Mr. Roebuck) to public life; and ever since he had stood by the side of his political sponsor, acting always in the most strict harmony with his honest friend (Cheers). If he had been able to do any good—and he hoped he had (Cheers)—he owed it all to Mr. Hume; and he strongly did he feel that to be the case, that gratitude as well as duty impelled him to come forward on the present occasion. The character of the late Mr. Hume was rather a peculiar one in England, as he had never sought anything for himself. He was disinterested in all he did, and more especially was above all considerations of pecuniary benefit (Hear, hear). But there was one thing to which Mr. Hume very properly aspired, and it was a grace which would have done honour to those that conferred it. Mr. Hume desired very much to be made a member of the Privy Council (Hear, hear). That was a mark of respect on the part of the country which might have been cheaply and easily conferred. His friends were in power, and many applications, as he (Mr. Roebuck) well knew, were made to them, but the thing never was done (Loud cries of "Hear, hear"). Why that was he could not tell—he only stated a fact; but its not being done was a slur on those who having the power of conferring the honour had neglected to do so.

Great Reduction in the Price of Sugar.—On Monday last the retail grocers throughout the metropolis reduced the prices fully 1½d. in the pound. Inferior Brazil sugar, that was selling at 7d. per lb., can now be obtained at 5½d.; and West India sugar of the best quality can be had at from 6d. to 6½d.; refined lump at 7d. to 7½d.; and crystallised Demerara at 7d. per lb.

NOTES OF THE WEEK.

THE arrival of her Majesty's illustrious and gallant ally, the King of Sardinia is, of course, the topic of the week. The Order of the Garter has not always been so carefully bestowed as to make it the honour *sans reproche* which courtly writers like to call it; but even now there are some great and good names in the muster-roll of its knights, and it will be enriched by the contemplated addition of the young Monarch, our guest.

The Queen has paid another of her kindly and salutary hospital visits On Wednesday her Majesty went to Chatham for the third time, to inspect the sick and wounded soldiers at Fort Pitt and Brompton. Numbers of the Crimean heroes came under the eye of their Sovereign, and, trite as the observation is, it cannot be too often repeated, that not only are the hearts and spirits of those who have bled for their country cheered by there gracious visits, but the Queen takes the direct and straightforward way of showing to the working army to the rank and file—that their share in the glories and sorrows of the war are fully appreciated by her in whose service they fight.

And while speaking of the visit of a Royal lady to the bed-side of the wounded soldier, let us record, as one of the incidents of the week, the first step towards the memorial in honour of another lady whose name will ever hereafter be associated with the recollection of similar visits paid almost in the scene of actions. The public meetings for the foundation of the Nightingale Fund is honourable to all engaged in it, and who have hastened to seize the only acceptable means of showing the national sense of the self-devotion of Florence Nightingale. The subscription list, nobly started, is open, and no one who has sympathised with the sufferings of our soldiers during the terrible hardships of last winter, or exulted over their heroism throughout the campaign, but will gladly contribute, according to his ability, to an object at once wise and charitable in itself, and a tribute to one who has assuaged so much affliction, and done so much invaluable service to our men.

Contradictory reports are circulated as to the success of General Canrobert in Sweden. There is no doubt that he has been most favourably received, and that his mission has excited much popular enthusiasm, but a usually well-informed contemporary asserts that it is entirely premature to allege that any treaty of alliance has been entered into. He has proceeded to Denmark, and the understanding seems to be that the two countries bound themselves together, at the opening of the war, in a way that renders it impossible for either to enter separately into any agreement with a third Power. But this state of things by no means negatives the probability that the Northern Powers will join against Russia. No State binds itself without reference to eventualities—such a course would be irrational. At the outset of the war the relations of the belligerents were very dissimilar to what they now are, and a Swedish or Danish statesman may well think it necessary to reconsider the whole case. We incline to believe that, had the matter not been in great measure settled beforehand General Canrobert would hardly have been dispatched with so much notoriety, or received with so much *éclat*.

A curious discussion has arisen upon the subject of our own defences. We can take Sebastopol, and burn Odessa; but can we protect the Isle of Wight? Mr. James Fergusson has again appeared in the field, or, rather, in the Redan, and has argued at considerable length that certain fortifications, erected with great care and at much expense for the defence of the Island, are an elaborated blunder; and he points out to our enemy the series of manœuvres by which they can be rendered harmless. To him hath responded another Vauban, with an official character, who denies everything which the assailant of the works has stated, and comforts the winter residents by the assurance that the defensive works are admirable. It is satisfactory to be told this, even although the Grand Duke Constantine has not yet settled the day for the sailing of the expedition that is to crush us and himself together.

The Government prosecution of the Redemptorist Father for burning the Bible has been pressed, and, after the culprit had gained a little time by pretended illness, he has been committed for trial, but bailed. It appears that the man is a Pole by birth, and was a resident in Odessa. The ultra-Romanists are furious, and in the excess of their rage they do not hesitate to speak of the English Bible in a way that illustrates our remark last week, that the Jesuitical phrases in which M. de Ruggeonns disclaimed the act were but a shuffle. One of the priests writes that the book is an abominable one, and that had he to burn it he would take it up with a pair of tongs, for fear of contaminating his fingers. The journals of the party are also endeavouring to intimidate Government by threats of disturbance among the lower orders, who have, it is said, been inspired with a ludicrous veneration for these dirty fanatical publications, and will rise in wrath at their chastisement. As Dublin makes some pretence to be a civilised metropolis, it is probable that such menaces will not be allowed to interfere with the proceedings of its law courts; but, should the admirable Irish constabulary, the finest body of "protectives" in Europe, be inadequate to the repressing the passions of a priest-led mob, London can spare a thousand or so of police, and keep order in Hyde-park with the balance." But it is almost an insult to the Irish capital to suppose that the threats of a rabble riot will have weight with its officials

Another kind of pressure is threatened by Irishmen of a different class. Serjeant Shee has published a letter wherein he intimates his conviction that the only course by which the Irish representatives can obtain "justice for Ireland" is to take a determined attitude of "dissatisfied independence," and to manifest this dissatisfaction, not only in regard to important questions and Irish topics, but upon "every day matters." In other words, the Irish members are to pursue a course of petty and harassing faction, for the sake of forcing the Ministry and the House of Commons to purchase their good behaviour at the price of concession. The proposal is in itself sufficiently humiliating to those to whom it is offered, but it is not novel, and has been, indeed, carried into effect without success. In temperate and persevering appeals to the good sense and good feeling of Parliament, the Irish members will find a better road to the accomplishment of their wishes; but, if it would not be asking too much of "dissatisfied independence," one would be thankful if the "representatives" would agree upon two small points first, what their grievances are; and, secondly, how they wish those grievances rectified. For, at present, although all Irishmen agree that Ireland is the most oppressed and unhappy country in the world, the selection of any particular sorrow immediately sets the party fighting. The only tangible grievance at which we have been able to arrive is, that the Minister has not quite places and patronage enough to stop the patriotic mouth; or, if he have, he oppressively and inhumanly applies them in another direction. Poor Mr. Lucas, in the later part of his life, stated this in terms much too express to please his colleagues.

NEW METHOD OF PRESERVING COLLODION PLATES SENSITIVE.—Mr. C. A. Long, of 183, Fleet-street, states that, after a long series of experiments, he has at length succeeded in devising a method by which the sensitiveness of the collodion film may be preserved in a simple and perfect manner. The novelty consists in sealing up the sensitive collodion in a case of transparent gutta percha, which will preserve the moisture in the film, and at the same time thoroughly protect it from that great enemy to the photographer—dust. The plate is exposed in the camera, the side next the glass receiving the image; then by means of a sharp knife the gutta percha is relieved from the edge of the glass; the film is carefully stripped off and laid on a slab, and the development and fixing are performed in the same manner as in the ordinary collodion process. The advantages attending this process are obvious.

MR. ALBERT SMITH will recommence his very popular Mont Blanc Entertainment on Monday next, at the Egyptian-hall. The principal novelty will be in bringing the traveller back by Paris, and showing him the Exhibition, illustrated by views painted by Beverley.

Several persons have lately been arrested in different parts of the Austrian monarchy for presuming to blame the recently-concluded concordat.

OBITUARY OF EMINENT PERSONS.

COUNT MOLE.

LOUIS MATTHEW COUNT MOLE, a distinguished statesman, Minister, and Peer of France, died recently at Paris. The family of Molé, which the Count represented, is one of antiquity and historic note. Its greatness was founded in the fifteenth century, by William Molé, Echevin of Troyes, who induced his fellow-citizens to desert the English and to deliver up Troyes to Joan of Arc, who was then besieging the place. This drew upon him the favour of Charles VII., and the Molés have since continually held a forward position in French politics and law. Matthew Molé was an eminent Judge in the time of Richelieu, and his descendants, hereditarily, under the old *régime*, filled high judicial offices. The last of these Judges, Edward Molé, the father of the Count just deceased, perished on the revolutionary scaffold, the 20th April, 1794. His son, Louis Matthew, the subject of this notice, was born in 1780, and in early life devoted himself to literary and historic studies. When twenty-six years of age he published a series of essays on morals and politics, which were very much admired, and which brought him into public notice. He became a Councillor of State, and in 1807 Prefect of the Department of the Côte d'Or. He was made a Count of the Empire in 1811, and in 1813 he filled the office of Grand Judge and Minister of Justice. Under Louis XVIII. he was created a Peer of France, and was Minister of Marine and of Public Worship. After the Revolution of 1830 Count Molé attached himself strongly to the cause of Louis Philippe, and was, on more than one momentous occasion, Prime Minister of France. Louis Philippe, indeed, had recourse to him in all emergencies, and he was actually placed at the head of a new Ministry only an hour before his Royal master finally abdicated. Molé was subsequently a Member of the Legislative Assembly, but, age and infirmities coming upon him, he meddled little with politics latterly.

LADY EMMELINE CHARLOTTE-ELIZABETH STUART-WORTLEY.

THIS gifted lady, the accomplished poetess, died at Bayeux, 30th Oct. Her Ladyship was born 2nd May, 1806, the second surviving daughter of John-Henry, present Duke of Rutland, by Elizabeth, his wife, daughter of Edward, fifth Earl of Carlisle. She married, 17th Feb., 1831, the Hon. Charles Stuart-Wortley, second son of James-Archibald, first Lord Wharncliffe, and was left a widow 22nd May, 1844, with two sons (one since deceased) and one daughter.

MAJOR-GENERAL FREDERICK MARKHAM, C.B.

MAJOR-GENERAL MARKHAM, C.B., died on the 22nd ult., in his fiftieth year. This distinguished British officer was the second son of Admiral John Markham, and grandson of the Most Rev. Dr. Markham, Archbishop of York. He entered the Army as Ensign in the 32nd Regiment in May, 1824, and saw considerable service in North America and the West Indies during his military career. He was with his regiment in the rebellion in Canada in 1837, and was wounded in four places at the action at St. Denis. Markham then accompanied the 32nd to the East Indies, as Lieutenant-Colonel, and served in the Punjaub campaign in 1848 and 1849. He commanded the Second Infantry Brigade at the first and second siege operations before Mooltan, where he was wounded; also a division at the action of Soorkoond, where the enemy's position was carried, and seven guns taken; and the Bengal column at the storming and capture of the city of Mooltan in January, 1849. He was at the surrender of the fort and garrison of Cheniote, and commanded a brigade at the battle of Goojerat. Soon afterwards he became Adjutant-General of the Royal forces in India, which appointment he held till he obtained his promotion as Major-General. Gen. Markham was then named to the command at Peshawur, but when within two days' journey to assume his post he was recalled, in order to lead a division of the army in the Crimea. He at once set out, and performed the journey to Calcutta in the unexampled space of eighteen days, despite the hot season, and it was from excessive fatigue that the seeds of his fatal illness arose. On his arrival in the Crimea he took the command of the Second Division, previously headed by General Pennefather, and led that division at the last attack on the Redan. He was justrise to see Sebastopol fall, but his health became so precarious that he was ordered home. He came to Southampton on the 24th October: in less than another month his glorious career was ended. Major-General Markham was a Companion of the Order of the Bath, an Aide-de-Camp to her Majesty, and was in receipt of a pens on for distinguished services. He became a Major-General Nov 28, 1854, and he also held the local rank of Lieutenant-General in Turkey from the 30th July 1855.

SIR JOHN R. CAVE BROWNE-CAVE, BART

THIS gentleman died on the 11th inst of paralysis, in the fifty-eighth year of his age. He was descended through a long line of ancestry from Jordayne de Cave, who came over with William the Conqueror. Sir John succeeded his father, Sir William, as tenth Baronet, in 1839, and was High Sheriff of Derbyshire in 1844. He married, in 1821, Catherine Penelope, youngest daughter and coheir of William Mills, Esq., of Barlaston-hall, county Stafford, and leaves a numerous family. The eldest son, now Sir Myles Cave Browne-Cave, Bart, inherits the title and estates.

FRANCIS RUDE.

FRANCIS RUDE, whose death has recently occurred, was one of the most distinguished sculptors that France has produced. He was born at Dijon, in 1784, and when but a child displayed a taste and love for the art in which he was afterwards to excel. In 1812 he obtained the grand prize of sculpture at Rome, and his talent was recognised and fostered by Napoleon I., to whom and whose cause Rude was devotedly attached. The restoration of the Bourbons consequently proved a period of obscurity for the young sculptor, he remained unnoticed by them; and it was not until the Revolution of 1830 that the era of Rude's fame really began. He, from that time, rose rapidly in public estimation; and in 1833 his exquisite statue of the Neapolitan fisherman, which Louis Philippe rewarded with the Cross of the Legion of Honour, placed Rude at the summit of his profession. He was the principal artist employed in 1836, by M. Thiers, to decorate the Arc de Triomphe de l'Etoile, his carved performance on that famous arch, representing the departure of the French republican armies to defend the soil, in 1795, has proved a constant theme of admiration. Rude's death was caused by an attack of gout. The Grand Jury of the Exposition Universelle had just granted him a Grand Medal of Honour

JAMES HARDIMAN, ESQ.

JAMES HARDIMAN, the venerable historian of Galway, and conservator of Celtic literature, died on the 13th inst., at the age of seventy-three. Mr Hardiman, in early life, practised as a solicitor in Ireland; but, being appointed Commissioner of Records, in Dublin Castle, he seems to have given up his profession. While engaged in this record employment he became acquainted with many curious and valuable manuscripts relating to Irish annals, public and domestic, of which he subsequently availed himself. His "History of Galway" will long remain a monument of research and accuracy. It is chiefly on this history that his fame will depend, and his ability be appreciated. Yet with the lovers of national poetry his "Bardic Remains of Ireland" will have, perhaps, a greater charm. He was also the translator of the "Statutes of Kilkenny." The last work by many was a "History of Iar Connaught," originally written by O'Flaherty in Latin, translated by Mr. Hardiman, and published by the Archeological Society

Mr Hardiman eventually gave up his appointment as Commissioner of Records, and subsequently resided in Mayo and Galway. On the establishment of the Queen's Colleges in 1849, Mr. Hardiman was appointed to the office of librarian, a post which he continued to fill with satisfaction to the professors and the public up to the time of his demise

Mr. Hardiman was much esteemed for his charity and benevolence. To him the Galway Institute mainly owes its existence. He was instrumental in procuring its charter, and bestowed on its library a donation of one thousand volumes.

GEORGE PILCHER, ESQ.

THIS eminent surgeon died suddenly at his residence in Harley-street, Cavendish-square, on the 7th ult., aged fifty-four Mr. Pilcher was a Fellow of the College of Surgeons, and a member of the Council. He was twice President of the Medical Society of London. He was also Fellow of the Medico-Chirurgical, the Pathological, and Epidemiological Societies. In early life he was associated with the celebrated Edward Grainger, and, at his death, became joint lecturer with his brother, Mr. Richard Grainger, so well known to the public for his measures of sanitary utility. Mr. Pilcher was ever ready and anxious to advance the interest of literary and scientific institutions, and to promote the diffusion of knowledge, as his many years' connection with the Southwark Literary Institution testifies.

WILLS AND CHARITABLE BEQUESTS.—The will of Admiral the Hon. Wm. Henry Percy was proved in London under £12,000 personalty.—The will of John Aldred Twining, Esq., of the Strand, and Bayswater, proved under £80,000.—James Colquhoun, LL.D., Stratford-place, £16,000.—W. Evens, Esq., of Mount Priors, Plympton, £30,000.—The Rev. Thomas Pearce, of Dover, £10,000.—Ambrose Brewin, of Tiverton, lace-manufacturer, £9,000.—W. Sharp, of Greenwich and Rotherhithe, tar and turpentine manufacturer, £10,000.—Wm. Oakey, Esq., of Hatch Court, Somerset, £60,000.—Miss Magdalen Oakey, of Swansea, has bequeathed £100 to the Swansea Infirmary, and small legacies to eighteen other charitable institutions.—Miss Hannah Devenish, of Salisbury, has bequeathed £200 to the British and Foreign Bible Society; £200 to the Religious Tract Society; £100 to the London Missions; and £100 to the Association Fund for Poor Dissenting Ministers of the Independents.—Mary de Poilier Vernand, of Lausanne, who died possessed of £12,000 personalty in England, has left to the Asylum of the Rhind, Lausanne, £500; to the Society of Incurables, founded in 1827, £300; and £300 to the Asylum of the Aged of Yverdon.

VICTOR EMMANUEL II., KING OF SARDINIA, PIEDMONT, &c.

THE visit of the King of Sardinia to this country excites an enthusiasm nearly as great as that which greeted the arrival of the Emperor of the French, though quite different in character. In welcoming Napoleon III. the English people felt that they had a double duty to perform—to lend more closely the ties which united England and France, and to atone to one of the most remarkable men of his age for misconception which were, under the circumstances, inevitable, and not dishonourable to either of the parties concerned. In the case of the King of Sardinia we have only have to pay honour to a firm and magnanimous ally, but also to a Prince whose political career has singularly identified him with the most lively sympathies and the most deep-rooted sentiments of the whole British people. We have learned to respect the Emperor of the French, in spite of radical differences of opinion on the subject of rival systems of government; but the King of Sardinia requires at our hands no such sacrifice of our principles—or, shall we say it? of their prejudices—to our candour. For the King of Sardinia stands forth before mankind not only as identified with a foreign policy dear to the English people, but as one of the allied defenders of the rights of nations, and of the sacred principles of international law, he is also in his domestic policy the champion of civil and religious liberty, the patron of the system of Parliamentary Government, and the antagonist of Papal encroachment. His public proceedings, therefore, bring him in harmony with the feelings of the British people, on the two fundamental articles of their political faith. There is, perhaps, no record of any Monarch who, within so short a time, has effected so much, and that so wisely and so soundly, for the great cause of human freedom.

To comprehend at once his personal character, and the peculiar difficulties of his position, it will be necessary to look back a little to his antecedents, and also to the position of his country before he was called to the throne. This we shall do as briefly as is consistent with the importance of events and of their bearing on the career of King Victor Emmanuel.

Emancipated by the peace of 1814 from the thraldom of French ascendancy, the then Royal representative of the House of Savoy found himself in a difficulty similar to that of many other Monarchs of his time. In politics or religion he had to stand between two intensely antagonistic influences—that of absolutism, temporal and spiritual, and that of a spirit of freedom, which sometimes took the shape of Italian nationality, and sometimes that of Republicanism. After sixteen years of ambiguous dominion he died, leaving the crown to Carlo Alberto, the father of the subject of this memoir. More than one-half of the life of Carlo Alberto had been passed in exile. Born in 1798, at the epoch when the French revolutionary armies began to overrun Europe, in the second year of his age he was taken to Paris, where, although under the shadow of the brilliant despotism which succeeded the revolution, he was not wholly estranged from the friends of his family and of his fortunes. He was sixteen years of age ere he returned to Piedmont, on the restoration of that State to independence, and the accession of his father to the throne. In accordance with the policy of many Royal families when subjected to political vicissitudes, he embraced in his youth the opinions which were then prevalent among the "popular" party in Italy. Secret societies, of a revolutionary character, were then, as now, the great obstacles to the advance of that country in real freedom, and Carlo Alberto, whether from policy or from preference, had become a member of one of these—that of the Carbonari. His revolutionary and insurrectionary principles probably sat upon him as slightly as did the "republicanism" of the present Prince Napoleon, who, from having been Chief of the Mountain, is now the right-hand man of the Emperor. Time, or perhaps resulting from altered circumstances, speedily, however, wrought a change in the views of the young heir to the Piedmontese throne; so that when, in 1830, he was called upon to succeed to the crown, he was as prepared to support the Royal authority as in former years, he had been ready to subvert it.

The history of the reign of Carlo Alberto reflects the changing interests of his country. When the preponderance of those interests leaned towards absolutism and Austrian dominion in Italy the King was employed in the repression of all revolutionary movements—on more than one occasion even to the extent of cruel proscription. When, on the contrary, the interest of Piedmont demanded, or counselled, that the King of that country should take a lead in Italy, he then permitted himself to be forced into a position as head of the "nationality" movement. Nothing is more common than to hear bitter charges against the rulers of States who are similarly situated. Their accusers only listen to the suggestions of their own passions and prejudices, forgetting that a King or a governing Minister is compelled to consider the interests of all the traditional policy of the kingdom, the chances of failure, and the retribution which may follow attempts at revolution.

His eldest son, the Duke of Savoy, now the King of Sardinia, so far trod in the footsteps of his father as that, although like him he married into the Imperial family of Austria, he at an early period adopted those general principles to which the Austrian system is antagonistic. Whether in this course of conduct he was sincere, or only politic, is probably a secret confined to his own breast. All that his contemporaries have a right to do is to judge of him by his actions, and these have hitherto been marked by consistency. The normal condition of Italy is insurrectionary. Perhaps it will continue to be so, at least, until foreigners shall cease to hold the soil. It is not necessary here to recapitulate all the causes which rendered the Italians ripe for a struggle, and ready to take a prominent part in the great revolutionary movement of 1848. The compact Government of Piedmont, its liberal character—for, in 1847, Carlo Alberto had *octroyé* a Constitution to his subjects framed on the English model—and its considerable military power, pointed it out as the natural leader of the resistance now commenced against the foreign possessors of Italian territory. Politicians like Gioberti had planned an Italian unity very different from that dreamed of by those of the school of Mazzini. Believers in disinterested statesmanship may still suppose that the rulers of Piedmont favoured the cause of Italian liberty for other objects than the aggrandisement of that State; but those who rightly read the lessons of history will infer that it was not a policy of mere "sentimentalism" which at last led Carlo Alberto to put his forces in motion. The flame of insurrection—never in a more righteous cause—had spread through Italy, and Lombardy had risen against Austria. The King of Sardinia and Piedmont well knew the strength of the Power thus braved—too well for success. He delayed his military movements until he appeared to have been forced to adopt them; and this caution justifiable on narrow views of policy—caused terrible reverses to his arms

It is at this point that the present King of Sardinia, then the Duke of Savoy, enters historically on the scene. On the 23rd of March, 1848, one month after the downfal of Louis Philippe, Carlo Alberto issued the proclamation by which he raised the Piedmontese flag as the "standard of Italian unity." His forces consisted of two corps d'armée and a reserve, which last was under the command of the Duke of Savoy, the subject of our memoir: it numbered about 20,000 men. The artillery was commanded by the Duke of Genoa, the second son, since deceased. A series of strategic manœuvres, which appear to be universally condemned, resulted in an engagement before the walls of Verona. The success was about equal on either side. The Sardinians had hoped for a rising within the city; they therefore retired without being beaten; while Radetzky considered that he had gained the day, inasmuch as the Piedmontese failed in their object. All accounts agree that the Duke of Savoy behaved with great gallantry, and fully sustained the military honour of his house The King of Sardinia next took the fortress of Peschiera, and here, too, the Duke of Savoy distinguished himself; but his principal exploits were in the engagement at Goito, whence, after a whole day's fighting, he dislodged the Austrians and drove them along the right bank of the Mincio back on Mantua. Then came the long, tedious, and fruitless attack on Mantua, which furnished Radetzky with the time necessary to concentrate his forces. Then came a series of disasters to the Piedmontese arms. The lines of Carlo Alberto were forced in several places, but his army, with a gallantry which promised victory, retired. The Austrians suddenly receiving reinforcements to the number of 20,000 men, the flank of the Piedmontese army was turned, and Carlo Alberto was forced to recross the Mincio. The present King took part in these actions, and displayed all the qualities of a gallant soldier. On the 3rd of August the Piedmontese, pursued by the Austrians, entered Milan, which, however, he soon quitted, as the citizens capitulated. This was followed by a truce, and finally led to the evacuation of Lombardy by the Piedmontese. It was during the progress of these events that the throne of Sicily was offered by the insurrectionary party to the Duke of Genoa, the second son of Carlo Alberto, and, after some coy hesitation, refused.

The year 1849 was destined to witness new efforts on the part of Carlo Alberto, and still greater reverses. The King opened the Parliament on the 1st of February, with a speech wherein he spoke warmly of Italian unity, and called on the nation to aid in the sacrifices necessary to continue the war. In adopting this course, he was rather forced than otherwise by the miscalculating enthusiasm of his people. On the 12th of March following it was officially notified to Radetzky that the armistice

HIS MAJESTY VICTOR EMMANUEL, KING OF SARDINIA.—FROM A PORTRAIT PUBLISHED AT TURIN.—(SEE PRECEDING PAGE.)

CAVALRY AND INFANTRY OF THE SARDINIAN ARMY.—(SEE NEXT PAGE.

was at an end. The Piedmontese army was already in motion, under the command of General Chrzanowsky, a Pole, and the King accompanied it as general of a brigade. We are here interested in this brief campaign chiefly as it affects the conduct of the then Duke of Savoy. He was stationed at Vercelli in command of the reserve, while he was compelled to retire before the advancing Austrians, whose object was to intercept the road to Turin. By the 23rd of March Radetzky had reached Mortara, opposite to Vercelli, the station of the Duke of Savoy. There he was attacked by the Duke, with the reserve under his command, with the view of arresting the Austrians so as to give time for the main body of the Piedmontese to march from Novara to Vercelli. The Duke failed in this attempt. He was driven back, and on the following day Radetzky advanced and forced on the decisive battle of Novara. The Piedmontese were utterly defeated; the Duke's division being driven to Biella, at the foot of the Alps, and that of Chrzanowsky to Borgo Manero. All accounts agree in attesting the bravery and good conduct of the Duke on this fatal day.

The immediate result of the battle was that the King Carlo Alberto abdicated in favour of his son, the Duke of Savoy, who now became Victor Emmanuel II. Carlo Alberto went into voluntary exile, and soon afterwards died at Oporto. So intense was the disappointment of the Italians at this disastrous result to all their exaggerated hopes, that it was with difficulty the King and his sons escaped personal injury. Shots were fired, and every kind of insult offered to the defeated Monarch. The new King, Victor Emmanuel, was the husband of an Austrian Archduchess; and Radetzky affected to treat him with every respect. An armistice was immediately concluded. Piedmont agreed to pay all the expenses of the war; the Senia was to be the line of demarcation between the Piedmontese and the Austrians; and the fortress of Alessandria was to be jointly garrisoned by their troops. It was a proof of the courage and patriotism of the young King that, although suffering from such fatal ruin, he peremptorily refused Radetzky's first demand, to have exclusive possession of Alessandria, Genoa, and a fortress in the Alps. This convention concluded, King Victor Emmanuel returned to Piedmont, where he formed a new Ministry. On the 27th of March, the Senate was to be opened, and the terms of the convention were read. They produced an explosion of impotent rage and misguided patriotism from the extreme politicians, who already were the bane of the Assembly. A leader of the Opposition, Lanza, moved contumacious resolutions, which, on the remonstrance of the Minister Pinelli, were carried. The Assembly also voted warlike resolutions, which only evidenced the madness of their promoters, who thus provoked a rebellion in Sardinia at the very moment when the enemy was at the gates. Genoa, in fact, did break out into insurrection, fomented by that republican party which is the peculiar bane of Italy. The small garrison was driven out of the city, and a Provisional Government was formed; but the king adopted vigorous measures. General de la Marmora, the same who now commands the Sardinian army in the Crimea, and to whom we may observe, in passing, the army of that nation owes in no slight degree its present efficiency, summoned a powerful force, and on the 3rd of April declared Genoa to be in a state of siege. On the 11th Genoa submitted, as did most of the other Piedmontese cities which had refused to accept the armistice. Ultimately, though with great difficulty, a treaty with Austria was agreed to; but the King was compelled to dissolve the Chamber of Deputies—a step which he accompanied with a speech of great dignity and moderation, recapitulating the past impracticable conduct of the Chamber, and renewing pledges to the great cause of constitutional liberty, which, he declared, should in no way be compromised by the dissolution. There are few Royal speeches on record, more distinguished by frank manliness and straightforward statement.

"When," says Gallenga in his recently published "History of Piedmont," "Victor Emmanuel ascended the throne on the 26th of March, at night, two days after the battle of Novara, but little was known about the young King, and that little by no means to his advantage. He had proved himself a daring, dashing soldier, but, for the rest, his manners were described as harsh and haughty. He was the son and husband of Austrian princesses and the pupil of Jesuits. When he joined his father in pledging his Royal faith to the Constitution on the 1st of February, 1849, his huskiness of voice and sourness of mien had been the theme of unfavourable remarks. The 'democratic' Ministry had resigned on the first tidings of the fatal issue of the war, and a new Cabinet had been formed under General de Launay, one of the well-known reactionary Councillors of Carlo Alberto. The appointment had caused the greatest uneasiness. For days and months Piedmont was kept in a state of breathless suspense." It was by that "reactionary" Government that the dissolution of the Parliament was resolved on and executed. Piedmont was not, however, long "kept in suspense." It soon became clear that the King was determined to abide by his oath, yet to do his duty to his country. Even a second dissolution was necessary ere the madmen who obstructed the progress of Government could be silenced, or the people disabused of the calumnious reports spread by them, that the King was about to violate the treacherous conduct of the other Sovereigns who, having granted Constitutions when in fear, withdrew them again in triumph. It was only by the aid of some of the most honoured of the true patriots of the country that the King was then able to vanquish his obstructive enemies; nor was it until January, 1850, that the Piedmontese Parliament finally ratified the treaty with Austria which arrested the Sardinian projects of Italian conquest, and restored internal harmony to the kingdom.

Secure on the throne of his ancestors, King Victor Emmanuel II. devoted himself to the task of equally securing the liberties of his people That his own interests as a Sovereign were identical with those of his subjects is an additional guarantee of the soundness, if not of the disinterestedness, of his policy. Sovereigns like Joseph II. of Austria, who follow out their own noble inspirations without calculating the fitness of their subjects for the reforms they initiate, expose their country to danger from political reaction, which are, perhaps, ultimately greater than those from which they seek their emancipation. Politicians of the era of Joseph II. would have denounced as impossible such a resurrection of ecclesiastical tyranny as has been developed within these few weeks by the late Concordat between Austria and the Pope. Victor Emmanuel II. is favoured by fortune in his great undertaking, because his people are fully prepared with the changes designed and perfected by his wisdom and patriotism. He has pursued a course of policy more difficult, if less immediately dangerous, that attempted by his father. He has applied himself to the task of fostering and consolidating the institutions in Piedmont, in spite of impracticable domestic enemies and of foreign menace. He has raised in Italy the only standard round which Italians can rally with any hope of success, while reviving the ancient glory of his country in foreign wars. The free constitution of Piedmont was scarcely more than two years old when he seconded the throne. It had to contend with enemies in its cradle, which it has vanquished with herculean vigour. Among the best and most sincere advisers of his father and himself were men who had formed the same exaggerated notions of the capacity of Parliamentary government which rendered the efforts of the French Constitutionalists so abortive. He, too, had to contend, if not with dynastic passions, at least with Republican fanaticism, with rashness, firmness, candour, and forbearance, and aided by the counsels of some of the most able and politically-disinterested men who ever took part in public affairs, he surmounted all those difficulties. In a protracted struggle he was assisted by the strong faith and sympathy of Messrs. Cobden and Bright, and by the will and towering administrative talents of Count Camille de Cavour. We doubt if the reader would take much interest in the details of the process by which all the anarchical elements of a representative system crushed in each of the three deadly and dangerous kind were finally reduced to harmony and order. The most extravagant freaks of the most "factious" Oppositions in England were innocently and imitatively caricatured in the young Parliament of Piedmont; and the Ministry had to encounter a force of resistance more than one of the most sincere supporters of the system endanger its young existence by an exaggerated estimate of its capabilities. Out of that chaos, however, order has at last been educed, and Victor Emmanuel now enjoys the proud satisfaction of having consolidated representative government on a soil, and among a people, alike presupposed incapable of that privilege. Piedmont has been cited, successfully, as an example of the absolute efficacy of the British-born institute for temperaments and climes seemingly antagonistic to its healthy action.

It has been through fire that the true temper of the Piedmontese Parliament has been tried and proved. Ultra-democratic tendencies within itself, and absolutism, spiritual and temporal, without, have conspired against it for years; its chiefs have been deadly and treacherous, hereafter, to exercise a healthy action. The last has been crushed, apparently for ever. We do not here desire to enter into all the minute details of the struggle maintained so long, and finally so triumphantly, by Victor Emmanuel II. against the tyranny of Rome. The worst features of the Papal system had pervaded Piedmont, eating into the vitality of the Government and people as a canker or a blight. The Pope, in the exercise of his presumed spiritual authority, and acting through the Archbishops and Bishops of the Church, sought to paralyse the temporal power of the Government, while legions of priests, monks, and ecclesiastics, in every form known to a corrupt superstition, consumed the substance and corrupted the morals of the people. To cleanse the land of these clogs and abominations was the second great task of Victor Emmanuel. It was a terrible trial for the new representative institutions, which had to withstand to priestcraft a ready instrument of political power. It took years to accomplish, but accomplished it is at last; and Victor Emmanuel has come out of the struggle with the glory of conquest and yet the honour of martyrdom. It will not be his least claim on the sympathy of the British nation that, on account of his resolute determination to purge his kingdom from the temporal corruptions and the spiritual interference of the Church of Rome as developed therein, he has now upon him the ban of excommunication! The English people will not be slow to decide which is the Monarch most deserving of honour—Victor Emmanuel of Sardinia, the outlaw of the Church, but the champion of his people's liberties; or Francis Joseph, who has sold his subjects to spiritual slavery, the better to secure a temporal crown.

The struggle between the two Governments of Piedmont and the Papal See has lasted, with varying fortunes, from soon after the accession of Victor Emmanuel down to the present time. The Civil Marriage Bill was only carried after a most severe contest in the Chamber of Deputies, in January, 1852; but it was thrown out, on appeal by the Ministry, in effect, consistently with the forms of the Constitution, to carry the dispute further. In this direction, the Government of Victor Emmanuel determined to attack the property of the Church, not for confiscation, but to provide a due support for the clergy, and for the purposes of education. A bill to this effect was introduced in November, 1854, and passed on the 29th of May in the present year.

In the mean time the foreign policy of Victor Emmanuel has kept pace with his domestic policy, in advancing the general cause of national freedom. He was the first of the European Monarchs to join England in the great work of Free-trade, by signing in 1850 a treaty of commerce suited to the altered wants of the two nations. When the Russian war assumed such a shape as to afford a pretext for negotiations for peace, King Victor Emmanuel, at the risk of again provoking the jealousy of Austria, boldly threw himself into the Western Alliance, joining France and England in the defence of Turkey, and sending to the Crimea a powerful contingent, under the command of General de la Marmora. To enable him to do this he contracted a loan with England. The gallantry of the Sardinians in action against the Russians amply proves that, with good organisation and good generalship, they are fully capable of sustaining their ancient fame.

Successful beyond precedent among Italian Kings in his public life, the King of Sardinia has been fearfully stricken in his domestic affections. All Europe sympathised with him when it was known that his mother, his brother, and his wife, followed each other to the grave with fearful rapidity. His priestly enemies saw in this the finger of God—he only a human affliction. Still it preyed upon his mind and health, so much so that at one time fears were entertained for his life. His long meditated visit to the Emperor of the French and the Queen of England was delayed from this cause. It is now paid; and neither in Paris nor in London will his Majesty have had reason to complain of his reception. In both capitals his general kingly virtues are fully appreciated, and he is welcomed not more as a gallant ally than as a patriot King and champion of liberty.

It remains only to add the leading dates and facts of his life. Victor Emmanuel II. (his other names are Marie Albert Eugène Ferdinand Thomas) was born on the 14th of March, 1820. He was the eldest son of Carlo Alberto Amadeus, who was born on the 2nd October, 1798, died on the 28th July, 1849. On the 12th of April, 1849, he married the Archduchess Marie Adelaide Françoise Renière Elisabeth Clotilde, daughter of the Archduke Renier, of Austria. She died on the 20th of January, 1855. On the 23rd of March, 1848, Victor Emmanuel succeeded his father, Carlo Alberto, in virtue of a verbal abdication on the field of Novara, confirmed in writing at Tolosa, in Spain, on the 3rd of April, 1849. The King has four children by his deceased wife, of whom the eldest, the Princess Clotilde, is twelve years of age; and the second, the Prince Royal of Piedmont, Humbert Renier, is eleven years of age. His brother, the Duke of Genoa, who died on the 20th February, 1855, left two infant children, a son and a daughter. The King of Sardinia is now thirty-five years of age.

THE SARDINIAN ARMY.

The following facts with reference to the Sardinian Army are derived from a statistical table in the "Almanach de Gotha for 1856." The table is drawn up from the war-budget of 1854, and is the latest published. The Sardinian Army is there shown to comprise a total of 47,524 soldiers, of whom 80 are generals, 3181 superior and inferior officers, and 44,414 rank and file. The total number of infantry soldiers, including officers, is 30,761, of whom 3637 (about ten battalions) Bersagliari troops or sharpshooters, and one battalion of Chasseurs. The Cavalry is composed of four heavy regiments, and five light cavalry regiments, numbering 315 officers, and 4896 privates. The Artillery consists of 479 privates, 231 officers, and 5 generals. The remainder are Royal Carabiniers, body-guards, guards of the royal palaces, veterans, invalids, and others. The former of these—the Royal Carabiniers—are divided into two detachments: those serving on the main land, about 30,000, and those serving in the island of Sardinia, 855.

PRINCE ALBERT AT BIRMINGHAM.—In his speech at Birmingham, last week, Prince Albert remarked that the work in which they had been engaged—laying the foundations of the Science and Art Institutions—was "one of the first public acknowledgments of a principle which is daily forcing its way amongst us, and is destined to play an important part in the future development of their system and the world—I mean," said his Royal Highness, "the introduction of science and art as the conscious regulators of productive industry." He went on to show that whatever amount of courage and enterprise might be evinced in our industrial pursuits, the ultimate success of our efforts would depend on the degree of our knowledge of the scientific laws by which all the forces of nature are regulated. In this country there are many persons who possess practical experience, but are deficient in the knowledge of those scientific laws by which their power over the material world might be illimitably extended. Other persons have scientific knowledge without a sufficient practical basis. The great object, therefore, of such an institution as that of Birmingham should be to combine the two. After referring to the fact that Oxford and Cambridge have rather arbitrarily selected the classical languages and mathematics as the essential parts of our university education, he pointed out several other branches of knowledge which we cannot do without. As regards the Midland Institute, "the laws regulating matter and force," said he, "are those which will constantly present themselves to students, such as the principle of subdivision of labour is the one most congenial to our age, I would advise you to keep to this speciality, and to follow with undivided attention during the session the study of one science. The consequence will be a great witnessing the beneficial results upon our national prosperity. Other parts of the country will, I doubt not, emulate your example; and I have in hopes that all these institutions . . . . . than complete their mutual organisation."

HUNT'S PATENT UNIVERSAL SAFETY HOOK.—This hook, for halters, harness, pole-chains, carts, waggons, and vehicles of every description, ... portant advantage (hitherto unaccomplished) of giving instantaneous release, however great the strain may be upon it, while it has also the strength of an ordinary hook of the same size. The chief object of the invention is to give instantaneous relief to horses when fallen down with a heavy load upon their backs, a case of accidents of daily occurrence, especially in the winter. It is not, however, in the falling that a horse generally hurts itself, so much as when upon the ground with the weight resting upon it; and while so down, during the time the animal is being released, which is seldom accomplished without the harness being cut or otherwise injured. Numerous accidents occur from polechains and backbands coming unfastened; and although such hooks have been made considerably longer and more crooked than the ordinary hook, as well as with the drop-link, still they have been found very insecure, and the only plan to secure them is by tying them with string or leather. For strength, security, and instant release, this new hook will be found of great value.

LAUNCH OF THE SCREW-STEAMER "EDINBURGH."—The *Edinburgh* screw-steamer, which was launched at Partick, near Glasgow, the other day, will be ready to start on her first trip to New York in the course of the present month; and from the appearance of the vessel—her fine lines, improvements to facilitate speed, and superior accommodation—we should say that in every respect she will be equal, if not superior, to the finely-equipped ships which Messrs. Tod and Macgregor have already built for this company. The dimensions of the *Edinburgh* are as follows:—Burden, 2400 tons; length of keel, 300 feet; breadth of beam, 40 feet. She will be propelled by a pair of engines of 450-horse power. Her internal fittings will be fitted and tasteful, and accommodation will be afforded for 100 first-class and 400 second-class passengers. Her cargo capacity on her first trip to New York is also to be provided. One of the attractions of this launch was the magnificent sheds of glass and iron under which this vessel was built, and which were lately constructed at a cost of £13,000.

TRADE RETURNS.—The value of articles of British produce exported during October was £8,860,594, being a very considerable increase on the corresponding month of 1854, when the amount was £6,472,164.

A MEETING, which was numerously attended, took place in the Exchange-hall, Nottingham, on Monday evening, to consider the propriety of erecting a monument to the late Mr. Feargus O'Connor. A committee was appointed.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE death of Lord Truro has been the means of giving to the public the true and full version of a little incident in his career as Chancellor, connected with letters, and highly honourable to every one in any way concerned in it. Lord Truro, a Whig Lord Chancellor, was, of course, a constant reader of our clever contemporary, the *Examiner*. A statement in that paper to the effect that the Tories had done nothing for the son of the poet Southey—then a Curate in an out-of-the way parish—caught the Chancellor's attention, and it immediately occurred to him that, if the young man deserved well on his own account (there was not a doubt with respect to the poet then no more), a church living in the gift of the Chancellor might be given to the son of the poet of "The Curse of Kehama," with advantage to letters and with advantage to the Church. On this hint he at once wrote privately to the editor of the *Examiner*, was satisfied with what he heard in reply, and immediately presented the only son of Southey to the living in Essex which he still holds, and holds most worthily. Nor was this all: Lord Chancellor Truro paid the fees on presentation out of his own pocket. This recognition by a Whig Lord Chancellor of the claims of a Tory writer reminds us that the *Whig* Sydney Smith owed his church preferment to a *Tory* Lord Chancellor—Lord Lyndhurst. In this way the Tory Earl of Oxford in the last Ministry of Queen Anne gladly permitted the Whig Congreve to retain his Whig appointments under a Tory Government.

Mr. Carruthers has just published, and for the first time, a very remarkable letter from Martha Blount to the poet Pope, that serves to explain very characteristically the cause of the quarrel that induced Pope to pollute his will with female resentment. "The fair-haired Martha" was on[what proved to be her last visit to Ralph Allen and his wife, at Bath. She seems to have given herself great airs, and to have come very early to an open quarrel with Mrs. Allen. She left in a tiff; retained her resentment, and made Pope a participator in the quarrel. Pope's answer was already in print. Let us add, from materials to which we have access, that the editors of the poet antedate the quarrel by a whole year.

A matter of interest connected with English poetry and English art has just been discovered. Sir Anthony Vandyck, by his will, made only a few days before his death, left the charge of his infant daughter to Mrs. Katherine Cowley. No one has told us who Mrs. Katherine Cowley was. She was the sister (and this is the discovery) of the poet Cowley. What additional pathos does this discovery give to that passage in Cowley's admirable poem on Vandyck's death in which he refers so touchingly to the newly-born daughter of the dying painter? Let the reader turn to the whole poem and annotate accordingly.

The last advices from America assure us that Jonathan "assumes" to be angry with Mr. Thackeray. His lectures are, it is said, "coarse." What: too "coarse" for our American brethren? We are afraid that the request to the papers not to publish has had something to do with the alleged dislike. The wiser few are delighted with the series; and such has been their influence that Mr. Thackeray has consented to repeat at New York the whole four.

Mr. Albert Smith reopens his Mont Blanc Exhibition on Monday next, introducing, of course, all the leading novelties and new points that have arisen since his close. He seems to have, and most deservedly, a monopoly of exhibitions of the kind. The secret of his success lies in the undoubted goodness of the thing itself, and the continuous pleasure he takes in making it still better. Hits as happy as his have not been continuously successful; from a mistaken notion of letting well alone. He studies to please, and to make his audiences comfortable.

The book-buying market is on the mend. The trade acknowledge a turn for the better. In the country among country dealers, there has been a good deal of depression, owing to the centralisation system in London; but, on the whole, books are looking up, and publishers are once more condescending to accept MSS. Amidst the depression, and this is curious, there have been more poets in quest of publishers than at any other period within the memory of the oldest inhabitant of the Row.

Buyers of old books will be glad to learn that a gigantic old book-shop is about to open on the vacated premises in the Strand of the Messrs. Smith, the leviathan caterers of literature for the rail. Mr. Willis quits the Piazza, and Mr. Sotheran his West end house, joining their collections and good names under the firm of Willis and Sotheran. Rare books still fetch rare prices.

MR. DICKENS' NEW STORY—"LITTLE DORRIT."

WE have received the first number of "Little Dorrit," which smacks throughout of the best qualities of its writer. There is the same happy invention in contriving to bring the same ingenious and searching observation of men and things; the same dexterity in selecting odd circumstances, and assembling around them odd associations; and, above all, the same skill in creating characters new to fiction and yet true to everyday life.

The story opens at Marseilles. The very air of the description is suffocating:—

Thirty years ago Marseilles lay burning in the sun one day.

A blazing sun upon a fierce August day was no greater rarity in southern France then, than at any other time, before or since. Everything in Marseilles, and about Marseilles, had stared at the fervid sky, and had been stared at in return, until a staring habit had become universal there. Strangers were stared out of countenance by staring white houses, staring white walls, staring white streets, staring tracts of arid road, staring hills from which verdure was burnt away. The only things to be seen not fiercely staring and glaring were the vines drooping under their load of grapes. These did occasionally wink a little, as the hot air barely moved their faint leaves.

There was no wind to make a ripple on the foul water within the harbour, or on the beautiful sea without. The line of demarcation between the two colours, black and blue, showed the point which the pure sea would not pollute; but it lay as quiet as the abominable pool, with which it never mixed. Boats without awnings were too hot to touch; ships blistered at their moorings; the stones of the quays had not cooled, night or day, for months. Hindoos, Russians, Chinese, Spaniards, Portuguese, Englishmen, Frenchmen, Genoese, Neapolitans, Venetians, Greeks, Turks, descendants from all the builders of Babel, come to trade at Marseilles, however great the sacrifice, taking refuge in any hiding-place from a sea too intensely blue to be looked at, and a sky of purple, set with one great flaming jewel of fire.

The universal stare made the eyes ache. Towards the distant line of . . . . . it was a little relieved by light clouded mist, ... ing from the evaporation of the sea; but it softened nowhere . . . . for away the glaring roads, deep in dust, stared from the hillside, ... from the hollow, stared from the interminable plain. Far away the dusty vines overhanging wayside cottages, and the monotonous wayside avenues of parched trees without shade, drooped beneath the stare of earth and sky. So did the horses, with drowsy bells, in long files of carts, creeping slowly towards the interior; so did their recumbent drivers when they were awake, which rarely happened; so did the exhausted labourers in the fields. Everything that lived or grew was oppressed with the glare; except the lizard, passing swiftly over rough stone walls, and the cicala, chirping his dry, hot chirp, like a rattle. The very dust was scorched brown, and something quivered in the atmosphere as if the air itself were panting.

Blinds, shutters, curtains, were all closed and drawn to keep out the stare. Grant it but a chink or keyhole, and it shot in like a white-hot arrow. The churches were the freest from it. To come out of the twilight of pillars and arches—dreamily dotted with winking lamps, dreamily peopled with ugly old shadows piously dozing, spitting, and gheggin—was to plunge into a fiery river and swim for life to the nearest strip of shade. So, with people lounging by, and lying wherever shade was, with but little hum of tongues or barking of dogs, with occasional jangling of discordant church bells and rattling of vicious drums, Marseilles—as fact to be strongly smelt and tasted—lay broiling in the sun one day.

In chapter ii. we are introduced to an open-air scene at Marseilles, in which the dramatis personæ are Father and Mother Meagles, their daughter Pet, and her attendant or lady's-maid, Tattycoram; a Mr. Arthur Clennam, a young gentleman on his way to England from China; and Miss Wade. Father Meagles is an inimitable creation. He is an eminently practical Londoner—well to do in the world, with a fondness for

travelling, and a rooted determination to speak English wherever he goes thoroughly convinced "that individuals were bound to understand it somehow.' Hear how he accounts for the odd name of Tattycoram.—

He spoke to a handsome girl with lustrous dark hair and eyes, and very neatly dressed, who replied with a half curtsey as she passed off in the train of Mrs. Meagles and Pet. They crossed the bare scorched terrace, and three together, and disappeared through a staring white archway. Mr. Meagles's companion, a grave dark man of forty, still stood looking towards this archway after they were gone; until Mr. Meagles tapped him on the arm

"I beg your pardon," said he, start ng

"Not at all," said Mr. Meagles.

They took one silent turn backward and forward in the shade of the wall, getting, at the height on which the quarantine barracks are placed, what cool refreshment of sea-br eze there was, at seven in the morning. Mr Meagles's companion resumed the conversation.

"I say I ask you," he said, "what is the name of"

"Tatty coram?" Mr. Meagles struck in. "I have not the least idea."

"I thought," said the other, "that —

"Tatty coram?" suggested Mr. Meagles again.

"Thank you—that Tatty coram was a name; and I have several times wondered at the oddity of it."

"Why, the fact is," said Mr. Meagles, "Mrs. Meagles and myself are, you see, practical people.

"That you have frequently mentioned in the course of the agreeable and interesting conversation we have had together walking up and down on these stones," said the other, with a half smile breaking through the gravity of his dark face.

"Practical people. So one day, five or six years ago now, when we took Pet to church at the Foundling -you have heard of the Foundling Hospital in London? Similar to the Institution for the Found Children in Paris?

"I have seen it

"Well! One day when we took Pet to church there to hear the music- because, as practical people, it is the business of our lives to show her every- thing that we think can please her—Mother (my usual name for Mrs. Meagles) began to cry so, that it was necessary to take her out. "What's the matter, Mother?" said I, when we had brought her a little round; 'you are frightening Pet, my dear.' 'Yes, I know that, Father,' says Mother, 'but I think it's through my loving her so much, that it ever came into my head.' 'That ever what came into your head, Mother?' 'Wo- dear!' cried Mother, breaking out again, 'when I saw all those children ranged tier above tier, and appealing from the father none of them has ever known on earth, to the great father of us all in Heaven, I thought, does any wretched mother ever come here, and look among these young faces, wondering which is the poor child she brought into this forlorn world, never through all its life to know her love, her kiss, her face, her voice, even her name!' Now that was practical in Mother, and I told her so. I said, 'Mother, that's what I call practical in you, my dear.'"

The other, not unmoved, assented.

"So I as next day. Now, Mother, I have a proposition to make that I think you'll approve of. Let us take one of those same children to be a little maid to Pet. We are practical people. So if we should find her temper a little defective, or any of her ways a little wide of ours, we shall know what we have to take into account. We shall know what an immense deduction must be made from all the influences and experiences that have formed us—no parents, no child-brother or sister, no individuality of home, no Glass Slipper, or Fairy Godmother. And that's the way we came by Tattycoram."

"And the name itself

"By George" said Mr. Meagles, "I was forgetting the name itself. Why, she was called in the Institution, Harriet Beadle—an arbitrary name, of course. Now Harriet we changed into Hatty, and then into Tatty, because, as practical people, we thought even a playful name might be a new thing to her, and might have a softening and affectionate kind of effect, don't you see? As to Beadle, that I needn't say was wholly out of the question. If there is anything that is not to be tolerated on any terms, anything that is a type of jack-in-office insolence and stupidity, anything preposterously conceited, wasteful, and big-ass, our English holding-on by nonsense, after every one has found it out, it is a beadle. You haven't seen a beadle lately?"

"As an Englishman, who has been more than twenty years in China, no."

"Then," said Mr. Meagles, laying his forefinger on his companion's breast with great animation, "don't you see a beadle, now, if you can help it. Whenever I see a beadle in full fig, coming down a street on a Sunday at the head of a charity school, I am obliged to turn and run away, or I should hit him. The name of Beadle being out of the question, and the originator of the Institution for these poor foundlings having been a blessed creature of the name of Coram, we gave that name to Pet's little maid. As the time she was Tatty, and as the time she was Coram, until we got used to making the two names together, and now she is always Tattycoram."

Of the bits of painting in this chapter here is a sample —

The rest of the party were of the usual materials. Travellers on business, and travellers for pleasure; officers from India on leave; merchants in the Greek and Turkey trades; a clerical English husband in a black strait-waistcoat, on a wedding trip with his young wife; a majestic Englishwoman and papa, of the dissolute order, with a travelling case, three growing-up daughters, who were keeping a journal for the confusion of their fellow-creatures; and a dear old English mother tough in travel, with a wise decidedly grumpy daughter indeed, whose sharp nose was already sketching about the universe in the expectation of ultimately toning herself off into the marriage state.

In chapter iii. the narrative moves from Marseilles to London. Mr. Arthur Clennam has returned home and visits his widowed mother. Here we are introduced to the widow, a marvellous piece of puritanical stiffness, and to her two attendants, Mr. and Mrs. Flintwinch. Mrs. Flintwinch promises to be a very happy and original creation.

We wish we could find room for a charming bit of satire about church bells and Sunday in London, but this the reader must gather for himself and from the number itself. We close "Little Dorrit" with a wish that Christmas was nearer than it is. Little Dorrit—we may observe from the glimpse we obtain of her—is a little girl or "whim" of the widow Clennam's.

THE MARQUIS OF LONDONDERRY AND HIS TENANTRY.—TWO pleasant instances of interchange of good feeling were manifested at Newtownards, on the 20th and 22nd of last month—the tenantry on the County Down estates of the Marquis of Londonderry having entertained his Lordship on the former occasion, and the farmers' wives and daughters having invited the Marchioness to a ball on the latter. The dinner was held out in the Assembly-rooms of the Market house, which were neatly decorated with flags, bannerets, evergreens, &c. At the head of the room was the inscription in prominent letters, "Welcome to our Landlord;" and at the foot the Londonderry Arms was displayed. Covers were laid for 200 persons; and the Chairman of the evening was one of the tenants, Robert Jamison, Esq. The compliment to Lady Londonderry took place in the Assembly-rooms, Newtownards. At eight o'clock the Marquis and Marchioness arrived; and, on being recognised, they were greeted by the crowd with an enthusiastic burst of cheering, which was prolonged for some minutes. The Marquis was accompanied by the Rev. Charles M. Dougall; John E. Jones, Esq.; and Joseph Eglinton, Esq. The Marchioness, who was accompanied by Captain Conner and Miss Latouche, entered the room leaning on the arm of the Rev. Hugh Moore. Upwards of 250 of the tenantry were present, exclusive of their wives and daughters, who swelled the number up to at least 400. At eight o'clock dancing commenced. The ball was led off by the Marchioness of Londonderry and Robert Jamison, Esq., and Lord Londonderry and Mrs. Jamison. The ball-room was tastefully and beautifully decorated with banners and evergreens. The side walls were covered with a profusion of banners, judiciously arranged, respecting the martial dignity of the Allied Powers. Dancing was kept up to an early hour in the morning.

THE BIBLE-BURNING CASE.—Father Pecherine, the Redemptorist, who had been remanded from Monday, was again brought up on Wednesday, when several witnesses swore that he was present while copies of the Bible were burned. No defence was made, and Father Pecherine was bound over to keep the peace at the next commission. Pecherine is a Russian by birth, and his confrères of the Redemptorist order are nearly all foreigners. Two of them are Belgians and two of them Greeks.

SHARP PRACTICE AT SEBASTOPOL.—The Russians on the north shore have ascertained the exact range point on the south side to the greatest nicety; and they have men always busy with spyglasses to point out the movements of our officers. We shun a uniform, and you are sure of a shot. Crossing some of the ravines, as visitors will, in a cluster, generally brings a shower or two about your ears. I had half-a-dozen escapes myself this way, and, being on a white horse, the Russians had little excuse for missing so fair a mark, since, as their fire is never returned, they might take aim as coolly as if at a review. I saw four English naval officers riding close together on Wednesday or Thursday, near the French artillery barracks (Monsieur Jaubert's quarters), when they had attracted the attention of the enemy. A shell burst close them with a concussion shell, which just missed the foremost horse and rider, and put the four visitors from the fleet to flight. Their horses would not stand to receive a second compliment. After their retreat a ball, in the same line of fire, nearly put an end to our trumpeter, who, like a cock on his own dunghill, was at the moment giving full effect to his musical powers; and other shot and shell pitched on both sides of our horse. Close shaving this. But none of us were hurt. Some officers of high rank have had a wall in their windows against shot and shell, for the spies soon told the enemy where persons of note had taken up their residence; and, in the evening, a mere light carried across a room was sure to draw a shot upon them.—*Letter from the Camp.*

MUSIC.

THE SACRED HARMONIC SOCIETY commenced its concerts for the season, on Friday week, with the "Last Judgment" of Spohr. Beethoven's Mass (or "Service" as it is called in Exeter-hall phraseology) in C. There was an immense concourse of people, every part of the vast space being crowded. Costa, to whose talents and exertions the musical public in general, and the Sacred Harmonic Society in particular, are so much indebted, was received, on entering the orchestra, with acclamations in which the whole host of vocal and instrumental performers joined. The "Last Judgment"—undoubtedly Spohr's chef d'œuvre—was more splendidly performed than we ever heard it. The solo parts were sustained by Madame Rudersdorff, as soprano, Miss Dolby as contralto, Mr. Lockey as tenor, and Mr. Thomas as bass. Madame Rudersdorff's powers are as versatile as they are great. She has always herself an admirable performer both on the Italian and German stage; but it is as an oratorio singer that she especially excels. Excepting only Clara Novello, she has no rival in this department among our resident vocalists. She is thoroughly conversant with the works of Handel and all his great successors, and she has the advantage of speaking and singing our language with the purity and facility of a native. Mr. Thomas has recently made his début in London. He has been bred, we understand, in Yorkshire, and has gained distinction in the most musical district of England. He has an excellent bass voice, and sings like a sound and experienced musician. The choruses were sung with a precision which showed the excellence of Costa's discipline, and they rose sometimes to the highest pitch of sublimity. Beethoven's Mass was less effective; indeed, it belongs to a class of music which cannot be rendered effective in a concert-hall. It is intended to be mixed up with the pompous ceremonial of the Romish Church; separated from which its design is marred. The only excuse for introducing such music into our concerts is that, in England, we cannot hear it in any other way.

MR. ELLA, the eminent director of the Musical Union, on the evening of Monday last, delivered a lecture on the History and Characteristics of the Popular and Traditional Melody of England and Scotland, at the London Institution, before a crowded auditory. Mr. Ella's remarks on this interesting subject evinced much research, and the airs, songs, and his illustrations were curious and novel, showing the effect of rhythmical influence on the arbitrary measure of the old *Canto fermo*. In a desultory and familiar way he initiated his audience into the conventional rules for imparting to music an emotional impression in the structure of Scottish melody and harmony; for it is not to melody alone (as some suppose) that the peculiarities of this species of music are limited; the progressions of the bass, and of the chords which accompany it, are often as characteristic as the strain of the tune. The lecture was copiously illustrated by the singing of Miss Lascelles and a small chorus, with Mr. Rimbault and a lady pianist, Mrs. Willmore; the two latter concluded with the cherro in Mendelssohn's Scottish symphony. The fund of historical information, interwinzed with original and lively anecdote, which the lecturer displayed, kept his audience gratified and entertained for nearly two hours.

JENNY LIND (Madame Otto Goldschmidt) has been arrived in London, and is about to give a series of concerts and oratorios at Exeter-hall, under the management of Mr. Mitchell, and the orchestra to be conducted by Mr. Benedict. The "Creation" is to be performed on Monday evening, the 10th December, and "Elijah" on Monday, the 17th.

THE result of the judgment given on Tuesday last by the Court of Queen's Bench in favour of Mr. Lumley, in the long-depending action of ejection from Her Majesty's Theatre at the suit of Mr. Croft, will greatly tend to remove the obstacles to the reopening of that house. Not only has his right of occupation as lessee been sustained; but it appears that the principal possessors of boxes—the Duke of Cleveland, the Marquis of Sligo, the Earl of Londesle, Lord Ward, Lord Witton, and other influential persons—had come forward, as joint defenders with him, to enable him to maintain it.

CHELSEA SACRED HARMONIC SOCIETY.—This society gave a concert on Tuesday evening last, at the Parochial School rooms, King-street, Chelsea. The performance consisted of a selection from the oratorio of "Daniel's Prediction," by C. E. Horn; followed by a miscellaneous selection of sacred music. Although the weather was unpropitious, the attendance was very good. We understand that the annual performance of the oratorio "The Messiah," by this society, will take place shortly before Christmas.

THE THEATRES.

PRINCESS'.—Mrs. Kean's appearances are now so rare that they may be resembled to angel visits, in all but in their brevity. In assuming a new character, Mrs. Kean bestows on it the study and care requisite to ensure it the continued attention of the public. We who recollect her early career can bear witness to the diligence which, even as a young artist, she bestowed on her parts. This, perhaps, had grown into a habit with her; for so no actress was ever naturally gifted with more impulse, more energy, or has been justified in sacrificing to happy spontaneous accidents the steady acquirements of skill. Whether, as "a true woman tigiting for her heart," to adopt one of Sheridan Knowles's sayings in regard to her, or maintaining her innocence against the temptations of the world, there was no lady on the stage who showed more purity, freshness, and freedom of feeling. All this might well have substituted the art of acting alto gether; but the artist was too judicious to permit such a tendency unduly to prevail. Gradually there was an advance to a more artistic development, and soon after her marriage it took a decided form. One reason for this was, evidently, the advantage which constant co-operation with a consummate artist must always afford. A performer standing alone is dependent on the caprices and deficiencies of his co-workers; but, where a perfect union is established on the scene, an harmonious effect, according to the principles of art and the inmost significance of the situation, may be predicated. Mrs. Kean has reaped the full benefit of her most fortunate position; and, in all she undertakes, acts with the most precise reference to what may be called, for the sake of distinction, the artistic relations of the scene.

We have already remarked that the time of year is favourable to the revival of our stock comedies, and that already laudable advantage has been taken of the season.

But until Monday Mrs. Kean has not herself come forward to illustrate the wit and humour of these national dramas Her choice has fallen very justly on Mrs. Inchbald's "Every One has his Fault," a play abundant in natural feeling and unsophisticated gaiety. Much hypercriticism has been expended on this drama, and it has been undervalued on account evidently of its simplicity of style to particulars without injustice to those performers who make points not sparkle with point, and the narrative has too much of the earnest of reality for that gaiety of conduct proper to the productions of Thalia. It may be more fitly, indeed, termed a Play than a Comedy; and we think, therefore, that it was on these judiciously grounded hints that Mrs. Kean was guided in the selection of her character.

The womanly patience and forbearance of the impoverished wife, her intense love for her husband, her sufferings for the act of self-devotion committed by him, her recognition of her long-lost boy, and interview with her proud, unforgiving father, were all points in which both the natural genius and acquired talents of Mrs. Kean alike told; they touched the heart, and satisfied the mind. Mr. Dyas's *Irwin* was a fine and manly impersonation, such as justified the devotion of a noble lady who had sacrificed rank and fortune to her love. The whole play was so charmingly acted that it is more than usually difficult to particularise without injustice to those performers who must perforce not to be mentioned. Mr. Harley and Mr. Cooper, in *Solus* and *Lord Norland*, were precisely the characters set down for them in the text—the exact embodiment of the dramatist's conception. Higher praise is impossible. Mr. W. Lacy was excellent in the minor part of *Sir Robert Ramble*—a character with which the author has herself sported, as if aware of the improbability of the incidents in which he is made to figure. Here dramatic invention has, in fact, been made to operate in subservience to the general application; and the anomalies of a Scotch marriage must be accepted as the drapery of a fable, not as the substance of a plot. Mr. David Fisher's *Placid*, we thought was much too mercurial; but the *Harmony* of Mr. Frank Matthews was the thing itself. The scenery, the costume, and the "get up" in the good of his sequaintance was in his own proper person before the audience, and they recognised him before he had uttered a syllable. It was a veritable portrait—the aptitude and merit of which were of themselves enough to sustain the performance for a long period. We must not omit mention of Miss Kate Terry, as the poor adopted boy; she played with a nicety of discrimination not to be excelled. Miss Murray and Miss Heath, as *Mrs. Placid* and *Miss Woburn*, were equal to their roles, and acted with pleasing elegance. The performance was received with unanimous applause. Mrs. Kean was loudly called for at the end of the second act, and again at the conclusion of the play. She responded on both occasions amidst a furore of applause. The recall of Mrs. Kean was followed by that of several of the other performers. The success commanded was decidedly deserved.

ADELPHI.—The "Twice Killed" of Mr. Oxenford was reproduced on Monday. Mr. Keeley revelled in his old character of *Euclid Fecile*; and Mrs. Keeley, as *Fanny Fegger*, was extremely rich in the former consequent on the old situations, tragic in their basis though broad farce on the surface, with which the piece abounds. The house was well attended.

DRURY LANE.—Madame Labarrere appeared on Monday with her cage of wild animals. The lions and the bear behaved with decency, and Madame sustained her mock supremacy with becoming *sang froid*.

SADLER'S WELLS.—Revivals are also at this house the order of the day. "The Comedy of Errors" and "A Midsummer Night's Dream" have been both reproduced with exemplary care. The first has proved exceedingly attractive, and, indeed, its eccentric character affords the fullest opportunity for comic sport. Mr. Marston, as the *Antipholus of Syracuse*, supported the character most effectively. The getting-up of the Shakspearian visionary scenes is the latter wild and fanciful drama is accomplished with even more than the skill and taste of former years; and the cast may be regarded as much stronger. Miss Rose Edouin, as *Puck*, is, in fact, inimitable—not only grotesque, but poetical. She is another instance how well children may be taught to act; how readily susceptible they are to instrinic suggestion; and how much more easily and better they may be instructed to go through the business of the scene than even the most experienced adults. Another grace is also possessed by this performance: Miss Jane Marston's *Hermia* is throughout a delicious piece of acting. Of Mr. Phipps' *Bottom* enough has already been said. It is as unique as it is excellent, and is likely to retain all its former popularity.

NATIONAL SPORTS.

THERE is not even a steeplechase to break the dormouse slumber of the ring next week; and Messrs M'George and Nightingale, &c., are now the "lords of all" in the coursing fields. Even Fly-by-Night is for the nonce superseded by greyhounds on Langton Wold, where the Malton Champion Meeting comes off on Tuesday. Chartley Open and Whitehaven are also fixed for Tuesday; while Deptford Inn, Barton-on-Humber, and Cardington, all commence then, and last about three days a-piece. The Ridgway Club and Mid Annandale Meetings come off on Thursday and Friday, and Mr. Lawrence will mount the scarlet at Spelthorne on Friday and Saturday. The Aehdown Park coursers consider that they have seldom seen a finer lot of greyhounds than were put into the slips at their recent meeting; and the "Brampton folk" have produced a winning phenomenon in the shape of Titmouse, who only measures twenty three inches, and weighs thirty-nine pounds. Hares are so scarce in Cumberland district, near Lord Carlisle's Border tower of Naworth, that a few score of these gentle "moss-troopers" are to be turned down next spring.

A sale of some of Earl Fitzwilham's thorough bred stock is fixed for Monday, at the paddocks near Wentworth Woodhouse; but the stamp of animals which Mr. Tilburn has to offer is very different to what it was in those proud days when John Jackson and Cuff went to scale at Doncaster and York in the "green and black cap" for Orville and the choicest blood of Sir Peter; and when Catton's best son, Mulatto, defeated Longwaist, Actæon, Fleur-de-lis, and his old Leger conqueror, Tarrare, for the Doncaster Cup.

The Messrs. Tattersall have a sale at Quorn, on the 13th and 14th inst., of all the hunting establishment of the late Sir Richard Sutton. It consists of twenty-nine seasoned hunters (one of which was in waiting for him at the Melville coverside when a messenger arrived from Quorn to tell of his death, and just in time to get the hounds whipped off), and several others which have only been used in cub-hunting. The seventy couples of hounds are to be sold in lots of five couples each; but the fifty couples of unentered hounds will not be sold before March. The *Sporting Magazine* mentions the Leicestershire *on dit* to the effect that the late Baronet's second son, who is at present the master of the Donnington country, and as keen a sportsman as his father, has had £10,000 a year left him, and hence entertains slight hopes are entertained that he will not desert the Quorn in their present difficulty, if things (as the late railway king would say) can "be made comfortable and pleasant." The incidents of the hunting field are endless in their variety; and not many days since a Shropshire "good liver" on his favourite hack, or rather "cob," at first through a gap, actually rode over and killed the fox, some thirty yards from cover. The Earl of Listowel has met with a warning at Concavan, as he stumbled unawares on one of his traps for fox-destroying, and, in his efforts to escape from tumbling into it, dislocated one of his shoulders. That was, however, preferable to finding himself in such close proximity with a half-muddened fox below.

Mr. Valentine, the dam of War Eagle and Inheritance, &c., was destroyed at the Hendon Court Paddock lately, in her twenty-fourth year, leaving an Orlando foal behind her. Mr. Bouverie sold her in 1849, with Wingenund at her foot and in foal with Whaw-Hoop, to Mr. Payne, for £600; but she proved a dear purchase. It is said that Lord Londesborough has not purchased Mary Copp, but that she was bought in by Mr. Lawley. The Doncaster £1200 grant to the races has again been carried by 15 to 2, although the minority, who numbered one less than the majority, were profusely eloquent. John Dawson, and not his relation, Cartwright, is, it seems, to train Lord Glasgow's horses, while his Lordship's late trainer, Cooper, who prepared Orlando for the Derby, and made General Peel's name so terrible to the owners of two-year-olds, is, we hear, about to retire altogether. Mr. Cooper brought up Nat from a boy in his stables, and introduced him to the racing saddle about twenty-five years ago.

The premiership in stakes, which was enjoyed by Clifden, Eglinton, Exeter, Hawley, Exeter, Derby, and Padwick, in the seasons of 1848-1854, has this year fallen to the Duke of Bedford, with £10,940; and Mr. Parr, thanks to Saucebox, has won £9483. The stout Weathergage has been sold to go to France; and it is worthy of note this horse, along with Saucebox, Defiance, and Clockwork, who cost him something like £400, have won Mr. Parr about £16,000 in stakes alone. Saucebox has already won him £8672; while Mortimer was his second "revival" in horse-flesh this year, and perhaps more wonderful than any of them. For many years he was the terror, with old Towerton, &c., of the leather-plating squires of the Welsh circuit and Fernhill was almost the only horse whose racing powers he did not fully perceive. Lord Clifden has won £3620 under the Northleach engagement, and Collingwood has also left us, after proving himself no Phantom to the Shelly family.

The Caledonian Soulless' race will have its attractions on Monday at Newcastle-on-Tyne, where the inhabitants would stand for hours to see a bonfrace if the thermometer was at 30 degrees. Some people can extract sport out of everything; and—as a contrast to the 10½ lbs. golden eagle, which was found in a pie—we have seen four Rugby boys wing to wing (a la record that the champion of a Sparrow Club lately produced 3696 heads at the annual festival, and was rewarded with half a sovereign; while his most formidable rival received a crown for 2116. What with the war and this species of homœopathic sporting, powder and shot makers may well flourish.

HARROW AND METROPOLITAN STEEPLECHASES.

WEDNESDAY.

Match: £100 each.—Honeycomb beat Roberto Diavolo.
Handicap Hurdle Race.—Minerva, 1. Laura Sellua, 2.
The Great Metropolitan Handicap Steeplechase.—Oldham, 1. Janus, 2.
Harrow Handicap steeplechase.—Massacuri, 1. Ginger, 2.
The Hunt Cup Steeplechase.—Non Compos, 1.

THURSDAY.

Sonry Handicap.—Victory, 1. Roving Betsy, 2.
£40 Plate.—Sum-qua-non, 1. Anglo-Saxon, 2.
Harrow Plate.—John o'Briggs, 1. Victory, 2
Steeplechase.—Minerva, 1. Lord of the Isles, 2.
Hack Steeplechase.—Ginger, 1. Massacuri, 4.
Handicap Hurdle.—Sailor, 1. Ginger, 2.

The Prussian Government will respond to the honour conferred on some of the Prussian exhibitors, by bestowing decorations on a certain number of French exhibitors.

A new comet was discovered on the 14th ult. by M. Karl Bruhns, of the Berlin Observatory. It is in the constellation of the Lion, near Regulus.

A gutta-percha speaking-tube, four hundred feet long and one inch in diameter, is used in a Liverpool printing-office, and messages are distinctly conveyed through it. This is said to be the greatest length of speaking-tube ever laid.

The Government of the United States of America has lately given considerable orders to a Rheunh house for bullet-proof steel cuirasses, to be delivered next spring.

GENOA, FROM THE PIAZZA DEL AQUA VERDE.—EMBARKATION OF THE KING OF SARDINIA.

DEPARTURE OF THE KING OF SARDINIA FROM TURIN.

The King of Sardinia embarked from Genoa for Marseilles, on the morning of the 26th ult., with a brilliant military suite. The Duke de Grammont accompanied his Majesty.

Before leaving Genoa the King of Sardinia paid a visit to Queen Marie Amelie, the state of whose health causes some anxiety.

On the 19th ult., the day previous to his departure from Turin, the King of Sardinia received the deputation of the Senate, with the address in reply to the speech from the throne, which we gave last week. This address repeated, in other words, the same sentiments expressed in that of the Chamber of Deputies. In the sitting of the 19th the President of the Council announced the intended departure of the King on the following day. Various bills are introduced, among which was one embodying the Extraordinary War Budget, and one for the establishment of a branch of the National Bank at Cagliari. The Chamber decided upon suspending its sittings for a few days, in order to attend the Bureaux, or Committees. During the absence of the King of Sardinia Prince Eugene of Carignan is intrusted with the direction of affairs Dr Lanza assumes the direction of the Department of Finance during the absence of Count Cavour.

The *Corriere Mercantile* estimates the deficit of the Piedmontese Budget for 1856 at 28,680,000 francs, assuming that the war shall last. To meet

PLACE VITTORIO EMMANUELE, TURIN.

THE ROYAL PALACE AT TURIN.

it the Government intends to contract a loan of 30,000,000 francs, and to apply to the Chambers for permission to raise that sum upon Treasury Bills, in order to have it in its power to choose the most favourable moment for contracting the loan. About 2,500,000 francs of the above sum are to be devoted to public works in the provinces.

We have engraved three Views in Turin, the capital of the Sardinian dominions, and one of the most flourishing cities of Europe. It lies on the left or western bank of the Po, in a wide and fertile valley, between the lower offsets of the Cottian Alps on the west and the hills of Montferrato, the valley opening to the north-east into the wide plain of Lombardy.

Turin is one of the most regularly-built towns in Europe; most of the streets being in straight lines, and intersecting each other at right angles the squares being also of a regular form. The buildings, though massive and lofty, are, generally speaking, plain. The town was formerly surrounded by ramparts, which have been razed of late years, and additional buildings and promenades have been constructed in their place. Several of the principal streets and squares are lined with arcades, which are much frequented.

We have selected one of the principal squares—the *Piazza Vittorio Emanuele*—which is chiefly remarkable for its great extent and regularity, and the fine views which it commands of the Po and the Collins, covered with villas and churches, the superga towering over all. At its eastern extremity is the bridge which connects this piazza with the opposite banks of the Po, just in front of the Church of La Gran Madre di Dio Another principal square is the *Piazza Castello*—so called from an old castle or palace which stands in the middle of it, and which was formerly the residence of the Dukes of Savoy. The northern side of the square is formed by the modern Royal palace—a vast structure, with gardens n the rear. Adjoining to the palace is the Cathedral of St. Giovanni Battista, with the annexed handsome rotunda chapel, Del Sudario, cased with marble and adorned with gilt bronzes. On the eastern side of the square is the great theatre, constructed by the architect Alfieri. Another remarkable building of Turin is the University, built by Victor Amadeus at the beginning of the eighteenth century. Turin also contains a great number of churches, but few remarkable for their external archi t-cture.

CATHEDRAL OF ST. GIOVANNI, AT TURIN.

OMER PACHA UNDER THE CAUCASUS:
HIS NEW FIELD.—MINGRELIA.

BY THE AUTHOR OF THE "HISTORICAL SUMMARY OF THE FIRST CAMPAIGN," ETC. PUBLISHED IN THIS JOURNAL.

OMER PACHA'S nine or ten months' conflict on both banks of the Danube revealed to the world several of those marked and unusual qualities by which he is distinguished, while to persons of reflection that campaign conveyed the idea that Omer must be a really great general. There is much difference between the two impressions which we have here contrasted. A really great General means something which we should not adequately or worthily describe in less than a good-sized volume, whereas the majority of those who became the admirers of Omer for his marvellous stand in Bulgaria would leave themselves little or nothing to add when once they had pronounced him "a clever fellow." Some perhaps might vary and adorn this elegant encomium by asserting that Omer's "head was rightly screwed on," or might, perhaps, facetiously profess their readiness to lay a wager that he slept with one eye open: commendations all of which would just as freely be applied to some sharp monkey-jiber. Nevertheless, as every body knows this is the way in which Omer Pacha (who is a great pet with us, and who, we are convinced, will experience a wonderful welcome in the streets of London, if ever he pays us a visit), this is the style, we say, in which thousands speak of one who ranks among the most extraordinary soldiers the nineteenth century has produced: and, what is still more curious, one whom they *believe* to be all that he is. It is our way in England.

When Omer was fighting on the banks of the Danube, two circumstances, quite distinct from that strategy which at once arrested the surprised and admiring attention of all persons in the least conversant with the grand principle of the military art—two adventitious circumstances, we say, increased our wonder. The first was, that Omer literally had to form and organise his army in the very presence of the enemy over whom he nevertheless made it uniformly victorious; the second is, that this enemy was commanded by a succession of able and highly-esteemed chiefs, who all lost their slowly-earned and long-enjoyed reputation the moment they encountered the Commander of the Ottomans—we cannot say the Ottoman Commander, for, as all our readers know, Omer is no Turk, but an adventurer of the sword, a soldier of fortune, who has risen from obscurity to glory and renown by the sheer force of those personal qualities with which Divine Providence has endowed him. Osten Sacken, Lüders, Gortschakoff, paled their inefficient fires before the fierce yet steady glare of this new meteor.

When he went to the Crimea, had put Eupatoria in a state of defence, and had beaten off Generals Liprandi and Khruleff in a sharp action, he became exceedingly dissatisfied with his position. There was no part for him to play. Such a character rises once through secondary grades, but in afterwards in utility almost lost to a cause if reduced to dependence upon the authority of others. He is best first, therefore best alone, therefore best away from such a scene as the Crimea, where he could hope for no greater destiny than that of virtually a Divisional General. But another circumstance aggravated his disquietude (the wretched incompetency of the Turkish commanders in Asia Minor; and he brooded continually over such engagements as those at Gumri and Akhalzik. We may add a third motive, which was probably not without its power over such a spirit as Omer Pacha—that the man who was reported to be the very first of Russian strategists, General Prince Mouravieff, had been appointed to succeed Prebetell in command of the active forces of Georgia; and splendid indeed would be the glory of crushing the dreaded chief whom the Czar preferred to a victorious officer, and whom he had so strangely promoted over the conqueror of the Turkish Selims. If Mouravieff deserved his fame, it was clear that fools ought no longer to remain opposed to the Russians in Asia: but of the three original routes by which Russian aggression might ever hope to assail or even to reach the audacity of the Turkish empire, here in Asia the third still remained. The other two, by the Danube and the Euxine, were effectually secured; but the third, we say, remained open, and the ablest officer in the Czar's service was now dispatched to operate at its further extremity. At length Omer fairly quitted the Crimea for Constantinople, where heaven knows what influences had frustrated all his applications by letter for the Asiatic command. On taking leave of his soldiers at Tchoulion and the gorge north west of the Baidar Valley, he told them he would soon return "If you do not," cried they, "we won't stay here behind you." Omer was magnificently received in Constantinople, and, after some delay, was allowed to take *a part* of his own army to Asia, provided he could transport them.

The Allied forces were, at this time, drawing very severely upon the services of the fleets. Provisions, ammunition, and the whole equipments consequent upon the fall of Sebastopol being in progress. Omer, therefore, had only such assistance to reckon on as would carry his troops and munitions by fractions. He would, we firmly believe, never have gone to the south seaboard of the Euxine could he have conveyed the whole of his army in a single expedition; but, when reduced to transport it by successive detachments, it was out of the question. Meanwhile, Kars was hard pressed, and it may seem strange that Omer should have preferred the enemy in the open field to the defence of the fortress of Kars. Kalek was full three hundred miles of circuitous march from Kars: whereas Batoum, on the confines of Gouriel and Lasistan, was less than a third of the apparent distance. This is true; and a soldier of less penetrating mind than Omer would probably have hurried straight to Batoum, where he would have found himself much nearer to the town of Kars, but much further from its relief. The formidable table-land of Armenia, on which, some six days' march inland, stands Kars, overhung with eminences, presents an unenviting line for trains of cannon, and the weightier number of an invading force. Coming by batches, moreover, such a force would soon feel itself the assistant only in name, but struggling for its own life in reality. Mouravieff's whole army was buried from the ramparts of Kars; but the garrison [illegible] could only [illegible] much less before it, have driven the Russian [illegible] from their own bourne, though but half their troops should hold it. The true danger of Mouravieff was the precise reverse of his own condition: if attacked from Circassia, in Abasia, or Lasistan, the Russian reinforcements [illegible] would [illegible] street gradually rising; and the desperate resistance offered to his progress by a mere handful of hastily-collected battalions portal composed of militia, and relying on their intrenched position behind the Ingour, shows the extreme misery and destitution with which the Russians justly regarded their new enemy and this, to them, fatal movement. Independently of the professional motives thus briefly glanced at, there was, however, the allimportant consideration of rousing and encouraging the mountain tribes to fresh exertions; and the effects of this presence of Omer Pacha will soon be felt if they are likely, in truth, to prove incalculable.

It was imagined by some persons who sought judgment is entitled to respect that, once Omer had selected Batoum as the vestibule by which he might break into the ancient Gouria, through Imeritia, and so threaten Tiflis and cut off Mouravieff not only from the Pass of Dariel but perhaps from the Caspian—once, we say, this first plan, or outline of plan, was fixed, it was supposed that Omer would have availed himself of the navigable stream of the Rion to penetrate more quickly into the enemy's positions. But any good map will show that this would have been for the soldier who was assailing his opponent's supports to imperil his own. From Kopchid, the very column which he has now scattered on the Ingour might have compelled him to retrace his step or put his whole expedition in jeopardy. It is reported, on the authority of the *Presse d'Orient*, that Prince Mouravieff has become insane. Now

[illegible] preceding days have [illegible] in obedience to [illegible] in order to balance or neutralise the terrible [illegible] of a mind so [illegible] tremendous overthrow aggravated his rage and [illegible] very soon manifest himself in leaving that Omer Pacha [illegible] him in front, and thus enabling him to fall back [illegible] oppressive [illegible] increasing resources of [illegible] supports, [illegible] that very fine Gibb only hope [illegible] foundation-head, he must have seen that his game was [illegible] he who had exploded the reputation of so many other Russian [illegible] would also terminate the career and run the fame of Mouravieff [illegible] lived at [illegible] death of [illegible]

[illegible] [illegible] [illegible]

GERMAN LIBERTY OF THE PRESS. At Coblentz there is published a newspaper, called the *Rhine and Moselle Herald*. The conductors of this paper, in their issue of the 14th inst., inform their subscribers that the Government had caused to be intimated to them its decided disapproval of the tone they had taken in discussing the events of the day, and had threatened them with strong measures. The commission of the paper announces that, as they cannot belie their principles, the journal will, on the 31st of December next, cease to appear.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

THE arrival of notices that £1,160,000 in gold from Australia has led to some activity in the Consol-market this week, and prices have advanced nearly one per cent. Under the impression that nearly the whole of the above-mentioned large supply of gold would go into the Bank of England, large purchases of Stock have been made for money, whilst the rumours current in certain quarters that a peace with Russia is not far distant have induced numerous parties to purchase largely for the account. We learn, however, that not more than about £400,000 will be received as the remainder has already been purchased for the Bank of France. Apart from the premium offered by the directors of that Bank, the present prices of Australian gold leaves room to send it to Paris as an exchange operation.

Efforts still continue to be made to stop the shipments of silver from this country to India and China, but as yet they have not been successful. The East India Company have given notice of a further reduction of 4d. per rupee for bills on India. The rates are now 2s 0½d per rupee for bills on Bengal and Madras, and 2s. 1d. on Bombay. This week £31,000 in silver has arrived from Belgium for transmission to the East by the next packet; but we are informed that the supply from Belgium will shortly cease, as the contained drain is productive of serious inconvenience in that country. There has been a good demand for money, and we hear leading to any change in the rates of discount. Money is easier in Paris, and the pressure at Hamburg—where money can be had at from 6½ to 8 per cent—is gradually subsiding.

The returns of the condition of the private and joint stock banks in England and Wales, during the four weeks ending on the 27th of October, show that £17,233,458 in notes was out being an increase, compared with the previous month, of £495,800. These banks are also the richer their liabilities, £20,120

English stocks were firm on Monday, and prices were improving. The Reduced Three per Cents realized 87¾ ⅞; Consols for Money, 88¾ ⅞; Ditto, for the Account, 88¾ up to 89; and New Three per Cents, 87¾ to 88¾. Bank Stock was 208 to 209. Long Annuities, 1860, marked 3⅞; ditto, 1885, 16⅞. India Bonds were 5s.; and Exchequer Bills, 2s. to 9s. discount. Exchequer Bonds, 98. On Tuesday increased firmness was apparent, both as regards demand and value. The Reduced were 87¾ to 88; Consols, 88⅝ to 89; and the New Three per Cents, 88½ to 89⅝. Bank Stock, 208½ to 209½; India Stock, 260 to 262; India Bonds, 5s to 3s; Exchequer Bills, 2s. to 3s. discount; Exchequer Bonds, 97⅞ to 98. The Omnium was done at 1¼ prem. The market on the following day was decidedly active, and prices were somewhat higher. The Three per Cent Consols sold at 89⅛ to 89⅝; the Reduced, 87⅞ to 88⅛; the New Three per Cents, 88⅝ to 89⅝; and Consols for Account, 89⅛ to 89⅝. Bank Stock, 208½ to 210. Long Annuities, 1860, 3 7-16; Ditto, 1859 3⅞; Ditto, 1885, 16⅝. India Stock, 260½; India Bonds, 3s.; Exchequer Bills, 1s. to 3s. discount; Exchequer Bonds were 98⅛. On Thursday the market was quiet. The Three per Cents were 89⅛ ¼ for Money, and 89⅜ ½ for January. The New Three per Cents were done at 89⅜ to 89⅝; and the Reduced 88⅛ 88½. Bank Stock, 209 to 210, India Stock, 226; Exchequer Bills, 1s to 3s., and India Bonds, 5s. discount.

The demand on the Foreign House have been rather restricted. Prices, however, have been remarkably steady. Buenos Ayres Six per Cents have marked 56½; Danish Three per Cents, 82½; Equador Bonds, 3½; Grenada Onesand-a-Half per Cent, 19½; Ditto, Deferred, 6¾; Peruvians Four per Cents, 46; Russian Five-and-a-Half per Cents, 88; Sardinian Five per Cents, 85½; Spanish Three per Cents, ¾; Ditto, New Deferred, 20; Ditto, Passive, 6¼; Turkish Six per Cents, 90⅝; Ditto, New Scrip, 8⅞ dis.; Belgian Four-and-a-Half per Cents, 92½; Dutch Two-and-a-Half per Cents, 63; Ditto, Four per Cents, 89¾; Brazilian Five per Cents, Small, 99½; Mexican Three per Cents, 19½.

There has been about an average business doing in Joint-Stock Bank Shares, at very full prices. Australasia have realised 92; City, 59½; London Chartered of Australia, 18; London and Westminster, 4⅜; Oriental, 39; South Australia, 40; Union of Australia, 63; Ditto New, 8.

Most Miscellaneous Securities have been steady in price; but the trade has been to them have been comparatively small. Ambs value Agricultural have been done at 2s; Canada Company's Bonds, 135; Ditto Government Six per Cents, 105; Crystal Palace, 2½; Ditto Preference, 4¾; English and Australian Copper Company, 12½; Ditto, New, 3½; Hudson's Bay, 19½; Ditto, New, 3½; India Rubber, 126, London Dock, 9½; General Screw Steam Shipping Company, 16½; Peel River Land and Mining, 2½; Peninsular and Oriental Steam, 7½; Scottish Australian Investment, 1½; South Australian Land, 2½; Australian Agricultural, 2½.

A few sales in Canal Shares have been effected, as follows:—Ashton and Oldham, 159; Derby, 84; Grand Junction Guaranteed Six per Cent, 114; Lichfield, 60; Worcester and Birmingham, 19. Berlin Waterworks Shares have realised 74, East London, 102; Kent, 78½; Southwark, and Vauxhall, 89½; and West Middlesex, 90.

A prospectus has been issued of a new Joint-Stock Banking Company to be established in London and Paris, with a capital of £000,000, in shares of £100 each. The projectors propose to adopt the system of business on the principle of our joint-stock banks, which has not only shown wonderful success, but has consider the immense amount of monetary business which is now transacted between the two capitals, and the heavy expense of forwarding remittances between them, it is difficult to estimate the profits saying that the proposed bank will be invaluable in a commercial point of view, because it will offer advantages to all classes hitherto not enjoyed, though apparently needed. The directors anticipate the future as being a large return, from the fact that the operations of both branches will be restricted to legitimate business; and from the circumstance that the French Ministers have promised to give it every encouragement. The interest on shares is guaranteed for good faith—justly observe that "Considering the intimate relations which subsist between the two countries, they feel warranted in expressing their conviction that it is difficult to estimate adequately the future importance, importance, and advantages—political as well as commercial—of an international banking institution, superseding equally to Great British and France, conducted on the soundest and strictest principles of English banking, and tending to promote the identification of commercial interests, transactions, and feelings, among the people of these two great empires."

Although the business in the Railway Share-market has not been excessive, prices have somewhat improved. The "calls" for the present month [illegible] heavy, viz., £2,397,400. In December, 1854, they amounted to [illegible] and in the corresponding month in 1853 to £5,000,000. The total "calls" for this year are thus raised to £15,505,987, against £13,171,842 in 1854, and £11,288,273 in 1853. The following are the official closing prices for [illegible]:

[illegible] SHARES AND STOCKS [illegible] Exeter, 50; Caledonian, [illegible] Clarence, 9; East Lancashire, [illegible] Edinburgh, Perth, and [illegible] several Western, 90; Lancashire and Yorkshire, 76; London and Blackwall, 6; London and Brighton, [illegible] London and North Western, [illegible] Midland, 93; North-Western, 85; Midland, 93; North [illegible] Eastern Berwick Extension, 11; Ditto, York, 44; Scottish Midland, 72.

[illegible] LEASED AT A FIXED RENTAL.—Birmingham, 8.

PREFERENCE SHARES [illegible] Caledonian, 5; Great Northern Five per Cent, 103; Ditto Five per Cent Scrip, 7; Great Western, Four-and-a-Half per Cent, 99; Ditto, Chester Five per Cent, 8; [illegible] Ireland, 20; Ditto, Worcester, and Wolverhampton, 9; South Devon, 14.

FOREIGN.—Eastern of France, 35; East Indian Five per Cent, 21; Great Western of Canada Shares, 23; Ditto, New, 7; Madras Extension, 4.

Deals as in Peninsular Mining Company have been recorded at 13; Cobre Copper, 67; and United Mexican, 4.

THE MARKETS.

CORN EXCHANGE, Nov. 26. To-day's market was but moderately supplied with English [illegible] but sold [illegible] In average wheat no letter was doing than the quotations were nim as nominal.

[illegible] ditto, white [illegible] grinding, hard [illegible]

[illegible] the quantities have an upward tendency. Linseed and cakes are rath [illegible]

[illegible] white, 8s. to 10s.; tares, 5s. to 7s. 6d. per bushel. English [illegible] [illegible] to 41s. 6d.

[illegible] bread in the metropolis are from 11d. to 11½d.; of houses [illegible]

[illegible] 10d., barley, 23s. 11d.; oats, 23s. [illegible]

[illegible] heat, 124,000; barley, 160 [illegible]

[illegible] a very moderate business has [illegible] however, we have no change [illegible]

Wool. At some recent public [illegible] refused to purchase at the [illegible] rates. [illegible] quantities to be [illegible] [illegible] [illegible] to [illegible] [illegible]

Rice. The inquiry for this article is not so active as last week, owing to the lowness in the corn trade. Prices, however, are supported, and the finest Bengal is worth 18s 6d per cwt.

Provisions.—There is a steady inquiry for Irish butter, and fine parcels may be considered 1s per cwt higher than last week. In the value of other kinds we have no change to report. Lard, hams, and bacon continue firm at [illegible] price.

Tallow.—Great inactivity prevails in our market, and per [illegible] the P.Y.C. on the spot is quoted at 69s. to 69s. 6d.; and for forward delivery, the per cwt. Town tallow [illegible]

[illegible] I need oil is full at 43s. per cwt. on the spot. Pale rape has sold heavily at £37 and brown £39 cs. Turpentine is heavy, at 37s. 6d. to 38s. 6d. per cwt. for spirits.

Coals.—There is no report a slow inquiry for rum. Proof rewards 3s to 3s 1d; East India, 2s [illegible] 2s 1½d per gallon. In brandy only a limited business is doing. Marseilles, 7s. 5d. to [illegible] to 8s per gallon.

Hay and Straw.—Meadow hay, 55s. to 126s.; clover ditto, 80s. to 147s.; and straw, 32s. to 38s. per load.

Coals.—Hasting's Hartley, 17s. 9d.; Wylam, 17s. 3d.; Hetton, 17s. 3d.; Haswell, 17s. 3d.; Lambton, 17s. 3d.; Caradon, 17s. 3d.; Adelaide, 17s. 3d.; Tanfield, 17s. 3d.

Iron.—Fine hops are in moderate request, at about stationary prices; but inferior kinds are very dull, and lower to purchase. The best Kent pockets are held at 45s. 0s. to 49s. 0s. per cwt.

Wool.—The transactions in all kinds are trifling, and the quotations are almost nominal.

Potatoes.—The arrivals continue good, and a full average business is doing, at from 70s to 75s. per ton.

Metropolitan Cattle Market.—There has been a good demand for all breeds of beasts, at an advance in the quotations of 2d. per 8 lbs. Sheep have sold at a similar improvement. Calves and pigs have met a slow inquiry.

Beef, from 3s. 8d. to 4s. 2d.; mutton, 3s. 6d. to 4s. 2d.; veal, 3s. 6d. to 4s. 8d.; pork, 3s. 10d. to 4s. 6d. per 8 lbs. by sink the offal.

Newgate and Leadenhall.—Generally speaking the trade has ruled steady, as follows:—Beef, from 3s. 8d. to 4s. 4d.; mutton, 3s. 8d. to 4s. 8d.; veal, 3s. 6d. to 4s. 8d.; pork, 3s. 10d. to 4s. 6d. per 8 lbs. by the carcase. ROBERT HERBERT.

Offices.—No. 4, Prince's-street, Mansion-house.

PROSPECTUS.

This Bank is formed for the purpose of affording Banking facilities to meet the requirements of Commerce, and increasing Monetary operations of the metropolis

The following Table exhibits the Progress and Present Condition of the Joint-Stock Banks in London

Name of Bank.	When Established.	£ s. d. Each Share.	Amount of Shares Paid Up.	Per Cent. Dividends on Capital for Last Year.	£ Amount of Profits, 1854.	Rate per Cent. Invested.	£ Value of Shares.
London and Westminster	1834	20	145	8,166,353	384,231	13	16
London Joint Stock	1836	10	34	216	6,351,7—	15	20½
Union Bank of London	1839	10	31	210	8,363,460	120,000	20
London and Country	1839	20	41	105	4,013,213	103,715	18
Consolidated Bank of London	1840	20	31	55	1,317,554	66,109	10
Royal British Bank	1840	50	30	Par	901,053	13,794	6
Total					29,345,981	1,—	121

Thus it will be seen that the amount of deposits is £29,345,981, and the reserved funds £796,521, that the Shares bear a premium in reaction to capital, from 5s. to 20s per cent, and that the dividends range from 6 per cent to 20½ per cent per annum

The "City Bank," and the "Bank of London," which have been established only a few months, also give promise of equal success, their Shares having already realized a premium—being already £20 3s. and £4 5s. 0d. respectively, and their shares already bear a considerable premium. It is, therefore, obvious that Joint-Stock Banks present a most eligible investment for capital.

The Bank will be conducted upon the principles which have conferred so great success upon those of the above Joint Stock Banks, and it is intended also to open a branch as the West-end.

Interest will be allowed in accordance with usage as well as on deposits, in proportion to the value of money in the market.

The Bank will undertake the agency of Our Banks whether Joint-stock or private. It will receive, free of charge, annuities or dividends, for the pay of military, naval, and civil officers; and it will undertake the purchase, sale, and transfer of stock in the public funds, &c.

It will likewise undertake the negotiation of foreign bills of exchange on the most favourable terms.

CONTINENTAL DEPARTMENT.

But, however encouraging may be the prospects of an additional Joint-Stock Bank, the Directors cannot but feel that the principal Directors desire to state, that one of the prominent features of those under whose auspices it is intended the English system of Joint-Stock Banking be Continental, and that the business of the Bank will chiefly be to be conducted by competent persons, specially empowered by the Court of Directors, whose gentlemen will act under the superintendence of a Council de Surveillance, consisting of persons of high position, and of proved financial experience in France.

The Administrators of the Paris Branch, as soon as it is established will supply the London Bank with the necessary funds to meet the drafts of France.

Inquiries have been made by well-qualified persons as to the present mode of conducting monetary transactions in France and as to the facilities for the employment of capital; by on the Continent, and it is considered that a new system of Banking—namely, the Receiving of Deposits, drawing the Exchanges, and the other legitimate operations of a Bank of Deposit in England, by a Joint-Stock Company, chartered under the Act of 1844, conducted by a Court of Directors in London, with a Branch in Paris, and the appointment of its management the most approved principles of English banking The result of these inquiries has been most satisfactory and most encouraging.

A deputation of the Directors have had communications with the Minister of the Interior, in Paris, and they have the satisfaction to state that there exists not only no opposition on political, commercial or legal grounds, to such an institution, but that it will meet with encouragement and support.

Paris being the great centre through which the Continental Exchanges and the monetary operations between France and England are transacted, the establishment of an International Bank such as the London and Paris Joint-Stock Bank, is a matter of much importance and necessity, and we consider it to commend the attention of capitalists happy existing, by multiplying the bonds of common interest.

The success of the Bank of Deposit" and the security it will afford to the numerous and influential British and American residents in, and visitors to, Paris, formed an additional consideration of no inconsiderable importance

The success of the Bank of Trade" must the vast extent and annual increase of the commercial transactions between Great Britain and France.

As regards the port of London alone, it appears by the last returns of the Customs, that the value of the imports and exports with cargoes cleared from the port of London for France was 1,— tons. The amount of tonnage is larger than that from the port of London to any other country in the world, and is exceeded only by the amount of tonnage from the port of London to the East Indies.

The operations of the Paris branch will be restricted to legitimate business with all kinds of securities, and merchandize, and no advances, except upon satisfactory security.

The subjoined Table shows the present condition of the leading Chartered Banks (Scotch and Anonymous) in Paris

Name of Bank.	Amount paid-up per Share.	Present Market Price.	Dividend for the Last Year per Share.	Rate of Dividend per Annum
	francs.	francs.	francs.	Per Cent
Bank of France	1,000	2,125	184	18½
Crédit Mobilier	500	1,71	99	19
Comptoir d'Escompte ..	500	681	13	2½

Under these favourable circumstances the London and Paris Joint-Stock Bank has been formed; and when it is considered that London is the focus of foreign banking operations, no one can doubt that the monetary and mercantile transactions between England and France will be assigned. many by fully of the Joint Stock Banks, and that the increase relations which exist between two countries, it is evident that the Bank is calculated to realize the most extensive success that it is difficult to estimate adequately the future magnitude of its operations. The dangers incidental to the attitude and aim international banking institution, appertaining equally to Great Britain and France must be met by the soundest and safest principles of Joint banking, and tending to promote the liberal position of confidence, security, and economy, among the people of

Prospectuses and Forms of Application for Shares may be had of Messrs. F. Cazenove and Co., Stock and Share-brokers No. 59, Lothbury, or at the offices, No. 4, Prince's-street, Mansion House.

By order,
JAMES KNIGHT, General Manager

SUBSCRIPTION.—The sudden death, on the 18th of September last, of Mr. SAMUEL COLLINS, who was for many years on the staff of the ILLUSTRATED LONDON NEWS, and Publishing Office, has left a Widow, 38 years of age, with infirm health, and six children almost entirely destitute of the means of support.

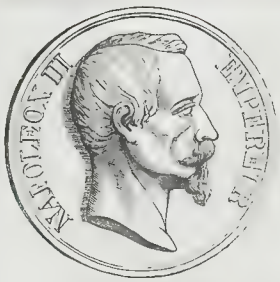
The family consists of four boys, aged respectively seven, nine, eleven, and thirteen years; and two girls, two and four years old.

The following Gentlemen have indeed the friends of the deceased consented to receive subscription for the purpose of purchasing an Annuity, or otherwise providing for the support of the bereaved family

The following Gentlemen have kindly consented to receive Donations:—
HERBERT INGRAM, Esq., 198, Strand (who will act as Treasurer).
THOMAS R. SWINNY, Esq., 198, Strand (Solicitor).
Subscriptions already announced £93 4

Donations are requested to be forwarded to the Treasurer, at 198, Strand, Secretary.

ONE HUNDRED and FIFTY RIGHTS of CHOICE.—The CONSERVATIVE LAND SOCIETY.—At the Third Annual Meeting, at Exeter-hall, on THURSDAY, December



PARIS EXHIBITION PRIZE MEDAL. (SEE PAGE 646)

(*Continued from page* 646.)

those two tails which are sometimes, wrongly, added; 4, of a pair of cuffs which screen the wrist and the front of the arms.

We can as yet only give very imperfect notions of the costumes that will be adopted for ball-dresses. Feathers of all kinds are being prepared as trimmings for robes. They are placed *à plat*. Others, for the dresses of young girls, are made of swan's-down. Bonnets are trimmed upon the edge *à plat*; and, at the same time, with tufts placed close to the top. Next come a host of charming patterns for ball head-dresses—*Marabouts*, *Plumes d'Autriche*, *Folettes*, *Esprits*, *Oiseaux*, and *Aigrettes*, of varied tints, which will, perhaps, throw into the shade artificial flowers of the usual materials; for, at the late Exhibition, we admired flowers made of feathers of natural colours, which are much softer and more graceful for the complexion than factitious shades, however successful they may be.

Bonnets are still worn as small as ever, and have *barolets* as large. They are worn of velvet for walking-dresses, with plumes, flowers, or velvet. For the theatre or visits, bonnets are made of white gauze, embroidered either with *petit pois* or pretty running patterns; or, again, with squares of very narrow white velvet, or silk chenille, forming a network upon the soft ground. The front is then ornamented with white blonde and tulle, mingled with a few flowers, white or red, and also with some black velvet, which, by-the-way, forms part of almost all winter ornaments, and this is worn without being in mourning. The sleeves have varied very little; only, for the winter, those intended for walking are close, with several rows of flounces trimmed with rich embroidery and Alençon lace.

THE ILLUSTRATIONS.

Bonnet of maroon velvet, with crown of white tulle, ornamented with maroon velvet, with bows on each side and a tuft of feathers. Mantle, arranged with black velvet and fitting into the waist with corsage ornaments, orming a pelerine, black satin ribbons placed at the top of a round scolloped lace, and which support a silk fringe. The sleeves, as well as the bottom of the mantle, which is quite closed in front, are ornamented to correspond. Plain robe or skirt of *satin turc* with wide black satin stripes. The bottom is blue or maroon, with other satin stripes, forming squares.

Boy. Black velvet cap, with a bow of Scotch ribbon placed at the side, just where the shade terminates. Mantle of dark green velvet, trimmed with silk galons of the same shade, or black—Scotch plaid.

Girl.—Bonnet with velvet ornaments. Robe of plain blue poplin, trimmed with a wide piece of black velvet, forming above an undulated trimming upon the skirt. The corsage closes straight in front, with malachite buttons. On each side, and forming braces, is a similar velvet ornament, beginning at the point of the corsage and joining the belt behind. Pelerine of poplin, similar, and ornamented the same. Little trousers, ornamented with embroidery *à l'Anglaise*; and long grey cloth gaiters, or black ones, to the knees.

PARIS FASHIONS FOR DECEMBER.

THE WEST KENT LIGHT INFANTRY.

On Wednesday week the impressive ceremony of presenting new colours to the West Kent Light Infantry took place on the regimental parade at Aldershott. In the absence of Lady Julia Cornwallis, whose gift the colours are, General Knollys officiated, and explained that her Ladyship was prevented from being present by family affliction, consequent on the loss of relatives in the Crimea. The men were drawn up so as to form three sides of a square, and, after the colours had been blessed by the chaplain, the General, in spirited and appropriate language, committed them to the care of the regiment, the discipline and good conduct of which, while in camp, he warmly and deservedly eulogised. At the close of the ceremonial, Sir T. M. Wilson, the Colonel, and his officers, entertained General Knollys and the friends who were present at luncheon in the mess-room.

PRESENTATION OF NEW COLOURS TO THE WEST KENT LIGHT INFANTRY, AT ALDERSHOTT.

VISCOUNT CANNING, THE NEW GOVERNOR-GENERAL OF INDIA.

WHEN the nobleman who forms the subject of this sketch was first nominated to the high and responsible post of Governor-General of India, it was at once remembered that, by a singular coincidence, the same office had been offered to his father. It is one which the popular opinion always designates for some statesman of talent and position, who, from some cause or other, either stands in the way of mere party movements, or who has been unlucky in provoking public discontent by partial failures in Parliamentary or Ministerial life; or for whose soaring ambition the sphere of home politics is too contracted. At the period to which we refer the liberal and statesmanlike views which George Canning was endeavouring to graft on the traditionary prejudices of his party rendered him peculiarly obnoxious to the great bulk of the Tories. It was natural, therefore, that he should desire to escape from the unsatisfactory position in which he found himself, as well as that his political associates, to whom his presence was an obstruction, should desire to facilitate his wishes. It was under these circumstances that the Governor Generalship of India was thought of for Canning -we believe actually accepted by him—as a sort of splendid exile, as well as a field in which his peculiar genius would find full scope for action. It is not a little remarkable that rumour should have assigned a similar end to the political career of Mr. Disraeli, at a time when the return of his party to power seemed probable, while his position and claims appeared likely to cause embarrassment.

To do recent Ministries of this country justice, they appear to have been guided by higher objects in their choice of statesmen to fill this high post, than those considerations of mere convenience which public opinion usually attributed to their predecessors. The appointment of Lord Ellenborough, for instance, although distasteful to persons who ultimately succeeded in effecting his downfal, was certainly justified by his many brilliant qualities, and a general character which fitted him to exercise dominion in the East. The selection of Lord Hardinge, in like manner, proved that a higher estimate was set than formerly upon the duties and demands of the Governor-Generalship; and if, when Lord Dalhousie was first appointed, it appeared that some secret influence must have regulated the choice of the Government, his subsequent conduct, while in the possession of power, has proved that that selection was made with great sagacity and knowledge of character. That Lord Canning should have been chosen to follow a line of men so distinguished is to him complimentary in the highest degree, indicating as it does Lord Palmerston's belief that he possesses those sound and commanding qualities which are now admitted to be necessary in the holder of the office of Viceroy in India.

THE NEW GOVERNOR-GENERAL OF INDIA, VISCOUNT CANNING.—FROM A PHOTOGRAPH BY MAYALL.

Lord Canning's antecedents in relation to our domestic politics much resemble those of Lord Dalhousie. He has never been a violent politician or an active partisan, but has always shown a capacity for business—a clear head, much application, and a trained and philosophic spirit. Bearing such a name he could scarcely fail to be emulous of distinction, and he has, of course, been much helped in his career by the prepossessions entertained on his behalf by men of all parties. He has also enjoyed in an eminent degree the favour of the Court.

Lord Canning first entered public life in the year 1836, when he had attained his twenty-fourth year. He is the second son of the celebrated George Canning, by the third daughter of Major-General John Scott, of Balcomie, Fifeshire. Lord Canning was born in the year 1812, at Gloster-lodge, Brompton. After having been at Eton, he went to Christ Church College, Oxford, where he much distinguished himself, being a first-class man in classics, and a second in mathematics. This was in the year 1833. In the following year he married the eldest daughter and co-heiress of Lord Stuart de Rothsay, who was his junior by five years. Lady Canning was early appointed a Lady of the Bedchamber to the Queen, and has ever enjoyed an especial share of her Majesty's favour. In August, 1836, Lord (then Mr.) Canning, was elected Member of Parliament for Warwickshire, and he continued to sit for the county till the following March when he succeeded to the peerage.

The reader is aware of all the circumstances attending the death of Mr. Canning, and of the demonstrations of gratitude made by the nation, recognising his brilliant qualities and eminent services. Besides the gift of a pension, the widow of the deceased statesman received high rank in the peerage, with reminder to her sons. Viscountess Canning continued to enjoy her title, from its creation in 1828, to her death in 1837, when she was succeeded by her second son, the elder having died young. Lord Canning now entered the House of Peers, where he early attracted the notice of the leading statesmen of the day, who appear to have entertained some doubts as to to the banner under which he would range himself. Occasional speeches, in which he displayed much good sense and general knowledge, and showed more especially that he had followed in the direction of his father's most distinguished preferences, led to a very high opinion of his abilities by the Duke of Wellington and Sir Robert Peel. We believe, also, that the position of Lady Canning at the Palace, and the evidences of political sagacity he had himself displayed, led to his Lordship being occasionally consulted on matters connected with Ministerial arrangements. At a later period, his name came prominently before the public in a transaction of the kind, in which he appears to have borne himself to the satisfaction of all parties.

Considering the strong (political) antagonism that prevailed between the late George Canning and his long-time colleague but some-time rival, Peel; it was generally remarked as a singular coincidence that it should have been under Sir Robert Peel that he first took office. This he did on the accession of the deceased statesman to office in September, 1841. He was then made Under Secretary of State for Foreign Affairs—a post which frequently imposed on him the task of answering for the Ministry in the Upper House, and this he always did with great discretion and ability.

From September, 1841, until January, 1846, Viscount Canning continued to fulfil the duties of his Under-Secretaryship. In the March following, on a partial reconstruction of Sir Robert's Peel's Administration, necessitated by the repeal of the Corn-laws, Lord Canning was promoted

A STREET IN CALCUTTA.—(SEE NEXT PAGE.)

Chief Commissioner ... a seat in the Cabinet ... In this office he gave great satisfaction. On the downfall of Sir R. Peel in July, 1846, Lord Canning accompanied his chief into retirement, only occasionally addressing the House of Lords, and then chiefly on matters connected with the duties of his office. He continued to attach himself to the fortunes of what was termed the Peelite party; and, when Lord Aberdeen came in as ... Viscount Canning, however, still remained in office as ...

The change in the Coalition Ministry, which resulted in the accession of Lord Palmerston to the Premiership while it made no alteration in the official position of Lord Canning, gave occasion for another signal commentary on political antagonisms and friendships. Sir Robert Peel had been denounced by the leaders of the "country party" as having betrayed, before Canning, yet the son of that statesman, as we have seen, first took office under the right hon. Baronet. Lord Palmerston, on the other hand, though from 1832 a steady opponent of Sir Robert Peel, and ... minister for a party chief, had ever been regarded as ... Canning, whose general principles of foreign ... had led him to wish to carry out. It was a striking ... of Shakspeare's saying that the "whirligig ... round his revenges"—that it should at ... of Lord Palmerston to be able to offer to the ... the past the Governor-Generalship of India— ... at one time was, on the point of filling. From the ... Viscount on the occasion of his appointment, there is every ... question, on the occasion of his appointment, there is every ... that he took with him the sense ... of business acquired ... office here, are not his only claims to guide the affairs of ... study to the ... ring the knowledge ... claims of the Crown ... by their suite, and accom- ... not be a matter, sailed from England on ... for Madras and India.

Beneath the Portrait of the new Governor-General is engraved upon the preceding page a View of a principal street in Calcutta, the seat of the Government, and the principal place of the Presidency of Bengal. Its extent along the bank of the Hoogly, from north to south, is about ... miles and a half, and its breadth, from ... to the Circular Road measures about a mile and a half; the entire site, which comprises an area of nearly eight square miles, being included between the river and the line of the road intervening between it and the Mahratta Ditch. The city is thus described by Thornton:—

"The approach to Calcutta by the river from the sea is marked by a series of superb mansions at Garden Reach, surrounded by lawns which descend to the water's edge. Off the point no change is afforded to the magnificent scenery displayed between Saugor and Calcutta, by means of which the residents of the capital communicate with Europe is carried on. A little to the north of Garden Reach are situate the Government dockyards: above these, the canal of Circular Road, which forms a junction with the river. To this succeeds the Arsenal, and still higher up is Fort William. From this point the appearance of Calcutta becomes grand and imposing. Heber, writing thirty years ago, describes the scene from the fort as seeming, "having on the left the Hoogly, with its forests of masts as if sail soon through the stems of a double row of trees. On the right is the district called Chowringhee, lately a mere ... with ... but now almost as closely built as, and very little less extensive than, Calcutta. In front is the Esplanade, containing the Town-hall, the Government-house, and many handsome private dwellings, the whole ... like some parts of Petersburg that it was hardly possible to fancy myself anywhere else." Above the Esplanade, on the river bank, is Chandpaul Ghaut, the principal landing-place of the city; and from this point a noble street extends northwards, along which are many fine buildings, including the Custom-house, the New Mint, and other Government offices. Many ghauts, or landing-places, communicate with ... town; and finally the Circular Canal bounds the ... northern extremity, and separates it from the suburb ... interesting the only eastward from Bebee Ross ... to the Upper Circular Road, may be regarded as ... the native and European divisions, the northern ... are assigned to the native population, and the ... the ground occupied by the European community. One ... however, observable in the two localities is, that a ... division is inhabited by "natives, chiefly Mussulmans, and ... of Hindoos, while very few Christians have their ... in this last mentioned division the streets, ... are narrow, though the houses of the wealthier ... few are built in the form of a hollow square, with ... to a hundred feet each way, which, when lighted up ... appearance. The other division ... and appearance, as well as in population. It has ... and wider streets, inhabited by several noble families, and the other adorned with the residences of Government functionaries and opulent merchants. In this latter quarter, which is called Chowringhee, the houses are constructed in the Grecian style of building, ornamented with pleasing verandahs, and from their imposing exterior Calcutta has not unmeanly been dignified by the appellation of the "City of Palaces." Between Chowringhee and the river an extensive space intervenes, designated the Esplanade, in which is situate Fort William. Owing to its brackish character, the water of the river is unfit for general use, and the chief ... has a ... some supply of the necessary of life rests upon artificial ... which contain their stores from the periodical rains. The number ... reservoirs, public and private, which have been constructed in various ... amounts to 1040. Fifteen of them are public tanks.

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

Pressure ... compels us to postpone our "MEMORABILIA" until next week. In the meantime we have to acknowledge the receipt of communications from the following correspondents, all of which shall receive attention:—

... Kennedy, Hull; D. D.; C. M. Ingleby; D. Rimbault; W. Chappell, ... Kendrick, Warrington; W. Newton; York; S. Driver, Chertsey; E. Cromer, Cerne; Bristo; H. E. L.; H. L. O.; Jas. A.; Delta; T. Harvey, Alton; F. K., Cave Hall, Cambridge; Fenwick; Pewsey; London Stone; H. M.; York; George Daniel, Canonbury; Nassau; R. ..., Portsmouth; K. S., Bracebridge, Oxford; A Native; "Old Cole," Leeds; Beta; Brecon; C. W. D., Grasmere; J. M., L. W., Longford; Dr. Mayo, Southern Lake; H. P. Exeter; J. T. Rowland, Dublin; W. ..., Ipswich; T. H.; Sylvynx; Eureka; W. P. Heaning, Debentures, M. D.; Leamington; the correspondent who sends the epitaph on Frances Harding is requested to write again, stating where the gravestone is to be seen, whether the inscription is accurately copied in respect to the relative space occupied by each line, and how much in width of the stone is so far obliterated as to render the words illegible. The description should be ... that the last legible letter on each line should come under that of the line preceding. Some are evidently obliterated. The last line but one looks like the name of a place. Is the last name what it resembles?

... D. D.—We need hardly say that the small collection of letters alluded to of Swift, and Addison, and Gay "supposed to have been never printed"— ... a most ... boon.

A FRENCH OPINION ON THE ANGLO-AMERICAN QUESTION.—The *Siècle* has received from an American friend in London a letter, protesting ... the notion that the United States has any sympathy for Russia; but at ... that American opinions do look with some apprehension at the possible consequences of the Anglo-French alliance. If, when the present ... and France and England shall be cordially agreed as to the ... there is reason to fear that the influence of these two nations ... Americans. The correspondent asks ... the *Siècle* does not see matter for ... which includes? The *Siècle* at once ... London are groundless. France ... has ... interests, which is not to ... Russia. The United States, again, ... H. Gland would never be a party to such a resettlement of Europe as should make France master of the Continent; and France would never consent to the annihilation of the secondary maritime Powers, or in any measure to check the progress of American shipping. In the opinion of the *Siècle* the different genius of the French and English people is a sufficient guarantee against any such ... one of their combined power. The United States ... not do better than ... manufacture, in which they would ... ers from the first, a few years ... open to them.

CHESS.

TO CORRESPONDENTS.

Q. Schaperel, DELTA, and others.—ENIGMA No. 923. The solution of this Problem involves so many variations that they would occupy a third of a column if given in full. The following are the leading ones:—

WHITE.	BLACK.	WHITE.	BLACK.
1. B to Q 3rd (ch)	K takes Kt, or (a)	(a) 1	K to Q 4th, or (c)
2. Q to K B 5th (ch)		2. Q to K Kt 6th (ch)	
And mates next move.		And mates next move.	
(b) 1.	K to Q B 3, or (b)	(c) 1	K to Q 5th
2. Q to Q Kt 7th (ch)		2. Q to K 2nd (ch)	
And mates next move.		And mates next move.	

MANCHESTER CHESS CLUB.—"A member of the Manchester Chess-club wishes to correct an impression which a contemporary's account of its play between the Rev. J. Owen and Mr. Kipping is likely to produce, that the latter gentleman played a doubled statement of all games and matches Every gentleman have played together. From the record sent it appears that Mr. Owen has scored in all twenty-six games, and Mr. Kipping twenty, and one game has been drawn.

F. T., Derby.—Have you added a Black Rook at Black K. Rook's 8th, as we have twice recommended? With that addition the game is not very difficult. It begins—1. Kt to K B 3rd (ch). 2. Kt to K Kt 3rd (double ch) &c.

THE SPHINX.—In Problem No. 906 Kt to Kt 4th cannot possibly be given in less than the stipulated number of moves, which is five, *if Black plays the best defence*; and it is on the presumption that the best defence will be made that problems are composed. 2 to in No. 908. If mate could be given as you suggest, the Problem would, of course be worthless; but you omit to observe that, if the White Rook chooses at 8th, the Black Kt can capture it.

DELTA, Bath.—The key-move Enigma 925—1. K to Q B sq.

CALCULATOR.—When a player advances a Pawn to the 6th square he can demand another Pawn, but that Bishop can only run on the same coloured squares as the one to which the Pawn was advanced. It may happen therefore that a player has two Bishops running on the same coloured squares. 2. We do not know of any parish room where Double Chess is played.

T. SOMERSET.—Your solution of the Indian Problem is not correct.

T. S., Barking.—The key to the solution of Enigma No. 927 is 1. K to K 8th. The rest is obvious.

F. C. R. HURST.—A piece employed in covering the king from a check through incapacity to move, is not dead for all other purposes, but remains as its character and ... power.

White, playing first, mates in three moves.

ALPHA'S CHESS QUERY.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Sir,—In your number of last Saturday there is a Chess Query, signed "Alpha," of such a nature as to require my immediate notice. Alpha asks "What proof is there that latterly among the Hindus the Ship (of the old game) was changed into the Chariot?" I answer, that the proofs are innumerable. To adduce a few: My principal authority is the great Colebrooke, undoubtedly the first Sanscrit scholar of his day. In a note to a paper on Chess, by Captain Hiram Cox, in the 7th volume of the "Asiatic Researches," 8vo edition, p. 504, Colebrooke says, "I find also, in an ancient 'Treatise of Law,' the Elephant, Horse, and Chariot mentioned as pieces of the game of Chaturanga." In the same paper Alpha will find that in the commentary Hindustanee game the piece which we call Rook is there called Rukh, or Rath—showing that the Indian people used both the Persian and Sanscrit term: in all probability the former was in use among the Musselmans, and the latter among the Hindus. Furthermore, in the Burmese game, which was undoubtedly derived from that of the Hindoos, the Rook is called Rathe—the Sanscrit word itself, pure and unchanged. This proves two things at once, viz., that the Burmese game came from India, and, that, at whatever period they went took place, the Hindus had the Caariot, and not the Ship. Lastly, the Malays, &c., to this day, have the Chariot in the place of our Rook; as may be seen in an extract from "Rajah Brooke's Journal," published in the 9th volume of the *Chess-player's Chronicle*. I need not say more on this point.

It were well for Alpha had he confined himself merely to the above part of his query. I must here quote Alpha's words entire, and then briefly give my reply. He says, "I should, therefore be extremely glad to know from what manuscripts (their names, &c.) Dr. Forbes derived his translation, describing the moves of the pieces, in chap. vi. of his 'Observations.' He (Dr. Forbes) informs us that he has chiefly followed the MSS. additional 18,188 (written A.D. 1486) and 7724 (written A.D. 1631), preserved in the British Museum; but I am assured by a competent authority that this account of the moves does not occur in either of the MSS.; nay, more, that it is not to befound in any of the copies of the Shahnama, in the British Museum (including a copy of great antiquity recently acquired, written A.H. 675—A.D. 1276), nor is it even in the text of Firdausi, published in Calcutta, in 1829, by Macan." You will observe the above extract consists of two sentences. My answer to the first sentence is this:—The MSS. from which I have *made* (not *derived*) my translation "describing the moves as the pieces" are precisely those I mentioned, viz., No. 18,188 and No. 7724, preserved in the British Museum. At the same time I briefly consulted some nine or ten other MSS. of the Shahnama, in the British Museum, as well as Macan's printed edition; yes, more, I consulted the so-called "copy of great antiquity" alluded to by "Alpha," before it came to the Museum. Well, in all of these, with I believe only one exception, the account of the moves *does occur* exactly as I have given them; always excepting, or rather excluding, a couplet about the two *counts*—which I agree with "Alpha" in considering an interpolation. Now we join issue, as the lawyers say. Alpha denies the existence of "the account of the moves," in every copy of the Shahnama in the Museum, as well as in Macan's printed edition. I, on the other hand, pledge my truth and honour that "the account of the moves" DOES OCCUR (with, at most, one exception) in every one of the manuscripts of the Shahnama in the Museum, as well as in Macan's printed edition; and I am quite ready to point out the passage in all of them to any gentleman and scholar who may have the least doubt on the matter.

53, Burton-crescent, 19th Nov., 1855. DUNCAN FORBES.

REVISION OF THE CHESS LAWS.—A meeting of the committee, appointed at the inception of the Lyceum to confer with Mr. Staunton on the subject of the Chess Laws, was held last week at the St. George's Chess-club, 53, St. James'-street. After listening to the alterations proposed by Mr. Staunton for the improvement of the present defective code, and comparing and contrasting them with the amendments suggested by his distinguished colleagues, MM. Von Jaenisch and Von Heydebrand der Lasa, the committee resolved unanimously that it was highly expedient Mr. Staunton's New Code of Chess Laws and Regulations, accompanied by explanatory extracts from the already-printed treatises of MM. Von Jaenisch and Von Heydebrand der Lasa, should be forthwith printed; that a copy of the pamphlet should be distributed gratuitously to every member of the Provincial Chess Association; and that the new rules should be finally submitted to the Association at the next meeting in 1856.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Sir Hamilton Seymour has given orders to engage a new residence for the Embassy at Vienna, as the lease of the present building has expired. He is expected to arrive at Vienna in three or four weeks.

The King of Prussia has conferred the Order of the Red Eagle, of the third class, upon Dr. Barth, the African traveller.

Lord Lifford, it is said, succeeds to the Irish representative peerage vacant by the death of Lord De Vesci.

The King of Hanover has conferred upon the sculptor, Rauch, the rank of a Commander of the Guelphic Order, in the second class.

The Chancellorship of the Duchy of Lancaster, to which Mr. Baines has succeeded, has lately been held by Lord Harrowby, who now takes the office of Lord Privy Seal, vacated by the Duke of Argyll.

The Emperor Francis Joseph intends to visit Italy in February next. He has accepted an invitation from the Pope to visit Rome.

The *Morning Post* says it is not true that Mr. F. Peel has resigned.

The three Grand Dukes Constantine, Nicholas, and Michael, have returned to St. Petersburg. The two last will set out for the army towards the end of this month.

General Canrobert left Stockholm for Copenhagen on the 20th ult. One of the King's adjutants, Count Bjornstjerna, accompanied him to the frontier. At Gottenburg they are preparing a brilliant reception for the General.

A grand soirée of the members and friends of the Glasgow Athenæum is announced to be held in the City Hall, on Friday next, the 7th inst. The chair will be occupied by the Earl of Eglinton.

The King of Sweden has named General Canrobert, as ex-General-in-Chief of the army in the Crimea, Grand Cross of the Order of the Seraphim. The habit Canrobert is seldom conferred except on crowned heads and members of sovereign families.

The *Morning Post* contradicts the statement that his Royal Highness the Duke of Cambridge is likely very shortly to succeed Viscount Hardinge as Master of the Horse Guards. The *Post* adds that there is no probability whatever of the resignation of Lord Hardinge.

The Duke d'Aumale and the Prince de Joinville passed through Belgium on the 23rd ult., on their way to Conghiano, near Genoa, to see Queen Marie Amelie, whose state of health causes, it is said, some disquietude.

Two sets of apartments which have recently become vacant in Hampton Court Palace have been assigned, the one to Mrs. Sandforth, widow of Col. Shadforth, who was killed at the first unsuccessful attack on the Redan, on the 18th of June; the other to Lady Torrens, widow of Sir Arthur Torrens, who died at Paris a short time ago from the effect of the wounds which he received at the battle of Inkerman.

The Duke Georges of Mecklenburg-Strelitz, who accompanied the Czar on his recent visit to Odessa, is the younger brother of the Hereditary Grand Duke of Mecklenburg-Strelitz, who receives £3000 a year from the English nation by reason of his marriage with the Princess Augusta of Cambridge. The Prince who follows the Czar was married in 1851 to the Grand Duchess Catherine, daughter of the Grand Duke Michael of Russia.

Mr. Seymour Thellusson, of the War Department, has been appointed private secretary to Colonel Mundy; and Mr. William De Burgh private secretary to Mr. F. Peel.

Accounts from Warsaw represent Prince Paskiewitsch as seriously ill. The King of Prussia has sent Dr. Schönbein, the Court physician, to the suffering veteran.

Captain Carpenter, late 41st Regiment, who was severely wounded at the battle of the Alma, has, by the decision of the Court of Chancery, come into possession of £60,000.

Mgr. Bourget, Bishop of Montreal, arrived at Havre on Saturday last, from Rome. The venerable prelate, who is a Canadian, the descendant of an old Norman family, officiated in Havre, at Notre Dame, on Sunday.

The grandson of the Czar of Grusia, George XIII., serving as an ensign in a Russian regiment, was killed in the engagement at Kars on the 29th September.

Dr. Vaughan having resigned the incumbency of St. Matthew's, Brixton, it has been placed under sequestration in the usual manner, and will remain so until the Archbishop of Canterbury, who is the patron, appoints a successor. It is worth about £800 a year.

M. Paillet has left by his will 10,000 francs to the Council of the Order of Advocates, to be employed by them in the encouragement of young barristers.

Mrs. Morrison, widow of the late Dr. William Morrison, of Hong-Kong, has received a large gold medal from the Emperor of the French, in testimony of her late husband's kindness to the French residents at Hong-Kong.

By the death of Michael Vororsmarty, at Pesth, Hungary has just lost one of her greatest poets. An epic, entitled "Zalan futasa," is his principal work.

The English Ambassador at Bucharest has not made any further official step in the affair of Colonel Tur, arrested lately at Bucharest. He awaits new instructions from his Government.

Subscription-papers for a testimonial to Sir C. Napier are now issued, and are lying for signature at several of the banks and other public offices in Falkirk.

M. Emile de Girardin has sold his villa in the Champs Elysées to the Empress's mother, the Countess of Montijo.

The *South Eastern Gazette* says, Madam Goldsmidt (Jenny Lind), with her husband and children, landed at Folkestone on Saturday last.

Mlle. Emma Fleury has been elected a member of the Théâtre Français, a rank much desired by French actresses.

The German papers state that Austria intends to open an Exposition of Arts and Industry at Vienna in the spring.

A public library, under the provisions of the "Public Libraries Act of 1855," has been refused by a large majority at a meeting called at Tunbridge Wells, specially convened for the purpose of taking the subject into consideration.

The amount of the subscription to the Austrian Crédit Mobilier will be fifteen millions of florins. The lists will be opened from the 10th to the 15th instant.

The Spanish Minister of Finance has declared to the Cortes that the result of the sales of clergy lands throughout Spain has been most satisfactory.

An educational association for working men has been formed in Oxford. Prizes, to the amount of £20, are given for lectures, and several gentlemen of the University gratuitously supply the instruction.

The first number of a weekly journal, to be called *Revue Musicale et des Théâtres*, is to be published on New-year's-day next at St. Petersburg.

The "altar" and "sedilia" of Heworth church were last week sold by public auction at Gateshead. The altar was sold for six guineas and a half; the sedilia for thirty shillings.

The manuscripts of Bernardin de St. Pierre, which have been purchased by the Municipal Council of Havre, have arrived in that town. They are so numerous as to form twelve or fifteen folio volumes.

The Free Church General Assembly agreed to memorialise Government on the subject of the assemblages in the parks of London on Sunday; and also to memorialise the Queen to withdraw her permission for military bands to perform on that day in Kensington-gardens or elsewhere.

The French Government has appointed a commission to inquire into the causes of the recent rise in sugars, and to report whether any measures can be taken to relieve the pressure on the consumer.

The estate of Seaclithe, near North Berwick, has sold for £65,000. It has been bought by an association for establishing a Roman Catholic colony, with a nunnery, Popish chapel, hotel, &c.

One of the St. Petersburg journals states that the news of the London Stock Exchange reaches St. Petersburg every day in eleven or twelve hours.

The first ship that entered the Victoria Docks on Monday was the *Enterpe*, an American clipper of 3000 tons, with a full cargo, from Calcutta. The size and draught of this ship, it is said, would have prevented her admittance into any other dock in London.

There was a heavy fall of snow at Brussels last Saturday night.

A parish overseer at Dover, named Bratt, has been committed for trial for disturbing a Mormon congregation.

The *Gazette Militaire*, of Switzerland, states that the Federal army numbers 115,000 men, with 476 guns. The organised militia consists of 10,000 to 20,000 men.

The Great North of Scotland Railway Company have placed on the floor of each compartment of their first-class carriages flat jars of warm water—very pleasant comforters to the feet of the travellers in these cold mornings.

PROTEST AGAINST THE BANK CHARTER ACT OF 1844.

THE parties who have convened the meeting to be held at the London Tavern on the 5th of December intend to propose a distinctive plan of Monetary Reform, of which we are enabled to give the substance. The first proposition refers to imperial money, to be issued by the Crown with the sanction of Parliament. Its amount will be limited, from year to year, to the annual amount of taxation. It will derive its value from the authority of the State which calls it into existence, and be declared legal tender. In this money the Crown will pay its debts and receive its taxes. If any person wishes to buy gold with this money he will be able to do so by purchasing that commodity at its market price.

The second proposition relates to commercial money, which will be issued by private banks giving security to Government. The issues of these establishments will be limited to two-thirds or three-fourths of the securities lodged. Government will fabricate their notes, which will bear a distinctive die, and they will be declared legal tender. In the event of bankruptcy Government will be empowered to sell the securities, so that every holder of the notes will be guaranteed twenty shillings in the pound.

Imperial and commercial money are designed exclusively for domestic purposes, and their main excellence will consist in the being *valueless abroad*, while they are *valuable at home*. The one as the instrument of taxation, the other as the instrument of internal trade, both would constantly remain among ourselves, uninterruptedly discharging the functions for which they were created. The Bank "screw" would cease to exist, and prices would rule at an equable rate. Panics would be at an end, for our legal tender would never be exported.

Under this system gold would be restored to its natural character as a commodity, and, in common with every other commodity, would find its market price in imperial or commercial money under the law of supply and demand. It would no longer be fixed in price, as it is now, because it would no longer bear a moneyed denomination. Not an ounce of gold would be needed in any of our home transactions. By being thus economised, we should always have an abundance of gold to pay any adverse balance of foreign trade, to purchase breadstuffs in time of scarcity, and to grant foreign loans in time of war.

Such is an outline of the plans which will be proposed at the London Tavern meeting, and we will take this opportunity of directing the attention of our readers to the opinions of some of our most eminent merchants and bankers who have condemned the Act of 1844.

Writing on the crisis of 1847, the late Lord Ashburton referred to the Act in the following terms:—"Nothing can be more absurdly preposterous than to substitute machinery in such a case for human intelligence. A very short time ago the interest of money was 2½ to 3 per cent. Every body found it difficult to employ their capital; now nobody can obtain capital for the best security under 8, 10, and even 12 per cent. The stagnation of the most legitimate trade is complete; the manufacturer stops his works; the Minister is obliged to double the interest of his Exchequer Bills."

When examined before the Lords' Committee in 1848, Mr. Samuel Gurney, the most extensive bill-broker in London, said:—"I have no hesitation in stating that, in my opinion, the Treasury letter of the 25th October, 1847, virtually annulled the Bill of 1844, and saved the country from an almost universal stoppage of payment, in which the banking department of the Bank of England would have been included. In my judgment the Act has failed in securing safety, and has a tendency to create, confirm, and increase panic."

Mr. George Carr Glyn gave the following evidence before the same Committee:—"I am free to admit that after the passing of the Act of 1844 I was inclined to think that it was a very fair experiment, and it was not until I saw the operation of it last year that I altered my views." He then observed that the Act "had decidedly failed;" and, upon being questioned as to the loss of property and the diminution of capital to the London commercial body in 1847, he describes them "as a very considerable indeed; beyond anything in my experience, certainly."

Mr. Lister stated "there was a panic throughout the country; people thought they were in an iron cage; that iron cage was the Act of 1844."

It would be easy to extend this condemnatory evidence by quoting from the testimony of Mr. Horsley Palmer, Mr. Bevan, Mr. Bates, Mr. Pease, and Mr. Birkbeck—this last gentleman being the delegated representative of the country bankers. We must not, however, omit the high authority of Mr. Tooke, who denounced the Act of 1844 "as one of the most wanton, ill-advised, pedantic, and rash pieces of legislation that has come within my observation;" and he adds "that the vaunted principles of the measure are entirely destitute of any foundation in fact or in reasoning."

With such evidence from such eminent authorities, all practically versed in business, surely a case for inquiry is, to say the least, fairly established. In 1847 we were at peace, and yet the Bank was only saved from stopping payment by the suspension of the Act, which had prostrated the fortunes of thousands of honourable, prudent, and experienced traders; now we are in a state of war, which requires gold to be sent to the East, and we may soon be called to export that metal to America in payment of breadstuffs. How, then, can we hope to retain a sufficiency of legal tender to carry on our home trade and our foreign commerce? An increased revenue, the result of increased taxation, can only be raised by an increased production and consumption of commodities; but since profits must disappear under heavy rates of discount, and wages must be lowered, or wholly cease when trade does not yield a fair return for capital and labour, the sources of revenue must fail, and the public treasury remain unreplenished.

In the second report on Banks of Issue, Mr. Gilbart, the chief Director of the London and Westminster Bank, gave the following evidence:—"In time of war I should stop payment at once. It would be better to stop payment before the gold was gone than afterwards. I stated that if I were Prime Minister I would, immediately on the commencement of war, issue an order in Council for the Bank to stop payment. I stated also that I spoke as a politician, not as a banker. The only war that has occurred in my memory is the war of twenty years with France: that is the war to which I referred. Now, under such a war as that it appeared to me that a suspension of cash payments would be inevitable. I recollect some time ago investigating the circumstances attending the suspension of cash payments in 1797. I came to the conclusion that under the circumstances a suspension of cash payments was not a matter of *choice*, but of *necessity*. That is the opinion at which I arrived after a careful investigation of the circumstances: it has since been confirmed by the writings of Mr. M'Culloch."

A flippant criticism inspired by egotism affects to sneer at all who denounce the Act of 1844, designating them "mere dreamers;" but the names we have cited effectually silence this silly attempt at abusing public credulity. The Currency Congress need not blush for a cause so ably defended, and perseverance alone is wanting to ensure a decided victory. At this crisis the operatives of Manchester have suspended

[illegible] not realise a fair profit. Thus the two parties [illegible] her of them perceiving that the common enemy [illegible] That basis is unremunerative in the metropolis [illegible] s not stopping when discounts range from [illegible], according to the date of bills; but the very [illegible] to the remedy. When the Bank of England recently made a difference of one per cent between bills at sixty and ninety days, it struck a blow at the course of trade when has existed so long as to have established for among traders the rule has always been, after what is called the "settlement," for the buyer to give a bill at three months. The Bank by its new arrangement has in the most arbitrary manner cut off one month from the credit; while long-dated bills in the [illegible] are subject to a rate of discount which transfers the whole profit of the market into the till of the banker.

NAVAL AND MILITARY INTELLIGENCE.

THE [illegible] the [illegible] Peace [illegible] largely occupied [illegible] and [illegible] more [illegible] ships [illegible] being [illegible] the [illegible] stocks. This fact will show the increased size which is given to our present vessels of war. Additional shipwrights, sawyers, and mechanics have been added to the dockyard strength at Pembroke, and great exertions are to be made for the spring.

THE Observatory telegraph at Milford Haven is near completion. This is to be the link between the forts of Thorn Island, the Point Battery at Dale, the martello on the Stack Rock, and the dockyard, so that a rapid communication between all the defences of the Haven can at once be secured.

IT is understood that Government have in contemplation the erection of large and commodious permanent barracks, to accommodate at least 5000 men near the present fortified barrack on Llanyrth-hill. A large building has for some time been marked on the plans, and the want of accommodation is much felt.

THE barque *Mohawk*, with a general cargo of provisions from the Royal William Victualling-yard, Plymouth, sailed for Balaclava on Saturday. The barque *Lady Warncliffe*, the brig *Alfred*, and the barque *Amoeba* are being laden for the same destination. In consequence of the great demand, instructions have been received at Plymouth yard from the Admiralty to roast coffee day and night until further orders.

THE authorities at the Horse Guards have just issued another memorandum relating to instruction in musketry, in addition to the memorandum laying down regulations for the organisation of the corps of instructors in musketry, issued a short time ago. The memorandum details various rules which the Commander-in-Chief directs to be strictly observed with a view to efficient instruction in the use of the rifle. The course of instruction is to commence in every battalion or depôt on or before the 15th of March in each year, so that it may be finished by the time the autumn half-yearly inspection takes place.

THE 12th Regiment, 2nd Battalion, from the Cape of Good Hope, and the 54th and 96th, from Gibraltar, will shortly embark for the Crimea. These corps consist principally of old soldiers. They will be relieved by Militia regiments.

CAPTAIN TWYSDEN, 55th Regiment, is under orders to leave Hythe for the Crimea, to assist Colonel Kennedy at the School of Musketry about to be established there.

THE average weekly number of recruits joining at Chatham is fifty. About 4000 young men, after completing their drill, are annually sent from Chatham 2600 to India and the Colonies, 700 volunteers to different corps, the regiments coming home taking the remainder.

THE Minister of War at Turin, in order to favour enrolments in the Anglo-Italian Legion, has decided that officers of the Sardinian army may, on the receipt of their passports, either start corps shall not lose either their pensions or the rank which they had attained.

THE mortar-vessel launched from the building-yard of Mr. John Laird, of Birkenhead, last week, is the first English mortar-boat built of iron; and, if the experiments immediately to be tried upon her answer the anticipations of the Admiralty officials, it is said that a large order will be given for the construction of more upon the same principle. Mr. Laird is also constructing fourteen wooden steam screw gunboats, of 240 tons each, and about 60-horse power. They are to be armed with one gun of heavy calibre, and to carry a crew of 45 men. Each vessel will cost about £5000. Though the order for them was only received from the Admiralty six weeks ago, already about 1000 feet of building sheds have been erected at these yards and fitted with gas, so that the men can work at the vessels night and day. Four of the boats are well advanced in frame, and the whole are to be ready for sea by March next.

MR. DOUGLAS, of the Strathcden Foundry, Cupar Fife, has recently received an order from Government for a large supply of bombshells. No specified number is mentioned in the contract, the directions being to manufacture as many as possible, and to continue doing so until orders to the contrary are received. Falkirk Foundry has furnished more shells than all the others in the United Kingdom. About eight months since the Messrs. Kennard, of the Falkirk Ironworks, entered into a contract with Government to supply shells for the Crimea, and since that period they, with a staff of nearly 2000 workmen, have been engaged night and day in executing their orders. The maximum weight of shell manufactured daily of all sizes has been about 155 tons; and so great was the demand for some time previous to the fall of Sebastopol for these destructive missiles, that the Messrs. Kennard had received instructions from Government to supply them at the rate of 200 tons daily; and they, we have ascertained, had made extensive additions to their works to enable them to produce this extraordinary quantity. The following are the quantities of shells of the larger sizes which have been turned out since the commencement of the contract:—13 inches, 120,000, 11,000 tons weight; 10 inches, 90,000, 4000 tons weight; 8 inches, 60,000, 1800 tons weight: total, 270,000, 16,800 tons weight. If we add to the above numbers the shells of various sizes the quantities of which we have not been able to ascertain, we are certain we are within the mark when we say that the entire number cast at the Falkirk Ironworks must have amounted to upwards of 300,000, representing a weight of upwards of 17,000 tons.

THE AUSTRIAN CONCORDAT.—The new Concordat meets with no mercy at the hands of the German journalists, who view it in exactly the same light as it is regarded by at least two-thirds of the population of this empire. The organ of the clerical party in Germany are at great pains to show that the new convention between the Church of Rome and the sword of Austria is a deadblow to the machinations of the revolutionary faction in Italy; but lay Conservatives predict that, sooner or later, the Concordat will lead to the downfall of the Austrian empire. The effect produced on the people by the convention with Rome is so extremely unfavourable, that the Austrian clergy have directed their subordinates to act with extreme circumspection, "and gradually to accustom their flocks to the new order of things."—*Letter from Vienna.*

Twelve hundred pounds have been voted out of the Doncaster borough fund for the next Doncaster races.

The hills in the neighbourhood of Coombe St. Nicholas, Chard, Somerset, were covered with snow to some depth on Wednesday, the 21st ult.

THE SEAT OF WAR IN THE CRIMEA.

NEVER, probably, since the "siege of Troy divine," have the interests and the destinies of the civilised world been longer concentrated within so limited an area as in the months that have elapsed since the Allies first landed at Eupatoria. Within a few days of that event, indeed, the arena of strife became yet more narrowly contracted. The battle of the Alma was fought and won (the ever-famous flank march was successfully accomplished—the British forces established their *point d'appui* at Balaclava; the French occupied Kamiesh harbour: both armies conjointly pitched their tents on the elevated plateau to the south of Sebastopol, and opened their first approaches on that side of the doomed fortress. Henceforward the catastrophes of the world-drama there to be played out were limited to a very confined arena. Within a quadrilateral site of ground, whose utmost limits might be measured by a line of twelve or fourteen miles to the side, battle after battle was fought and won in the great cause of Civilisation and Progress versus Aggressive Barbarism; and as, we hope, the future fortunes of Europe secured alike from the diplomatic enterprise of ambitious Czars and the material *débâcles* of Muscovite hordes.

Restricted within so narrow an arena, the destinies of the conflict have naturally turned upon the most minute points of topographical and geo-

[illegible] more curious, among [illegible] of interest and ca[illegible] presented themselve[illegible] rent war, than the recurrence of occasions when the [illegible] desperate conflicts have depended upon apparently [illegible] soil and situation. The sickle of an [illegible] the trend [illegible] presence of a few thickets of brushwood, here pre[illegible] result of the most hotly contested encounters. Look [illegible] under such [illegible] have been the issue of [illegible] Tchernaya, again, [illegible] last and fiercest of the three Ru[illegible] [illegible] how which, by accident [illegible] of the attack [illegible] storm of shot from the battery during their advan[illegible] sian army almost ere they crossed the water; and, when after[illegible] and dil-comfited by the French infantry, the dread of encountering [illegible] same ball of death-dealing missiles indeed many thousands of the enemy to lay down their arms, and converted the orderly retreat of the [illegible] a panic rout.

These are but two instan[illegible] actual truth to say [illegible] tween Sebastopol harbour, [illegible] the seasonat on the west, has [illegible] played its important part in the progress of the s[illegible] about five, [illegible] [illegible] sions. On the other hand, an accidental elevation [illegible] a site whereon they erected the formidable Malakoff ba[illegible] while it commanded all other points, not being commande[illegible] furnished a key to their whole position, and, when once taken by a *coup de main* by our gallant allies, was tenable against [illegible] capture, and ultimately rendered the evacuation of the [illegible] Sebastopol a matter of sheer necessity. But, besides these special [illegible] of locality, the general geological conditions of the district in [illegible] of the utmost importance since the siege first commenced. [illegible] shores of the Crimea have been compared to the Und[illegible] Wight, and, so far as their surface appearance [illegible] is tolerably accurate; but beneath there is a wide difference betwe[illegible] two. Instead of the light dry chalk strata of the Isle of Wight, the plateau of Sebastopol is covered with a layer of stiff clay, [illegible] imposed over impervious rock. A few days of winter rain convert[illegible] surface aforesaid into mud from one to four feet deep, and, thus rendering transport difficult, at once delayed the progress of the siege, and brought on the British army all the hardships and privations which inspired feelings of such bitter shame and resentment a few months since among their countrymen at home. The Nemesis who will hereafter undertake to write the history of the Crimean War must intersperse his narrative with many pages of picturesque description, and illustrate it with sundry maps and plans, similar to that which we give in our present Number, before the reader can hope to make his account intelligible, and apportion fame or censure with any approach to justice among the combatants on either side. As the siege of Sebastopol proceeded we have given numerous sketches, faithfully taken upon the spot, of the most memorable sites, and striking scenes enacted during the progress of that great drama. By the fall of the fortress the *locale* of conflict has somewhat shifted; and in the Map which we now publish we present an outline of the geographical position and topographical contour, as derived from the latest authorities of the country which now forms the "seat of war," or which, according to present appearances, will be the scene of conflict during the ensuing campaign. Compared with previous designs, it will be seen that the site of contest has shifted a little, and only a little, northwards and eastward. The Russians have been permanently expelled from the whole seaboard to the west, and from the undulating plateau of which Balaclava is the centre to the south. At present their right wing rests on the elevated cliffs which skirt the north shore of Sebastopol harbour; but we learn they are busily growing with new batteries and intrenchments; while their centre and left wing are placed in strong positions upon what is termed the Mackenzie plateau, behind the Akyar ridge of hills, and stretching towards the east and south to a point of which we cannot be said to know accurately the limit. For, elevated as are some of the points on the Sebastopol plateau, they none of them dominate the Mackenzie heights. From the most lofty positions occupied by the Allies, the horizon is still limited by the summits of the steep escarpments which line the northern or Russian side of the Tchernaya valley. What passes beyond the ridge, what camps are formed there, or what preparations for attack or defence may be arranged by our wily enemies, we are necessarily ignorant of; while our own encampments lie stretched before them in full view, and are, no doubt, industriously daguerréotyped day by day, by clever artists, for the information of his Imperial Majesty Alexander II.

Both armies, according to the latest accounts from the Crimea, are placed in what must be called a condition of "armed neutrality." They have both accepted the arrival of winter in so far as to have postponed all [illegible] of active hostilities, and rema[illegible] nt content with such military arrangements as may enable them to defy every attack from their enemy. The Allies, accordingly, occupy not only the area on which they encamped during the siege, but hold the entire south side of the Sebastopol harbour (avoiding always some localities wherein the guns from the northern forts play too heavily), and have pushed forward their advanced guard to the eminences that line the south side of the Tchernaya valley, where a succession of batteries and redoubts in every point of vantage constitutes altogether an impregnable series of defences. Russian batteries crown the opposite heights; their intrenched works all every break in the vista, and leave an impression of force still more numerous and formidable yet more formidable lying beyond our ken. The force of the Allied armies now mustered in this part of the Crimea is estimated at 200,000 men: viz., 80,000 British, 100,000 French, 15,000 Sardinians, and 35,000 Turks. The Russian troops are supposed not to exceed 150,000 under Prince Gortschakoff, but large reinforcements are known to be at hand; and new army corps are actively organising, whose time and mode of junction will depend upon the facilities of transport at the command of the Russian Generals. Hitherto we must acknowledge that our adversaries have exhibited a perfection in their transport service more than equal to our own. No difficulties of country or inclemencies of season appear to have prevented the arrival of their stores and reinforcements, although obtained perhaps at a sacrifice of life and expenditure of which we have no idea.

There may be many sufficient reasons why their present position should be chosen for the winter quarters of the Allied armies. But, in furnishing the plans of the ensuing campaign, the Map which we now publish will show the enormous difficulties that must attend any effort to operate from that basis for the reduction of the whole peninsula. The positions now occupied by the Russians are indeed little, if at all, less formidable than that within the town of Sebastopol itself. Towards the north and east, in which direction the Allied troops must first advance, the attack will have to be made in face of enormous batteries, skilfully placed upon the most commanding position. Behind these, again, is probably a second line of defence of which we are unable to guess the extent. The very nature of the ground is also against us in any attempt from this quarter. From the lofty central ridge of the Tchadir Dagh lateral ridges start out towards the west, whose intervening valleys are traversed by the Alma, the Katcha, the Belbec, and other streams flowing into the Euxine. The general tendency of the surface is that of decline towards the south; but every successive ridge presents its steepest activity in that direction, with a shoulder of far less rapid ascent turning towards the north. Such a line of heights is now occupied by the Russians around the Tchernaya valley and Mackenzie plateau. They still possess strong reserves at Baghtcheserai, twenty-one miles from the north side of Sebastopol, with a base of operations at Simpheropol, at forty miles distance. Between these points there is more [illegible] ridge of the character we have described, steeply escarped on their southern face, and presenting to any attack from that quarter of the country an impregnable position. The contour of the surface prevails [illegible] at the high lands and open plains in the very centre of the [illegible] lofty districts are arid in summer [illegible] in cooth seasons inapt for warlike operations. But the obstacles thus presented are palpably those which a military genius, and none other, is competent to overcome. If such can be found in the Allied armies, the conquest of the Crimea will speedily be [illegible]

FORT KINBURN, AFTER THE BOMBARDMENT.

These three Sketches of Fort Kinburn by our Artist and Correspondent, who accompanied the expedition, give a pretty fair notion of the terrible havoc produced by the combined fire of the French floating batteries and the English fleet. An eye-witness of the attack says it surpassed anything he had ever seen in the Crimea: "Heavy as the fire has been from time to time during the bombardments of Sebastopol, it never was anything like that opened by the Allied fleets in force, intensity, din, or grandeur." Under so frightful a fire-storm (*feu-d'enfer*), it was no wonder that the place very soon became too hot for the Russians. As the buildings in the inner space of the fort were chiefly of wood they fell an easy prey to the flames. Our own Correspondent explains how this was in the following passage of a recent letter:—

"The difficulty of procuring stones for the erection of solid masonry in a country which, for hundreds of miles, offers no other material to work upon than sand, explains the slightness of these buildings. The greater part of them had been burnt entirely to the ground, others had been rent to fragments by the balls and shells which entered them from all sides, and the whole presented an aspect of desolation and ruin not surpassed in any portion of the great wreck of Sebastopol. There was no refuge anywhere from you, said the old Russian Commandant. The houses of the courts were untenable; the casemates of the south were invaded by shot from the northward, and those of the east by shot from the west; and those which were safest from direct fire were not proof against the perpendicular fall of heavy thirteen-inch shells from the English mortar-boats. In truth the casemates, although built of solid mason-work, were none of them bomb-proof, the stone to all appearance having rotted with age. So weak, indeed, were they considered by the Russians themselves, that there were guns in two or three only of the stone embrasures; and the strength of the Russian artillery consisted mainly in the barbette pivot-guns of the upper parapet, and nine or ten mortars in the interior of their works. The vaults, which were unused for hostile purposes, had apparently been made into provision magazines, or places of safety for charts, records, and miscellaneous articles—one of them smelt powerfully of sour beer, another of rotten cheese—none of saltpetre or sulphur. The whole cement which bound the fabric together had fallen away everywhere, and left the stones carried thither centuries ago by the Turks or Genoese to exfoliate and dwindle away. And this was not only the condition of the vaults internally, but of the outer walls also. In many places the Russians had made efforts to strengthen the traverses and magazines by piling up iron wheels of gun carriages in rows, and mixing them with sand. * * * There were but two or three pieces of ordnance in the whole fort capable of being fired at the time of the surrender. The carriages of the pivot-pieces, built of Russian pine, had in almost every instance been smashed, leaving the long tube of iron projecting into the air in a variety of attitudes—many of them so severely hit that they tumbled off the parapet and had fallen into the yard below. The guns themselves had not been spared. One had been struck and broken into pieces, another had its breech knocked off, a third its muzzle, whilst a fourth and fifth had received such dents in their sides as to split them and render them unfit for further use. The ground around the guns bore marks of the explosions of our shells and their effects, where the fine sand had drunk the blood of the unfortunate slain. In eight or nine instances shells had fallen upon the vents of the casemates below, and, exploding as they fell into the vaults, caused those clouds of black dust-smoke which I had witnessed so frequently during the bombardment. The whole circumference of the parapets was marked by similar explosions, and it was creditable to the Russians that they fought so long under such adverse circumstances. Nay, if the old Commandant's assertion be true, the garrison would not have surrendered so soon as they did had the fire been confined to the gun-boats, mortar-vessels, and small steamers. It was only when the English fleet, led by Sir Edmund Lyons, closed in where they never dreamt that a three-decker could come, that despair seized them and they lost heart."

FORT KINBURN: EFFECTS OF THE BOMBARDMENT, OCTOBER 18.

SOUTH-WEST ANGLE OF KINBURN, AFTER THE BOMBARDMENT.

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

Camp at Sebastopol, Nov. 10, 1855.

General Codrington is appointed Commander-in-Chief, and succeeds General Simpson. General Airey and General Barnard return to England, and Colonel Percy Herbert is appointed Quartermaster-General of the army. These arrangements have given enormous satisfaction.

After much hesitation and divergence of opinion amongst the leaders of our armies and fleets, the Allied forces have gone into winter quarters. The British troops on board ship since the reduction of Kinburn are about to be landed and whilst the marine brigade returns to England, as a just reward of its great and well-done service, the regiments under General Spencer will resume their old position on the heights above Sebastopol.

The expedition destined, we were told, for Kaffa did not sail, on account of the belief entertained by our Generals that considerable danger and loss might attend it. For many days the fleets lay at anchor off Kamiesch, with their living freight anxious to learn what their destination might be. New reasons were assigned every day for delay. At first the Generals were waiting for telegraphic news from England, then for the decision of the highest authorities in Camp. At last it became evident that, notwithstanding the hopes of the sanguine, no movement was intended. The Bombarding batteries *Glatton* and *Meteor*, deprived of their heavy spars, were laid up in Kazatch; and the indefatigable Captain Fletcher, of the *Triton*, was observing towing on one after another the mortar-boats which to the last moment had hung lazily astern of our men-of-war.

Long before these symptoms had appeared amongst us, others of a similar nature were witnessed in the fleet of our Allies, which proceeded to disburden itself of the troops brought back from Kinburn, and was speedily filled again with the division of Louis Napoleon's Imperial Guard, on its way to France. The withdrawal of these splendid troops had been anticipated for some time, and the gap made by their departure had been more than filled up by the draught of 24,000 men into the Crimea, whose new uniforms proclaimed them novices on these well-trodden fields.

I left the *Charity* with regret, after more than a month's cruise, during which we had had the honour of a pennant whilst blockading the Russians at the mouth of the Bug, and an easy time of it, lying quiet in smooth water, with our guns ready for the enemy, who, of course, did not appear.

In the short time which had elapsed between our departure and return the Allies had never ceased in the most active exertions for the completion of the roads between the ports of Kamiesch and Balaclava and the camps in which the troops are to winter. The road from the former port to Kamara over the Col de Balaclava, following the slopes of the elevated plain above Sebastopol, had been closed to traffic and remetalled. Large detachments were busy also in completing the lines intended to connect the redoubts built for the defence of Kamiesch These, when completed, will make a formidable intrenched position of the French landing harbour and secure it as a place of last resort in case of disasters, which, although not anticipated, are still guarded against by this judicious arrangement. The redoubts are placed at intervals of three-quarters of a mile from each other, and connected by a deep ditch and parapet which will.

INTERIOR OF FORT KINBURN, OCTOBER 18, SHOWING THE EFFECTS OF TWO HOURS' BOMBARDMENT.

shortly be completed. On our side, the ways of communication from Balaclava over the Col to the camps, with the divers branches from the road to the positions of each division, are almost finished, metal being laid down plentifully, and drains dug to keep the lines from overflow and moisture. With the exception of the 4th Regiment of Chasseurs d'Afrique, which lies at Baidar, the advanced guard of General de Salles has fallen back, and covers the heights in front of Balaclava, where we built redoubts in the autumn of last year. The general opinion of the officers who reconnoitred the head waters of the Belbec was that the Russians could not easily be turned in that direction, and that the precipices which face us here are as difficult of access as those which prevent our approach to Mackenzie's Farm on the ragged rocks held by the enemy at Inkermann.

The north side of Sebastopol, still bristling with guns which pour out a slack but continuous fire into the town during day and night, appears to be permanently occupied for the winter; and although many think the Russians must feel the effects of the bad season, and suffer from want of food, fuel, and forage, there is at present no appearance of a determination to abandon it.

A vast number of huts have been erected for the soldiers, who are gradually becoming more comfortable as they are housed for the cold season. The weather, fortunately, has been favourable for the operation, being warm and genial, and different in this from that which was experienced at a similar period last year. The cavalry is not to winter here, and has already been partially moved. The 1st Dragoon Guards has gone to Kululez, and will be followed by the 6th and other heavy regiments.

The *Highflyer*, with the Duke of Newcastle on board, returned a few days ago from a cruise along the coast of Circassia, and is now in Kazatch Bay. I may be able to give you some details of her operations in one of my forthcoming letters.

A small part of the above letter appeared in a portion of last Saturday's publication.

COUNTRY NEWS

Tribute to Sir Colin Campbell.—A meeting of influential persons was held in Glasgow last week—Sheriff Sir Archibald Alison in the chair—for the purpose of making arrangements to pay a tribute of respect to Major-General Sir Colin Campbell, who is a native of that city. On the motion of Mr. A. Morrison, Dean of Faculty, seconded by Mr. W. Campbell, of Tullichewan, and supported by Mr. Hastie, M.P., it was resolved that the citizens of the city of Glasgow would pay a tribute of respect to their townsman, Sir Colin Campbell, for his eminent military services in various quarters of the globe, by presenting him with a sword of honour; that, to mark the compliment as general as possible, the subscriptions for the sword be limited to contributions of 1s. from each person; which, however, is expected to raise a sum amounting to several hundred pounds; that Sir Archibald Alison, the historian, be respectfully requested to present the sword in Glasgow, at such time as may be convenient to Sir Colin. It is also intended that at the next meeting of the Town council the freedom of the city shall be voted to Sir Colin Campbell. Both presentations are, therefore, likely to come off about the same time, and be followed by a banquet on a large scale. Sir Archibald Alison stated that this movement, which was so cordial and general on the part of the inhabitants of Glasgow, was peculiarly gratifying to him. It happened that his eldest son stood by Sir Colin's side while the memorable assault was being made on the Redan at Sebastopol, and when one of his Aides-de-Camp was killed close to his person; and he knew that Sir Colin was beloved by every officer and private under his command, as well as by the whole British army.

Sir Robert Peel and Captain Townshend at Tamworth.—The two members for Tamworth had an opportunity of meeting their constituents on Tuesday week at a public dinner given to the retiring Mayor of the town. The toast of "Her Majesty's Ministers" was spoken to by Sir Robert Peel, who said:—This war was not a matter of choice to them; it was a necessity (Hear, hear), and the best way of concluding it was by a firm and determined prosecution of it, and an untiring perseverance in carrying out the object we had in view ("Hear, hear," and cheers). But, however determined the Government and the people were to carry on the war with vigour, it would be useless unless they had fitting agents abroad to answer to the policy of Lord Palmerston. What they wanted were men three thousand miles away, with energy and vigour to carry out the policy of the Administration at home (Hear, hear). He could not help saying that the press had rendered the most incalculable benefits to the country. Far from crying down the press, as some others were inclined to do, he thought that the press had done infinite good, by placing before the public, with great temper, judgment, and determination, the circumstances which had occurred in connexion with the war, and which otherwise might have been concealed both from the Parliament and the country, and which had led to the adoption of measures which, but for the press, might not have been undertaken ("Hear," and cheers). On having touched on the cost of the war, which he set down at one hundred millions sterling, Sir Robert went on to say, that during the last year the fleet in the Baltic had cost the country between eight and nine millions; and he thought he was expressing the opinion of the country—at least he was sure he was expressing the opinion of many in the country—when he said that the eight or nine millions spent in the Baltic had not answered the expectations of the people (Hear, hear). The hon. Baronet expressed a similar opinion as to the fleet in the Black Sea, and referred with high praise to Lord Palmerston's late speech at Guildhall. Captain Townshend followed, controverting Sir Robert's views as to the fleets, pointing out that all that could be done was done.

The Peace-at-any-price Party. A large meeting of the inhabitants of Stroud, Gloucestershire, have given expression to their opinions on the war in an unmistakable manner. The meeting was called for the purpose of hearing an address delivered by Mr. H. Richards, the Secretary of the Peace Society, on the origin, objects, and probable consequences of the war with Russia, and the chair was taken by Mr. R. Poole thwaite; Messrs. S. Bowly, J. Surge, and others of the Peace party were on the platform. Mr Richards addressed the meeting at great length, and was listened to with patience, though his remarks were frequently interrupted by cries of dissent. He accused France of being the first to stir up a quarrel, and fixed on the Porte the charge of having communicated hostilities, and on England and France the responsibility of having incited her to it. He pictured the consequences of the war as fearful and disastrous, and said the burdens would fall almost entirely on the labouring classes. Mr. Richards was followed by several speakers, who vindicated the necessity and justice of the war. Among these was a working man named Wood, who denied that the labouring classes were the only sufferers by the war; the rich had their share of the burden to bear, and while to those burdens might be, the working men would cheerfully bear them for the honour, safety, and welfare of the country (Loud cheering). Mr. S. Bowly followed on the peace side, and ridiculed the idea that we were fighting for liberty, or that we could conquer Russia, which was too difficult a task for Napoleon Bonaparte. On a vote of thanks to Mr. Richards being moved, an amendment was proposed by Mr. Harper, affirming "that the war is both just and necessary, and that the warmest support ought to be given to the present Government to enable them to carry it on vigorously until a just and safe peace can be concluded." The chairman refused to put the amendment, and, amid the greatest confusion, left the chair, which was taken by Mr. Marling, when, thanks having been voted to Mr. Richards, Mr. Harper's resolution was put and carried amid thunders of applause.

The Earl of Leicester and the Labouring Classes.—The Earl of Leicester recently delivered an excellent address on the position and habits of the labouring classes to the members of the Dorking Agricultural Association. His Lordship's observations evoked a good deal of attention throughout the district, and he has now followed them up by taking steps for the establishment of a library, reading-room, &c., in the parish of Holkham, where workmen are to be supplied every evening with tea, coffee, &c., at the moderate charge of twopence per cupful of the day. In the spring a building is to be erected in the village expressly for their accommodation; in the mean time the school-room is to be suitably fitted up. The committee of management, to the extent of supporting every person admitted to its privileges will be required to pay a penny per week, but the great bulk of the necessary expenditure will be borne by the noble owner himself.

Relief of the Poor.—Great efforts are being made to relieve the necessities of the poor during the winter in some places in Devonshire. At Exeter large quantities of potatoes and turnips are being sold weekly to the poor at a great reduction in price. As many as twelve tons were sold on Saturday last. An extensive soup-kitchen will be in operation in a short time, an apparatus having been erected by which 2000 gallons of soup can be supplied daily. At Tiverton a public meeting was held last week to devise means for relieving the poor, when it was resolved to establish a soup kitchen. The Earl of Portsmouth, at a recent audit, requested his steward to urge on his tenantry the duty of assisting their poor labourers during the winter.

Mr. Miall, M.P.—On Saturday last it was announced by placards posted on the walls of the town, that Mr Miall, M.P., would address the electors and non-electors of Rochdale this week. A rumour is current that some of the electors are dissatisfied with Mr. Miall's negative mode of dealing with the question of the war; and we are informed, on good authority, that a placard is in the press calling upon the electors to consider how far Mr. Miall represents them on that question.—*Manchester Guardian.*

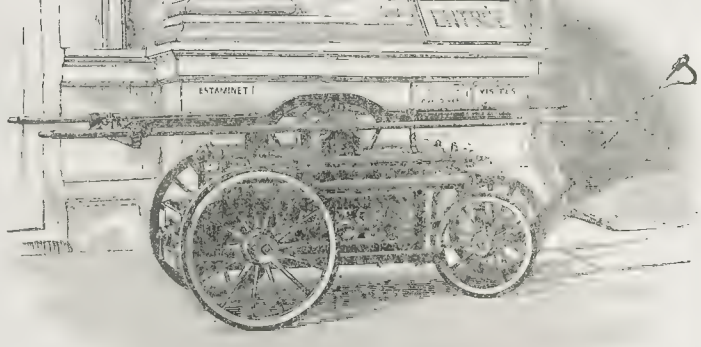
The Irish Catholic University.—From a statement of accounts published by the Roman Catholic University, it appears that that institution has already obtained funds amounting to above £50,000, of which £27,600 was contributed in Ireland, £4100 in England and Scotland, and £16,200 in the United States of America. Of this amount nearly £17,000 is lodged in Government stock and other funds, and the remainder has been expended in establishing the University, purchasing the premises, paying professors, advertising, &c.

Wholesale Ejectments in Ireland.—On the 23rd ult. a detachment of military, supported by about 150 of the police, and accompanied by J. M. O'Hara, Esq., sub-sheriff and a number of bailiffs, proceeded to Driffield, near Loughrea, for the purpose of ejecting seven families. On the appearance of the military and police the persons who were to be ejected made a show of resistance, and declared that they would not surrender possession of their holdings. Mr Ryan who commanded the force remonstrated, and advised them to give up quietly, as the law must be carried out at all hazards; the sub sheriff also spoke to the same effect; but they replied that they would not yield except with their lives. After some further parley the police charged with fixed bayonets, and several of the peasantry were wounded; one man, named Monaghan, received a deep bayonet wound in the groin, and is not expected to recover. The houses, seven in number, were then taken possession of, amidst the wailings of women and children, who formed a part of the inmates.

Scandalous Interruption by a Bishop. The Rev. H E Head, Rector of Feniton, Devon, has addressed the Bishop of Exeter on the subject of a recent scandalous interruption of the communion service. He commences:—"My Lord, Much astonishment, I have been told, was given, not very long ago, by the word 'damnation' suddenly uttered in not the gentlest tone by the right reverend prelate during the celebration of the holy communion, in the way of correction, it would seem, of the officiating clergyman, who, in reading the passage relating to eating and drinking our own damnation, had substituted 'condemnation' for 'damnation.'" He then proceeds to a philological examination of some of the texts of Scripture which the doctrine of eternal punishments is based, and concludes:—"Whether the circumstance to which I alluded in the beginning of this letter has been accurately reported or not I do not undertake to say, nor having been present at that communion. This only I affirm, that the clergyman who substituted a softer word for 'damnation' was Scripturally correct, and that the prelate who publicly rebuked him for so doing was doubly in the wrong."

A Brave Old Woman.—On the night of Monday week Mrs. Vining, aged eighty four, who lives in a small cottage in Shepton Mallet, was alarmed by a noise as of some person forcing his way into the house. On looking up she saw a man enter her bed-room with a lighted candle in his hand, his face being covered with a veil of thick crape. The old woman leaped out of bed, and, challenging the fellow as to his business in her cottage, boldly said it should be life for life. She then ran up to him and tore the mask from his face; upon which he dealt her a blow upon the head, which felled her to the ground, and rendered her partially insensible. On recovering herself she saw the burglar about to carry off a box in which was her little all. Resolved, if possible, to save her property, she seized the tongs, and commenced a fierce attack upon him. One of the blows which she aimed at the robber knocked the candle from his hand. The old woman raised a cry of "murder;" and, either fearing the arrival of help, or unwilling to remain in the dark with the incensed owner of the cottage, the villain decamped, without his booty

The Sewing-Machine and the Shepton Shoemakers.—A few weeks ago a public meeting of the artisans of Stafford was held relative to the supposed introduction by Mr. Edwin Bostock, shoe-manufacturer, of a machine for binding and sewing bootops, at which several resolutions were adopted condemnatory of the introduction of machinery into the manufacture of the staple trade of the town. Mr. Bostock, in reply to a deputation of the workmen, said he would not press the machine-sewed tops upon his men against their wish, although the excellence of the work was one of the greatest inducements for its adoption. On Monday last the workmen of the town held another meeting at their society's house, when it was resolved that Mr. Bostock's manufacturer should be put on strike if he would not promise to decline the use of machinery in the manufacture of his bootops. A deputation accordingly waited upon Mr. Bostock, when that gentleman gave the promise demanded, but observed that, in appearing to give way to popular clamour on the subject, he was only carrying out the promise which he had previously given them, and if they positively refused the aid of the machine when they became acquainted with its capabilities he would not enforce its introduction upon them; but, at the same time, he saw no reason to alter his opinion of the value of the sewing-machine, or of the probability of its extended introduction into the trade.



PERRY'S CANADIAN PRIZE FIRE-ENGINE.

THE FIRE ON THE QUAI DE BILLY, NEAR PASSY.

This fire, which broke out on Sunday evening, the 18th ult., at the military bakehouse, on the Quai de Billy, has happily not been attended with the serious consequences that might have been feared. Only one storehouse of corn, isolated from the *manutention* properly so called, and from the mill, was burnt. The immense supply of corn and flour remains, therefore, almost untouched. Still, at the present prices of grain, the value of the flour and corn destroyed must be represented by a very large sum, of considerable national importance. Some idea may be formed of the extent of the establishment from the fact that, by the regulations, stores were always kept on the premises to supply 40,000 men for three months, and that upwards of 40,000 rations were prepared there each day.

As soon as the fire was observed, General Regnault de Saint Jean d'Angely ordered a party of the Cuirassiers of the Guard to mount, whilst another party and the Regiment of Voltigeurs of the Guard went to the spot on foot at double-quick time. M. M. Fleury and De Toulongeon—the former Aide-de-Camp and the other orderly officer to the Emperor—were early on the spot, encouraging the men, and did not quit until all fear of further danger was removed. The Minister of the Interior was one of the first to arrive, and on leaving he gave 500 francs to M. Colombet, the Commissary of Police, to be distributed among the four men who had been injured by some of the falling timber. At the fiercest moment of the conflagration a well-dressed young man, whose name is not known, heard the alarm-whistle of the steam-engine, an indication that the boilers had become overheated, and were about to explode. Every passage was obstructed by the flames, but, guided by the sound of the whistle, the man rushed forward and opened the valves, and thus prevented additional mischief. Two English non-commissioned officers, in undress, who are in Paris for the service of the English Government at the Universal Exhibition, made themselves remarkable by the coolness with which they went into the greatest danger. The Minister of War, who notified the steam-engineer of these facts to him the following day, that he might personally thank them. A fact

NEW ZEALAND.

(To the Editor of the Illustrated London News.)

Will you allow me to correct two typographical errors in the interesting letter from my old friend the Surveyor-General of New Zealand, which appeared in your last Number? The island described is Kawau, spelt with a u and not an n, and pronounced Kow-wow. The tree mentioned is also spelt with a u, and pronounced Cowrie. The name of the island is the same as that of the Chief, to whose tribe it belonged, and who, by-the-by, was a cousin of Old Hookinse, described by you; the whole of the land on which the city of Auckland now stands and all the surrounding country was also bought from the Chief Kawau. While writing on the subject of New Zealand, will you permit me to correct a very false impression which I have found widely diffused in England—viz., that the whole of New Zealand is subject to the action of earthquakes. This is not so. All that have occurred since its occupation by Europeans, and as much further back in time as the natives have been able to describe, have appeared to have exhausted their greatest force in and about the Valley of the Hutt, extending with sufficient violence to Wellington to destroy most of the buildings in that town, and reaching across the strait in a slight degree to Nelson; they have also reached as far as Taranaki or New Plymouth to the north, but no farther. And as Auckland, the capital of New Zealand, is as much farther to the north from Taranaki as Taranaki is to the north of Wellington, Auckland is perfectly free from their influence; and, as far as one can judge, is likely to continue so. Philo-Maori.

Jonathan and the Greeks.—A letter from Athens affirms that the sole object of the American mission to the capital of Greece is the recovery of a sum amounting to 180,000 drachmas, said to be due to an American citizen as compensation for a certain piece of ground which has been used by the Government in the construction of a street. The claim has been recognised, and the money paid in so prompt a way as to call forth strong expressions of approval from the American Envoy. All the officers belonging to the American squadron have been presented to his Majesty King Otho and his Queen, and have also had the honour of receiving invitations to dine at the Royal table.

Turkish War Finance.—Much is said of the peculations in the Turkish administration; everybody thinks he has the right to throw a stone at it without giving himself the least trouble to enquire into the truth. Doubtless it has committed abuses, but people will be astonished when they have before them a distinct proof that these abuses are less here than anywhere else. It will not be long before this evidence appears, for the Porte had decided to publish officially the budget of the war during the last two years. It will then be seen that, since the commencement of the war, the Porte has had to maintain 200,000 men upon an effective war footing, either against the Russians in Roumelia, Asia, or in the Crimea, or against the Greeks, and in the interior; and that, during the whole two years, the entire expenses of the clothing and subsistence of these 250,000 men have not exceeded £5,000,000, or 125,000,000f. —*Letter from Constantinople.*

A Cheerful Prospect in the Crimea. If we have not improved in pure generalship, we have done so vastly in the administration of our interdances; and when the snows and rain-torrents of winter again deluge those Crimean heights, tender-hearted philanthropists at home will be no longer agonised by hearing of such sufferings as fell to the lot of their campaigning countrymen before and after Christmas last. In fact, so far as I can learn—and I have presented inquiries in most of the departments on whose efficiency the physical comfort and well-being of the troops will be dependent—there will be little to complain of in any one of the three grand items of food, housing, and clothing. Much as was promised some months ago about the entire hutting of the army, I, for one, never expected that so grand a project would be realised; and I think I may venture to say that of the justice of that opinion there is yet every reason to be satisfied; but still a large majority of the force will be so sheltered, and very many of the remainder will be warmly and drily lodged under double canvas, whilst an abundance of fuel and food will be laid up for all. Under these favourable conditions, and perseveringly drilled during the idle winter months, even the rawest levies whom the shortsightedness of the home authorities have sent out may be expected to be manufactured into efficient soldiers by the time that spring comes round to permit of a renewal of military operations. As yet we have weather which reminds one of an English August—bright sunshine by day, and chill, winter-warning dews by night, but both as unlike as possible to the ordinary climate of a northern November. If this last for another fortnight, we shall be fortified against the worst that can follow; and, with plenty of food, warm shelter, good roads, and no trench duty, our hybernal sufferings are not likely to be great.—*Letter from the Camp.*

NEW BOOKS.

THE ENTOMOLOGIST'S ANNUAL for 1856.
London: JOHN VAN VOORST, 1, Paternoster-row

Just published, in two vols., post 8vo, with Maps and Plates, 21s. cloth,
THE FUR-HUNTERS of the FAR WEST. By ALEXANDER ROSS.
Author of "Adventures in the Columbia River."
"Many accounts of hardships and adventures with savage men and beasts will be found in these volumes. There are some striking sketches of Indians, and Indian life and Character, as well as a good deal of information about the old Fur Trade. The book is of considerable value as a picture of an almost past mode of human existence, as well as for its information upon the Indian of Oregon."—Spectator.
"These volumes have a special as well as a general interest. Their adventures, generally, their rare and curious details, recommend them to the reader. As contributions to the history of Anglo-Saxon enterprise, peopling and fertilising the Far West of America, they possess a higher value, and deserve to rank with the chroniclers in our standard collections."—London.
THE WANDERER in ARABIA. By G. T. LOWTH, Esq. 2 vols., with Illustrations.
LILLIESLEAF. By the Author of "Margaret Maitland."
HURST and BLACKETT, Publishers (Successors to Henry Colburn).

November, 1855.

PARTNERSHIP.—A GENTLEMAN of energetic business habits, having invested £9000 in establishing a wholesale business in the City, returning £30,000 per annum, wishes to meet with a Partner of respectability, who can command £2000, part of which only would be required at first, to extend it.—Apply, in the first instance, to BENARDS, City News Room, Cheapside.

PARTNERSHIP.—A Manchester House, doing a considerable and safe business, are OPEN to TREAT with a CAPITALIST, with from £5000 to £10,000, with a view to a Permanent Partnership. The income would be considerable, and a large percentage would be realised. Applications can be made to J. C. Fawle, Esq., 3, New Inn, Strand, London; or to Messrs. Sale, Worthington, and Shipman, Manchester.

AUSTRALIAN JOINT-STOCK BANK, Sydney, Melbourne.—LETTERS of CREDIT and DRAFTS are GRANTED upon this Bank by Messrs. MEYWOOD, KENNARDS, and CO., No 4, Lombard-street, the Agents of the Bank. They also undertake to Negotiate Bills and to make advances on Securities at the Current Rates.
By order of the Court of Directors, Australian Joint-Stock Bank, Sydney, RICHARD WERNICH, Manager.

DR. DE JONGH'S
LIGHT BROWN COD-LIVER OIL.

TESTIMONIAL FROM EDGAR SHEPPARD, ESQ., M.D., M.R.C.S., Translator of "Gibert on Diseases of the Skin," "Bocquillon-Limousin's Rodier's Researches on the Blood," &c., &c. &c.
"Dr. Sheppard has made extensive use of DR. DE JONGH'S LIGHT BROWN COD-LIVER OIL, and has great pleasure in testifying to its genuine and unadulterated character, as imported by Mr. Mein into this country. IT HAS YET FAIR EXCELLENCE OF BEING WELL BORNE AND ASSIMILATED BY STOMACHS WHICH REJECT THE OBNOXIOUS OILS. Dr. Sheppard has no hesitation in stating that he he frees an imperial pint of Dr de Jongh's Light Brown Oil to be of more value than an imperial quart of any other to be met with in London.—Enfield, Middlesex, Aug. 28, 1855."

Sold only in bottles, capsuled and labelled with Dr. de Jongh's signature, WITHOUT WHICH NONE ARE GENUINE, by ANSAR, HARFORD, and CO., 77, Strand, London, Dr de Jongh's sole Consignees and by most respectable Chemists in town and country.
Half-pints (10 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quarts (40 ounces), 9s. IMPERIAL MEASURE.

LONDON STEREOSCOPIC COMPANY, 54, Cheapside; 313, Oxford-street (Corner of Hanover-square). Country orders promptly attended to, and carefully packed. A selection sent if desired.

CAUTION. PATENT EVER-POINTED GOLD PENS.—S. HOLBROW and CO. are the sole proprietors of the very fine imitations of their truly useful invention; S. H. and Co. therefore caution all purchasers to see that the Pens they require be stamped legibly on the case. Many of these counterfeits are constantly pressed on the public, as they yield a greater profit to the dealer, but will be found of no value in use.
Perhaps the above caution is even more strictly necessary when Gold Pencil-cases and Fancy Articles are purchased for which S. H. and Co. are not celebrated. Unless these have been most accurately gauged to the exact size of the patent, they will be found utterly useless.
Each box of genuine gold pens is stamped "Warranted S. HOLBROW and Co." Manufactory, 29, City-road, London.

FINE ARTS.—S. MORDAN and CO. beg to call the attention of the public to the fact that they are enabled to supply a genuine Cumberland Lead DRAWING PENCIL, without a particle of grit, or any admixture, at 8s. 8d. and 6s. They have no hesitation in asserting that such excellent pencils in every respect have never yet been produced, and, in confirmation of this, the highest testimonials from the first artists in the country, and superiors have been received. The following is an abbreviated List—

Charles Baily, R.A.	Richard Redgrave, Esq., R.A.
C. L. Eastlake, Esq., P.R.A.	Copley Fielding, Esq., F.W.G.S.
J. K. Browne, Esq., R.A.	W. Wyon, Esq., R.A.
Clarkson Stanfield, Esq., R.A.	David Roberts, Esq., R.A.
Robert Westmacott, Junr., Esq., R.A.	Thomas Uwins, Esq., R.A.
F.R.S.	H. T. Wilson, Esq., Director, Go-
Front. Esq., F.S.A.	vernment School of Design.

Each pencil is stamped with their name,
Manufactory, 29, City-road, London.

IMPORTANT.—W. W. HUGHES, Foreign Wine Agent, 5, Dorset-street, Portman-square, continues to supply the Public and Private Families with London-warranted Sherries of Dozens, duty paid from the Docks. The very finest duties, 60s. Wines equally moderate. List of prices sent on application.

THE ILLUSTRATED LONDON NEWS.

No. 773.—VOL. XXVII.] SATURDAY, DECEMBER 8, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE OVERTURES FOR PEACE.

THE rumours of renewed negotiations for peace, on which we commented in our last week's impression, have acquired additional strength and consistency within the last few days. The wintry weather that impedes both naval and military operations is propitious for diplomacy. When the sword is idle, the tongue becomes industrious; and the Gortschakoff of Vienna assumes importance whenever the greater Gortschakoff of Sebastopol is forced into inactivity by the elements. The opinion has gained ground in well-informed circles that peace is far more probable to result from any negotiations that may be renewed during the winter than it was at any former lull of the great war-tempest. We trust that these anticipations will be realised; but, until the public knows exactly from what quarter the propositions for peace are to emanate, it will do well to be prepared for a continuance of the war. If it be merely Austria and Prussia who offer to mediate, because the war imperils and distresses them, it is not likely that any good will come of their interference. Their services are not required; and, if offered, will be received with cold politeness, and no more. But, if these Powers are really moved by the Emperor Alexander to negotiate in his behalf, the Governments and people of Great Britain and France will not only be ready but anxious to listen. Any reasonable propositions, proceeding directly or indirectly from the Russian Government, will be received with attention and respect. The Allies fight neither for glory nor for gain—but for the independence of nations and the public law of Europe. If Russia wishes to terminate the war, and will give adequate security against renewed aggression on Turkey, the Allies are too just and generous, and too deeply aware of their mighty responsibilities to the present and future Time, to continue the war for any purposes of so-called glory or the still worse purposes of revenge.

One thing must be firmly impressed on the minds of the diplomatists—Russian, Prussian, Austrian, and any other who may in the course of events be called upon to debate this great question—that there is an end of the "Four Points" which were discussed at Vienna in April last. They are dead and non-existent, and cannot be revived. The chariot-wheels of Victory have driven over them, and their memory alone remains, to show the Emperor of Russia how favourable an opportunity he let slip; and what sacrifices and humiliations he might have spared himself and his country if he had at that time taken a true estimate of his position and his duties. He has since the breaking up of the Vienna Conferences put forth all his strength, and been defeated. Calamity has met him on every side. He has had a first-rate General; but he has been foiled. And—worse than all defeats that could have been inflicted by the arms of such great Powers as England and France—he has been beaten ignominously by the Turks, whom he has taught his people to despise. His *prestige* is gone. The nations of Europe no longer stand in awe of his power, and those of Asia no longer consider him invincible. Turn where he will he finds no

VISIT OF THE KING OF SARDINIA.—THE ARRIVAL AT CHARING-CROSS.—(SEE PAGE 675.)

friend that he can be assured will not speedily become his foe. He is not even sure of the allegiance of Prussia, much less of Austria; and the naval Powers that hold and guard the entrances of the Baltic are half, if not wholly, disposed to give to the cause of England and France the support of their fleets and armies in addition to the sympathies of their people, which were given long ago. The longer the war lasts, the greater the sacrifices he must make, and the humiliations he must endure. The Allies have not put forth a half or even a tithe of their strength. They have not only resources in reserve, but a battle-cry which, if they did but utter, as they might, would arouse against him hosts of internal as well as external enemies who as yet have made no move. All these things he must know, if he be of sane and unprejudiced mind; and the knowledge must predispose him to listen to the prudent counsels of his friends in Prussia and Austria, who, if they hate England and France, hate war much more—friends that sit in powder-magazines, and cannot but be alarmed when the Allies run to and fro with lighted torches, and may, intentionally or unintentionally, cause a conflagration in which their thrones may perish.

Unfortunately it cannot by any means be taken for granted that the Emperor of Russia is in this reasonable frame of mind, and that he regards his prospects unswayed by passion or by desperation. If he were, it would not be difficult for the diplomacy of England and France to fix a minimum of concession, on his adhesion to which the war might be brought to a termination honourable to the Allies, safe for Turkey and all Europe, and as little as possible humiliating to the pride and self-love of the Russian people. Such a minimum, if proposed now, would include *Six* great Points:—*first*, a complete and absolute renunciation by Russia of all claim of interference with the civil position of the Greek or any other Christians in Turkey; *second*, the erection of Wallachia and Moldavia into free States, paying their tribute to the Sultan, but holding their place in the European commonwealth, as Switzerland does, under the joint protection of all Europe; *third*, the absolute freedom of the Danube to the commerce of all nations; *fourth*, the razing to the ground of the fortresses of Sebastopol, north side and south side; *fifth*, a prohibition—to which Austria and Prussia should be parties, in common with England, France, Turkey, and Sardinia—rendering it a *casus belli* if Russia should erect, or cause to be erected, any naval fortress whatsoever in the Crimea; and *sixth*, the limitation of the Russian fleet in the Euxine to such a number of vessels as might be considered by all the Powers sufficient for the legitimate protection of Russian commerce, and insufficient for any aggression against Constantinople, or any other part of the Turkish territory. Less than these Six Points the Allies could not accept as bases of any permanent pacification; but more than these they would be, in strict justice to themselves, entitled to demand, if the overtures of peace were made immediately. But the question of indemnification, if too galling to Russian pride, might perchance be waived, provided that Russia in good faith acceded to the Six Points we have named, and gave adequate security for the fulfilment of her contract. The terms of the winter of 1855 will not keep. Time will destroy and spoil them, and produce new claims for consideration. Victory with its sword will dictate in the long days a higher price than would be accepted by Diplomacy with its pen in the short ones; and the winter of 1856, if the war last so long, will produce a minimum infinitely more formidable than the one thus briefly sketched—a minimum inclusive, perhaps, of the restoration both of Poland and of Finland, and possibly of the Crimea and of Bessarabia.

If, as we said before, the overtures for peace really come from Russia herself, there will be no insuperable difficulty. If, however, they come from Austria or Prussia, without Russian consent, the war must work itself out to its proper issues; and the German Powers must either stand ingloriously aside, as they have long done, or enter into the quarrel on one side or the other. England and France will neither court them in one case, nor fear them in the other.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

His Sardinian Majesty having taken his departure, the people who stood for hours in the streets to see him pass have returned to their homes and hearths; where, indeed, they have need to shut themselves up and remain, so bitter is the cold that within the last few days has set in—a black, dull cold, that nothing in the shape of a sunbeam comes to brighten or relieve. The King of Sardinia has left behind him a most favourable impression The frank, soldier-like gaiety of his manners, and his perfect freedom of speech, have considerably astonished, and not a little amused, the Court and the society here; and a hundred entertaining anecdotes are in circulation of the sayings and doings of the illustrious guest, which are, however, unfortunately, for the most part, a little too *sans façon* to be properly chronicled in the public press. The Royal critiques upon, and comparisons between, the French and Italian clergy are most amusingly and energetically expressed. In proof of the nature of his sentiments towards the former, his Sardinian Majesty has conferred on the Cardinal de Bonald, the Archbishop of Paris, the Archbishop of Avignon, and the Bishop of Marseilles—these four being the prelates he came more immediately in contact with—the decorations of his national order. The King of Sardinia purposes at present to return to his dominions by Paris, where he will spend two days on his route.

A return to the customs of some of the preceding dynasties is strongly marked by an arrangement now being carried out in the Jardin des Tuileries. The great terrace that runs parallel with the river, and is known by the designation of the Terrasse du Bord de l'Eau, has been for the present closed against the entrance of the public, in order to secure a private promenade for the Empress during the existence of her actual position. The custom commenced, we believe, with Anne d'Autriche, and was kept up by Marie Louise, the Duchesse de Berri, and the Duchesse d'Orleans. The terrace communicates by a subterranean gallery with the palace; in order to prevent the Empress suffering from the cold and damp of this passage, a number of calorifères are being established.

It appears that the Comte Molé had for some time been fully aware of his precarious state, and was quite prepared for the fatal event that has just occurred. During the summer he made a long tour in Germany. In a small town in Saxony he accidentally encountered the Comte de Chambord. At the termination of a long and highly-interesting interview, in which the representative of the legitimist monarchy and the late President of the Council of Louis Philippe had freely conversed on affairs of State and politics, the former, who was no less surprised than gratified by the moderation and the liberal and enlightened views of the former statesman, embraced him, saying "Au revoir, j'espère, M. le Comte." M. Molé made no reply, but shook his head sorrowfully. It is said that M. Molé has left memoirs, but it seems doubtful whether the family will consent to their publication. We cannot refrain from citing here, *apropos* to the death of M. Paillet, a speech made by M. Molé on another late distinguished orator: "En France aujourd'hui, les hommes distingués meurent vite, parce qu'ils veulent toujours se tenir debout et ne savent pas s'asseoir à temps."

The Exhibition concerts have come to an end; it must be confessed that the idea of establishing them did not prove a very happy one. The size of the building prevented the music producing the effect that it ought to have done; there was never anything like a sufficient audience to make it one quarter, or at the very outside one third, full, and the cold was so intense that many persons could not remain above a short time present. As many complaints are being made respecting the bad management and defective organisation that reigns at the winding-up of the Great Universal Exhibition as existed as its commencement. Even the persons who most desired that the period for its closing should be deferred now regret that the request was accorded. Since the ceremony of the 15th, nothing but dust, dirt, noise, and confusion has reigned in the building, and, as before, innumerable annoyances and vexations to the exhibitors. Above all, the measure which refuses to those latter the permission to enter, or to send their representatives into the Palace until the arrival of the day for the removal of their products, excites general dissatisfaction, and is the more absurd and unaccountable from the fact that, while the Exhibition remained open, and the public were admitted to view its contents, these were allowed to be carried off amid hurry, bustle, and confusion most disagreeable to the visitors, while, now that none are admitted, this necessary work of removal is put a stop to. During the last day but 677 persons visited the Palais de l'Exposition, and 343 that of the Beaux Arts—a pretty sufficient argument against its prolongation.

Two destinations are proposed for the building—one that we have already mentioned, transporting thither the Bourse; the other that of establishing in it a vast theatre, a sort of hippodrome for great public fêtes.

It has been a subject of general remark that on the occasion of the swearing-in of the new prelates at the Chapel of the Tuileries they knelt before the Emperor. This custom, adopted in the reign of Louis XIV., has never been followed up by any Sovereign till the present one.

On the 10th instant takes place, at the salle of the Rue Drouot, the sale of the pictures and drawings of the late Camille Roqueplan, for the benefit of his widow and only daughter, who are left otherwise unprovided for. The works of this painter are, beside their real excellence, remarkable for the immense variety of style and subject they present, and for their fidelity to nature, of which he never abandoned the study. Hence Camille Roqueplan is peculiarly free from the defect to which most modern French painters incline, namely, conventionalism, and a seeking to produce strong effects by extraordinary and unnatural means. Many of these productions are quite unknown to the public, having been painted in the more leisure hours of the artist, and laid aside to serve as a heritage to his family.

The theatres have been in a vein of success during the last ten days. At the Français, "La Joconde" has a brilliant triumph; at the Odéon, "La Florentine," the first dramatic production of a young amateur of Polish extraction, highly in favour at the Palais Royal—not the theatre, but the Palace—meets with great and well-merited applause; M. Charles Edmond (*a nom de plume*) bids fair to take a very high post in dramatic literature, if it pleases him to continue his efforts in that line. At the Porte St. Martin, "La Boulangère a des Ecus" draws abundant audiences: as also, at the Vaudeville, "Le Fils de Monsieur Godard. Mdme. Borghi Mamo takes the place of Mdlle Cruvelli at the Opéra.

AMERICA.

The steam-ship *Asia*, which left Boston on the 21st ult., arrived at Liverpool on Sunday.

The intelligence by this arrival removes all apprehension of a rupture between England and the United States. A letter from Washington, Nov. 16, says:—"The Cabinet were in session again to-day, and the despatches by the *Pacific* from our Minister, Mr. Buchanan, were received at the State Department and considered in Cabinet Council. The tenour of these despatches is, I am informed by good authority, of the most friendly character, assuring our Government that there was no significancy in their sending a fleet to the West Indies, and that there was not the slightest cause for the panic created by the English journals. This news has quieted those excitable spirits in the Cabinet who have been anticipating a rupture between the two Governments. Commodore Paulding's expected mission to San Juan has thus been frustrated, and only one vessel of the home squadron will proceed to Nicaragua. The Administration is greatly relieved by the news that England does not intend her fleet for a Central American demonstration, as it relieves them from the danger of having to back out from the Monroe doctrine or fight."

Accounts from Bermuda, to the 7th, state that the British fleet from Halifax, with the Admiral in command, and a portion of the Baltic fleet, were daily expected. Governor Murray had prorogued the Legislature. The mail-steamer *Curlew*, from Halifax, had nearly foundered during a late passage.

According to the *New York Herald*, Bank of England post-notes, payable sixty days after sight, have been sent to the United States to a large amount. "It is supposed they are intended for the purchase of breadstuffs for shipment to Great Britain, and to prevent or postpone the exportation of specie from London for that purpose."

Mr. Williams and the Electors of Lambeth.—On Monday evening there was a numerous assemblage of the electors of Lambeth, at the Horns Tavern, Kennington, to hear from Mr. Williams an account of his conduct in Parliament during last Session. Mr Williams, who was received very cordially, commenced his address by recapitulating the course he had taken with reference to the various measures which had been introduced into the House of Commons during the Session. He had, he said, in every instance acted to the best of his judgment in strict conformity with the principles he had professed, and he had always been present, with the exception of five nights, when he was incapacitated by illness. After commenting upon most of the measures of the Session, and animadverting on the mismanagement which led to the disasters of last winter, Mr. Williams proceeded to say that he looked forward with a little more hope to the exertions of the present Government, though he had not implicit faith in them. He concluded by giving his opinion that the only way to secure a lasting peace was to carry on the war with vigour, and if they did so he believed it would not be long before they would establish it upon the safest and most honourable terms (Cheers). Various questions having been put by electors to Mr. Williams, and answered by him, the following resolution was carried unanimously:—"That this meeting, having watched the public conduct of our representative, W. Williams, Esq., during the last Session of Parliament, and having heard his explanations, express its full satisfaction and thanks for his exertions, which they believe have been productive of the most useful results."

The Minor German Powers and Russia.—The *Indépendance* of Brussels says:—"The Powers of the second order, and the majority of the other Courts of Germany, have just addressed representations to Russia, enforcing on her the necessity of restoring peace to Europe before the spring. These Powers have not addressed themselves to Russia collectively, but have come to an understanding together as to the nature of the representations to be made to her, and have all written in the same tones. This is a fine reply of the Courts of Germany to the loyal appeal made to them by the Emperor Napoleon. The Emperor himself did not use that language without well knowing, from the conference of MM. De Beust and Von der Pfordten, when in Paris, how it would be understood in Germany."

The Case of Colonel Turr.—Rumours from Constantinople state that Viscount Stratford de Redcliffe has protested energetically against the late arrest of Colonel Turr by the Austrian Commander at Bucharest. It is said that the Porte also has expressed itself to the Austrian Minister at Constantinople as deeply aggrieved by this outrage, seeing that the Turkish territory was the scene, and that the officer arrested is attached to an allied army, the individual members of which, by virtue of a treaty, have the right to circulate throughout the Sultan's dominions. It appears from the *Ost Deutsche Post* that on the 30th ult. Colonel Turr was in prison at Cronstadt, and that a council of war had pronounced his sentence.

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

CAMP, SEBASTOPOL, Nov. 24, 1855.

Ruined as was Sebastopol, when abandoned by the Russians—burned, broken down, and destroyed, as we found it on the morning of the 9th September—its aspect is now more desolate than ever. In the midst of the general overthrow there were still some large edifices entire, which testified to the former splendour of the spot, and spoke of the energy and taste of our enemies. Since then two forces have been at work completing the destruction of those well-fought remains, and, between the pickaxe of the Allies and the cannon of the Russians, the remnants of Sebastopol are fast returning to the dust out of which they were created. The stately edifices, churches, clubs, and barracks, are falling piecemeal before us every day; and the stones or wood no longer grace structures of ambitious elegance, but descend to the more useful erection of huts and stables. The well-known temple in Sebastopol West, the barracks and hospitals round the dockyards, and other large palaces and houses are unroofed, and partially carried away; whilst the Russians, intent on the death of the spoilers, fire away daily volleys, their shot and shell reverberating amongst the ruins, and casting up volumes of dust and stones wherever they alight. Sebastopol will shortly offer the spectacle of unsightly gables and rugged walls in the whole of its extent; and, through the wreaths of snow which already encircle it, one may almost fancy that the gaunt relics around are a wilderness of tombs—the sole memorials of a race now departed. Whilst these changes are daily visible on the shores of the harbour near which the Russians still linger, with that love of old haunts which characterises almost every animal in the creation—whilst one town is disappearing, another is rising on the hill—of a less permanent and solid appearance, it is true, but more vast, and more suited to our present purposes. The elevated plain of the Chersonese is now a perfect wilderness of huts, intersected by broad and well-constructed roads, drained on the most improved principle, and metalled, to meet the exigencies of large traffic during the forthcoming period of winter. Wherever the ground appears to offer the most successful return of stone, large parties may be seen daily delving and blasting, quarrying out the rock, and breaking it into fragments. Strings of carts line the roads, carrying the produce to the site of new erections, whilst others wend their way along from Balaclava to the front with parts of huts sent out from England by the care of Government. The new roadways are not alone brought into daily use, but a speedier communication has been established along the line of railway by the working of two new locomotives, whose whistles cheerily and shrilly echo amidst the hills. One of these is "The Victory," a pretty little engine, decorated with the flags of the united nations. A few more days and a force-pump will be in readiness to fill the boilers, which are now laboriously supplied by hand. These preparations, and the activity of officers and men, were luckily made in time for the majority of our troops to be comfortably housed; for already November has given us a foretaste of winter. On Wednesday the hills of the Crimea, which had lain all the morning shrouded in heavy clouds, broke into day, and exposed their sides covered with snow. A high north-east wind began at the same time to blow, and the following day and night were marked by snow and bitter frost throughout the Camp. Ice of two or three inches in thickness was every pond and pail of water; and those who, like your Correspondent, are still under canvas suffered much discomfort from the sudden inclemency of the weather. The wind has since shifted, and the days are still warm and cheerful enough.

The Russians seem to have been suddenly compelled by the rapid advance of winter to move their quarters. Without sufficient shelter, and suffering, we are told, from shortness of provisions and want of fuel, they began yesterday to move in masses from their camps on the north side to positions inland. I observed six or seven battalions thus in motion cresting the hills and diving into vales, followed by strings of carts and pack animals, as if a regular retreat were intended. Coupled with this fact is another which has reached us from Eupatoria, where General d'Allonville has again been successfully beating up a body of the enemy retreating towards Perekop. The difficulties of the Russians in their old positions must have been increased by the capture on the Azoff shores of a convoy of corn two miles long, which was destroyed a few days since by men from one of our ships of war—I believe the *Vesuvius*. It is supposed, not without a good show of foundation, that Prince Gortschakoff has commenced the evacuation of the Crimea. In the mean while, however, the batteries of the north side still continue their daily fire upon us, and they have even extended their batteries and built two new ones at the mouth of the pass leading towards Simpheropol from Inkerman.

It is satisfactory to be able to record the continued healthiness of our forces, which are in the enjoyment of repose and the best spirits. A pause, however, has occurred in the dispatch from hence of the cavalry regiments to the Bosphorus. We hear of a fresh and virulent outbreak of cholera at Scutari, where Dr. M'Gregor and another medical officer have fallen victims to the prevailing disease. The 6th Inniskillings, under orders to embark on the 21st, were countermanded, and the 4th Dragoon Guards also remain for the present in the Vale of Karanyi.

Other letters from the Crimea speak of the movements of Russian troops on the Mackenzie-ridge, from which it is inferred that they are about to move inland. The accounts which arrive by deserters confirm this belief. Lately great numbers of Russians have come in, partly to the Piedmontese and partly to the French, and from every arm of the service. This frequent desertion speaks either of a great carelessness in the outposts, or, what is more probable, of their being, as they say they are, on short commons. The deserters all state that the Emperor Alexander was in the Crimea in the middle of last month, and, as we learn the same fact from the *Invalide Russe*, we have thus some ground for relying upon the information they give. They all agree in stating that he reviewed the troops on the Mackenzie-ridge on the 12th, those in the Slevernaia on the 13th, and those on the plateau of Korales towards the Upper Belbec on the 14th. They say the Emperor expressed at the review his satisfaction at their defence of Sebastopol, and thanked them for it. He said that they were not driven from Sebastopol, but evacuated it according to his orders, as he did not think that the holding the south side was worth the lives of so many of his brave soldiers and dear children. In conclusion he said that he hoped that they would prove worthy of their fame as the defenders of Sebastopol now they were going to march. None of the deserters knew what this last expression meant, whether it applied to a retreat or to an attack. After the review every man received a gratification of three roubles, or very nearly nine months' pay.

About the movements of the Russian army the deserters seem to know nothing. The expression which they say the Emperor used in his speech, namely, that they are going to march, puzzles them as much as it does the Allies; whether they are marching forwards or backwards is to them a complete mystery. The only difference between the accounts given by the deserters and the official one in the *Invalide Russe* relates to the date of the Imperial visit, which is described by the latter authority as having ended on the 12th of November. On that day the Emperor addressed to Prince Gortschakoff the following rescript, dated Simpheropol, Nov. 12:—

During my sojourn with the army in the Crimea, I have remarked with peculiar satisfaction that the soldier has preserved his air of vigour and contentment in spite of the unparalleled labours which he has undergone since the defence of Sebastopol, and, moreover, that order in all departments—and this is the basis of the good organisation of an army—has been undisturbed. The excellent condition of the army testifies to the solicitude and indefatigable exertions by which alone you have attained such an end, and that, too, in a moment when all your activity, all your thoughts must have been directed to

combating an enemy who is powerful, brave, and sparing of no sacrifice Seeing the situation which nature has created at Sebastopol, facing back before the enemy step by step, and guided by the wise motives by which an accomplished commander must be influenced, you have left the enemy but ruins dearly bought at the price of the blood which has been shed. Having withdrawn the troops by a way up to that time unknown, you are again ready to meet the foe and to fight him with the courage you have always displayed in leading your regiments to the field. In rendering full justice to your signal services, it is agreeable to me, after having personally expressed them to you, to renew here my sincere acknowledgments. I pray you, Prince, to believe in my invariable good-will in your regard

Yours, sincerely attached, ALEXANDER

The different general orders issued in connection with the inspection of troops held by the Emperor during his journey to the Crimea show that in all parts the troops consisted of light cavalry; the only exception to this rule is formed by the division of cuirassiers now stationed in the neighbourhood of Nicolaieff. All correspondence from Russia that is spoken of here as coming from well informed sources expresses astonishment at the rumours of pacific overtures, &c., current in the press. The only facts the letters contain point to energetic preparations for a renewal of the war in the spring.

Though the Emperor arrived at Tzarskoe-Selo in the night of the 18th ult. he had not visited St. Petersburg up to the 21st, on which day the Dowager Queen of the Netherlands was to arrive there. The Dowager Empress of Russia had already provisionally taken up her residence for the winter in the Palace of St. Petersburg assigned her in the will of the late Emperor. Immediately after the arrival of the Emperor at Tzarskoe Selo, on his return from the south, not only Count Nesselrode, with his assistant Seniavine, the Secretary of State, Count Panin, Count Rüdiger, and various senators, repaired to the Imperial residence there, but also Count Orloff, Count Adlerberg, Baron Lieven, and Prince Bariatinski, who had all accompanied the Emperor on his journey.

By the *Euphrates*, which left Constantinople on the 26th ult., we learn that Admiral Lyons continued to cruise near the shore of the Crimea, to survey the point of Kertch, against which the Russians seem to be preparing an attack during the winter. They were fortifying Arabat, and were concentrating in its environs 30,000 men, whilst 15,000 more were sent towards Yenitchi, in order to establish communications between the mass of the army of Prince Gortschakoff and the interior of Russia by the road over the Spit of Arabat. The guns of the boats and steamers of the Allies, and of their floating batteries, can reach the Russian convoys along the whole route, and across the whole breadth of the Spit, unless maritime operations are suspended by the freezing of the Sea of Azoff, in which five gun-boats were cruising when the steamer left.

THE TURKISH CONTINGENT.

There appears to be some very gross mismanagement with regard to this useful body of troops, as the following letter, from a cavalry officer of the Turkish Contingent, abundantly shows. It gives a very true sketch, from an eyewitness and sufferer, of the recent voyages, hopes, and disappointments of the unlucky cavalry of the Contingent:—

On Monday, the 20th of November, a fleet of steamers and transports were seen arriving, one by one, in Balaclava roads, where they remained the whole day, not anchoring, but, with steam up, moving to and fro. With the exception of a solitary boat, which passed to the shore, no communication was held with the port. Next morning the mysterious fleet was gone. What could the armament be that it contained, and on what imp ortant errand was it bound? It was the cavalry of the Turkish Contingent: it had arrived from Kertch: it had sailed for the Bosphorus. The following is the history of its wanderings.—General Vivian, in his exposed position at Kertch, greatly needed his cavalry, and wrote for it to join him. General Shirley hastened to embark a force, he and his officers hugging the belief that they would at last see some service. Large steamers and transports, expensive ships, costing the Government £100 to £200 a day, conveyed the force, which, owing to bad weather and contrary winds, reached Kertch only on Thursday, 15th of November. What does it bear on arriving? [Every one is calling out for cavalry. There is abundance of forage in the country around. Only the day before the Cossacks had been rick-burning within three miles of the place. The cavalry are delighted to hear they have arrived just at the right time; but their hopes are soon dashed. A report spreads that there are no means of landing them, and that they must go back to the place whence they came. Go back, indeed. Why, there are two or three gunvessels in harbour, pitched for the transport of cavalry, and steamers of light draught have passed by the ships during the day, going straight into Kertch. Why not use them? We are told the naval agent says it cannot be done. Our water and provisions are running short. The * * * arrives from Balaclava on board. Is that to go back too? By no means. There is a steam-tug at once to take that on shore

Sunday, Nov. 18.—General Shirley returns on board. We are to leave for Balaclava. What! sail away from such a famous place for cavalry! Why not land us, if only for a fortnight, to give the horses' legs a chance? Rely on it, Shirley would clear the country round, bring in forage for the whole winter, and the cavalry would gain some credit. Can it be that they think we should gain more than our share, by being the right troops in the right place? God by, for this year at least, to all chance of honour and distinction. With heavy hearts we see the anchor lifted. The horses are beginning to droop. We reached Baclava. The General goes on shore, to seek permission for us to land at Eupatoria. He wants a chance for his cavalry. The naval authorities refuse, and we sail for the Bosphorus. What has this trip cost the Government?

The sole reason for all this rad blundering and waste of the public money is said to be professional jealousy. "It is no use minding the matter," says the Correspondent of the *Times*; "the truth is, as I have good grounds for believing, that there are persons in high places at headquarters who do all in their power to deprive the Contingent of opportunities of distinction, because it is commanded by an Indian officer; also, perhaps in a less degree, because numerous Indian officers hold appointments in it—some of them on the Staff. * * * * *

But Shirley, it may be said, the crack Colonel of the 7th Hussars, is no Indian officer. Why thus fribble and trifle with him? Because he has cast in his lot with a Company's General—one, certainly, of high rank, an honourable career, beloved and respected by his officers and soldiers, indefatigable in his duty, and who, under the mild demeanour of a polished gentleman, conceals, as those who best know him well know, much energy and firmness of character. All his good qualities avail not. Vivian is an Indian, and, consequently, unpleasant to the sight and hearing of our military red-tapists and exclusives."

A PRUDENT DECISION.—The Madrid *Nacion* of the 23th ult. says that the Holy See has postponed, perhaps abandoned, the projected reply to the memorandum of the Spanish Government; and it remarks that in so doing it has acted with prudence and displayed a conciliatory spirit. The *Express* says that amongst the English shareholders in the proposed Bank of Spain are Messrs. Henderson, Fox, Kennard, Denison, and Flower; and amongst the French, Count de Morny.

THE DANUBIAN PRINCIPALITIES.—Count Coronini is expected at Vienna to take part in the deliberations for the settlement of the affairs of the Danubian Principalities, which are to be opened so soon as Sir Hamilton Seymour arrives. The Austrian Government has announced its satisfaction with the appointment as Ambassador, in the most flattering terms, in answer to an official communication from Mr. Khuit, of the date of the 24th ult., informing the Cabinet of Vienna of Sir Hamilton's nomination. The statement of Prince Gortschak.f having made a declaration that Russia would protest against any organisation of the Principalities arranged without her participation is discredited by the *Augsburg Gazette*. According to that journal, Austria, Turkey, and the Western Powers indicated, a year ago, by the treaties they then concluded, an intention of terminating the provisional state of matters existing in the Principalities by settling a definitive system of government for their regulation; and if Russia intended to protest she would have done so long since

THE INQUISITION IN THE VATICAN.—The *Piemonte* of Turin publishes a letter from Rome giving the following account of the Tribunal of the Inquisition at Rome since the present time:—"The old Palace of the Inquisition having been turned into barracks for the French troops, the tribunal has been transferred to the interior of the Vatican, where the Dominicans occupy a part which cannot be known but by a guide in the Palace can ever find, such is the intricacy and multiplicity of the stairs, passages, and secret corridors that lead to it. When the inquisitors want either to arrest or question you, they neither send officers of justice nor a warrant; such extreme measures are only reserved for those who attempt to escape; but a gentleman calls upon you in a quiet way, and informs you that the Holy Office requests the pleasure of your company. Should you happen to expostulate, the quiet gentleman politely suggests the expediency of being punctual. When you reach the outer court of the Vatican you find a priest who conducts you to the tribunal; and, if you are only summoned as a witness, it is he who conducts you back. When in the presence of the inquisitor you are made to swear that you will speak the truth; your answers to the questions put to you are written down in Latin; and before being released you must take another oath that you will reveal nothing of what you have either seen or heard."

BURYING A WHOLE PARISH.—The sexton of Cullompton, in Devonshire, who died a few days since, had buried upwards of 4000 persons, while the population of the town is only 3685. It is said that the sextonship had been in his family for a period of 300 years.

TO VICTOR EMMANUEL, KING OF SARDINIA.

FOREMOST and greatest in the ranks of Kings,
Thy march hath trod a host of fictions down:
Honour upbears thee on her proud-spread wings,
And on thy brow sits wisdom, as a crown.
O where is Chivalry, if not in thee?
Thou art as one who, in an earlier day,
Through lone, dark midnights, upon reverent knee,
Did watch his arms beside some altar grey,
Thence to ride forth and champion the world!
First in the noble struggle of the free,
No lagging banner hath thy hand unfurled:
Here, planted fast, and rooted as a tree
In the strong heart of nations, let it stand,
Victorious ensign of a glorious land!

E. L. HERVEY.

THE BRIGHT AND CRAWSHAY CORRESPONDENCE.

THE following correspondence between Mr. Crawshay, of Gateshead, and Mr. John Bright appeared originally in the *Birmingham Journal*. Within the last few days it has been published by the *Manchester Guardian*, and has given rise to a rather warm discussion among the electors of that borough as to whether it is not high time to get rid of a member who talks in so insolent a manner of the opinion held by the great majority of his constituents on the most important question of the day. There was some talk of a ticket meeting to be held in the new Free-trade Hall, in order that Mr. Bright might have an opportunity of explaining his views on foreign policy; but this, we are told, has been abandoned, as in that case he would be under the necessity of speaking out on the question of the nationalities, which would damage him still more in the estimation of the Manchester democracy. On some points Mr. Bright has boldness enough, and to spare; on others it must be confessed that he is exceedingly prudent.—

TO THE EDITOR OF THE "BIRMINGHAM JOURNAL."

Having read a very remarkable article in your number of yesterday, in which a comparison is instituted between Mr. Urquhart and Mr. Bright, I send you a correspondence which I have recently had with the latter gentleman, which will, I think, show you that Mr. Bright does not stop short of conclusions, but stops short of action on those conclusions.

This correspondence originated in my having from the members of the House of Commons selected Mr. Bright as one who, from his ability, independence, and courage, had suggested to me the hope that the qualifications requisite for the task of taking the first steps in a national and judicial investigation might not be wholly wanting in the Legislature.

My hopes have, for the present, been disappointed. Should the present indications of public awakening be incipient only, and, consequently, progressive, my hopes in Mr. Bright may, as it is my fervent prayer, in the end be realised. It is my belief that even now Mr. Bright and I fully concur in one point—a reprobation of that public apathy which has rendered the House of Commons, in the neglect of its own duties, the true representative of the people. Yours obediently,

Sheffield, Nov. 8. G. CRAWSHAY.

(Copy. No 1.—Extract.) Gateshead, Sept 23.

After applying for information, the letter concludes thus, the extract being written from memory:—"If we had understood the character of our Ministers, and especially of the Prime Minister, we should not be in our present position, from which I can see no extrication but by that character becoming understood, however late." Yours truly, G. CRAWSHAY

(Copy. No. 2.) Rochdale, Sept. 25

Dear Sir,—The fact is that Mr. Cobden and I know nothing of the matter except the gossip of the day. I presume it to be notorious that the Leipsic Consul was a disreputable person, and that he was appointed by Lord Palmerston: but I suspect our system of appointments is not intended to exclude such. I know nothing whatever of the matter, and I think Mr. Cobden knows nothing that will serve your object, or that you can publish.

With regard to the Prime Minister, he knows the ignorance and the foibles of the people, and suits himself to them. That is an imposture as evident enough, but to expose him does nothing. He exactly suits the frothy politicians that are so numerous among our countrymen. He is to the middle classes what Feargus O'Connor was to the working classes, and I wish them joy of him. Yours very truly, JOHN BRIGHT.

G. Crawshay, Esq.

(Copy. No. 3.) Gateshead, Oct. 2.

Dear Sir,—I duly received your letter of the 26th ult., with respect to which I feel called upon to remark:

You observe with respect to the Prime Minister, "That he is an impostor is evident enough, but to expose him does nothing."

May I beg of you to ask yourself this question, how far such a description may not be justly applied to a member of Parliament who can hold such language? Yours truly, G. CRAWSHAY.

J. Bright, Esq., M.P.

(Copy. No. 4.) Rochdale, Oct. 3.

Dear Sir,—I hope I do not rightly understand your note. It seems intended as an insult to me, because I am unable to join in proceedings which I am not clever enough to comprehend. To expose the Minister is nothing, so long as the people are a prey to the delusions which he practises upon them.

He is the proper ruler of a nation arrogant and intoxicated, and, so long as the present temper of the public is maintained, they have the Government they most deserve.

Lord Palmerston is Minister, because he is supposed to be wishful to support the foreign policy you advocate. I am not sorry if he plays false to his credulous followers, for it is difficult to say whether his policy or theirs would be more pernicious to the country. Perhaps, as we differ so much on these topics, it is better that our correspondence should cease.—I am, respectfully,

George Crawshay, Esq. JOHN BRIGHT.

(Copy. No. 5.) Gateshead, October 4.

Dear Sir,—What I intended by my note was not insult, but blame. I would not willingly insult any man.

In my first letter I only asked you to give me some facts. You could not. How could I desire to insult or even blame you for that? But I could not pass over the doctrine repeated in your last, "that to expose the Minister is nothing," put forth with whatever qualification. This is nothing to do with our opinions. Suppose you had a friend in the position in which you yourself depict the nation, "a prey to delusions and practised on by an impostor." Would you consider it nothing to show him that he was made a fool of? Most certainly, if you can see nothing wrong in the language I have complained of, our correspondence, at least upon this subject, cannot proceed.—Yours,

J. Bright, Esq., M.P. GEORGE CRAWSHAY.

MR. MACREADY has just forwarded a handsome subscription in aid of the funds of the Printers' Almshouses.

MARY KELLNACK, the aged woman who walked from Cornwall to see the Great Exhibition of 1851, in Hyde-park, died at Newlyn, on Wednesday week, aged eighty-eight years. Her portrait appeared in the ILLUSTRATED LONDON NEWS, No. 526.

MESSRS. STRAHAN, PAUL, and BATES have been removed to Millbank Penitentiary, where they are fulfilling their sentence in the ordinary way.

SCOTTISH HOSPITAL.—The 199th anniversary of this institution was celebrated by a public dinner at the London Tavern on Monday evening; the Lord Mayor in the chair, supported by about 150 friends of the charity. The collection of the evening amounted to upwards of £500.

THE METROPOLITAN BOARD OF WORKS.—On Wednesday next, the 12th instant, the elections by the metropolitan vestries of members to constitute the Board of Works will take place. The city of London will return three, and the highest number to a single parish is two. Several magistrates are candidates. It is not necessary that a vestryman should be elected.

EXPLOSION AT WOOLWICH ARSENAL.—On Monday morning, at 11.50 a.m., an accident occurred in the rocket department of the Royal Arsenal at Woolwich, which, it is feared, will cause the loss of several lives. At the extremity of the yard are some slightly-erected sheds for making and finishing rockets. In one of these, called the mealing-shed, where nine men were employed in pulverising the powder for the manufacture of Hale's rockets, an explosion took place, whereby the finishing and mealing sheds were blown into the air, and nine men were more or less injured. Three of them were dangerously wounded, and four others are severely wounded and bruised, besides being fearfully burnt. The only cause by which this sad accident can be accounted for is that, in mealing the powder, some slight friction, sufficient to create a spark of fire, must have been occasioned by the double-handed wooden instrument used for that purpose.

THE MANCHESTER STRIKE.

THE strike at Manchester is not at an end, and both masters and men have appealed to the public. We have read their appeals, one of which has been especially sent us "to make our information more exact." We have, however, nothing to retract or alter in what we wrote on the 24th ult. We lament still that the difficulties of a strike provoked by a combination of some Manchester masters to reduce wages should be added to the sufferings which severe weather and dear bread invariably inflict on the working-classes. Whether the Manchester self-minders get higher wages than the similar workmen in the surrounding places is disputed, and, considering our present facilities of communication, is not credible, unless there be peculiar circumstances in Manchester to warrant it. In the general condition of the trade there are no apparent circumstances to justify the attempt of the masters. To the end of September we have already shown, and we can now assert to the end of October, by later returns, the cotton trade was more flourishing than ever. Since the end of October the supply of the raw material has improved; and trade-circulars issued at Manchester say, "At the commencement of the month (November), and extending over a period of fourteen to twenty-one days, considerable improvement in the demand for both goods and yarns existed." "Large operations were entered into, and an improved price of both goods and yarns necessarily followed." We have read a letter, too, in a contemporary from "A Manchester Cotton-spinner," in which it is stated that the manufacturers "have exported largely for the last nine months," but in which it is assumed that this was the consequence of the high price of provisions at home, which reduced the home market for cottons, and forced an export. The assumption is incorrect, for the whole quantity of cotton used has been, on the average, 3700 bales per week more in 1855 than in 1854. Though the price of agricultural produce has been high, our own crops were very large in 1854, and not small in the present year; our agricultural classes have, consequently, all been employed throughout 1854 and 1855. There has been a great demand for labour at prices pretty nearly adequate to the increased price of food; and the assumption, therefore, that the increased export has been forced by a much-diminished market at home appears to be without foundation. If exports have not been profitable, there must have been excessive production or high discounts, or both; and it is not fair that the men should suffer from the faults of others. Our statement of the trade was perfectly exact; and, though we are thankful to the gentleman who offers us information, we must say that he seems to require it himself.

We described the whole factory system as nursed and regulated by laws, and the trade, in consequence, as one in which the parties were continually seeking by unions a species of force to gain unfair advantages over one another. The public hears continually of disputes between factory owners and workmen, the like to which do not habitually occur in other great trades. The masters, in their appeals, say:—"Unions of the men have successfully promoted constantly-recurring efforts on the part of the operatives to obtain advances of wages." "In pure self-defence the masters in Manchester formed themselves into a union." "In 1853," the "times being favourable," and "the associated masters not being sure of their strength," the self-minders and piecers obtained an advance of wages. The masters in union now suppose the times are favourable for withdrawing the advance; and they retort on the men. They speak "of the past dictatorial conduct" of the operatives, and allege that "they have no inducement, in the state of their business, now to continue making sacrifices which only a *profitable trade enables them* to meet." Instead of carrying on an unprofitable trade, as the "Cotton-spinner" alleges, they have carried on a profitable trade; but now they find it unprofitable, and they will no longer make what they call sacrifices for the dictating workpeople. Such phrases describe continual contests, rather than a continual series of mutual services. Our description of the factory system, then, was exact. There is a perpetual conflict; but just now the masters, suffering very much from the condition of the Money-market, are partially unable, as well as unwilling, to pay the rate of wages "extorted" from them in 1853; and, thinking that the times are no longer favourable to the operatives, they try by a combination to win it back. That is their own statement.

From our former remarks we have nothing to retract. We must add that the masters, far more than the men—few of whom have votes—are the persons chiefly responsible for any condition of the law inimical to trade, and that the unrepresented classes should justly be the last and the least to suffer from enactments which they had little hand in making. Some writers are predicting the loss of the cotton trade from the cheaper manufactures of Switzerland and Germany. With them we say such loss would be ruinous to England; but the cotton trade was not made flourishing by low wages, and there are better means of producing goods cheaply than degrading the workmen. Intelligence, not slavery, is the parent of cheapness, and the wealth-creating intelligence of the multitude is not increased by poverty and very, very small rewards. There is more danger of our being undersold by the Americans than by the Swiss.

THE King of Sardinia, accompanied by the Marquis d'Azeglio, Chevalier Nigra, and Chevalier Cigala, on Wednesday honoured the establishment of Mr. Quartermaine, of Piccadilly, with a visit, and became a purchaser of three very fine horses of great value.

A SOCIETY, calling themselves "The National League for Obtaining the Opening of the British Museum and Crystal Palace on Sundays," have recently called two meetings at Haverstock-hill, to form a branch. On both occasions they have been met by those who are opposed to what they consider the desecration of the Sunday by law, and defeated by a show of hands. On Tuesday evening the opponents of the League held a public meeting at the National School-rooms, Hartland-road, to form a Sunday Rest Society. After some excellent speeches, both by professional and working men, the resolutions to form the society were carried by overwhelming majorities.

AN ACT OF CLEMENCY.—The Princess Christine Belgiojoso of Lombardy was banished from Austria some six years ago, on account of her political doings. This lady took up her residence at a farmhouse in Asia Minor, where, being totally destitute, she was forced to labour with her hands for her very existence, in the strictest sense of the word. The Emperor of Austria has now been pleased to recall the lady by an edict of grace, and to annul the sequestration which at the time of her banishment was placed upon the whole of her property.

BREAD MEETING AT NEWCASTLE-ON-TYNE.—On Sunday a meeting convened by handbills, headed "For lack of bread the people perish," was held on the town moor, Newcastle-on-Tyne, to consider the high prices of bread. About 10,000 persons were present. The Rev. J. H. Rutherford, a dissenting minister, addressed them in a very sensible manner, urging frugality and temperance as the best means of lightening the effects of high prices. Other speeches in a very different strain followed; the rapacity of the rich and the mischievous results of bad legislation being the main topics. The assemblage dispersed quietly.

THE NORTH AUSTRALIAN EXPEDITION OF THE ROYAL GEOGRAPHICAL SOCIETY OF LONDON, according to a Sydney journal, cleared that port in July last. The expedition consists of the barque *Memarch* and schooner *Tom Tough*. Several savans in zoology, botany, and geology, are of the party. The vessels were to call at Moreton Bay for horses and further supplies; and the depôt was to be formed at the Victoria River, where the *Memarch* was to leave for Singapore, the schooner remaining for whatever services might be required of her. Stores are supplied for eighteen months; and the little band will proceed to explore the unknown interior of the country.

ERRATUM.—We are requested to state that the announcement in our Journal that the medal and honourable mention by the jurors were awarded to Mr. Walker, of Sheffield, for the patent self-feeding stove and fender, was incorrect; the recipient being Mr. Thomas Walker, of the Oxford-street Stove Works, Birmingham.

THE ARRIVAL OF THE KING OF SARDINIA, IN "THE VIVID," AT DOVER.—(SEE PAGE 675.)

RECEPTION OF THE KING OF SARDINIA BY PRINCE ALBERT AT THE SOUTH-EASTERN RAILWAY STATION.—(SEE PAGE 671)

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 9.—2nd Sunday in Advent
MONDAY, 10.—Grouse shooting ends. Charles XII. killed, 1718.
TUESDAY, 11.—Louis XVI. brought before the National Convention, 1793
WEDNESDAY, 12.—Lord Hood born, 1724. Cromwell declared Protector, 1653.
THURSDAY, 13.—Dr. Johnson died, 1784. Lord Ellenborough died, 1818.
FRIDAY, 14.—Washington died, 1799 Izaak Walton died, 1683.
SATURDAY, 15.—Earl Stanhope died, 1816.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING DECEMBER 15, 1855.

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

VISIT OF THE KING OF SARDINIA TO FRANCE AND ENGLAND:
Embarkation of the King at Genoa ... ... *page* 680-681
Grand Musical Fête to his Majesty, in the Palace of Industry, at Paris 672
The King of Sardinia and the Emperor of the French Hunting in the Forest of Compiegne 676
Arrival of his Majesty in the *Vivid*, at Dover 680
Reception of the King by Prince Albert at the South-Eastern Railway Station 661
The Arrival at Charing-cross 657
Visit of the King to the Royal Arsenal at Woolwich 668
Grand Trophy of the Allies, in the Corridor at Guildhall 669
Portrait of Victor Emmanuel, King of Sardinia 664
Portraits of her Majesty and Prince Albert 665
Inkerman Mill, the Scene of the Recent Explosion 673
Remains of an Ancient Building discovered near the Head-quarters, Sebastopol... 673
Sardinian Chasseurs Bearing the Body of their Commander, Captain Proia, at the Battle of Rivoli 677
Reception of General Canrobert at Stockholm 680-681
The New Colonial Steam War-Sloop *Victoria* 684
Building of the *Lapwing* and *Kingdove* Dispatch Gun-vessels by Gaslight, at Cowes 684
Ancient Rank Stone recently found in the Isle of Man 685
Testimonial presented to the Hon. E. Deas Thomson, Colonial Secretary of New South Wales 685
Horses for the Land Transport Corps, encamped at Toxal, in Asia Minor... 685

VISIT OF THE KING OF SARDINIA.

The ILLUSTRATED LONDON NEWS for Saturday next, Dec. 15, 1855, will contain the completion of the Series of Engravings of the King of Sardinia's Visit, with the following Splendid Illustrations:—

Reception of his Majesty at Windsor Castle.
Mass at the Sardinian Chapel.
Presentation of the Address to his Majesty in the Guildhall (Two Pages).
Investiture of his Majesty with the Order of the Garter (Whole Page).
Grand Ball at the Hôtel de Ville, Paris, &c.
Also several Sketches from the Crimea, and other Illustrations.

ANNUAL CHRISTMAS DOUBLE NUMBER (1855) OF THE ILLUSTRATED LONDON NEWS.

On SATURDAY, DECEMBER 22nd, will be published the

CHRISTMAS ANNUAL NUMBER

OF

THE ILLUSTRATED LONDON NEWS.

And, besides the usual attractions, a New and Marvellous Supplemen will be given, containing

MAGNIFICENT COLOURED PICTURES

OF

The Angel Appearing to the Shepherds. By John Gilbert.
London: Returning from Church on Christmas Morning. By George Thomas.
Bringing in the Boar's Head. By J. Gilbert.
Singing the Christmas Carol.

ALL PRINTED IN COLOURS.

In addition to these, the ordinary CHRISTMAS SUPPLEMENT will contain, among others, the following Illustrations:—

The Monster Snowball.
Cold Without. Drawn by S. Read.
The King and the Jolly Miller. Drawn by John Gilbert.
Christmas Eve and Christmas Day. Drawn by John Clayton.
The Shower of Toys: a German Custom.
Conjuring for Children's Parties. By Professor Anderson, the Great Wizard of the North. With an Illustration.
The Shadow on the Wall. By Phiz.
And a variety of other subjects appropriate to the season.

NOTICE TO THE TRADE AND THE PUBLIC.—No Copies can be supplied of this Double Number unless subscribed for immediately.

Price of the Double Number. TENPENCE; Stamped, 1s.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 8, 1855.

THE honest people of England have looked into the honest face of the King of Sardinia, and both, there is reason to believe, have derived satisfaction from the acquaintanceship—we might say the friendship—thus formed. His Majesty's reception, if not boisterous, was hearty and sincere. The people did not look upon him as the Sovereign of a great people—as a mighty conqueror—as a romantic hero—offering in his life the strangest vicissitudes and most remarkable adventures; neither did they throng around his path to catch sight of an apparition of the rarest female loveliness that has been seen in our time—all of which feelings mingled in their minds when the Emperor of the French came amongst them a few months ago; but they regarded him in the light in which his own subjects look upon him—as an honest and intelligent man, governing his small kingdom with justice and honour, and building up amid difficulties and dangers, and the obstruction and hostility of priestcraft, a stable edifice of constitutional liberty. The applause they bestowed upon him as their gallant ally in a great and just war was only a portion of the homage which they rendered to him; for, engrossing as the war is, they could not but remember that the domestic policy of Victor Emmanuel is as noble as his foreign, and that he has set an example worthy to be followed by all the Sovereigns of Europe, and afforded an encouragement to every people who desire freedom, but have not yet been able to attain it. Russia, if she meditate universal conquest, or the subjugation of Europe, can have no more formidable enemies than free States; and every King who founds such a State, or consolidates popular rights that were pre-existent to his accession, though unrecognised and disputed, raises a barrier against barbaric dominion, and contributes in a large degree to the peace of Europe. If all Italy had been as free as Sardinia, and if all Germany were ruled by constitutional Kings, England and France would not be compelled to constitute themselves the policemen of Europe and its protectors against the brigandage of Muscovy.

In his journey westwards Victor Emmanuel may have seen more pomp and splendour than met his eyes in our dingy London in the murky month of December; but he nowhere beheld a spectacle so calculated to edify and exalt his mind as that of our people, who are not only the most free but the most loyal in the world, and who have carried the difficult art of self-government to the highest perfection which it has ever reached in ancient or modern times. If from the visit he have derived encouragement to pursue the bold career into which he has entered—if he have acquired any greater respect for free institutions—the journey will not have been made in vain, and may produce results not yet anticipated even by those who most earnestly study the shifting history of our time. His Majesty carries with him from our shores the best wishes of our people, both for his own person, and for that beautiful Italy in which he is the only Sovereign who has acted with good faith, common sense, or ordinary humanity. He has shamed Austria and Naples—braved the Papacy—and proved that, at least, some of the Italians are capable of self-government. Such deeds are prolific; and are as serviceable to all Europe as to Italy herself.

A REPORT upon the condition of one of our great railway companies furnishes a more gigantic illustration than could have been expected, or desired, of the species of dry rot which is making its way throughout our commercial system. Hitherto we could only point to numerous but isolated instances of the fraud generated by, and reacting to generate, the diseased atmosphere of our artificial life; but in the course of the last few days we have had presented to us a whole series of specimens, selected from among the ramifications of a chartered commercial society. We need hardly say that we refer to the Report of the Committee of Investigation into the affairs of the Eastern Counties Railway, a document that has produced a singular sensation, even in an age that is asserted to be one of hollowness and humbug.

The proprietors of this company, unable to resist the conviction that the unsatisfactory state of their affairs was in some degree connected with somebody's misdoings, took heart, in August last, to appoint a committee of seven shareholders to inquire into the whole business. Of course a company, directed by "men of business," had its big account books, and its balance-sheets, and its regular audits, and all the rest of the Lares and Penates of commercial superstition; but, somehow, these household gods had not helped it, and there was nothing but frightful expenditure and frightful loss. So the seven wise men were desired to investigate. One declined, one became indisposed towards the end of his work, and the report comes out, signed by five—Messrs. Love, Ball, Christy, Pilcher, and Soper, whose names should be preserved as those who venturously unrolled a most uncleanly and decomposing mummy. After three months of inquiry they report the existence of about as rotten a system as ever excited the indignation of the public. It is edifying, indeed, to see how "men of business," who pooh pooh the "impracticable schemes" of men who cannot tell the price of Consols, or calculate the profits on stock-jobbers' bargains, do their own business, or allow it to be done for them. Even a set of solicitors, supposed, not without cause, to be the persons most utterly innocent of all knowledge of accounts, could not have managed worse than this grand company of practical men.

Premising that, as might be expected, various of the people who are charged with blunder or misconduct by the committee have put forth contradictions of the report—each declaring that, however evil other people may be, he is the soul of wisdom and honour—we should observe that we do not undertake to decide on these points of detail, or settle, between report and correspondence, what precise amount of blame is to fall upon each delinquent. We simply take the case as stated by the committee, who have given their best attention to the work, and who state that they have tried to do justice, neither using their authority ungenerously nor shrinking from exposing error. Now, be good enough to draw a very long breath, for the plunge into the turbid waters. Now for the deeds and sufferings of "practical men."

The accounts have never been properly kept, and most important books were never laid before the auditors, whose business it was to have them. No correct balance has ever been struck in one of the great departments since the present chairman was chosen, and the two accounts on the subject never agreed. A small trifle of "capital account" was added to the liabilities of the Eastern Counties Company when it really belonged to another company; but this is not worth dwelling on, the sum being only £69,606 10s.; but the committee mention it as an illustration of the "reckless manner" in which the affairs have been managed. Seventy thousand pounds, however, is nothing to what has been otherwise brought upon the company. Contracts have been made on terms not remunerative, unjust preferences have been given, debts have been largely and "illegally" increased, and "a most reckless expenditure" has been kept up, not for the advantage of the company, but for that of other persons." And, in addition to all this, bad as it is, improper representations have been made of the state of the company's affairs at the half-yearly meetings.

Pretty well this, for practical men, to say nothing of honest and upright mercantile men. But it is difficult to feel with or for a corporation which, as the Irish orator said, has neither a body to be kicked nor a soul to be still more severely treated. Only put a single individual in the case of the company, and imagine his affairs thus treated by those to whom he confided his interests. His account-books all wrong, other men's debts taken on his shoulders, articles bought for him at a price that would leave him no profit, his money otherwise squandered, and falsehoods told him when he came down occasionally to learn how his business was going on. He would, of course, take Basinghall-street on his way to Hanwell, unless he had to take Newgate as a half-way house, consequent upon his taking avenging law into his own hands. But men of business are so prudent and regular, and smile so very contemptuously at schemers

It is impossible to show here, in much detail, how these mercantile men have been going on. We will say nothing about improper allotments of shares or of an "astonishing bargain" made with some great contractors for the working of the Tilbury line; even the committee are afraid to use the words by which they would like to qualify it. But one thing must be mentioned. The company have taken Lowestoft harbour, and the committee can only hope that "so ruinous an adjunct" may be removed from the company's possession by the sea washing up the sand and destroying it! The grossest mismanagement is charged in regard to the steam fleet, and the coal department, and the passenger traffic. A locomotive superintendent is appointed at a salary fixed at £600, and under various pretexts he is paid sums amounting to £20,000 in five years. In the "stores" there has been more "fraud and loss" than in any other respect: goods have been bought at forty per cent over the market price, and "untouched goods" have been sold for old stores. The company, say the committee, have been paying the highest price for what they have "sold to marine store dealers" (a race that ought to be devoted to pitiless extermination) "as rubbish." The committee does not know what has been lost in this way—perhaps £10,000, perhaps £40,000. Add that the constitution of the company is objectionable, that its banking system is wrong, and that the audit of its accounts—a farce regularly performed—is "perfectly useless."

Designing to return to the subject, we have desired to present a sort of conspectus of the condition of one of our grand railway associations, as set forth by its own officials. Interesting as is such a view, suddenly opened up, it becomes ten times more interesting when regarded in its moral and social light. But it is too pregnant a text to be dealt with hastily or briefly, and may be all the better handled when its general character shall have become more familiar to the public. As, after the tremendous explosion lately in the Crimea, men's ears must have time before ordinary sounds can affect them.

THE COURT.

The interest of Court life during the past week has been centred in the visit of his Majesty the King of Sardinia, full particulars of which are given in other pages of this Journal.

The hospitalities of Windsor Castle have rarely been dispensed in more magnificent style; and the King of Sardinia's visit will long be remembered as one of the most gratifying instances of the exchange of Royal courtesies between the Queen of Great Britain and a Continental Sovereign which modern history affords.

The Prince Consort accompanied the King of Sardinia to Folkestone on his return to the Continent on Thursday. His Royal Highness afterwards visited the Camp at Shorncliffe, and returned to the Castle in time to join the Royal dinner party.

The distinguished guests invited to meet the King of Sardinia at Windsor Castle on Thursday.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary leave Cambridge Cottage in a few days on a visit to the Marquis and Marchioness of Salisbury, at Hatfield House.

His Excellency the Earl of Carlisle is expected in town early in the ensuing week, from Castle Howard, Yorkshire.

Lord George Beauclerk has arrived at Fenton's Hotel from the Crimea. His Lordship is seriously indisposed.

CHURCH, UNIVERSITIES, &c.

APPOINTMENTS. *Honorary Canonry:* The Rev. W. H. Brandreth to an honorary canonry in Manchester Cathedral. *Rural Deanery:* Rev. W. H. Maddows to the rural deanery of Romford. *Rectories:* Rev. W. J. Fox to Houghton-on-the-Hill, near Leicester; Rev. H. J. Walker to Bury thorpe, Yorkshire. *Vicarages:* Rev. W. C. King to Norham, Berwick-upon-Tweed; Rev. T. J. F. Hicks to Ampleforth, Yorkshire. *Incumbency:* Rev. W. C. Evans to Skelbrooke, Yorkshire.

A LECTURE on recent discoveries in Assyria and Babylonia was delivered in the Sheldonian Theatre, Oxford, on Wednesday last, by Col. Rawlinson, C.B., Hon. D.C.L., to an audience of 1,500 persons.

ROYAL VISITS.—The King of Sardinia, after attending Divine service on Sunday, paid visits to her Royal Highness the Duchess of Gloucester, at Gloucester House; and her Royal Highness the Duchess of Cambridge, at Kew. The King, with his suite, then proceeded to the Star and Garter on Richmond-hill, where they partook of luncheon; and afterwards visited the Duchess d'Aumale at Twickenham.

THE MEETING OF PARLIAMENT.—A Council will be held this day, (Friday), when Parliament, which at present stands prorogued to Tuesday, the 11th inst., will, it is said, be further prorogued until the 31st day of January next, then to sit for the dispatch of business.—*Times*.

DR. VAUGHAN'S CASE.—Saturday last was appointed for the hearing of the evidence in the charge of perjury preferred by the Rev. Dr. Vaughan against George Malby, his sexton; but, upon the application of the defendant's solicitor, the case has been adjourned for a month, to allow the case against Dr. Vaughan to be first disposed of at the ensuing session of the Central Criminal Court.

INVESTITURE IN KNIGHTSBRIDGE.—DR. LUSHINGTON'S JUDGMENT.—We need hardly say having been named by Dr. Lushington, the Judge of the Arches Court of Canterbury, for the delivery of the judgment in the case of Mr. West (late churchwarden of St. Paul's, Knightsbridge, and Mr. Beal, an inhabitant of the ecclesiastical district of St. Barnabas, against the Hon. and Rev. R. Liddell, M.A., the incumbent), the court was densely crowded by persons anxious to hear a decision referring to points of grave importance to the Church. The argument extended over four days, Dr. Deane appearing for Mr. Westerton and Mr. Beal, and Dr. Robert Phillimore, with Dr. Swabey, on the part of the Hon. and Rev. Mr. Liddell. Dr. Lushington, in delivering judgment, referred to the affidavits which had been put in on both sides, and expressed his regret that the dissensions which prevailed in both churches were a matter of painful notoriety. It had been argued that many of the articles complained of were placed in the church prior to consecration, and that when the Bishop consecrated the church he stamped them with the authority of his approbation. He did not, however, attach any importance to this argument. Unless the Bishop's attention was specially called to these matters, his consecration would not affect them; and, if there were extraordinary ornaments in the church, it was the duty of those who prayed to see the ornaments read the Bishop's attention to them. He had no complaint to make against the ornamentation in St. Paul's, but that in St. Barnabas was of stone, and immovable, and, therefore, illegal. As for credence-tables, he did not declare them to be in contravention of the law of the Church. In reference to crosses he remarked that it was one of the great objects of the Reformation to abolish them; it was his duty to uphold everything done at that period, and to withhold his sanction from the introduction into the Church service of articles which had not avowedly been in use since that time, as crosses certainly had not been, with very rare exceptions. He had come to the conclusion that lighted candles upon the altar were warranted neither by practice nor by the law of the Church. The learned Judge concluded by granting, in its most material parts, the prayer of Mr. Westerton and Mr. Beal, who instituted the present proceedings against the Hon. and Rev. Mr. Liddell. The learned judge ordered the things complained of to be taken down by next Wednesday week, but would not make an order for costs on either side. It is expected that this decision will be carried for review to a higher tribunal.

GALLANT COMMAND REWARDED. The ship *Hope*, Capt. D. Dewar, on her last passage from London to Melbourne, encountered a severe hurricane May 18 last, in lat. 35 S., long. 45° 48' W.; she lost her foremast and topgallant-mast, life-boat, figure-head, and part of her bulwarks, and had her hull severely damaged; the gale lasted three days and three nights, and went all round the compass. At length the vessel arrived safely at Melbourne, when the chief-cabin passengers presented Capt. Dewar with a collection of books, and the second-cabin passengers with an address, in testimony of their sense of his able command of the vessel, and his great kindness and consideration during the entire voyage. Capt Dewar, last year, while in command of the same ship, and under similar circumstances, was presented by the passengers with congratulatory addresses, and a handsome gold cup, of Melbourne manufacture.

LATEST INTELLIGENCE.

THE PEACE RUMOUR.

Neither the *Standard* nor the *Globe* of last night place much reliance on the rumour regarding peace proposals. The *Standard*, in speaking of Russia, says it agrees with the *Times* that "We have already had ample experience how easy it is for the dexterous and insidious power to assent to terms proposed to her in the abstract, and to evade them by raising objections to every proposition by which they could possibly be carried into effect." The *Globe* affirms that, whatever may be said about peace, the Allies are making the most vigorous preparations for the campaign of 1856:—

Whatever may be the indirect attempts made to terminate hostilities, there will not be the least cessation on the part of the English Government of the, we may say, gigantic preparation now on foot for the ensuing campaign If the Emperor of Russia could be brought to a full appreciation of those preparations, we should indeed have hopes of peace. We some time ago showed that with the spring of 1856 England would be represented in the Crimea by an army of more than 70,000 fighting men in an admirable condition; and we believe that estimate will turn out to be a good deal too moderate. She will be represented in the Baltic by a fleet of not far short of 250 vessels, of which by far the greater portion are being specially constructed for the service required of them. We are no longer experimentalising. We are no longer apprentices in the arts of war; and in 1856, for the first time in the conflict, will the strong right of England be raised to strike with her own proper vigour. Our allies are acting as becomes the greatness of the contest. As far as human calculations go—we can see nothing but—we say it deliberately—appalling disasters to Russia from the next campaign. It is entirely for Russia to avoid or invite those disasters.

IMPERIAL INSOLVENCY.

VIENNA, Dec. 6.—The *Oesterreichische Correspondenz* has the following:—

The Odessa Imperial Commercial Bank has suspended its cash payments. Unpleasant scenes have occurred in consequence. The Gendarmerie remind people that by refusing to take bank-notes they display an enmity towards the Government The premium on silver is already twelve and fifteen per cent.

THE BALTIC FLEET.

NYBORG, Dec. 6.

The united squadrons, with Admiral Dundas and eleven ships-of-the-line, have just passed the Belt northwards.

A letter from Berlin says, "General Canrobert dropped some words at Hamburg indicating that in case of another campaign in the Baltic the fleet will have an immense preponderance of gun and mortar boats. Two armies will be landed, one in Finland and the other in Courland, and General Canrobert will have the command-in-chief."

VIENNA RUMOURS.

Vienna, Dec. 6.

It was reported on the Exchange to-day that the Austrian army is to be again reduced by 80,000.

Sir Hamilton Seymour arrived last night at the Hotel "Roman Emperor."

A report is generally prevalent that the Russians have taken Kars. Rumours of peace are also gaining consistency.

ELECTION OF ALDERMAN.—The election of alderman for the Ward of Bread-street took place yesterday (Friday) afternoon at Cordwainers' Hall, the vacancy having been occasioned by the death of Mr. Alderman Lawrence, when Mr. Donald Nicoll was elected. A poll having been demanded on behalf of Mr. Wm. Lawrence, son of the late alderman, it was fixed to take place to-day.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS
TAKEN DURING THE WEEK ENDING THURSDAY, DEC 6.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure Degree of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches.	°	°	°	°			Inches.
Nov. 30	29.986	44·5	39·0	39·2	— 2·6	92	N. & W.	0.00
Dec. 1	30.061	43·3	31·2	38·2	— 3·5	88	S.W.	0.00
" 2	29.832	43·5	35·2	40·0	— 1·6	90	N.	0.05
" 3	29.982	39·0	27·1	32·3	— 8·7	90	N.	0.05
" 4	29.859	46·0	38·9	39·4	— 2·0	97	N.	0.00
" 5	29.546	44·2	32·5	40·0	— 1·3	92	W.	0.00
" 6	29.354	40·3	29·5	36·1	— 5·0	73	N.	0.01

Note.—The signs — denotes below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The rending of the barometer decreased from 29·59 inches at the beginning of the week to 29·46 inches by Nov. 30th; increased to 30·06 inches by Dec. 1st; decreased to 29·82 inches by the 2nd; increased to 29·99 inches by the 3rd; decreased to 29·35 inches by the 6th, and increased to 29·58 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29·72 inches.

The mean temperature of the week was 38°—being 3½° below the average of thirty-eight years.

The range of temperature during the week was 18·9°.

The mean daily range of temperature during the week was 18·1°.

The weather has been very cold during the week. On Monday evening snow fell for some time, and was the first fall this season. Snow fell again on the 5th. The sky was for the most part cloudy.

For the month of November the mean reading of the barometer at the level of the sea was 30·043 inches, the range during the month being 0·796 inch. The highest reading of the thermometer by day was 58·7°, on the 6th; and the lowest by night was 24·2°, on the 16th; the range of temperature during the month was therefore 34·5°. The mean of all the highest readings by day was 46·8°, and of all the lowest by night was 33·2°; the mean daily range of temperature during the month was therefore 13·6°. The mean temperature of the month was 40·0°—being 2° *below* the average of the corresponding month during 43 years. The mean temperature of evaporation for the month was 39·4°. The mean temperature of the dew point was 37·7°. The mean degree of humidity was 90 (complete saturation being represented by 100). And the fall of rain during the month was to the depth of one inch and a half.

Lewisham, Dec. 7, 1855. JAMES GLAISHER.

HEALTH OF LONDON.—The births of 787 girls and 828 boys were registered within the metropolitan districts during the week ending last Saturday, and exceed their averages by 101 and 99 respectively. The deaths during the week were 1194, the numbers in the two previous weeks having been 976 and 1079, and are less by 147 than would have occurred if the rate of mortality had been as high as it was, on an average, during the corresponding weeks of the last ten years; and the weekly deaths in November have been, taking the averages, 126 more than they were in the preceding month. To diseases of the zymotic class 207 deaths are attributed; and to diseases of the respiratory organs 234 deaths—122 of which are due to bronchitis, and 84 to consumption.

MECHI'S TIPTREE-HALL FARM AT THE POLYTECHNIC INSTITUTION.—Mr. Pepper has lately added to the attractions at this Institution a large and very perfect model of Tiptree-hall Farm, the size of which enables the system of housing and feeding cattle which Mr. Mechi has pursued to be understood at a glance; and, to facilitate the examination, the modellist (Mr. Merrett, architect and surveyor, Fetter-lane) has made the roofs of the building removable. Everything, therefore, is plainly seen—the steam-engine, the cattle-sheds, the piggeries, the corn-stacks, and all the accessories of the farmyard. Mr. Pepper's lecture on the electric telegraph, and the powerful agency of the lime-light, are also very attractive.

THE BANK CHARTER. MEETING AT THE LONDON TAVERN.—A meeting was held on Wednesday evening at the London Tavern, to consider the case of our monetary system, and the influence of the Bank Charter Act of 1844 on domestic industry and foreign commerce. The chair was taken by Mr. Francis Bennoch, besides whom were on the platform Messrs. A. Spottiswoode, Alexander Wilson, W. Littlewood, J. Ingram Lockhart, H. Ingram, Leone Levi, E. Capps, of London; Mr. H. Ayres, Colonel Macdonald, Messrs. W. Pare, of Dublin; T. C. Salt, of Birmingham; Alexander Alison, of Glasgow; J. L. Thackeray, of Nottingham; E. V. Neale, and others. The chairman, after a review of our present monetary and commercial condition, observed in conclusion, that the Act of 1819 and the Act of 1844 equally failed to attain their object, to secure the convertibility of the bank-note; that the existing legislation upon this subject ought therefore to be amended or swept away; and that it was necessary to provide some circulating medium which should not be liable to such disastrous fluctuations. After passing a resolution condemnatory of the present law, it was resolved that no system of currency can be satisfactory that does not restore gold to its natural character as a commodity, so that it may find its value under the natural laws of supply and demand; and that such natural paper money may be issued under conditions calculated to remove the objections usually urged against paper money, and that it be referred to a congress to discuss the system of currency which might conveniently be adopted.

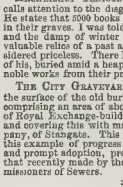
PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday a meeting of the Royal National Life-boat Institution was held at the society's house, John-street, Adelphi; Thomas Chapman, Esq., in the chair. Mr. Lewis, the secretary, having read the minutes of the previous meeting, the silver medal of the institution was voted to Mr. William Gruer, of Lossiemouth Coast-guard Station, in testimony of his gallant conduct; in having saved the crews, consisting of fifteen men, from two wrecks during the late fearful gale, and received £17 for their laudable services. A reward of £10 was also granted to five fishermen for putting off during a heavy gale to the rescue of a lad from a billyboy which went to pieces near Thorp Haven on the 3rd ultimo, when six other persons unfortunately perished. A grant of £20 was made to the widow of a boatman, named Thomas Cable, of Aldborough, who unfortunately lost his life while attempting to save with a rope the crew of a Swedish vessel. The disasters arising from the late fearful gales had made great demands on the funds of the society, and the committee earnestly appealed to the public for their generous co-operation.

ARCHBISHOP TENISON'S LIBRARY.—A correspondent of the *Times* calls attention to the disgraceful state of Archbishop Tenison's library. He states that 5000 books are "rotting and mouldering like their authors in their graves. I was told that for the last two years the heat of summer and the damp of winter had done their worst upon these ancient and valuable relics of a past age—works which in some hands would be considered priceless. There lies Bacon's Nota Book, and various other MSS. of his, buried amid a heap of dust. Can nothing be done to rescue these noble works from their present sepulchre?"

THE CITY GRAVEYARDS.—Directions have been given to clear the surface of the old burial-ground of the late church of St. Benet Fink, comprising an area of about 3000 feet, and situate at the north-east angle of Royal Exchange-buildings, by overlaying it with a bed of concrete, and covering this with material supplied by the Seyssel Asphalte Company, of Stangate. This process is now in operation, and it is hoped that this example of progress in sanitary improvement will, by its general and prompt adoption, prevent the repetition of similar complaints to that recently made by the inhabitants of Botolph-lane to the City Commissioners of Sewers.

OBITUARY OF EMINENT PERSONS.

CAPTAIN GILLMOR, R.N



CAPTAIN CLOTWORTHY GILLMOR, a distinguished naval officer, was the youngest son of William Gillmor, Esq., who was High Sheriff of Sligo in 1785. Capt. Gillmor was born the 5th April, 1773, and entered the British Navy on the 3rd December, 1794. He saw much active service during the late war. He was, in 1806, in the *Belleisle*, one of the vessels of the Hon. George Hyng's fleet, and assisted at the capture of the Cape of Good Hope. When Lieutenant in the *Marlborough* he escorted the Portuguese Royal family to the Brazils, and he attended the expedition of 1809 to the Walcheren. In 1810 Gillmor, after the death of Captain Houston, commanded for a time the Naval Brigade of 500 men at the lines of Torres Vedras, under the Duke of Wellington, and he completely accomplished, at Santarem, and Almeirim, the important work of destroying all Massena's boats, with which the French army were to have crossed the Tagus. For this service he received the thanks of General Pine. Captain Gillmor ceased to be actively employed in the summer of 1811, and he became a retired Commander on the junior list the 1st Dec., 1830, and on the senior the 17th Nov., 1845.

Captain Gillmor died at his residence in Bentinck-street, Manchester-square, on the 30th September last, and was interred at Hersham, in Surrey. He was married, and leaves issue. His son, the Rev. Clotworthy Gillmor, M.A., is Vicar of Dartford, Kent; and his younger daughter is the wife of Captain C. H. Thomas, Hon. East India Company's service. Captain Gillmor had a very accomplished mind; he was a thorough scholar, and a most pious man; he, till within a few days before his death, daily read the New Testament in the original Greek, and in small type, without using spectacles. He was a fine specimen of a veteran Christian warrior.

CAPTAIN EDWARD SHAWE POWYS.

CAPTAIN POWYS was second son of Henry Philip Powys, of Hardwick, in the county of Oxford, Esq. He was educated at Eton, and the Royal Military College, Sandhurst, where, in 1844, he received a commission as Ensign, without purchase, in her Majesty's 61st Foot. In 1845 he proceeded with his regiment to India; and, serving in the Punjaub campaign of 1848-49, was present at the passage of the Chenab—in the battles of Sadoolapore, Chillianwallah, and Gonjerat, and with the field force in pursuit of the enemy to the Khyber Pass, in March, 1849, for which he received a medal and two clasps. At the head of Chillianwallah he received an orderly prize to Brigadier-General Sir Colin Campbell, where he had his horse shot under him, and was honourably mentioned by the Commander-in-Chief in his despatches. In 1850 he returned to England; and, after passing a short period in the Senior Department at Sandhurst, received a certificate of qualification. In 1853 he rejoined his regiment at Wuzeerabad, and died at Cashmere, after a few days' illness, on the 23rd September, 1855, most deeply and deservedly lamented.

LADY GOULD

THIS venerable Lady, conspicuous for her benevolence and charity, died at Hawkshead, in the county of Herts, on the 15th ult., in the 83th year of her age. She was the daughter of the Ven. Wm. Willes, Archdeacon of Wells, youngest son of Edward Willes, forty years Bishop of Bath and Wells, who had the rare gratification of seeing his elder brother the Chief Justice Sir John Willes, a nephew (Sir John's son), Sir Edward, and a first cousin, the Chief Baron of the Irish Exchequer, in possession of seats upon the Bench at the same time. In lifetime Lady Gould, the widow of eleven children (of whom the youngest, Mrs. Maddleton Attye, of Ingon, near Warwick, is the only survivor), was the widow of Admiral Sir Davidge Gould, G.C.B., Vice-Admiral of England, &c., who died in 1847—the last of Nelson's captains of "the Nile." He was of the old knightly family of Gould, of Sharpham Park, near Glastonbury, Somerset, of which two members became Judges—the daughter of one of whom (a coheiress with Mrs. Luttrell, of Dunster Castle) married the Hon. General Fielding, son of the third Earl of Denbigh, and was mother of Henry Fielding, the celebrated author of "Tom Jones."

MRS. MACDONALD.

THIS excellent and venerable lady died on the 25th October, at St. Martin's house, Perth, in the seventy-seventh year of her age. She was relict of the late William Macdonald, of St. Martin's and Garth, Perthshire, and daughter of Sir William Miller, Bart., of Glenlee, long one of the Senators of the Scottish Courts of Justice, under the title of Lord Glenlee. Mrs. Macdonald had lived at St. Martin's for nearly forty years: she was much beloved by all, and especially by the poor on her property, to whom her charity was unbounded. Mrs Macdonald was interred on the 29th ultimo, in the vault of St. Martin's, on the 31st October: a large concourse of the tenants and feuars on the estate, and of the nobility and gentry of the surrounding country, attended the ceremony The funeral sermon was preached on the following Sunday by the Rev. John Park. The Macdonalds of St. Martin's descend from the Lords of the Isles. An ancestor of the family settled in Aberdeenshire after the battle of Harlaw, in the fifteenth century. It is now represented through the female line by William Macdonald Macdonald, of St. Martin's and Keanie Castle, who married the Hon. Clara, sister of the present Lord Lurgan, and has issue a son and a daughter.

WILLS AND CHARITABLE BEQUESTS.—The will of the Right Hon. Sir Robert Adair, G.C.B., was proved in London under £2000 personalty. Thomas Hankey, Esq., banker, £140,000; John Phillips, Esq., St. George's-place, Knightsbridge, £70,000; Colonel Martin Orr, £12,000; John Duncan, M.D., £25,000; John Bowen, M.D., £14,000; Andrew Glennie, brewer, of Dartford, Kent, £10,000; the Rev. James John Hornby, M.A., Rural Dean and Rector of Winwick, £35,000, within the province of Canterbury; Thomas Copeland, Esq., F.R.S., of Cavendish-square and Cheshunt, £180,000 personalty, and has bequeathed £5000 to the Asylum for Poor Orphans of the Clergy, St. John's-wood; and £5000 to the Society for the Relief of Widows and Orphans of Medical Men in London. Mrs. Elizabeth Boyton, of Dover, has bequeathed £1000 to the Society for Promoting Christian Knowledge, £1000 for the Propagation of the Gospel in Foreign Parts, £200 to the Dover Hospital and Dispensary, and £2000—one moiety to be invested for the purpose of allowing four £5 a year for each of the inmates of the almshouses in Dover, and the other moiety for the annual distribution of coals to old sailors and widows of sailors inhabitants of Dover.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE obituaries of the week announce the death of the Rev. Robert Montgomery, known to many as a popular preacher in a chapel off Tottenham-court-road, and as a poet who thought no subject too grand for his muse. He is said to have died in his forty-eighth year; but this must be a mistake; he must have been at least fifty-four.

Twenty-five years ago Mr. Montgomery was in the full swing of his reputation as a poet. He was looked upon by many as a great genius, born to revive and sustain English poetry. His subjects were imposing. Like Blackmore, he grappled with immortal themes. The City Physician and Knight did "Prince Arthur," and "King Arthur," "Creation," and the "Book of Job." The Oxford student—for such Mr. Montgomery was when he solicited attention as a poet—was even bolder than Blackmore. "The Omnipresence of the Deity" was his first theme; followed by "Satan," "The Messiah," and, lastly, "Luther." "Fools rush in where angels fear to tread" our great satirist assures us; and Mr. Montgomery did, certainly, rush into print with a determination to take Parnassus and the public by storm.

Nor was he without his admirers. There were critics who preferred him to a living poet whose name he bore, and *James* Montgomery, we were told to believe, was a dotard compared to Robert. The year 1830 saw his "Omnipresence of the Deity, a Poem," in the eleventh edition, and his "Satan, a Poem," in a second edition. It was then that Mr. Macaulay, looking about for a good subject for the *Edinburgh Review*, seized on the newly-fledged poet, and passed judgment upon him in an article which he has since very properly included in his collected Essays. Mr. Macaulay exposed his nonsense and his plagiarisms, and taught some of his admirers to see the rubbish they took pleasure in admiring. Posterity will place Mr. Robert Montgomery in a lower order of poets than even Sir Richard Blackmore. There is *some poetry* in the "Creation" of Blackmore—there is none that we could ever find in the numerous effusio ns of Mr. Robert Montgomery. He looked like a poet, and that is all.

Lord Broughton, better known as Sir John Cam Hobhouse, has just appended to the new edition of his "Journey through Albania" an appendix of remarks on the refusal of the Dean and Chapter of Westminster to admit into Westminster Abbey the statue of Lord Byron. His Lordship (then only Mr. Hobhouse) was the leading mover in forming the committee for the Byron statue, and very merciless does he deal with the late Dean Ireland and with the present Bishop of London for the course they took in refusing to admit the statue. We are glad to observe that his Lordship is not insensible to his best claim to be remembered hereafter—the friendship of Byron and the dedication before the fourth canto of "Childe Harold." Why does not his Lordship give us his recollections of the poet? Why, above all, does he not give us the letters of Lord Byron?

Death has removed from among us a writer of verse, with the same title to the name of poetess that Mr. Robert Montgomery has to the name of poet. Lady Emmeline Stuart Wortley—nearly as prolific a writer as Margaret Lucas, Duchess of Newcastle—is no more. Some ten years since a season was seldom suffered to pass without a volume of verse from Lady Emmeline. Her Ladyship's was a common case: she mistook inclination for power—and the desire for the gift. There is in what she wrote a good deal of what was fancy a century before her birth. She was the daughter of the Duke of Rutland.

Public attention has been called of late to living links that connect us with Dr. Johnson and De Foe. A link of a longer chain has just been broken. The following announcement, to be seen in the newspapers on Thursday last, takes us back to the time of Cromwell and Charles II.:—

Died, on the 17th ult., at his residence, Grecian-place, Lincoln, aged 80, Robert Bunyan, Esq., the last male descendant in a direct line from John Bunyan, the author of the celebrated allegory, "Pilgrim's Progress."

The last male descendant of John Bunyan died one hundred and sixty-seven years after the glorious old dreamer; and the last male descendant of Sir Walter Scott died twenty years after the illustrious novelist!

The Civil Service Commission has not answered the purpose for which it was established; and is now, after a six months' existence, about to be reorganised. Mr. Edward Romilly, one of the three Commissioners, has resigned; and Mr. Spedding, the secretary, has imitated his example. We are not sorry to hear that Mr. Spedding has resigned. His duties as secretary withdrew him from his labours on Lord Bacon. There is now a greater chance of our obtaining an instalment from him of Bacon's works.

An autograph and unpublished letter of Pope's has been offered for sold during the present week. It is long and characteristic. He mentions the death of his nurse, to whom he erected the well-known monument in Twickenham churchyard, and quotes with reference to her what he calls a favourite line from his own translation of the "Odyssey"—

The tender second to a mother's care.

Wild prices are being asked for Pope's letters. This is offered as cheap at seven guineas.

The lovers of London topography will learn with delight that a second copy of the celebrated Map of London, engraved by Faithorne, in 1658, has been accidentally and fortunately discovered. It is now in London, and is to be engraved in facsimile. Till this copy was discovered the impression in the Imperial Library at Paris was looked upon as unique.

Some very foolish people are filling the columns of a contemporary with an idle attempt to show that Sir Walter Scott was not the author of all the Waverley novels. What absurdity! They ascribe a joint authorship to his brother Thomas Scott; but, after what Sir Walter himself has said on this subject, no sane person will give credence to so silly a supposition.

Letters from New York assure us that Mr. Thackeray is making "a pot of money" by his lectures; and visitors from Paternoster-row inform us that Mr. Macaulay's forthcoming volumes will reveal "the true story" of Marlborough's disgrace.

MR. ALBERT SMITH'S MONT BLANC.—The Egyptian Hall is again the arena of inexhaustible attraction. The public will never weary of Mr. Smith's Ascent. Mont Blanc still reigns here as "the Monarch of Mountains." But, with the old name, the materials are not all old. A third act has indeed been added to Mr. Smith's drama. The Paris Exhibition furnishes him with a new series of views. The Palace of Industry itself, with the Place de la Concorde and Champs Elysées, flourishes on the canvas. A Bird's-eye View of Paris, the Palais Royal at Night, the Long Machinery Gallery of the Annexe, and the Interior of the Palace of Industry, form a decidedly interesting succession of pictorial subjects. The last view, we should mention, is taken from the Great St. Gobain Glass, and presents a magnificent interior. The lecture accompanying this new portion is exceedingly brilliant. The chapter on the Brown family, and the long yarn of the English engineer on board the Lyons steamer, are most suggestively humorous, and provoke laughter as much by what they suppress as what they disclose. Add to this the fascination of Mr. Smith's *bonhomie*, and we have a genial entertainment such as the British public will long delight in, and will, therefore, willingly patronise. It only remains to add that, in honour of the King of Sardinian's visit, the outside of the hall was, on Tuesday, illuminated with Turkish lamps, and other appropriate ornaments.

THE BURMESE EMBASSY.—A correspondent of the Calcutta *Citizen*, speaking of the reception of the English Embassy by the Burmese King, says—"The only thing remarkable at the interview was the inanimate object, and that was a ruby in the centre of the pagoda crown of his Majesty. It was as large, if not larger than a hen's egg, and far more valuable than the great Koh-i-noor; it was beautifully cut, and almost as round as a marble. It was torn off the ear of the Karen Queen by Alompra. It was a pendant, being suspended by a wire casing through her right ear. It is of its purest water, and more than two thousand years old if the traditions concerning it are believed. It came originally from Assam, and belonged to the great Garrow King Moung Sa, who ruled the whole of Chin India. This ruby will, I prophesy, in ten years be worn by our Queen."

VISIT OF THE KING OF SARDINIA T

UEEN VICTORIA AND PRINCE ALBERT.

NOTES OF THE WEEK.

CONSIDERING that the King of Sardinia has come among us at what is proverbially the most disagreeable part of our year, his Majesty has been exceedingly fortunate in his weather. The exception was in the day chosen for the visit to the City, when, certainly, the murky atmosphere prevented thousands from obtaining any satisfactory view of the King. Yet, even then, there was no rain, and, on the whole, the saying of King Charles II. is a true one—that, taking the English year all round, there are more days in it "on which one can get out" than in most other countries. King Victor's reply to the City address was frank and manly, and his pledge of adherence to the policy he has hitherto pursued, and which has brought him into union with England, will afford more satisfaction here than among his despotic neighbours. Let it also be recorded that the Hebrew Mayor did homage to the King of Jerusalem in the most gentlemanly manner. In the fact that two men—one a Jew, who, through the progress of civilisation, has made his way to the highest honour the greatest Christian city can bestow; the other a King, who has extricated himself from the trammels of kingcraft, and stood forward as the champion of liberty—should meet as host and guest, is matter to be pondered over; to say nothing of the King of Jerusalem visiting a Hebrew Lord. Ample details of all the incidents of King Victor's reception at Court and in City will be found elsewhere. We have also shown him some ships, and one has been rechristened by his name. Perhaps the person most to be compassionated just now is Cardinal Wiseman. The King of Sardinia has swept away the locust-crowd of priests, friars, monks, and other nuisances that have infested his dominions, and for doing so he has incurred the anger of Infallibility and Implacability. He is not actually excommunicated, but he is under the severe displeasure of Rome, and, but for the trifling accident that he is an ally of the Sovereign who saves Pius IX. from the necessity of again hurrying in disguise out of the Eternal City, there is no doubt that the thunders of the Church would have growled their angriest at King Victor. But even ecclesiastical ire must learn self-government at the dictate of circumstances, and so both in Paris and London the ultramontane Catholic hierarchy have orders to do the King honour. The Cardinal, whose organs assail the King, and profess a wish to see him "humbled," is compelled to receive him at the Sardinian chapel and make a complimentary speech to him, which must have amused his Majesty, who is understood to have considerable power of enjoying the good things of this world, intellectual as well as material. His Eminence, who is supposed long since to have procured his own consent to be enthroned one of these days as Pope Sapiens I., will, no doubt, treasure the recollection. In the mean time he is preaching sermons in which he asserts that the Concordat between Austria and Rome is one of the noblest compacts ever made; but that English journalists cannot understand it—first, because it took two years in framing; and, secondly, because it is written in the Latin of ecclesiastical diplomacy, and not to be translated like the Orations of Cicero or the Commentaries of Cæsar. We say "asserts," for at present the Cardinal has done nothing but utter alternate turgid bluster and verbose oily cant; but poor Mr. Bowyer, M.P., a great believer in Dr. Wiseman, promises more logic anon. It might not be amiss if some of it were exported to the country more immediately interested, where the ecclesiastical authorities are afraid to bring the precious and beneficial machinery into play, except gradually, and where the working clergy and the laity are incensed beyond measure at the deathblow their Emperor has given to their scant liberties.

General Canrobert has returned to Paris from his mission to the Northern Courts. Among the announcements which have been made on the subject of peace, it is stated that "Sweden and Denmark are ready to give their verdict in our favour, and, when need arises, to enforce that verdict." This information, which is probably derived from Parisian channels, may, we imagine, be received with less caution than most of the assertions which are now distracting the world and its Bourses. There is no reason to suppose that Sweden and Denmark are less aware than is Russia herself of the position of the parties in the great quarrel, or of the side on which, should another campaign take place, safety and advantage will be found to lie for those who come in at "the latter end of the fray."

Sir Robert Peel—"old Sir Robert's son"—has been again manifesting some of that "vehement silliness" which, if a hostile critic is rightly informed, a distinguished lady once attributed to him. He has been making a speech at Tamworth, in which, as a Lord of the Admiralty, he thought proper to remark upon the alleged shortcomings of the British fleet in the Baltic. Anything in worse taste, considering the impulsive Baronet's position, can hardly be imagined. It would seem, however, that he has been advised to explain himself, which he has done, after a fashion, in a letter published on Wednesday. If he does not explain away his ill-judged words, he makes it quite clear that he has been taken to private task for them. The rumour that his brother had resigned would seem to be premature. It would be curious if the two very dissimilar young Peels should discover simultaneously that the country could go on without their aid. Sir Robert the sire was perhaps wrong in desiring that his sons should not accept hereditary honours—they would have been more out of the way in opposite corners of the House of Lords.

There is mourning in Belgravia. Dr. Lushington has given sentence in the case of St. Paul and St. Barnabas, and the Romish ornamentation is to be stripped away from the altar—nay, the altar itself is to be torn away from the wall, and a wooden table substituted. The candlesticks may remain, for there are candlesticks in Royal chapels and those of colleges, but the candles are not to be lighted except where artificial light is necessary. This last decision the ornament party might evade, by putting very dark glass into the chancel windows, but the rest of the decree there is no escaping. Credence-table and cross go down, and the five altar-cloths, with their symbolical colours for the various festivals of the Church, must give place to white linen. It is a heavy blow to church millinery—but the battle is not over. Seven columns of reasons in small type do not satisfy the defeated party, and they appeal. The decision of Dr. Lushington is rational and satisfactory; but the whole affair would be ridiculous but for the serious questions connected with it. Of the intellect of those who set their hearts upon the foolish ornamentation, and of the sincerity of those who profess to be unable to go to church while it exists, other people will form their own estimate. We sadly want an Infallibility, to prevent such unseemly contests. Could we not manage a *Concordat*?

Mr. Russell, the *Times* correspondent in the Crimea (about, we understand, to return home), sends over a ludicrous story, of which a London tailor's "representative"—nothing like a long word, or tailor's man, would have done—is the unlucky hero. He appears to have got tipsy (a state in which tailors have always been declared by poets to become very valiant), and, being confronted by one of the Provost Marshal's servants in Balaclava, to have displayed a fire worthy of Hawkwood, the bold young tailor, who, according to Dr. Doran, incontinently slew two ruffians who attacked him on his return from Greengoose-fair, held at Bow. He assaulted the formidable official in question, but, being overpowered by the British army, was carried off to the main-guard. Things began to look serious, and he entreated that some of his distinguished "clients" should be sent for, that his release might be procured. This, it seems, is not the way in a military lock-up; and he bided all night in limbo; and, in the morning, received the two dozen lashes with the cat-o'-nine tails kept for the discouragement of other tipsy and disorderly disturbers of the Camp. If he was sent out to the Crimea to dun the gallant customers of his employer, it is afflicting to think of the intense suffering they must have felt and manifested over their pipes when the story came round to the tents. It is rumoured, by the way, that we are not likely to have a great many more stories from professional writers, for that both Marshal Pelissier and Sir William Codrington have set their faces most vehemently against the system of camp diaries for publication at home.

Some well-meaning persons, but of the class whose type is known in light-hearted society as "a Sentimental Billy," are occasionally amusing common-sense folks with proposals to do away with all the names and memorials which recall the events of the wars between us and our gallant allies the French. One "spooney" wants to abolish the name of Waterloo-bridge, and call that structure Happy-Alliance-bridge; another would re-christen Trafalgar-square, and so on. What is to be done with Nelson's statue we are not told, but it would be rude to Russia, whose Emperor subscribed £900 towards the completion of the column, if we took him down. And where are we to stop? What is to be done with Blenheim-street, and Marlborough-street, and all the Wellington streets and squares, and Rodney-street, and Salamanca-row, and the other places of similar titles? We fear that it will not do. How the French themselves, with the name of a battle on every other lava-tablet at the street corners of Paris, must laugh at such ridiculous twaddle. Rely upon it the secret of a nation being respected does not lie in its forgetting, or asking others to forget, that it can "hold its own." At the same time let us by all means erect new memorials of the glorious things that old foes did when Providence made them friends. There are two or three new bridges building, or about to be built, and our Crimean campaign will afford them names; but, *pace* the twaddlers, we do not mean to obliterate the records of the deeds of our fathers. But there will always be a crop of these soft-headed people; and no doubt that, should England fifty years hence be in alliance with Russia, we shall have "Philopacificus" writing to the papers of that day to suggest that the suspension-bridge at Chelsea be no longer called Sebastopol bridge, but the Anglo-Muscovite-bridge.

Has a clergyman a right to read to his congregation a sermon which he did not compose? This question, and some mercantile ones arising out of it (for though, according to Milton, Mammon always keeps his eye on the pavement, it is he who usually kicks up the dust), are just now in agitation. A Reverend Mr. Watson, stated to be a respectable clergyman, has drawn some lay censure upon himself by advertising that he will supply his brethren with sermons, in manuscript, for every occasion; and he has defended himself, quoting St. Augustine and Bishop Hook, in favour of his practice, and rather getting the best in a very superficial argument. We know what Queen Elizabeth thought of the "shameful lazy" practice of reading sermons at all, and also what the other elderly lady in the Scottish Kirk thought about it, and how she flung her stool at the minister's head, as an intimation that his flock preferred extemporaneous to prepared instruction. On the other hand, we know that a clergyman may read a homily if he pleases. But where the element of trickery and cheating comes in, that leaven which flavours even sermons as well as other things in these evil days is where the bought sermon is manufactured to look like the MS. discourse of the preacher himself, and where he passes it off as his own. This is simply a dishonest "dodge," and it is surely needless to ask whether a spiritual teacher may practise it. We should see no objection to a clergyman making it known that he was about to deliver a sermon which special occupation in his duty had prevented his composing, though we might not go so far as good Sir Roger de Coverley, who insisted upon his chaplain reading standard sermons by other divines, both morning and afternoon, and who asked at dinner, "Well, Doctor, whom do we have to-day?"

MUSIC.

ENGLISH AND FOREIGN OPERA.

A PARTY of singers have been performing what is called "English Opera"—though it is more properly "Opera in English"—at the Edinburgh Theatre. The company, though it included Mr. Sims Reeves, appears from the local papers to have been weak and inefficient. Their success has not been great; and the usual complaints are made of the neglect of native talent, the preference of foreigners, and so forth. The *Edinburgh Advertiser*, adverting to these complaints, makes the following pertinent remarks:—"And what is English opera, that such a howl should be raised, here as elsewhere, against it? Is it to be converted Bula' an English opera, or 'Fra Diavola,' or 'Lucia'? If we be told they are, we may next expect to learn that Shakspeare is a foreign work because it is translated into a foreign language. In truth, there are English operas of which the nation need not be ashamed; but *they* are shelved. And why? *Because English singers won't look at them.* Why was it that we did not get one English opera during the six nights' performance? Simply for this reason, that, as singers dictate what they are to sing, managers must submit. But the public won't; and, when they withhold their countenance, they get rated soundly by the press for neglect of English opera. Such is the state of the case."

There is truth in what the northern critic says. Such is the state, though not the whole state, of the case. We disregard the clamour about native and foreign talent. We value talent according to its worth, whether native or foreign, but we desire that talent, whatever it is, should be appropriately employed. We want it in this, as in all other things, the right people in the right places. An Italian opera will not be converted into an English one by the mere process of translating the libretto into English; but yet we would not exclude an Italian opera from the English stage (la French musical stage is immeasurably superior to ours); but it has been nourished during its whole existence by the importation of foreign operas and the employment of foreign composers. For a hundred years and more, Italians and Germans—Gluck, Piccini, Rossini, Meyerbeer, and many others—have been supplying the Parisian stage, along with the native composers; and their works have been received according to their merit, not their origin. The evil in this country lies in this: We have no great standard theatre where English operas, or operas in an English tress, can be adequately got up and represented. The consequence of this wretched destitution—for which our English musicians and singers may thank themselves, and not the public—is that we have no English dramatic school, either of composers or performers. The taste of the public has run ahead of all that they can do in either capacity. Even in the provinces the public hear too much of foreign music and foreign singing to be satisfied with the doings of native talent. If they listen with impatience to the performance of Mr. This or Miss That, in a clumsy English version of "Lucia" or the "Sonnambula," which they have had many opportunities of hearing in Italian and by Italian singers, can we wonder at their being somewhat fastidious and discontented?

But this is not all. We are even in a more unhappy situation than if we merely had no English opera; for the English opera that we have is much worse than none. What sort of English opera have we in London? The manager of some theatre—say Mr. Smith at Drury Lane, or Mr. Buckstone at the Haymarket—announces an "operatic company," whose performances are to alternate with other things, during some portion of the season. The company consists of a "star," probably exorbitantly paid, and half-a-dozen *comprès* (as Catalani's husband used to call the people employed to sing along with her) who are not got for next to nothing. There is no competent musical director, no orchestra, no chorus, no decorations, nor a single thing necessary for a respectable—not to say splendid, for that is out of the question—*mise en scène*. The performance is beggarly and wretched; the public despise it, and stay away; and in a short time the affair comes to an abrupt termination. Then as to the provinces—three or four singers without employment in London go strolling about the country, sometimes two or three different parties at the same time—and giving what they are pleased to call "English Opera," with the help of such "supernumeraries" as they can get together on the spot. True English opera is discredited and degraded, and the obstacles to the establishment of a great national musical theatre are rendered insuperable.

MR. STERNDALE BENNETT has been elected conductor of the Philharmonic Society's concerts of next season. This step will give general satisfaction both to the public and the musical profession. Mr. Bennett stands in the first rank not only of British but of European musicians. His orchestral works, as well as his compositions for the instrument of which he is so great a master, are esteemed throughout the Continent; and his experience and ability as a *chef d'orchestre* have been recognised in Germany by his appointment to direct the celebrated *Gewandhaus* concerts at Leipsic. His high personal character, too, and the general respect in which he is held, will add much to his usefulness, in a position where moral influence is not less important than artistic talent.

THOUGH the AMATEURS MUSICAL SOCIETY is a fashionable body, and at present is an unfashionable season, yet the two concerts they are giving before Christmas promise to be as brilliant as if they took place at Midsummer. On Monday evening (when the first was given) the Hanover-square Rooms were crowded with elegant company, and the performance went off with infinite spirit and success. The orchestra, nearly a hundred strong, is, as before, conducted by Mr. Henry Leslie, who, though an amateur, is well known to possess the attainments of a most accomplished musician. It consists almost exclusively of amateurs; the number of professional performers this season being greatly diminished. Thus, among the *forty* violins all are amateurs except *two*, Mr. Henry Blagrove and his brother. This exclusion, however, has been carried a little too far; for some of the amateur wind instruments, placed for the first time in positions of trust and responsibility, were not up to the mark, and failed for want of strength and firmness. In time, however, we may hope that they will acquire more confidence and self-possession. The programme exhibited an excellent selection. It included Haydn's Symphony Letter H, Beethoven's Overture to "Egmont," Auber's Overture to the "Diamans de la Couronne;" a Pianoforte Concerto, composed and performed by Mr. Waley; and several German Part-Songs, sung by the German Choral Society, established in the City under the direction of Herr Pauer. The orchestral pieces were on the whole well played. Haydn's Symphony was the most successful and Beethoven's Overture the least; it is still too arduous a task for young performers. Mr. Waley's Concerto is a masterly composition, and was admirably played. It is in the pure and symmetrical style of the older masters—reminding us of Mozart and Hummel, though without any servility of imitation. Mr. Waley is an accomplished performer: he was a little flurried and nervous, but gave excellent expression to his own ideas. The German part-songs were sung most delightfully, and one or two of them were encored. The next concert is on the 17th of this month, and clashes with Jenny Lind's performance at Exeter-hall. This is unfortunate: might it not still be avoided?

MISS WILLIAMS, an interesting young Welsh lady, a pupil of Signor Lanza, sang, on Thursday evening last week, in a vocal entertainment given by that gentleman at the Music-hall in Store-street. It was an agreeable *mélange* of national songs and ballads of various countries, and of airs from modern operas, thrown into something of a dramatic form so as to enable Miss Williams to appear in different characters. Signor Lanza, in his proper person, is supposed to be in his own apartment, and visited in his professional capacity successively by several singers—a Welshwoman, a Scotchwoman, and an Irishwoman, applying for an engagement at the theatre—a young lady of fashion come to take a lesson, and a Bavarian broom girl; all which characters are sustained by Miss Williams with liveliness and dramatic talent. She is a handsome and agreeable young lady, has a charming mezzo-soprano voice, and her ballad-singing is full of grace and feeling. The hall was quite full, and Miss Williams's reception was highly flattering.

Jullien gave his "Mozart Night" on Wednesday last. The selection from the great master's works consisted of two of his finest symphonies, the overture to the "Zauberflute," the grand pianoforte concerto in E flat (played by M. Billet), and several vocal pieces from "Don Giovanni," arranged for instruments. The theatre was (if possible) even more crowded than on the "Mendelssohn Night," and this most classical music was listened to with a deep attention and intelligent applause which it was gratifying to witness.

THE THEATRES, &c.

ADELPHI.—MR. WEBSTER was greeted with a full house on Monday, on his return to his own stage. These are occasions on which, however old the piece, the courtesies of theatrical life are observable. The stage has its conventions as well as society. It is, in fact, a kind of separate world, in which the ideal prevails, and fancied rights and wrongs have more sway than in the circles of ordinary business. Artistes are a sensitive race, and critics—"nothing, if not critical." All the more reason, therefore, there exists that at certain seasons there should be certain amenities, to restore good understandings, and rectify the balance of feeling. With Mr. Webster perhaps this is less requisite than with any manager on record; never have we known him to interfere with the critic's function, or to complain of his opinion, however contrary. He has always respected the mutual independence of manager and journalist. The performances on Monday were introduced by the bipartite drama of "Janet Pride;" and the criminal father, still human at heart, though not resolute enough to bring the humanity fully into action, was enacted by Mr Webster with his usual power, discrimination, and throughout artistic tact. In some respects Mr. Webster is an unique actor. Not that he manifests any specific peculiarity; but his general excellence is greater than ordinary, and he is so skilful a player that he can pursue his advantage with the utmost quietness of manner. No man has better mastered the repose of style. The play was exceedingly well received, and deservedly so, for, in fact, we never saw it better acted.

OLYMPIC.—"The Jealous Wife" has been added to the repertoire of this theatre; and *Mr. Oakley* receives the full advantage of that intelligent illustration by which Mr. Wigan distinguishes his delineations of old characters from those of his predecessors. *Mr. Oakley* has, at length, another than a mere stage-personality. He is no longer a formal mannerist, an automaton, a moving puppet; but just such a gentleman as we may meet on the Mall or in the drawing-room. We have just reason also to commend Mrs. Stirling in *Mrs Oakley*. The due mean of nature is perceptible in this lady's acting; forcible, without exaggeration; passionate, without being obstreperous. On Monday a new piece was produced—an English version of "Monsieur Perdue," a vaudeville, by MM. Marc Michel and Moreau. The defect of this piece is the insufficiency of its basis, and perhaps some impropriety in the topic. *Benjamin Boothtuvatte* (Mr. Robson), an imprudent young husband, excites his wife's jealousy by a club-dinner, meets an old acquaintance, and leaves his watch at her house in his hurry to escape from her husband, whose ring at the bell announces his return home. As the watch is marked with his very singular name, he fears the husband's vengeance, and consequent exposure to his own wife. A ludicrous terror, after the manner of farces, is built on this slender foundation, which demands all Mr. Robson's *genius* (we use the word advisedly) to justify and support. The piece is entitled "Five Pounds Reward;" but it is not to be supposed that *Boothtuvatte* suffers any such reward; no, he shrinks from anything that threatens exposure; but his sympathising wife (Miss Marston), remarking his frenzied distress for the supposed loss of the old watch, has a bill printed for its recovery. The proof of this she produces, to *Boothtuvatte's* perfect horror. Nevertheless, the bills have not been posted, and a reprieve is yet possible. But a new element of discord is introduced. The frail lady's husband is a watchmaker; and, though exceedingly jealous, is himself rather of a Lothario disposition, and has annoyed *Mrs. Boothtuvatte* herself with unwelcome attentions. Ultimately both facts become known to the terrified hero, with the assurance that *Sorrodaile* (such is the intruder's name, is ignorant that the watch was left at his house in any other than the usual way of business. At once he determines to turn the tables on his tormentor, and commences a fight with foils. But *Sorrodaile* is also in pursuit of a domestic tormentor, whom he recognises in the lady's medical attendant, and begins on him a fierce attack; so that all the parties are driven in confusion from the stage. As we have already intimated, the defects of this piece are obvious; but the sustained excellence of Mr. Robson's acting is irresistible, and the humour of the situation was kept up to the end by the simple force of his unrivalled energy. The house was respectably attended.

HAYMARKET.—MR. Buckstone returned to this house with his troupe of Spanish Dancers on Monday. The play was "The Busy-body," and attracted a full and fashionable house. The manager had a warm reception.

PARIS EXHIBITION.—At the distribution of rewards, one of the two first-class silver medals given for English carriages was awarded to Mr. Storey, of Nottingham, for his cottage phaeton. This carriage has an "invisible" hood, which can be used at pleasure. The transformation from the open to the close carriage is exceedingly simple and instantaneous, and the vehicle retains in both its forms great elegance of appearance. This cleverly-contrived carriage was pointed out by the jurors as worthy of the attention of his Imperial Highness Prince Napoleon, who immediately gave an especial order for one to be furnished to correspond with the Imperial equipages of France. This has just been completed, and has been sent to Paris. Singular enough, when the Prince was walking through the Crystal Palace, on his late flying visit to England, he was attracted by the elegant little cheap "Basket Carriages" there shown by the same maker, and ordered one of them, as have several members of the Emperor's household. These facts show that novelty and merit in any branch of our manufactures arrest the attention of his Imperial Highness equally with those of his own country.

MANAGEMENT OF THE METROPOLIS.

We should despair of the success of the new "Act for the Management of the Metropolis" were it not that all laws are susceptible of various interpretations, and thus become, when carried into effect, subservient to the spirit of those who administer them. The new law, while prescribing much, leaves much to the discretion of the people, and on that we rely to make it work tolerably well. Its chief feature is a "Metropolitan Board of Works," which it creates, "a body corporate, with a common seal and perpetual succession," empowered to take on itself the management of all the sewerage of the metropoli., to regulate straw open thoroughfares, and make improvements, each one of which may cost £50,000, without restraint, and to levy for these purposes what-ever sums of money it may think reasonable. It is to consist of thirty-three unpaid members—three elected by the "City," and thirty by the surrounding metropolitan parishes—and a paid chairman, salary not less than £1500 nor more than £2000, elected by the unpaid members, and removable by a vote of two-thirds. His situation is likely to be permanent, and his power will be very great.

The Board will depend entirely the future management of the metropolis, and there is no duty which the recently-elected vestries will have to perform equal in importance to electing its members.

The 12th inst., Wednesday next, is the day on which the newly-elected vestries are required to perform this the first and chiefest of their functions. The Act, somewhat faulty in this respect, does not prescribe the mode of election; and probably the vestries, or their clerks, will have to decide whether it shall be by ballot or open voting. On this point the vestries must be circumspect, for they will no doubt be exposed to the influence of those jobbing cliques which are known to predominate in several parishes, and which may at the very moment of commencing the elections come forth in an organised body to make them subservient to their own purposes. The vestries are summoned in some cases to perform this duty as late as six o'clock; and, as the Act is imperative in requiring it to be performed on the 12th, they will hardly have time to ensure its proper performance. With the technical duties required of the members of the Board—such as registating and deciding whether the sewers shall be pipes or tunnels—the vestries may perhaps not be well acquainted; but they will readily distinguish ignorant, boasting self-seekers from efficient, honest men acting on a conscientious sense of responsibility, and will prefer the latter.

On this point they have nothing to consult but their own discretion; they are in nowise limited in their choice; there is no excuse in old customs, aristocratic predilections, the rust of disuse, or in lists already crammed with aged servants, for not putting the right man if he can be found in the right place; and it will be somewhat derogatory to the character of the people of the metropolis if, after having undertaken to instruct the Government, they should put round pegs into square holes. The Act professes to give the ratepayers of the metropolis, through their vestries, by the election of this Board, and the election of its chairman, a control over all municipal affairs, except the police and the poor; and it will be the fault of the vestries if the professions of the Act do not eventuate in beneficial and substantial realities. A good Board of Works, should the vestries constitute such a one, will speedily put to shame the squabbling Commissioners for Sewers, of which there have been six distinct bodies since 1847, and all of which have wasted the public money, delayed the progress of necessary works, and broken up in confusion.

NATIONAL SPORTS.

Although there have been some strong foretastes of winter during the past week the coursing has gone on without a check, and hares are generally reported to be plentiful and strong. In Cumberland, however, as we lately mentioned, there seems to be a lack, and now we hear that some coursers who were ont on the Solway marshes slipped Larricdale (who ran up for the Workington Cup) at a slapping 16 lb fox, who jumped up in some turnips, and killed it after a fine run. We rather long for a return of the days when English greyhounds

Gaily shipped their greyhounds
At the borders in the fens

But this gratuitous piece of mischief was especially to be deplored, as Mr Lawson's pack drew the Drayton plantations all day in the ensuing week without a find. Rather than have a repetition of such a thing the Cup to his owner's credit, but he has unfortunately broken one of his toes, as his sire, Bedlamite, did before him, and has retired from the slips for the present. The meetings next week are eight, and commence with Marbury (Whitchurch) on Monday; Bangor (O.) and Knallworth stand for Tuesday and Wednesday; Ardrossan for Wednesday; "Newcastle, Northumberland, and Durham," and Mountainstown, for Wednesday and Thursday; Baldock for the above two days and Friday, and Altcar Club for Thursday and Friday.

Shooting in the Highlands has been unusually protracted this year, although it promised so ill in August; and on the 22nd ult. no less than sixteen and a half brace of grouse were actually *killed to pointa* on the Inverness moors. *Apropos* of shooting, we have just heard from a gamekeeper that the late Sir Richard Sutton once shot 100 brace of sn.pe in two days. The crack shot on the Continent is said to be a Count N——, and his aim is so faultless, that at Geneva last year he stuck a half-franc piece repeatedly on the toe of his boot, and shot it off with a pistol. He enchanted the *beau monde* of Munich three years before to such an extent by his feat, that, to use the caustic expression of one of their most distinguished wits, "nearly every man of fashion tried to do the same, and *most there is hardly a big toe among them!*" The King of Sardinia is, perhaps, the finest game-shot among Monarchs, and the crack of his rifle has often echoed in the *Alpine Hanoks* and the mountains of Savoy. We understand that his Majesty visited the Pauls Paddocks on Wednesday, and, although we are not informed as to whether he bought any hoof of—there, he did not leave Mr. Quartermaine's, of Piccadilly, without purchasing three hunters. As he is fond of hounds, we could have wished that he had spent a little more time in England to hear a chorus of those "wood-notes wild" which are so striking a characteristic of an English morning. A Devonshire wrter was so pleased to hear them lately that he described a "wedding-morn ushered in by a merry peal from the church tower, which united with the stirring notes of the far-famed Oaldeharriers;" and a she-donkey, belonging to a woodcutter, yclept "John-o'-the-Boon," actually followed the Duke of Buccleuch's hounds for ten miles over hedge and ditch last week to their tune. Although she lost two shoes in her ardour, and cost her owner a weary chase, he was so proud of her performance that he fondly hugged her at the finish, and gave her a biscuit and a glass of rum!

Quorn Hall is advertised to be let, and the sale of the hunting establishment will take place there on Thursday and Friday. The catalogue, which comprises 158 lots, announces that the sale "will commence punctually at twelve each day," and that everything, down to the fomenting-tubs and poultice-boots, will be "sold without any reserve." On Thursday the hound-van and fourteen five-couple lots of hounds will be sold first, and thirty-seven hunters will follow, with twenty-seven lots of saddles, clothing, &c. Six horses that have been used in cub-hunting, three hacks, three ponies, six harness horses, besides harness and the rest of the stable appurtenances, compose the lots on Friday. The list of the hounds has been published, and they seem to have a good deal of the Badminton, Yarborough, Belvoir, Burton, Drake, Lumley, Sledmere, Donnington, and Fitzhardinge kennel blood amongst them. Mr. Richard Sutton may perhaps retain the Donnington country; and some slight hopes are entertained that Mr. John White may become the master of the Quorn, with a subscription. He has been foremost among the best at Melton for thirty years; and even Nimrod, in his *Quarterly* article, represents him as taking a gate just by the hinge-posts in front of Captain Ross on Clinker. He was the master of the Cheshire hounds until the close of the 1854 season. A strong misunderstanding exists between Lord Southampton and Mr. Selby Lowndes, whose late country his Lordship now hunts, and hence his Lordship's hounds are, if possible, whipped off the instant they point for one of Mr. Lowndes' own coverts. We hear that this matter has, at last, a chance of being settled, which we trust is the case; as, if it is not, Mr. Lowndes may probably meet with reprisals, and be warned off, in his turn, from the covers of a certain great proprietor in the Atherston hunt. Hunting men must stand by each other on such matters.

Racing news is almost *nil*, but it is hinted that Mrs. Osbaldeston's horses will leave Warrenner's and go to William H. Scott's, at Holywell, on whose springy sod Queen of Trumps, General Chasse, Trapball, and a host of good horses were trained in their day, and whose far-famed "Montys Mills" even the great Touchstone's St. Leger laurels were dimmed. This horse's own brother, Launcelot, himself a winner of the Champagne Stakes, St Leger, and second for the Derby, was brought from Holywell to Tattersall's last Monday for sale; but nothing, strange to say, though he is the sire of twenty-one winners and very fresh, there was not even a bid for him. Sharavogue is to be sold next Monday, and will, we hope, have more luck.

There will be a couple of steeplechases, four flat races, and a hurdle race (in two of which events Bourton heads the acceptances), at Wolverhampton, on Monday and Tuesday; and a four-mile 100 sovs. side steeplechase match is made up for the 18th instant. Mr. "Pell," or rather Mr. Cooke, of Lutterworth, the owner of Polestar, has added another to the long list of turfites who have died this year; and his friend Mr. C. Breton, the breeder of Ellnsthorpe, Wild Huntsman, Rosaline, Sirius, &c., has declined further breeding for the turf Switch, the dam of Rosaline, is dead; and Honey-Dear, with a sister to Wild Huntsman at her footand in foal to Teddington, was disposed of previously to his sale, which consisted principally of yearlings and foals by Meteor and Foig-a-Ballagh. It has been announced in a semi-official way that the rumoured misunderstanding between a well-known owner of race-horses and his jockey will not lead to a rupture a termination which no one expected, as his two horses would have been certain to go down in the Derby betting all the winter if such had been the end of it.

Game in the Crimea.—We are encamped in the Valley of the Baidar, in the midst of woods swarming with game; the hares are of very large size and you may be sure we do not neglect them. The sportsmen have a good deal on their hands; they pretend that M. de Mardswinff, the proprietor of this vast property, had a secret for fattening them, and making them assume enormous dimensions. The source of the Tchernaya is at a few paces distance from us: at the moment I write it is a thin stream of water, which issues from the feet of a rocky mountain The beautiful verdure, which has lasted since our arrival here, imparts to the country the most agreeable aspect, and the soldier (who is an artist as well as a soldier) has succeeded in producing complete Italy, Swiss cottages, and other landscapes very comfortable. One might fancy it a Switzerland in miniature, and our men seem to have no apprehensions of winter.—*Letter from the Camp*

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

An impression having gained almost general currency that we shall shortly have peace with Russia, some little excitement has been apparent in the Consol Market, and the prices of nearly all National Stocks have steadily improved. The leading Peace party have purchased largely, both for Money and the next Account; and there has been a difference of about ¼ per cent between transfer prices and those for the January settlement. Both here and in Paris heavy amounts—viz., from 20 to 50 per cent—have been lately paid for carrying over accounts, an impression have been the speculators with the prospect of a speedy termination of our dispute with Russia.

The Bank of England has continued to make rather large advances to the commercial body, but we have no alteration to notice in the rates of discount. On the whole there is a fair supply of money at the present rates of interest. The imports of bullion have amounted to nearly £300,000 from Mexico and the West Indies, and £58,000 from Australia; but we have had an export of nearly £500,000 to India and China—notwithstanding all the efforts made to check these enormous shipments—and about £50,000 to the Continent. Rather over £30,000 in silver has arrived from Belgium Out of the supply of gold recently imported from Australia—£1,160,000—only £300,000 has entered the Bank of England—the whole of the remainder having been purchased for France, and we are apprehensive that this drain will continue.

On Monday there was a steady business doing in the Consol-market, and prices were on the advance. The Three per Cents were 89¼ to 89⅜ for Money, and 89⅛ to 89⅜ for the present Account. The Reduced were 88¾ ⅞; and the New Three per Cents, 88⅜ to 89½.

A transaction took place in the New Two-and-a-Half per Cents at Bank Stock, 209½; India Stock, 226; Long Annuities, 1860, 8 7-16 ½; Ditto, 1885, 16½. India Bonds, 1s. discount. Exchequer Bills, 2s. to 7s. discount; Exchequer Bonds, 97¾ to 98¾. There was an improved feeling in the market on Tuesday, and the quotations were again higher. Consols were done at from 89⅞ to 90⅛; the Reduced, 89⅛ to ⅜; and the New Three per Cents, 89½ to 89⅝. Long Annuities, 1860, realised 8 7-16 ½; Ditto, 1885, 16½; Exchequer Bills, 1s to 6s. dis.; Exchequer Bonds, 98¼ to 98. On the following day prices further advanced, with considerable activity in the market. Bank Stock, 210½ to 209; Three per Cents Reduced, 88⅞ to 89½; Consols, 89⅜ to 90⅛; New Three per Cents, 89⅜ ⅝; New Two-and-a-Half per Cents, 89½; Long Annuities, 1860, 8¼; Ditto, 1885, 16⅛; India Stock, 226 to 225; India Bonds, 1s to 1s discount; Exchequer Bills, 1s to 6s discount; Exchequer Bonds, 97 to 98. On Thursday there was less activity in the market. Consols were done at 89⅞ ⅜, but they closed heavily at 90¼. The New Three per Cents were 89¾ 90 to 89⅝; and the Reduced, 89 to 89. Bank Stock, 209 to 210½; Exchequer Bills, 6s. to 2s. discount; and India Bonds, 5s to 1s discount.

Some large speculative purchases having been effected in Turkish Bonds, prices have ruled as high as 86; and the New Scrip has been done at 2¼ ⅜. Most other Foreign Securities have been tolerably firm, and a steady business has been transacted in them Brazilian Five per Cents have realised 99½. Dutch Four-and-a-Half per Cents, 99 ex div.; Buenos Ayres Six per Cents, 84½; Chilian Six per Cents, 101½; Equador, 6% Mexican Three per Cents, 19½; Peruvian Four-and-Half per Cents, 75½; Russian Four-and-a-Half per Cents, 90; Sardinian Five per Cents, 85¾ ex div.; Spanish Three per Cents, 40¼; Ditto, New Deferred, 20½; Ditto, Passive, 7½; French Rentes Three per Cents, 67; Dutch Two-and-a-half per Cents, 61½; Russian Five per Cents, 98.

Joint-Stock Bank Shares have been very firm, and the quotations have rather improved Australasia have realised 52. Ditto, 60; London Chartered of Australia, 17. Provincial of Ireland, 34; Union of London, 30¾

The business in Railway Shares and most Miscellaneous Securities, as follows:—Caledonian, 87¾; Canada Company's Bonds, 130; Ditto, Government, 103½; Crystal Palace, 2⅜; Mediterranean Electric Telegraph, 6⅛; Mexican and South American, 6½; North of Europe Steam, 1⅜; Peninsular Land and Mineral, 2⅜; Peninsular and Oriental Steam, 69½; St. Katharine Dock, 84; Victoria Dock, 19; East and West India, 119½; London, 109½; Southampton, 87¾. Hungerford-bridge Shares have marked 12; and Waterhall, 1½. Albion Insurance have stood at 65; Globe, 107; Imperial Fire, 340; Ditto Life, 18½; London, 29½; General, 6½; Phœnix, 180; Royal Exchange, 230; Sun Life, 85.

The market for all Railway Shares, except Eastern Counties, has been rather active, and the quotations have somewhat improved. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCK:—Bristol and Exeter, —; Caledonian, 86; Eastern Counties, —; Great Northern, —; Great Southern and Western (Ireland), 82; Great Western, 80½; Lancashire and Yorkshire, 77½; London and North-Western, 94½; London and South-Western, 87; Midland, 64½; Norfolk, 45; North British, 39½; North-Eastern, Berwick, 11½; Ditto, York, —; Oxford, Worcester, and Wolverhampton, 39; South-Eastern, 58½; South Wales, 81½.

LINE LEASED AT A FIXED RENTAL:—Hull and Selby, 105.

PREFERENCE SHARES:—Aberdeen, 107; Caledonian, 4 per Cent, 94½; Eastern Counties Six per Cent, 124; Great Northern Five per Cent, 115; Ditto, Five per Cent, redeemable at ten per cent prem., 106½; Ditto, Four-and-a-Half per Cent, 101; Ditto, Five per Cent Scrip, 7½; Great Western and Western (Ireland), 124; Great Western Four-and-a-Half per Cent, 86; London and Brighton Five per Cent, —; Manchester, Sheffield, and Lincolnshire, 124; Oxford, Worcester, and Wolverhampton, —; Wisbech and Kilkenny Six per Cent, 2½.

FOREIGN:—Antwerp and Rotterdam, 5; Belgian Eastern Junction, 1½; Eastern of France, 85½; Head Indian Five per Cent, 91; Grand Trunk of Canada, Lassie, 11½; Great Luxembourg, 8⅜; Great Western of Canada, 34½; Ditto, New, 7⅜; Madras Extension, 4⅜; Northern of France, 35⅜; Paris and Lyons, 46; Sambre and Meuse, 8.

Mining Shares have been firm: Cobre Copper have realised 65 Lusaces, 7⅞; Rhymney Iron, 21½; Santiago de Cuba, 4⅜.

Friday Afternoon.

We have had a dull market for national stocks to-day, and prices are drooping The Three per Cents, for Money, have been 89⅝ ⅞; and, for the Account, 90⅛ ⅜. The Reduced have realised 88⅞ 89; and the New Three per Cents 89¼ ⅜. All Foreign Bonds and Railway Shares are dull.

THE MARKETS.

Corn-Exchange (Friday).—Since Monday a very limited supply of English wheat has come to hand, sometimes and by foreign carriage. To-day the show of samples was small; but the demand was inactive, at Monday's quotations. With foreign wheat we were scantily supplied. The business done in that grain, during the week, was trifling, for our former terms. Fine parcels of grain were held on former terms. We had a slow sale for barley, at the late decline. Malt moved off slowly at late rates. There was a slight improvement in the oat trade, at full quotations.

[illegible] 700 casks, 30 chaldron, 700 quarters, 300 sacks, 300 bags, 1400 [illegible] Kent, red, 42s. to 46s.; ditto, white, 47s. to 49s.; Norfolk and Suffolk, red, 42s. to 45s.; ditto, white, 46s. to 48s.; grinding barley, 27s. to 29s.; malting ditto, 32s. to 34s.; distilling ditto, 30s. to 32s.; Chevalier, 34s. to 36s.; Lincoln and Norfolk malt, 70s. to 72s.; Kingston and Ware, 77s. to 80s.; Oxfordshire, 68s. to 70s.; Yorkshire and Lincolnshire feed oats, 27s. to 29s.; potato ditto, 30s. to 32s.; Youghal and Cork black, 23s. to 25s.; ditto, white, 25s. to 27s.; tick beans, 41s. to 47s.; grey peas, 43s. to 45s.; maple, 42s. to 47s.; white, 50s. to 52s.; boilers, 50s. to 55s. per quarter, Town-made flour, 75s. to 77s.; Suffolk, 58s. to 59s.; Stockton and Yorkshire, 55s. to 61s. per 280 lbs. American flour, 42s. to 43s. per barrel.

Seeds. The business doing in most seeds is but moderate, yet prices generally are well supported. Cakes are very firm.

Linseed, English, crushing, 78s. to 83s.; Mediterranean, 78s. to 83s.; hempseed, 56s. to 58s. per quarter Coriander, 20s. to 30s. per cwt Brown mustard seed, 12s. to 20s.; white ditto, 10s. to 14s.; tares, old, 5s. to 6s. per bushel English rapeseed, 35s. to 36s. per quarter Linseed cakes, English, £14 os. to £15 10s.; ditto, foreign, £13 10s. to £14 10s.; rape cakes, £7 10s. to £8 per ton. Canary, 65s. to 68s. per quarter

Bread.—The prices of wheaten bread in the metropolis are from 11d. to 11½d.; of household ditto, 9d. to 10½d. per 4lbs. loaf

Imperial Weekly Averages.—Wheat, 65s. 1d.; barley, 44s. 5d.; oats, 28s. 10d.; rye, 35s. 8d.; beans, 38s. 9d.; peas, 38s. 5d.

English Grain Sold Last Week.—Wheat, 117,413; barley, 13,076; oats, 20,558; rye, 365; beans, 3156; peas, 3005 quarters.

Teas. We continue to have a steady, though not to say, brisk, demand, for most kinds of tea, the prices of which are well supported. Common sound congou, 8½d. to 9½d. per lb.

Sugar.—A very limited business has been done in raw sugar this week, and it is difficult to give accurate quotations. Where sales have taken place, prices have been from 1s. to 1s per cwt. below the highest point of the market. Refined goods have continued dull, at 60s. per cwt. for brown lumps, and 62s. to 63s. for grocers.

Coffee. Good ordinary native Ceylon has changed hands at 58s. to 59s. per cwt., with a limited demand. All plantation kinds have realised full quotations. In foreign coffee very little is doing.

Rice.—The demand has slightly improved; nevertheless, the quotations are somewhat easier than they were ten days since. The finest white Bengal cannot be purchased under 18s. per cwt.

Provisions.—Irish butter has moved off slowly, however, are well supported. The best Dutch is rather easier. English is firm, at extreme rates the best Carlow being worth 118s. per cwt. The bacon market is heavy, at 2s. decline. Hams are cheaper, but other kinds of pork are as steady.

Tallow. P. Y. C. on the spot has been dull, at 68s. per cwt. For forward delivery very little doing.

Oils. Linseed oil moves off slowly, at 32s 9d. to 33s. per cwt. on the spot, and 44s. to 45s. 6d. for forward delivery Most other oils are a dull inquiry. In spirits of turpentine is selling at 36s., and American, 37s. to 37s. 6d

Spirits.—Rum is in fair request, and prof towards is selling at 3s. 1d. to 3s. 3s. per gallon Bast India being quoted as 3s. 1½. to 3s Brandy is also dear and steady. Malt spirit, 1s. per gallon.

Coals [illegible] Harton, 19s. 9d.; Haswell, 22s.; Hetton, 22s.; Lambton, 21s. 6d.; Stewart's, 22s West Belmont, 19s. 9d. per ton

Hay and Straw.—Meadow hay, 85s to 110s.; clover ditto, 95s. to 125s.; and straw, 24s. to 30s. per load

Wool.—Our market is heavy, but we have scarcely any change to notice in prices.

Potatoes.—The supplies are large, and the trade is heavy, at from 70s. to 115s. per ton.

Hops (Friday).—There is a moderate business doing in fine hops, at full prices. In other kinds very little is doing, and the quotations are barely supported. About 150 bales have arrived from Hamburg. Mid and East Kent pockets, 75s. to 120s.; Weald of Kent, 65s. to 85s.; Sussex, 60s. to 90s. per cwt

Coals (Friday).—Hilton, 21s.; Lambton, 21s. 6d.; Montagu, 19s. 6d.; Plummer, 20s. 3d.; Hetton, 21s. 3d.; Stewart's, 22s.; Tanfield, 19s.; Tanmain, 19s. 9d. per ton

Metropolitan Cattle Market (Friday).—The supply of beasts in to-day's market was limited, and in good condition. All breeds sold slow for, as they Monday's prices were freely supported. The best Scots were worth fully 5s. per 8lbs. With sheep we were very moderately supplied, yet the mutton trade was heavy, at Monday's decline in value. The show of calves was comparatively small, yet the veal trade ruled inactive and prices had a downward tendency. The top figure was 5s per 8lbs. We sold slowly, on former terms. Much cows were dull, at from £14 to £19 each, including their small calf.

Per 8lbs to sink the offal.—Coarse and inferior beasts, 3s. 8d. to 3s. 10d.; second quality ditto, 4s. 0d. to 4s. 4d.; prime large oxen, 4s 6d to 4s. 10d.; prime ditto, 5s. 2d. to 5s. 3d.; coarse and inferior sheep, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 4s. 2d.; prime coarse-woolled sheep, 4s. 4d. to 4s. 6d.; prime Southdowns, 4s. 8s. to 5s. 0d.; large coarse calves, 3s. 10d. to 4s. 0d.; prime small ditto, 4s. 10d. to 5s. 0d.; large hogs, 3s. 2s. to 3s. 6d.; neat small porkers, 4s. 0d. to 4s. 6d.; sucking calves, 2ls. to 30s.; and quarter old store pigs, 22s. to 28s. each. Total supply beasts, 960; cows, 280; sheep, 3820; calves, 990; pigs, 230. Foreign beasts, 210; sheep, 850; calves, 160

Newgate and Leadenhall (Friday).—The supplies of meat were large, and a full average business was doing, as follows:—

Per 8lbs. by the carcase:—Inferior beef, 3s. 2d to 3s. 6d.; middling ditto, 3s. 8d. to 3s. 10d.; prime large ditto, 4s. 0d. to 4s. 4d.; ditto small ditto, 4s. 6d. to 4s. 8d.; large pork, 3s. 10s. to 4s. 4d.; inferior mutton, 3s. 8d. to 3s. 6d.; middling ditto, 3s. 6d. to 4s. 0d.; prime ditto 4s. 2d. to 4s. 6d.; veal, 3 8d. to 4s. 8d.; small pork, 4s 6d to 5s. 4d.

HERBERT.

THE LONDON GAZETTE.

TUESDAY, DECEMBER 4.

WAR-OFFICE, DEC. 4.

8th Light Dragoons: Major-General George Charles, Earl of Lucan, to be Colonel.

BREVET.—Brevet-Major H. A. Lake to be Lieutenant-Colonel in the Army, Lieuts.-Col. F. F. Tuite and W. Mayne, to be Aides-de-Camp to the Queen, with the rank of Colonel in the Army.

ADMIRALTY, NOV 24

Lieut. and to be Assign

VISIT OF THE KING OF SARDINIA TO THE ROYAL ARSENAL AT WOOLWICH.—(SEE PAGE 675.)

THE KING OF SARDINIA'S VISIT.

(Continued from page 636.)

THE VISIT TO THE CITY.

His Majesty Victor Emmanuel had a great reception from the inhabitants of London on the occasion of his visit to the City on Tuesday. As a popular demonstration it fell very little short of that accorded to the Emperor Napoleon, and is a conspicuous proof of the resolute spirit with which the whole country is animated in reference to the war and the alliances which it has cemented. The King, following the example of the Emperor, has wisely made his sojourn in England felt to be a compliment not only to the Sovereign but to the nation. He, too, has accepted not only the hospitalities of Windsor Castle, but those of London; and in such an e of considerate consideration the public will not fail to see influences far more suited to the age in which we live than those exclusive interchanges of private friendship which have hitherto marked the intercourse of our Court with those of foreign States

Victor Emmanuel did not bring bright skies with him to England from Italy; but, considering the season of the year, he has been tolerably fortunate in the weather. Tuesday, however, was one of those murky, gloomy days peculiarly metropolitan, when everything looks dismal—when the thoroughfares, without being positively enveloped in fog, have a hazy, sombre, and miserable aspect—when somebody the rain does not come down, though it seems to have all the inclination in the world to do so. The good people of London were, nevertheless, bent upon seeing and cheering the King of Sardinia, the ally of their Queen; and so, though the weather was so unpromising, they assembled along the route of the procession in extraordinary numbers. They made no great display of flags, though there was enough of these to mark the festive character of the occasion. Triumphal arches, and other architectural effects, such as were produced in Paris during the Queen's visit, were not attempted, and altogether the street decorations may have appeared bald to the eyes of a foreigner; but, on the other hand, we would ask strangers to our habits and customs to consider the compliment implied in closing up for a whole day the busiest and most crowded thoroughfares of this vast capital, and in arresting that high tide of commerce which is ceaselessly surging through those great arteries of communication extending from Buckingham Palace to Guildhall. The King, who had come in from Windsor early in the morning, received addresses of congratulation from the Common Council of London, presented by the Lord Mayor; from the Town Council of Edinburgh, presented by the Lord Provost of Edinburgh; from the bankers, merchants, and traders of the city of London; from the Protestant Dissenting Deputation of the three Denominations; and from the Religious Societies of Great Britain. His Majesty afterwards held a levee at the Palace of the Diplomatic Corps, which occupied some time. At twelve he set out for the City in one of her Majesty's State carriages, escorted by a detachment of the 1st Life Guards. A numerous suite attended him in other carriages; and the line of procession, which was the same as that followed by the Emperor and the Empress of the French, was held for a portion of the way by the household troops. For the rest the Metropolitan and City police sufficed, and excellent order was maintained. The progress from Charing-cross along the Strand, Fleet-street, Ludgate-hill, and Cheapside was a continued ovation, for his Majesty's spirited conduct in joining the Western alliance and in upholding the civil and religious liberties of his subjects had made him extremely popular among the citizens of London. Unfortunately, the gloomy state of the atmosphere, and the close carriage in which the King sat, prevented the people from seeing his features as distinctly as they wished.

West Strand was conspicuous for its display of colours and the warmth of its reception. Here many of the shops were closed against the pressure of the multitude. A large shield, with the quarterings of Savoy, Piedmont, and the very many States that go to make up the Sardinian kingdom, was exhibited at Messrs. Russell's. The Electric Telegraph office and the Lowther Arcade were the centre of a profusion of colours, some on a very large scale, the four flags of the Allied nations being united into one. At this point the welcome given to his Majesty was particularly marked. Up to the New Church, the Strand presented a singularly lively and holiday appearance. The "Illustrated London News," as the *Post* remarked, "shone with coloured illustration." A guard of honour of the 3rd Light Dragoons were stationed at Temple-bar; whence, up to Ludgate-hill and round St. Paul's, the scene was one of general exhilaration and popular excitement. One house in Cheapside, among other signs of welcome, exhibited a large placard inscribed with

Se benvenuto speranza d'Italia.

Mercers'-hall set forth all the banners of its company, as did Grocers'-hall, whose long façade in Princes-street was adorned with no less than thirteen flags. There was nothing otherwise conspicuous about the Mansion-house and the Exchange. Lothbury was held by the Artillery Company and Gresham-street by the City Militia. Precisely at ten minutes to one the cortège arrived at the entrance to Guildhall, where his Majesty was loudly and repeatedly cheered.

THE GUILDHALL DECORATIONS.

The Hall was fitted up in a style altogether different from that on the visit of the Emperor and Empress of the French; the distinctive character on the present occasion being that the throne was placed as nearly in the centre of the Hall as the compartments would admit, instead of at the east end; so that the ceremony of presenting the address might be seen and heard to better advantage by the guests at the extremities of the building.

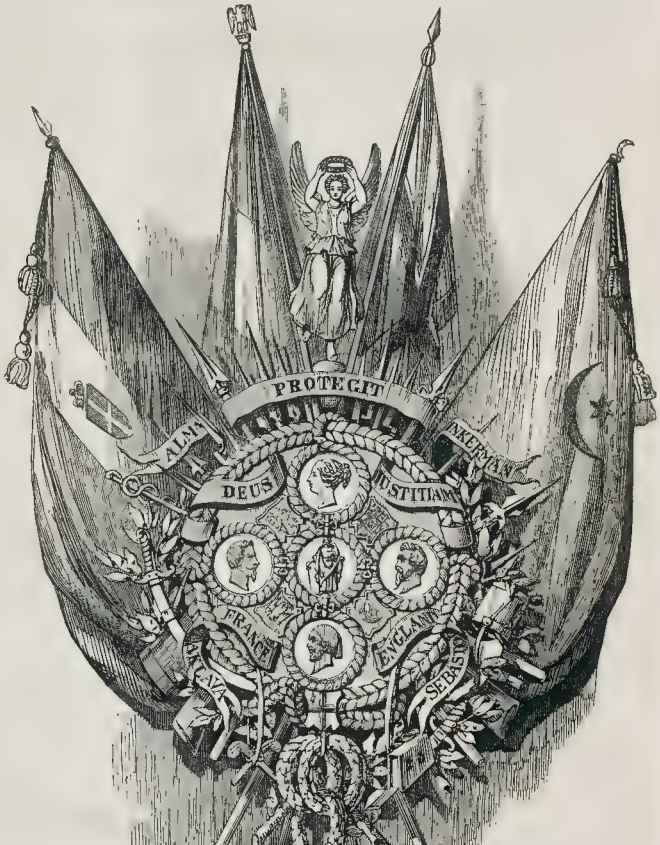
It has always been admitted that the effect on State occasions has been greatly marred by the extreme brevity of space between the outside door and the immediate entrance into the Hall. To remedy this defect Mr. Bunning, the City architect, planned the addition of a pavilion enclosing the whole of the Guildhall-yard, which, while it gave both a corridor and vestibule to aggrandise the effect, afforded accommodation on raised seats to nearly 2000 spectators, between whom the illustrious guests entered. The corridor was ornamented with clusters of flags; and the vestibule, by an ingenious adaptation of what was a necessary encumbrance—twelve gas stoves for warming it—presented an appearance of the entrance to an ancient Greek palace, six altars being ranged on either side, surmounted by a lambent flame, and appropriately ornamented with myrtle wreaths and rams' heads.

The almost unnecessary plan of excluding daylight on a December day was adopted, as ensuring a proper effect of light; and this was made the most of in a manner elegant and simple, by defining the architectural outline of the building with small jets of gas, a species of illumination for which we are indebted to the artistic mind of Italy, where it is to be seen on a grand scale once a year—at the illumination of St. Peter's. A fine mass of colour, at either end of the Hall, gave repose without distracting from the brilliancy of the lighting. To these the eye was happily led up by a series of medallion portraits which ranged between them on either side of the Hall. The device covering the western windows, painted by Messrs. Fenton and Absalon, presented portraits of her Majesty the Queen, the Emperor of the French, the King of Sardinia, and the Sultan. Groups of soldiers of each nation formed a background, while above, giving elevation and meaning to the design, were allegorical figures of France, Sardinia, Turkey, and England, standing by an altar in the attitude of pledging themselves to an alliance. On the front of the altar was inscribed, in bold characters, a Latin legend, implying that "no power can overcome those who are firmly agreed; nor shall any power avail to break such a covenant of faithful friendship." The eastern window presented the appropriate compliment of a view of the Piazza di San Carlo, with the celebrated statue, by Marochetti, of Emmanuele Filiberto, founder of the monarchy of Sardinia. At the base of the picture were portraits of Carlo Emmanuele II., Vittorio Amadeo I., Francesco Giacinto, and Carlo Emmanuele II. The large medallions on either side the Hall included portraits of Charles Emmanuele III.: Charles, surnamed the Happy, a rare exception in his race; Prince Eugene of Savoy, a name well known to English history; Tommaso Cariguano, the founder of the present reigning dynasty in Sardinia; Massimo d'Azeglio, whose diplomatic skill might almost be said to have preserved it on the throne; Boniface, Archbishop of Canterbury, brother to la Belle Eleanor of Provence, Queen of Henry III., a worthy whose appointment was one of the most offensive ever made in the English Church, and had very nearly caused the loss of her throne to his sister, who begged the appointment for him from the Pope; Vittorio Amadeo II., who was a great King, but, having abdicated his throne, wished to take it back again; Vittorio Amadeo III., who was a great King, and would not let him have it, and who first pointed out that the danger of Russian aggression necessitated peace and a close union between France, England, and Sardinia; Carlo Alberto, father of the Monarch whom the proceedings of the day were to honour; Carlo Emmanuele IV.; and, lastly, the King himself and Prince Albert.

The Ambassadors and distinguished guests occupied the front of the gallery on the right of the throne. The members presenting the address were placed opposite. The throne was raised four steps, and the dais covered with rich blue velvet, embroidered with Sardinian knots and the initials "F. E. R. T." ("Fortitudo Ejus Rhodum Tenuit"), emblems in use in Sardinia as the bee in France. The chair of state, with the letters V. E. in a wreath of laurel embroidered in gold, and surmounted by a crown, was placed in the centre of the dais. The Royal arms of Sardinia were embroidered on the back of the throne, which was covered with light blue velvet. The canopy, ornamented with national emblems, was supported by graceful female figures bearing baskets of flowers and surmounted by a statue of Minerva.

The lobbies from the Hall to the Banqueting Room (the Chamber of the Court of Common Council) were decorated, as also the porch from the Pavilion to the Hall, with portraits of Crimean heroes.

On the left side of the corridor leading from the Hall to the Council Chamber was placed a splendid trophy commemorative of the victories in the Crimea. This emblematic group consists of a richly-gilt shield, encircled by a double cord; the shield is divided into five medallion compartments by a gold cord, on a centre one is a figure of Justice, and on the others surrounding her are portraits of the Queen, the Emperor Napoleon, the King of Sardinia, and the Sultan. These portraits are separated from each other by shields bearing the arms of the respective countries. The figure of Justice and the portraits are in gold, on a white ground. The shield itself is surrounded by implements of war and laurel wreaths, entwined by a ribbon, which is also gracefully brought over the face and border of the shield. On this ribbon are inscribed the motto, "Deus protiget Justitiam," and the names of the principal victories of the Allies—"Alma," "Inkerman," "Balaclava," and "Sebastopol." At the bottom of the shield are the City arms, and, where the branches of laurel cross, are hung three golden wreaths. The whole design is surmounted by a large figure of Victory; and the silken banners of England, France, Sardinia, and Turkey, wave gracefully around it. The trophy is about six feet broad, and from eighteen to twenty feet high. It was designed and executed by Mr Charles Nesotti, of Oxford-street, and does great credit to his taste and skill. We have engraved this very characteristic work of decorative carving.



GRAND TROPHY, IN THE CORRIDOR AT GUILDHALL.

Two finely painted portraits of Charles Emmanuel III. and Victor Amadeus III., the property of the City Remembrancer, were displayed in the lobby adjoining the Council Chamber.

This Chamber was appropriated to the défeuner of the King and his suite. The table was elegantly ornamented with finely-executed groups in silver, and flowers judiciously arranged, over which massive candelabra shed a brilliant light. The "dressing" of the Royal table may possibly have its interest. The wine glasses, made expressly for the occasion, were of novel form and character, having twisted stems, and elaborate engravings of the diadems of England, France, Sardinia, and Turkey, on the cup. The napkins were bordered with costly lace, and had the Royal crown of Sardinia worked in the centre. The doyleys were of crimson velvet, embroidered with Sardinian emblems in raised gold. The dessert service combined two elaborate designs—the one embodying the flags of the Allies grouped together in an artistic manner, with the shield of the city of London in the centre surrounded by the arms of Paris, Turin and Constantinople; and the other showing the Sardinian arms in the centre, with the armorial bearings of the Allied Powers in compartments. A noble china vase, nearly three feet high (by Messrs. Rose, of Colebrook Dale), formed a striking object on the table. On the one side were the arms of England, France, and Sardinia, sustaining the emblems of the Turkish empire, and on the other the arms of the city of London. These were the preparations made by the city of London to receive an illustrious guest of the Sovereign and the friend and ally of the nation.

RECEPTION OF DISTINGUISHED GUESTS.

The invitations, limited to about 1500, prescribed the hours of arrival between ten and twelve. As soon as the hall doors were opened, a long line of carriages deposited the more eager visitors, and before eleven o'clock the seats were for the most part occupied. The most distinguished guests now began to arrive, although, indeed, some special notabilities had previously taken their seats unobserved by the general mass. Mr. Monckton Milnes and Mr. Roebuck were of the category occupying places removed from the seats of honour, and surveying with apparently amused scrutiny the entrance of their Parliamentary colleagues. First came Admiral Sir Charles Napier, to gratify the excited expectancy of the company. His entrance was loudly cheered, and celebrated by an outburst of music from the band of the Royal Horse Guards Blue in the gallery facing the vestibule. Perhaps a moral lesson was intended by their choice of a tune, which was "Steady, boys, steady!" Next came the Foreign Ministers in quick succession. The first to arrive was M. Van de Weyer, who was received by the Lord Mayor, and conducted to the seats appropriated for the Ambassadors. M. Van de Weyer was accompanied by his wife, the daughter of one of the wealthiest of our English merchants. In his reception of this distinguished pair the Lord Mayor displayed a courtliness and polish of manner which is not always left as an heirloom with the office. The Bavarian Minister came next, and then Count Colloredo, whose position as Austrian Minister, when announced by Mr Barker in his usual emphatic manner, created what our French neighbours style "a sensation." The Hanoverian Minister, alike popular by his long residence in England and open character, came next, and was followed by the Ministers of Sweden, the Netherlands, Denmark, and Portugal. When Mr Buchanan, the American Minister, appeared, some interest was evinced, as if people thought they could judge from the countenance of the diplomat either what he himself felt or what were the intentions of his nation towards our own. Nobody cared about the Mexican and Brazilian representatives; but, when M. Musurus, the Greek representative of Turkey, was announced, he was received with loud cheers. The Greek Minister and the Spanish Chargé d'Affaires were followed by the representatives of the Rothschild family—Baron James Rothschild, of Paris, and Sir Anthony Rothschild, of the London house. The name of Lord Panmure was well received. His Lordship came with Lord Stanley of Alderley. At half-past twelve the arrival of Lord Palmerston elicited a new sensation. The moment his Lordship entered the hall, a clapping of hands and cheering welcomed his coming, and showed the confidence which the citizens of London repose in his policy, and the support they are ready to give his measures. His Lordship was yet engaged in conversation

with the Lord Mayor when the French Ambassador and the Countess Persigny were announced, whose reception was extremely flattering. Lord Palmerston and Count Persigny approached each other, and conversed attentively for some minutes. The Earl of Clarendon, Sir George Grey, Sir Charles Wood, and other members of the Ministry, passed to their seats without much notice.

ARRIVAL OF THE KING.

At ten minutes to one o'clock the sound of trumpets and the shouts of the people outside announced the near approach of the King, and everybody at once settled down into their places. The Lord Mayor and the Sheriffs, once settled down into their places. The Lord Mayor and the Sheriffs, once settled down into their places. The Lord Mayor and the Sheriffs, once with the Recorder and the members of the Entertainment Committee, proceeded to the entrance of the corridor, where they received the King on his Majesty dismounting from the Royal carriage. The Lord Mayor intimated to the King his deep sense of the honour conferred upon the City by his Majesty's visit, which the King graciously acknowledged

A procession was then formed, the Common Councilmen of the Entertainment Committee going first, followed by the Sheriffs, and then came the Aldermen. The Lord Mayor and the Aldermen immediately preceded the King, who walked alone, having his Royal Highness the Duke of Cambridge a little in his rear. His Majesty wore the uniform of a Sardinian general officer, and displayed several orders upon his breast. His walk was dignified, and his manner grave, without affectation. The grand scene presented by the Hall appeared to surprise his Majesty, who looked round several times before he ascended the dais. His entrance was signalized by a burst of applause which made the old Hall ring. This his Majesty acknowledged by bowing repeatedly on either side. The King courteously declined the invitation of the Lord Mayor to be seated on the throne—an act which, in a foreign Monarch, is considered one of deference to the presence of those about him. Taking up a position on the dais in front of his suite, who were attired in brilliant uniforms, the King intimated his readiness to receive the address of the Corporation

The Lord Mayor then advanced with the Recorder, to whom his Lordship handed the document, which the learned gentleman read as follows:—

TO HIS MAJESTY THE KING OF SARDINIA

May it please your Majesty,—We, the Lord Mayor, Aldermen, and Commons of the City of London, in Common Council assembled, desire to offer to your Majesty our heartfelt congratulations on your Majesty's arrival in this country as the honoured guest of our beloved and most gracious Queen; and on behalf of our fellow-citizens and for ourselves we humbly tender to your Majesty the warmest expression of our gratitude for the welcome visit to our city with which you have deigned to honour us this day.

We hail the arrival of your Majesty as a happy proof of the extension of those friendly and intimate relations which it is the wish of this people to cultivate with all nations, and which are daily drawn closer by the cordial intercourse of Sovereigns, the interchange of mutual courtesies, and the progress of unrestricted commerce.

We see in your Majesty the representative of a long line of illustrious Sovereigns, and rejoice to find their throne filled by one who, in the present momentous epoch, has joined his arms to those of France, Turkey, and England, and who has not only avowed his desire to participate in the triumph of the high principles for which the Allied Powers are now resolutely contending, but, animated by the generous sentiments of the sub-Alpine people, his subjects, and the traditions of the house of Savoy, has heroically thrown himself into the cause of justice and civilisation, and with the resolution to persevere until a durable peace, guaranteeing to every nation its legitimate rights, shall be obtained.

It is with solemn gratitude to the Almighty Disposer of Events that we reflect upon the unbroken success which has proved the superior power and bravery of the Allied armies and fleets, supported, as they have been, under almost incredible labours and privations, by a lofty sense of the glorious cause in which they are engaged, in which the arms of Sardinia have borne so glorious a part.

Our most gracious Sovereign and her illustrious allies, undazzled by the splendour of repeated triumphs and the continued progress of victory, seek no more than to vindicate the rights of nations and secure a lasting and honourable peace.

In the contest for this high purpose our beloved Queen, acting in concert with her allies, may firmly rely on the strongest and most cheerful efforts of the loyal citizens of London and of all her people, united as they are in duty and affection to her Majesty's person and Government, and in determination to defend the cause of national independence and civil and religious liberty.

With feelings of deep respect it is our earnest prayer that health and life may, by the blessing of Divine Providence, be vouchsafed to your Majesty for many succeeding years in the government of a free, brave, and enlightened people.

THE KING OF SARDINIA'S REPLY.

Immediately on the Recorder ceasing, his Majesty replied in a speech of which the following is a translation

My Lord Mayor,—I offer my heartfelt thanks to you, to the Aldermen, and to the Commons of the City of London, for the cordial congratulations which you present to me on the occasion of my visit to her Majesty the Queen and to the British nation

The reception that I meet with in this ancient land of constitutional liberty, of which your address is a confirmation, is to me a proof of the sympathy inspired by the policy I have hitherto pursued—a policy in which it is my intention constantly to persevere.

The close alliance existing between the two most powerful nations of the earth is honourable alike to the wisdom of the Sovereigns who govern them and to the character of their people. They have understood how preferable is a mutually advantageous friendship to ancient and ill-defined rivalry.

This alliance is a new fact in history, and is the triumph of civilisation. Notwithstanding the misfortunes which have weighed upon my kingdom, I have entered into this alliance because the house of Savoy ever deemed it to be its duty to draw the sword when the combat was for justice and for independence.

If the forces which I bring to the Allies are those of a State not vast, I bring with them, nevertheless, the influence of a loyalty never doubted, and supported by the valour of an army always faithful to the banners of its King.

We cannot lay down our arms until an honourable and therefore durable peace has been secured. Thus we shall accomplish by seeking unanimously the triumph of right and the just desires of each nation.

I thank you for the good wishes you this day express for my future happiness and for that of my kingdom.

While you thus express yourselves with respect to the future, it gives me pleasure to speak of the present, and to congratulate you on the high position attained by Great Britain. This is to be attributed to the free and noble character of the nation, and also to the virtues of your Queen.

The Lord Mayor, having received the reply from his Majesty, presented to him in succession the Sheriffs, the Recorder, and several of the Aldermen.

THE LUNCHEON.

The Foreign Ministers and members of the Government, with their ladies, now withdrew to the Council Chamber, where a splendid luncheon had been prepared for the more distinguished visitors. As they passed the foot of the throne his Majesty graciously acknowledged their salutations. Among them came his Royal Highness the Duke of Cambridge, with whom the King, descending the steps of the dais halfway to meet him, entered into familiar conversation. The suite, comprising not only the immediate attendants on his Majesty, but several members of the Queen's household, had ranged themselves behind the throne in the form of a semicircle during the presentation of the address, Count Cavour standing somewhat apart from them and close to the Royal person. When the King moved to the Council Chamber they followed, and luncheon began.

The age and quality of the wines used on this occasion were much vaunted. A sherry, said to be eighty years old, and a bottle of which, placed before the King, was known to have been in the *Victory*, at the battle of Trafalgar; champagne of 1834; hock from the Steinberg cabinet; and a wine which Horace celebrates, were among the *bonne-bouches* supplied to the Royal table. At the dejeûner the Lord Mayor proposed the health of "Her Majesty the Queen." His Lordship, on again rising said—I have the honour to propose to you the health of our august visitor and welcome guest, "His Majesty the King of Sardinia." Presently afterwards the King gave the health of "The Lord Mayor, and prosperity to the City of London." The distinguished company now rose, and the King was conducted with due ceremony from the Council Chamber, through the Hall, to his carriage, before entering which he paused to thank the Lord Mayor, and express his sense of the hospitality which had been shown to him by the city of London.

VISIT TO LORD PALMERSTON.

On leaving the Hall the King proceeded by the same route to Charing-cross, and thence diverged by Pall-mall and St. James's-street to the Terrace in Piccadilly, where his Majesty honoured Viscount and Viscountess Palmerston with a State visit. The *corps diplomatique* and leading members of the aristocracy were present to meet the King, who was received by Lord Palmerston on alighting from his carriage, and conducted to the drawing-room, where his Majesty entered into conversation with Lady Palmerston and several of the guests of her Ladyship.

At half-past three o'clock his Majesty took leave of the noble Viscount and Viscountess, and returned to Windsor Castle. The Queen gave a dinner in the evening in St. George's-hall to a distinguished party.

THE INSTALLATION.

His Majesty the King of Sardinia left Windsor Castle at twenty five minutes past seven o'clock on Wednesday morning, attended by the Marquis d'Azeglio, Count Rocca, Chevalier Carderina, Chevalier Cigala, Count de Persano, Count de Barone, Chevalier Nigra, and Count de Robilant. His Majesty travelled in the Royal train on the Great Western Railway, and returned by the same route to the Castle at half-past one o'clock. At three o'clock in the afternoon the Queen held a Chapter of the Most Noble Order of the Garter at the Castle, for the purpose of investing his Majesty the King of Sardinia with the Order. The Knights Companions of the Garter were summoned to attend, and were robed in the Guard Chamber in their mantles of purple velvet, and wearing the hoods of crimson velvet and the gold collar of the Order. The officers were robed in their respective mantles: the Prelate and Chancellor, of purple velvet; the Registrar, Garter King of Arms, and Black Rod, of crimson satin.

The Knights Companions were called over by Garter in the Music Gallery, when the following answered:—The Marquis of Exeter, the Duke of Richmond, the Marquis of Lansdowne, the Duke of Cleveland, Earl De Grey, the Marquis of Abercorn, the Marquis Camden, the Earl of Carnarvon, Earl Spencer, Earl Fitzwilliam, the Duke of Northumberland, the Earl of Carlisle, the Earl of Ellesmere, and the Earl of Aberdeen. The Officers of the Order present were the Prelate, the Bishop of Winchester, the Chancellor, the Bishop of Oxford; the Registrar, the Dean of Windsor; Garter Principal King of Arms, Sir Charles George Young; and Gentleman Usher of the Black Rod, Sir Augustus Clifford, Bart.

Her Majesty the Queen, accompanied by his Royal Highness Prince Albert and his Royal Highness the Duke of Cambridge, was conducted by the Lord Chamberlain, the Treasurer of the Household, the Vice-Chamberlain, and the Controller of the Household, from her apartments to the Throne-room. Her Majesty wore the kirtle, mantle, hood, and gold enamelled collar of the Garter, and also wore a magnificent diadem of diamonds. The long mantle of the Queen was borne by the Pages of Honour in Waiting. Prince Albert and the Duke of Cambridge both appeared in the mantle and hood of the Garter, and also wore the collar of the Order. The Queen was conducted to a chair of state of Imperial purple velvet, richly carved and gilt, placed at the head of the table, a little in advance of the throne, which is canopied with crimson velvet, having the national badges of the three kingdoms embroidered in gold.

The Knights of the Garter, with the officers of the Order, entered the Throne-room and took their seats at the table, the senior Knights nearer the Queen. The table was covered with purple velvet, with a deep border of gold lace and bullion fringe. The Prelates of the order stood on the right hand of the Queen, the Chancellor on the left, and the Registrar, Garter, and Black Rod at the bottom of the table. The Bishop of Oxford, Chancellor of the Order, read a new statute dispensing with existing statutes, in so far as may be required for the especial purpose therein mentioned, and ordaining and declaring that his Majesty Victor Emmanuel, King of Sardinia, be declared a Knight of the Most Noble Order of the Garter, any statute, rule, or usage to the contrary notwithstanding.

His Majesty, by command of the Queen, was conducted from his apartment to the Chapter or Throne-room, between those Royal Highnesses Prince Albert and the Duke of Cambridge, the two senior Knights Companions, preceded by Garter (bearing the ensigns of the Order upon a velvet cushion) and by Black Rod. The King wore the uniform of a Sardinian General, dark blue, with silver appointments, and was attended by the Ministers and Officers of his Court.

Her Majesty the Queen and the Knights of the Garter received the King standing, and his Majesty was conducted to a seat in a chair of state, placed on the right hand of the Sovereign. The Queen announced to the King Sardinia that his Majesty had been elected a Knight of the Most Noble Order of the Garter. Garter King of Arms, kneeling, presented the garter to the Queen, and her Majesty, assisted by his Royal Highness Prince Albert, buckled it on the left leg of his Majesty, the Chancellor pronouncing the following admonition:—

To the honour of God Omnipotent, and in memorial of the blessed martyr St. George, tie about thy leg for thy renown this noble garter, wear it as the symbol of the most illustrious order, never to be forgotten or laid aside, that thereby thou mayst be admonished to be courageous, and, having undertaken a just war in which battle shalt be engaged, thou mayst stand firm, valiantly fight, and successfully conquer

Garter King of Arms presented in like manner the ribbon, having the George suspended; and the Queen, assisted by his Royal Highness the Prince, placed the same over the left shoulder of his Majesty, the Chancellor pronouncing the usual admonition. Her Majesty the Queen then gave the accolade to the King of Sardinia; and his Majesty received the congratulations of Prince Albert and the Duke of Cambridge, and also of each of the Knights of the Garter present. The Knights were called over by Garter, and, with the Officers of the Order, retired from the presence of the Queen with the usual reverences

The Queen accompanied the King to his apartments, followed by Prince Albert, the Duke of Cambridge, and the gentlemen of the Sardinian Court.

At five o'clock on Wednesday afternoon the Corporation of Windsor, headed by the Mayor, presented a congratulatory address to the King of Sardinia.

GRAND BANQUET.

At a quarter past seven o'clock a grand banquet was served in St. George's-hall. The Queen, the King, Prince Albert, and the members of the Royal family, with the respective Courts of Great Britain and Sardinia, assembled in the Throne-room. Her Majesty's guests on a visit at the Castle, the Knights of the Garter, the Ministers, and the nobility and gentry who had been honoured with invitations, met in the Grand Reception-room. On dinner being announced, the Queen, conducted by the King of Sardinia, proceeded to the Hall, preceded by the great officers of the household; the Royal personages came immediately after their Majesties, and the guests brought up the rear from the Grand Reception-room. On the entrance of the Queen and King in the Hall the band commenced playing the "Fanfare Sarde." Her Majesty took her seat in the middle of the north side of the table, having the King of Sardinia on her right hand. Her Majesty wore the insignia of the Order of the Garter. His Royal Highness Prince Albert sat opposite the Queen, having the Royal Duchesses on either side. Behind the Royal party on each side were stationed a special guard of her Majesty's Hon. Corps of Gentlemen-at-Arms, under the command of the Lieutenant. A body of the Yeomen of the Guard were posted at each end of the Hall. All the gentlemen appeared in full uniform, Court, or official costume. The banquet was served with the greatest magnificence. The service was entirely of gold plate; down the centre of the table during its whole length were a succession of the most beautiful vases, epergnes, wine-coolers, and candelabra, all in gold plate; some of the vases were adorned with artificial flowers. Immediately before the Queen was placed the St. George's candelabrum. This is of large size and noble proportions, and bears twelve wax lights; on the base are the figures of the infant Mars, and it is enriched with national emblems and badges, the whole is crowned by a statuette of the saint on horseback in combat with the dragon. In addition to the great number of beautiful articles displayed for the services and decoration of the table, two large and lofty buffets were erected at each end of the Hall lined with crimson, for the display of the more artistic and ornamental specimens of gold plate and articles of vertu in the Royal treasury. On these were displayed the shield presented by the King of Prussia to his godson, the Prince of Wales; the Shield of Achilles, designed by Flaxman; a very large salver, the border of which was designed by Flaxman; the National Cup, surmounted by St. George; Cellini's Nautilus Cup; two vase cups, carved by Cellini, two orange cups, presented by Queen Charlotte to her son, George IV., on his coming of age; the solid gold salver made by order of George IV.; some jewelled tankards, bulbcups, and a large golden box of East Indian workmanship.

At the conclusion of the banquet the Lord Steward of the Household of his Majesty the King of Sardinia," when the Sardinian National Hymn was performed by the band of the Grenadier Guards, who were stationed in the gallery. The dinner party included his Majesty the King of Sardinia, their Royal Highnesses the Duchess of Kent, the Duchess of Cambridge, the Princess Royal, the Princess Mary of Cambridge, and the Duke of Cambridge, his Serene Highness Prince Edward of Saxe-Weimar, the Duchess of Sutherland, the Dukes of Richmond, Northumberland, and Cleveland, the Duke and Duchess of Argyll, the Sardinian Minister, the Marquises of Breadalbane, Lansdowne, Abercorn, Exeter, and Camden, Lady Fanny Howard, Baroness De Speth, Lady Caroline Murray, Lady Caroline Barrington, Lady Isabel Howard, the Earl and Countess Spencer, the Duchess of Norfolk, the Duke of Newcastle, Clarendon, Bessborough, De Grey, Ellesmere, and Mulgrave, Viscounts Palmerston, Drumlanrig, and Sydney, Lord Ernest Bruce, Bishops of Winchester and Oxford, Lord Foley, Lady Emily Cavendish, Major-General the Hon. G. and Mrs. Grey, Miss Barrington, Colonel the Hon. C. B. and Mrs. Phipps, Miss Phipps, Sir George Couper, the Field Officer in Waiting, the Silver Stick in Waiting, Sir Augustus Clifford, Sir Charles Young, Sir William Martins, Colonel Seymour, Captain Dayer (33rd Fusiliers), Count Cavour, Duke Pasqua, Chevalier Messino d'Azeglio, M. General Count Morozzo de la Rocca, M. General Chevalier Luserna d'Angrogna, M. General Chevalier Cardenna, Chevalier Ribert, Colonel Chevalier Cigala, Captain Count de Barone, Captain Count de Robilant, Captain Count de Persano, Chevalier Nigra, Lord Byron and Colonel the Hon. A. N. Hood (in attendance on his Majesty the King of Sardinia), the Dean of Windsor, Major Home Purves, and Colonel the Hon. James Macdonald. After the banquet the Queen, accompanied by the Royal Duchesses, and Princesses, and the other ladies present, entered the Grand Reception-room, and were afterwards joined by the King of Sardinia, Prince Albert, the Princes, and the other gentlemen.

DEPARTURE FROM WINDSOR.

Long before the people of London were out of their beds on Thursday morning the King of Sardinia had parted from her Majesty at Windsor, and was speeding his way homewards. The departure from Windsor took place at five o'clock, and, notwithstanding the early hour fixed for the event, a large number of the inhabitants had assembled in front of the Palace, to pay their last respects to our illustrious ally. Precisely at five o'clock his Majesty left the Castle, accompanied by Prince Albert, the Duke of Cambridge, Chevalier Messino d'Azeglio, the Marquis d'Azeglio, Sardinian Minister to this country; Count Morozzo de la Rocca, Chevalier Luserna Angrogna, Chevalier Cardenna, Count de Persano, Count de Barone, Count de Robilant, Chevalier Nigra, Lord Byron, Colonel A. N. Hood, Major General Wylde, and Captain the Hon. Dudley de Ros, in four of the Royal carriages, escorted by a squadron of Life Guards

On arriving at the private station of the South-Western Railway his Majesty was received by the Mayor and Corporation of Windsor, Mr. L. Cronbie (the secretary), Mr. A. Scott (the traffic manager), and other officials connected with the company; a guard of honour being drawn up at the entrance, composed of the 22nd Regiment, the band playing the National Anthem. The reception of his Majesty was most enthusiastic, and he repeatedly acknowledged the cordial manner in which he was received. The Royal train left the station at ten minutes past five, and arrived at the Queen's private station at Vauxhall at ten minutes before six. A guard of honour, consisting of the Scots Fusilier Guards, was drawn up in front of the platform, and immediately on his Majesty alighting the fine band of the regiment played (for the first time, we believe) the real national anthem of Sardinia, "La Piedmontese"—the air that has been played during his Majesty's visit being an Italian national anthem, but not the Sardinian. His Majesty, Prince Albert, the Duke of Cambridge, and suite left the station at eight minutes to six, escorted by a squadron of the 7th Light Dragoons, and proceeded direct for the Bricklayers' Arms station, where a train was in readiness to convey his Majesty to Folkestone

THE JOURNEY TO FOLKESTONE.

Six o'clock was the time appointed for the departure of the train from the Bricklayers' Arms, and it was within two minutes of that hour when his Majesty and Prince Albert arrived. Here his Majesty and the Prince were joined by his Royal Highness the Duke of Cambridge, Major Macdonald, the Marquis d'Azeglio, and other distinguished persons. The King had brought with him from Windsor a private carriage, and so much luggage, that great delay in the dispatch of the train took place, and notwithstanding the great exertions which were made by Mr. Brown, the superintendent, it was twenty-five minutes past six o'clock before the Royal train left the station. It was accompanied by the Hon. James Byng, the Chairman, Mr. Rich, M.P., Mr. Coles Child, and Mr. Gordon Thompson, Directors, who received his Majesty on the part of the company. At Tunbridge, where the train stopped for the purpose of obtaining a supply of water, the station was well filled with inhabitants of the town, who had a capital opportunity of seeing the King. They pressed forward towards the side of the state carriage with undaunted perseverance, and shouted with extraordinary vehemence in compliment to the King, the Prince, and the Duke—dividing their favours pretty equally amongst the three. The train was again on its way, and Folkestone was reached at twenty minutes before nine, the whole of the railway journey (eighty-two miles) having occupied two hours and a quarter.

ARRIVAL AT FOLKESTONE.

All Folkestone was on the *qui vive* for the arrival of its Royal and illustrious visitors. At what is called the junction, on the main line, the engine was detached, and the train ran down an incline to Folkestone harbour. At the line runs at the back of a long row of large duty houses, the inhabitants of which appeared at their dingy windows, and made the best appearance their means admitted. Some displayed flags, others devices of various kinds, while all cheered lustily. On reaching the harbour the town presented a very imposing appearance. The whole space between the harbour and the Pavilion Hotel was crowded with spectators, while great masses stretched far away along the beach. How Folkestone ever contrived to get together such an immense multitude of persons is utterly inconceivable. However there they were, and they were evidently bent upon achieving the object for which they were called together—a purpose in which they were kindly assisted by the good-humoured police and troops, to whom the order of the day was candied. Flags were flying from nearly every house, and the bells of the venerable church on the heights rang out a merry peal to welcome the Sovereign who had honoured the town as his place of embarkation. After leaving the railway, his Majesty, Prince Albert, the Duke of Cambridge, the King's suite, Colonel Grey, Colonel Anson, and twenty or thirty other persons, proceeded to the Pavilion Hotel, which they reached at a quarter before nine. The road was kept by a detachment of Hussars, the 12th Regiment of Foot, and the Kent Militia.

A dejeûner, which had been provided in the Pavilion, was dispatched in ten minutes; and at five minutes before nine the cheers of the multitude, and the report of guns from the Cliffs, announced that the Royal party had left the hotel and were on their way to the harbour, where the *Fiend* was lying with her steam up, ready to carry his Majesty across the Channel to Boulogne. On reaching the place of embarkation the party left their carriages, and stood for some minutes in earnest conversation. The King shook hands several times most heartily with Prince Albert and the Duke of Cambridge, and thanked them repeatedly for the kind and generous reception he had experienced during his brief visit to England. Afterwards he shook hands with Lord Panmure, the Marquis d'Azeglio, and other gentlemen around him. He then went on board the *Fiend*, which in another minute was making her way out of the harbour, followed by the *Fire Queen*. Loud and continued cheering greeted the King, who frequently lifted his cap in acknowledgment. The *Blenheim*, which was lying outside the harbour, gaily dressed with flags, fired a Royal salute. His Majesty stood on the deck waving his hand to the Prince until a heavy fall of snow rendered the vessel invisible. It was expected that his Majesty would reach Boulogne about eleven o'clock, and Paris in the evening. Brilliant as the reception of the King of Sardinia has been in various parts of this country, his popularity has in no place called forth more ardour than in the usually quiet town of Folkestone. The inhabitants seemed to vie with each other in doing him honour; and the manner in which they acquitted themselves was most enthusiastic as well as most respectful.

Shortly after his Majesty's departure, Prince Albert, the Duke of Cambridge, Lord Panmure, General Grey, Colonel Anson, and Major Macdonald proceeded to Shorncliffe, about three miles from Folkestone, for the purpose of reviewing the British German Legion stationed there. Prince Albert presented the Legion with a stand of colours.

GRAND CONCERT AT THE PALACE OF INDUSTRY AT PARIS.

One of the great public festivities presented to the King of Sardinia, on his recent visit to the Emperor of the French, was a musical entertainment, given upon a stupendous scale, in the Palace of Industry, on the afternoon of Sunday, the 25th ult. The interior of the building was elegantly decorated, and the shields and trophies of flags of the four Allied nations, escutcheons, and various other emblems. Three compartments of the northern gallery (exactly opposite the orchestra) had been fitted up for the Imperial party and suite. At a few minutes after three the Emperor, the King of Sardinia, and Prince Napoleon, entered the centre box. Four military bands, stationed to the rear of the choral societies, struck up the national air of Savoy; and the entire audience stood up uncovered, and welcomed the Sovereigns with cries of "Vive l'Empereur!" "Vive le Roi!"

The King of Sardinia, on a sign from the Emperor, advanced to the front, and was greeted as a guest. After this the Emperor and the King were observed successively to point to the central seat, as if each invited the other to take it; but ultimately the King of Sardinia accepted the honour offered him. The Emperor sat on his right hand, and the Prince Napoleon on his left. The concert then commenced; the military bands played during the intervals several *morceaux*. Their Majesties left at five o'clock; and on their return to the Tuileries were received as before.

It is estimated that upwards of 15,000 persons were present at this entertainment. In the orchestra were several choral societies from Dieppe and other towns in the north of France; the "Orpheonists" of Vaures Bercy and many other places in the suburbs of Paris marched in procession with banners to the Palace in the morning.

AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—A BENEFIT for Mrs MACNAMARA will be given at this Theatre and Olympic Theatre) will be given at this Theatre on TUESDAY, DECEMBER 18th, in addition to the Corps Dramatique of the Theatre, the following celebrated Artists have in the most generous manner volunteered their services—Mr James Anderson, Mr Bedford, Mr Buckstone, and Mr Leigh Murray; Mrs Stirling, Miss Bonsa Wright, Mrs Leigh Murray, Mrs Wilkins, and Miss Abernethy. November, 1855.

DR. DE JONGH'S LIGHT BROWN COD-LIVER OIL.

TESTIMONIAL FROM EDGAR SHEPPARD, ESQ., M.D., M.R.C.S., Translator of "Gibert on Diseases of the Skin," "Bocqueral and Rodet's Researches on the Typhoid Fever," &c., &c.

"Dr. Shoppard has made extensive use of DR. DE JONGH'S LIGHT BROWN COD-LIVER OIL, and has great pleasure in bearing testimony to its superiority over other preparations to be met with in this country. IT HAS THE SAME EXCELLENCE OF BEING WELL BORNE AND ASSIMILATED BY STOMACHS WHICH REJECT THE ORDINARY OILS. Dr. Shoppard has no hesitation in stating that he believes an imperial pint of Dr de Jongh's Light Brown Oil to be of more value than an imperial quart of any other to be met with in London. — Enfield, Middlesex, Aug. 30, 1852.

Sold only in bottles, capsuled and labelled with Dr. de Jongh's signature, WITHOUT WHICH NONE ARE GENUINE, by ANSAR, HARFORD, and CO., 77, Strand; London, Dr. de Jongh's Consignees, and by most respectable Chemists in town and country.

Half-pints (16 ounces), 2s. 6d.; Pints (20 ounces), 4s. 9d.; Quart (40 ounces), 9s. IMPERIAL MEASURE.

OFFICES No. 4, Princes-street, Mansion-house.

PROSPECTUS.

The Bank is formed for the purpose of extending Banking facilities to the requirements of the business and to the Mercantile interests of London and Paris.

The following Table exhibits the Progress and Present Condition of the Joint-Stock Banks:—

Name of Bank	When Established	Amount of Capital	Amount Paid up	Dividends Declared	Rate per Cent.	Amount of Reserved Fund	Amount of Deposits	Amount of Bills in Circulation
London and Westminster	1834	£2	£2	14	7	£1,000,000	£11,000,000	£3,000,000
London Joint Stock	1836	£1	£1	20	20	£1,200,000	£6,000,000	£2,000,000
Bank of London	1838	£2	£1	21	10½	£1,000,000	£5,000,000	£2,000,000
Union of London	1839	£2	£1	15	7½	£1,000,000	£5,000,000	£2,000,000
Bank of London	1840	£2	£1	5	2½	£1,000,000	£5,000,000	£2,000,000
British Bank	1849	£2	£1	2	1	£1,000,000	£5,000,000	£2,000,000
Bank of Paris	1848	£2	£1	2	1	£1,000,000	£5,000,000	£2,000,000

It will be seen that the amount of deposits is £39,000,000 and that the Capital Paid, that the Shares bear a premium, and realized from 5 to 21 per cent; and that the dividends range from 7 per cent to 20 per cent per annum

The "City Bank, and the "Bank of London," which have been established only a few months, also give premia of exchange, sometimes opposite—by their published returns being already £201,262 and £34,000 respectively, and their Shares already bear a considerable premium. It is, therefore, obvious that Joint-Stock Banks present the most eligible source for Investment.

The Bank will be conducted upon the principles which have produced to the eminent success of the above Joint-Stock Banks; and it is intended to open a branch in the West end.

It is not will be allowed on current accounts as we [illegible] on deposits, in proportion to the rate of money in the market

The Bank will undertake the agency of Country Banks, whether separate or private. It will receive the rate of exchange, annuities of dividends, and the pay of military, naval, and civil officers: and it will also undertake the purchase, sale, and transfer of stock in the public funds, &c.

[illegible] make the regulation of foreign bills of exchange on the most favourable terms

CONTINENTAL DEPARTMENT

But, however conducive to the general prosperity of an additional Joint-Stock Bank for the transaction of London business, the Directors regard, as the main one of the prominent features of their undertaking is to extend the English system of Joint-Stock Banking to the Continent, and for this purpose a branch Bank is opened in Paris, to be conducted by competent persons, specially empowered by the London Directors. Every description of business connected with the London Directors. Every description of business connected with the London Exchange, consisting of persons of high position, and of great financial experience in France.

The advantages of the Joint-Stock Branch, as soon as it is established, will apply, in the usual manner, to open an account with the Bank of London.

Inquiries have been made by well-qualified persons as to the present state of the negotiation of transactions in France, and as to the practicability and expediency of introducing on the Continent what has proved so beneficial to the commercial interests of England, by the receiving of Deposits the Discounting of Bills, and the other legitimate operations of Banking. The Bank of Deposit in England, by a Joint-Stock Company, chartered under the Act of 1844, conducted by a Court of Directors of London Merchants and Bankers, and having the whole management the most approved principles of English Banking. The result of these inquiries has been most satisfactory and most encouraging.

A deputation of the Directors have had communications with the Emperor of the French, in Paris, and they have the satisfaction to state that there exists not only no objection, on political, commercial, or legal grounds, to such an institution, but that it will meet with countenance and support.

The Bank will thus receive through which the Continental Exchanges and the monetary operations between France and England will be transacted, the establishment of an International Bank, such as the London and Paris Joint-Stock Bank, is a matter of manifest advantage and necessity, and will contribute to cement the alliance so happily existing, by multiplying the bonds of common interest

Its conveniences as a "Bank of Deposit," and the security it will afford to the numerous and influential British and American residents in, and visitors to, Paris, form an additional consideration of no inconsiderable importance.

The returns of the Board of Trade show the vast extent and annual increase of the commercial transactions between Great Britain and France.

The trade in the port of London alone, it appears by the last returns, published March, 1855, No. 78, that in the year 1853-4 the tonnage of vessels entered in the port of London with cargoes from France was no less than 176,859 tons, and that the tonnage of vessels with cargoes cleared from the port of London for France was 161,796 tons. This amount of tonnage is larger than that from the port of London to any other foreign country in the world, and is exceeded only by the amount of tonnage from the port of London to the East Indies.

The operations of the Paris branch will be restricted to legitimate business only, avoiding all kinds of speculation, and making no advances on stocks, funds, or merchandize.

The suggested Table shows the present condition of the leading Chartered Joint-Stock Banks (Scotch excepted):—

Name of Bank.	Amount paid up per Share.	Present Market Price.	Dividend for the Last Year per Share.	Rate of Dividend Amount.
	Francs.	Francs.	Francs	Per Cent.
Bank of France	1,000	2,750	186	18½
Crédit Mobilier	500	1,171	59	12
Comptoir d'Escompte ..	500	1,000	50	10

Under these favourable circumstances the London and Paris Joint-Stock Bank has been formed, and when it is considered that London is the focus of the largest banking operations in the world, that the commercial relations of the two countries have increased to [illegible] already very large, are likely to increase to an extent to which at present can barely be anticipated, there can be little doubt but that this Bank will realize a profit to the Shareholders equal to that of any of the Joint-Stock Banks before mentioned.

Containing, likewise, the intimate relations which subsist between the two metropolises, the Directors have every reason to entertain the conviction that it is difficult to estimate adequately the future magnitude, importance, and advantages—political as well as commercial—of an international banking institution, appertaining equally to [illegible] and France, and combining the principles of the most approved system of English banking, and tending to promote the [illegible] of commercial and real transactions, and feelings, among the people of the two great countries.

Prospectuses and Forms of Application for Shares may be had of Messrs F. Cleaver and Co., Stock and Share Brokers, No. 36, Lombury, or at the offices, No. 4, Princes street, Mansion House

[illegible] Secretary pro tem.

CAUTION.—PATENT EVER-POINTED PENCILS.—S. MORDAN and CO. are daily receiving complaints from the public that pencils not bearing their name, [illegible] S. M. and Co therefore caution all purchasers to see that the Patent Everpointed Pencils bear the name of S. MORDAN and CO., manufacturers as constantly pressed on the public, as they yield a greater profit to the retailer than the genuine article. Sold by all dealers.

Perhaps the above caution is even more satisfy necessary when it is considered that the Patent Everpointed Pencil for refilling the Pencil-case. Unless these have been most accurately gauged to the exact size of the pencil-case, they will be found useless.

Each box of genuine lead points is stamped "Warranted S. MORDAN and Co." Manufactory, 23, City-road, London.

[illegible]

JUNE ARTS.—S. MORDAN and CO. beg to inform the public that they are enabled to supply a genuine pure Everpointed Pencil, free from the [illegible] of gold, silver, or any other impurity. S. M. and Co. have no hesitation in asserting that such excellent points in every respect have never yet been produced, and, in confirmation of this, the highest testimonials from all the first artists, architects, and engineers have been received. The following is an abbreviated list:—

Philip Hardwick, Esq., R.A.
Cyrus Edmeston, Esq., F.R.S.
Copley Fielding, Esq., F.W.C.S.
W. Tyrrell, Esq., R.A.
David Roberts, Esq., R.A.
E. M. Ward, Esq., R.A.
H. T. Wilson, Esq., Director, Government School of Design.

C. L. Eastlake, Esq., P.R.A.
E. H. Baily, Esq., R.A.
Clarkson Stanfield, Esq., R.A.
Richard Westmacott, Esq., R.A.
&c. &c.

S. Prout, Esq., F.S.A.

Each pencil is stamped with their name and address, Manufactory, 23 City-road, London.

BY HER MAJESTY'S ROYAL LETTERS PATENT for a valuable and extraordinary Improvement in the most powerful and brilliant OPERA-GLASSES, Camps, Race-course, Opera, and Perspective Glasses, to know the distances, at Messrs. S. and B. SOLOMONS' Optical Establishment, 39, Piccadilly, opposite the York Hotel. They possess such extraordinary power that some, from 5s to 5 guineas, with an extra eyepiece will show distinctly at the distance of nine miles; the achromatic telescope, Saturn's ring, and the double stars. With the same Telescopes can be seen a person's countenance distinctly at the distance of a mile and a half, and objects from sixteen to twenty-five miles, for the waistcoat pocket, and are of larger and all sizes, with increasing power. The Royal Exhibition, 35s.—Valuable very small powerful waistcoat-pocket glass, the size of a watch, 10s. 6d.—Also a perfect view of the moon at three miles and a half distant; country scenery and ships are clearly seen at twelve miles distant. These invaluable Glasses are recommended to sporting, yachting, steeplechases, gentlemen, gamekeepers, and tourists. Every Glass skilfully tested before leaving the Manufactory. The valuable advantages derived from this invention is, that vision becoming impaired by age, short-sightedness, &c., the very aged person is enabled to employ their sight at the most minute occupation—can see with these lenses of a much later magnifying power, and they do not require the frequent changes in the dangerous effects of further powerful assistance

DEAFNESS.—The ORGANIC VIBRATOR, an extraordinarily powerful, small, newly-invented Instrument, for deafness, entirely different from all others, to surpass anything of the kind that has been, or probably ever can be, produced. Being of the same colour as the skin, it is not perceptible. It enables deaf persons to hear distinctly at church and at public assemblies. The unpleasant sensation of singing noises in the head is entirely removed; and it affords all the assistance that could possibly be desired. 30, Albemarle-street, Piccadilly. Observe, opposite the York Hotel.

NEW MUSIC, &c.

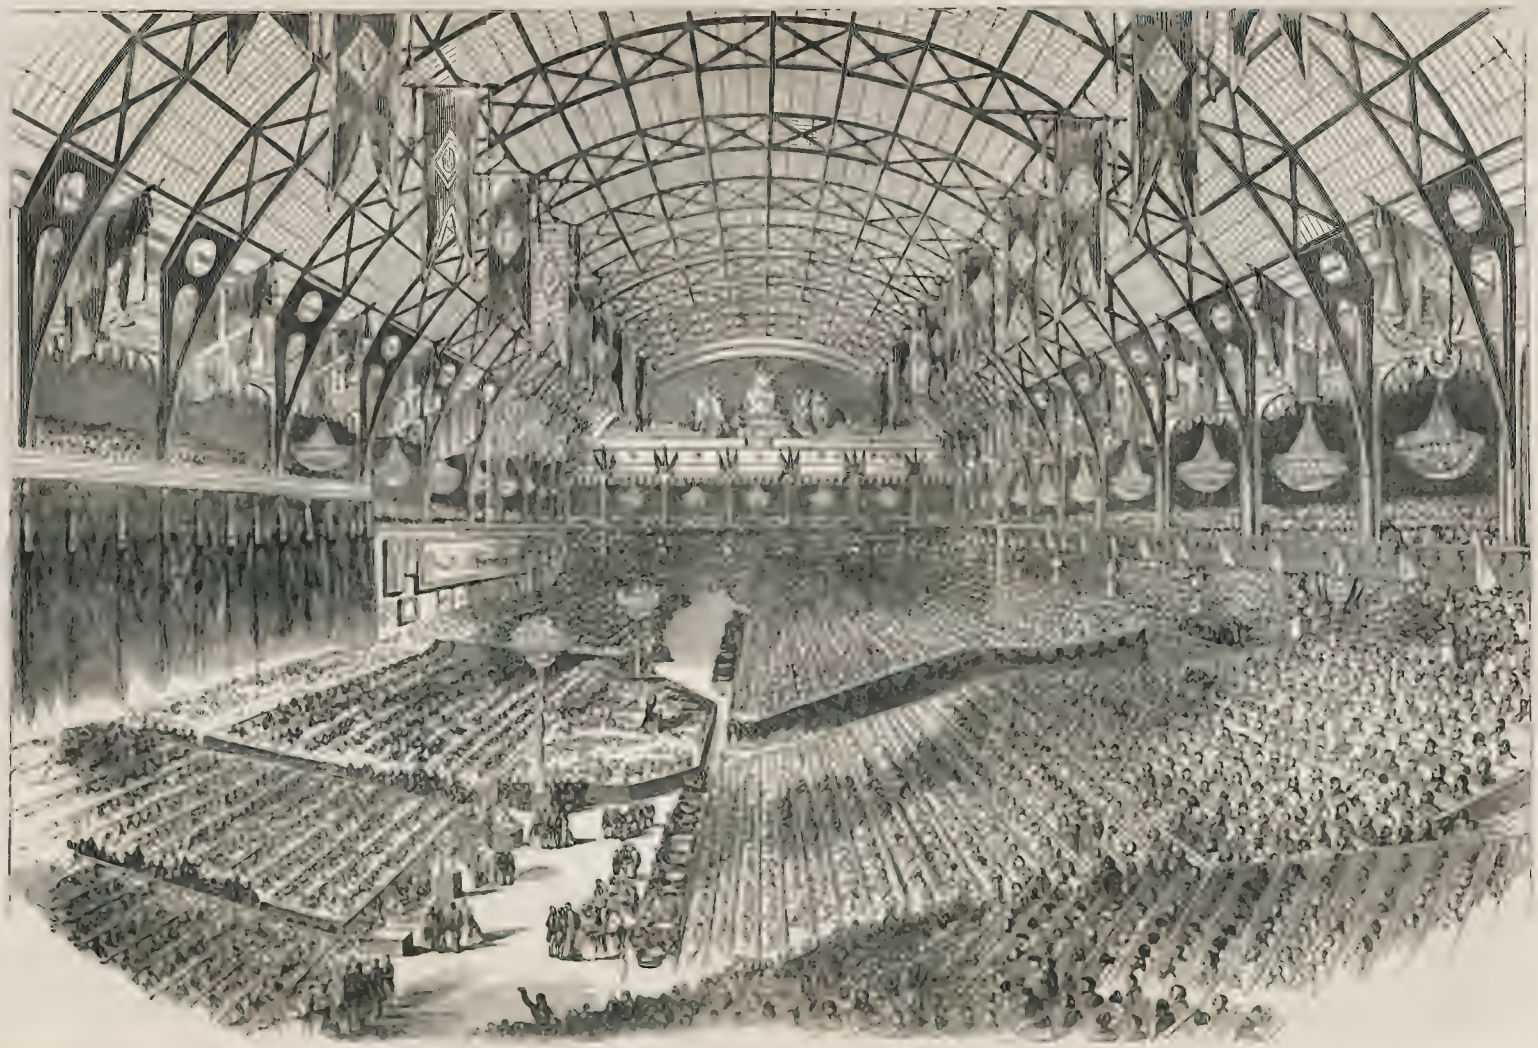
Terms cash.—Wallerings from the Wine Lands, to be had of all Booksellers.—FOSTER and INGLE, Mitre-court, Milk-street, London.

TOTAL DESTRUCTION by FIRE of a FEATHER FACTORY. HOWITT and CO. respectfully inform their friends and the public that they are now SELLING OFF the Stock of their Feathers, which was entirely DESTROYED by FIRE which destroyed the adjoining premises, burnt part of their own, and injured their Stock by water. The Goods are of the usual good quality of the general drapery, cabinet, and carpet departments, and will be sold at all considerably allowed as salvage by the fire-offices.—ALBION HOUSE, 230 to 232, High Holborn.

DESTRUCTIVE FIRE.—Cabinet Furniture, Carpet Buyers, and Parties Furnishing generally, will find this a desirable opportunity of supplying themselves. HOWITT and CO. are selling off their Stock, damaged during the recent fire, at 50s. Brussels Carpets, 30s.; Ladies' or Gentlemen's Dressing-cases, 10s. 6d.; Fenders, 2s. 6d.; Fire-irons, 1s. 6d.; Children's Leather Clothes, 2s. 6d.; Naval and Military Caps, Canes, Sticks, Canes, Trousers, Books, old Gold and Silver Lace, Boots, Linen, Furniture, Miscellaneous Property, &c. Ladies or Gentlemen having any of the above to dispose of will be punctually waited on at their residence, on a line or addressing a letter as above. Parcels sent from any part of the country. Wholesale Clothiers, 231, Strand, opposite Twining's Banking Establishment. All Goods purchased for Cash for every description of Wearing Apparel, including [illegible] velvet, satin, moleskin, and silk dresses, regimentals, uniforms, swords, epaulettes, cocked hats, shawls, point lace, trinkets, smart trains, furs, table linen, dressing, furniture, books, miscellaneous property, &c. Ladies or gentlemen wishing to dispose of any of the articles named, will be punctually waited upon at any time or distance, by addressing a letter as above. Parcels sent from any part of the country will get immediate attention, and the utmost value remitted by Post-office order.—Established 1808.

WANTED, LEFT-OFF CLOTHES.—Messrs. [illegible] Mr. and Mrs. HART, 31, Newman-street, Oxford-street, beg most respectfully to acquaint Ladies and Gentlemen that they continue giving the highest price in Cash for every description of Wearing Apparel, including [illegible] velvet, satin, moleskin, and silk dresses, regimentals, uniforms,



GRAND MUSICAL FETE TO THE KING OF SARDINIA IN THE PALACE OF INDUSTRY, AT PARIS.—(SEE PAGE 670.)

FRENCH CAMP. RIGHT ENGINEERS' (ENGLISH) PARK.

INKERMAN MILL, THE SCENE OF THE RECENT EXPLOSION.

THE EXPLOSION AT INKERMAN.

THE origin of this melancholy accident, of which our Correspondent at the Crimea gave an account in his letter of last week, is still involved in mystery. The individual who, by his wicked negligence and want of caution, caused the irreparable mischief, as well as the witnesses of the act, must have met with instantaneous death. At first the most absurd statements were made as to its origin. The general impression seemed to be that a train had been laid and the dépôt blown up by a Russian emissary. When it was discovered that the English magazine was safe—long a conspicuous object—and the difficulties of such an undertaking were considered, this notion was exploded. Then it was said that a Zouave, excited at having received punishment, had set fire to the siege-ammunition. But even if the supposition of such a fiendish act could be admitted, the well-known caution and strict rules of the French administration prevented it from being entertained. No one at any time was admitted into the French dépôt unless engaged there on duty, or accompanied by a French officer. The more probable story is one that was told by a French artilleryman, that some five Russian shells were being emptied at the dépôt, and the gunpowder contained in them collected for storage, and that the ignition of one of these must have led to the firing of the principal magazine. Smoking was forbidden within the precincts of the dépôt, but some soldier may have been guilty of the act unobserved and a spark fallen in the gunpowder. A commission of inquiry will, no doubt, be appointed to investigate the subject.

Among the regiments of the Light Division (which was nearest to the scene of the catastrophe), whether in tents or huts, a sudden sensation was felt, as if of an upheaving of the ground, at the same time that a violent shock was experienced from the concussion of the air. Almost instantly followed the loud report of the explosion: not sounding as if a single charge or magazine had been fired, and without the ringing tone or decided character of a salvo of artillery, but seeming rather as if a number of magazines had been discharged, one after the other, so rapidly that all the reports were blended into one. As the thunder of the first report subsided, its place was occupied by the sharp cracking sounds of shells bursting high in the air, the rush of fragments falling to the ground, and the loud bangs of shells which had been scattered and were exploding on all sides. Those who were at a distance say that they first saw a swelling column of smoke, out of which shot rays of light, ascending to a great elevation, and that these, curving and bursting with brilliant star-like centres of light, had precisely the appearance of a magnificent display of fireworks. After the first "stunning" effects of the explosion had passed

REMAINS OF AN ANCIENT BUILDING DISCOVERED NEAR THE HEAD-QUARTERS, SEBASTOPOL.—SKETCHED BY E. A. GOODALL.—(SEE NEXT PAGE.)

away one laudable desire seemed to seize all ranks to be instrumental in saving the maimed and wounded, who were unable to escape from the neighbourhood of the fire, or who were lying around, struck by the fragments of shells or by other projectiles. Some stretchers were got from the surrounding regimental hospitals, and the wounded, French and English, rapidly carried to them. Medical officers from other divisions, and from the General Hospital, galloped over to render assistance. The Staff of the Light and Second Divisions were quickly at the scene of action; and not long afterwards General Codrington arrived with the Head-quarters Staff, many of whom were returning on their way from the Artillery review in the plain near Balaclava. A train of ambulance waggons arrived quickly, and were of essential service. There was great danger in approaching the fire from the constant explosions, and both men and officers had frequently to be recalled while searching for those who had been injured, or while stamping, by tearing down cartridges or cutting down timber, to stop the communications of the fire. One young officer of Artillery, of the name of Dawson, had his leg carried away by a shell bursting, and was conveyed to the General Hospital. A guard from the Second Division had been brought down very soon after the first explosion, and a line of sentries was stretched across to prevent a nearer approach to the scene of danger than the lines of the 88th Regiment.

Immediately after the first great explosion, when it was ascertained that the Windmill itself, which forms our main magazine in that part of the Camp, and contains some hundred and eighty tons of powder, had escaped, General Straubenzee, who commands the brigade, hurried up to the tents of the 7th Fusiliers, and asked if any of the men would volunteer to mount the wall of the mill, and cover the roof with wet tarpaulins and blankets as a protection against the thickly-flying sparks and burning wood. Now, the concussion had literally thrown the roof off the old building, and there it stood in the very centre of the spreading flames, exposed every minute to a thousand chances of instantaneous destruction. Hardly anything could exceed the danger attending such a labour as the General proposed: but, notwithstanding, Lieutenant Hope Johnstone and twenty-five men at once responded to the Brigadier's appeal and proceeded to the powder crammed building. A sergeant and some men of the Rifles, with also a party of the 34th Regiment, were induced to accompany them; and, within ten minutes from the first great blow-up, Mr. Hope was on the walls of the mill piling the wet coverings over the exposed powder boxes—exploding shells and burning wood flying through the air in perfect storms the while. Whilst the officer and some half-dozen of the men were thus employed, the remainder carried water to throw upon the blankets and other rubbish of the mill, and in little more than half an hour this vast pile of powder was as well protected from the thickly-flying sparks and rockets as it could be, short of entire removal from the scene of the conflagration.

The following is an extract from a letter just handed to the assistant-Surgeon Walter Clegg, Light Division, describing the catastrophe:—

NOV. 16, 1855.

— I had written thus far yesterday afternoon, when, at about half-past three o'clock p.m., paper and desk were dashed from beneath my arm, pole and tent rattling down felled me prostrate, and for an instant my mind was paralyzed by the impression that the end of all things had come. Good God! a sound like the combined thunders of a century went up to heaven, and the earth, for a mile round, quaked and rocked like an angry tide. No air! no breath. Struggle out and gasp for life! No sky to be seen. A thick darkness over all—and, ah! hurried, and restless!! Another and another roar, and a bellow and a crash re-echoed by every hill—reverberating through trench and ravine, stirring the very dead in their graves! And now a shower of blackened and blood-stained projectiles, mutilated human limbs, hands, arms, legs, feet, pieces of skull, shattered bones, and solitary nibs with fibres of muscle still quivering, are blown about like chaff before the blast! Men who have faced death in every form are flying hither and thither in frenzied alarm! Shells are thundering in the air, and bursting over head; rockets streaming fire: musket and grape flying on every side: and there is no hiding-place! And now the groans of the wounded and the dying! Here a man lies dead and disfigured, almost beyond recognition. There a poor fellow writhes in the agony of his wounds, while close beside him a screaming sufferer, whose thigh is torn off at the hip joint. Huts and tents have fallen, or are falling, burying all beneath them. You might be tempted to believe that this description exaggerates the horrors of the late disaster in the French Camp; but, probably, ere you receive my letter, the newspapers will have informed you fully of all that has happened. The magazine of the French siege-train adjoined the magazine of the right wing siege-train of the British army, the latter situated in the rear of the Light Division, in the rear of the 2nd Battalion Rifle Brigade and Royal Artillery. It is a most providential circumstance that for some days previously companies of the Artillery had been employed in removing large quantities of gunpowder and ammunition from the British magazine. On the morning of the 14th the greater part of the fuses had been taken away; and, but for this circumstance, it is impossible even to guess how terribly extensive the calamity might have been. The French magazine was crammed with gunpowder and every description of explosive matériel, and seven adjoining huts contained vast quantities of Commissariat stores. One single fatal moment was sufficient to destroy all, and huge fires are at the present moment smouldering on the ground where the storehouses yesterday stood.

The positive cause of the explosion is still unknown, though there are scores of absurd stories afloat on the subject. Some will have it that a Russian spy had been at work for several nights (the nights have been lately intensely dark), boring into the magazine for the purpose to state on the "best authority," that the said spy was arrested the same evening at Kamiesch, and numerous civilians and sailors at Balaclava are persuaded that they have seen the incendiary (a Greek tailor) bound with cords, and heavily ironed in a French guardhouse at Kadikoi. Of course there is not the slightest reason to believe in any report of this kind. The French say that the real circumstances of the misfortune will never be positively discovered. All they know is that at the time of the explosion a number of their men were employed in conveying gunpowder from the railway to the magazine, and it is suspected that one of them attempted, even in these circumstances, to strike a match and indulge in a cigar! A private in our artillery, however, has given me a much more likely version of the catastrophe. He said, that an hour before the explosion he had been in the French magazine, and that several heavy guns taken at the Malakoff and Redan were there, still loaded, and hundreds of Russian live shell lying about. During the hour he was present one or two of the party tapped these shells with their bayonet points, and, according to the conjecture of my informant, a fuse had been ignited in this way. Numerous fatal accidents have resulted, during the last two months, from similar acts of folly and recklessness.

I cannot tell you with certainty the exact loss in killed and wounded. The French have of course suffered much more than we have. Thirty-five blackened corpses of Frenchmen were picked up during the first few minutes after the panic had subsided. Of many score brave fellows not a fragment remains. Every officer of the French Siege Train was killed, with the exception of the Captain, who is dangerously wounded, and, it is feared, dying. The French Camp Hospital, crowded with patients, was levelled in an instant; and, I am informed, seventeen were killed, and scarcely one escaped unwounded. The English loss is principally in the Light Division. At the present hour they have sixteen killed, and about one hundred wounded, many very severely. The Royal Artillery have suffered more than any other regiment. It is amazing that the loss is not even greater, and I could fill a volume with the recital of miraculous escapes. The whole ground of the Light Division, especially of the 7th, 23rd, 33rd, and 2nd Battalion Rifle Brigade (singular fatality! always sure to be "under fire!"): is covered with masses of torn shell, grape, canister, minié and musket balls. Holes a yard deep are ploughed in the ground where shells have exploded and human life has been sacrificed. It is a fact that many were killed and wounded a mile away—in the 14th, 49th, and 77th Regiments; and shot and shell fell even in the Victoria Redoubt. The total loss, French and English, is estimated between 400 and 500 killed and wounded. I am writing a few hours after the accident, and give you the statistics supplied to me by our best-informed officers. I hope the sequel will prove that these reports are exaggerated.

The windmill, so well known as a beacon in the Camp (an admirable engraving of which lately appeared in the ILLUSTRATED LONDON NEWS), escaped by good fortune almost beyond comprehension. This old mill is about 120 yards from the site of the conflagration. It contains an enormous quantity of gunpowder, and other ammunition, sufficient to blow up an English county. Rockets and shells were raining like hail over and on every side of it, and this circumstance rendered necessary the performance of a service by our soldiers of a most awful character—a duty requiring more coolness and courage than even the storming of the Great Redan. Companies were told off from the artillery, the 2nd Battalion Rifles, 23rd, and 33rd, and these men, taking the blankets from their own beds, mounted by turns to the summit of the mill, and spread the blankets, saturated with water, over the roof. And at this duty they remained the whole of the night, absolutely scorched by the heat and the burning fragments which fell amongst them. Their exertions saved the British Camp.

Van Diemen's Land exists no longer, the Queen having been graciously pleased to accede to a petition from the colony praying that the name of Van Diemen's Land should be changed to that of "Tasmania."

ANTIQUARIAN RESEARCH IN THE CRIMEA.

(From our own Correspondent.)

NEAR the Col de Balaclava, and the railway junction, about a mile to the left of Head Quarters, as you ride towards Balaclava from Sebastopol, a discovery has recently been made which excites no small degree of attention and interest. In the process of road-making, some stones were found which, from their regularity of form and their order of collocation, gave rise to the opinion that there was something below the surface which deserved exploration. Under the directions of Colonel Munro, the situation has been excavated with great care, and the appearance presented, up to the date of our artist's sketch, is represented in the Engraving. In one chamber are several deep basins composed of the most primitive fictile manufacture, a reddish clay, set in the earth; and in one corner is a heavy stone slab, slightly hollowed on the upper surface, with a piece cut out at the inner and depressed end, so as to admit of a spout for the escape of any fluid which may find its way into the excavated portion. Adjoining this is another, and a larger, chamber, which opens into a third of smaller dimensions. The walls are of such cyclopean massiveness and simplicity of structure as to contribute to a theory of great antiquity, not supported, however, by the discovery of some small coins which bear the Christian symbol, and which favour the notion that the building cannot be older than the time of Justinian at farthest. The most popular and probable opinion as to the use of these curious vats and the stone slab is that they were employed for pressing out and fermenting the juice of the grape. We shall have more to say there anent by and by. Meantime our friends the antiquaries may break their *bâtons* against our present instalment of the subject.

COUNTRY NEWS.

THE BISHOP OF MANCHESTER ON THE EDUCATION OF THE PEOPLE. At a soirée of the Ashton and Dukenfield Mechanics' Institution, last week, the Bishop of Manchester said:—When he considered that their library was open to those who would pay 1s. 3d. per quarter; when he found their classes open for mathematics, arithmetic, grammar, and geography, and yet found so scanty an attendance, he felt convinced that there was something erroneous in the minds of the great majority of the men of Ashton-under-Lyne. He felt there was something radically wrong if, out of a population of 30,000, a larger number than 230 did not avail themselves of those opportunities. It was notorious that our working-men only knew trade, or branch of a trade, whilst it was not so with the working-men of other nations; and he wished he extended their knowledge, and raised our operatives to their proper place, we should lose, at no distant period, our place among the nations. Mr. Hindley, M.P., who subsequently addressed the meeting, said he would give a cheque of ten guineas to any ordinary member of the institution, or to any working man in Ashton, who would write an essay to account for the fact that the working-men neglected the advantages of the institution, the Lord Bishop to decide if such essay answered the question, and he would be happy to publish the essay for the good of the institution. The Rev. J. G. Rogers thought the falling off in the attendance of the working classes might be accounted for in some degree by the increase of cheap newspapers, and the increase of books; and another reason was the confinement of shopmen to late hours.

THE UNIVERSITIES OF ABERDEEN.—The cause of University reform in the north is now, we rejoice to say, more prosperous than at any previous period. A deputation, consisting of certain members of the Citizens' Committee, waited on Lord Panmure last week, and found his Lordship very favourable to their views, and disposed to do his best to give effect to them—provided the state of opinion among those interested be found such as would warrant him in introducing a measure on the subject into Parliament.—*Aberdeen Journal.*

REPRESENTATION OF LEEDS.—Mr. R. Hall, of the Northern Circuit, has issued an address to the electors of Leeds, in which, while he deprecates the practice of opposing candidates vacating their seats by the acceptance of office, he yet intimates the possibility of his coming forward in opposition to Mr. Baines when the election takes place.

CROWN PROPERTY IN THE COUNTY OF DURHAM.—We are informed, from good authority, that there is Crown property in the county of Durham worth upwards of £100,000 from which the Government do not, and never have, received a farthing revenue. How such a state of things exists during the present reign it is not for us to explain, but it will be a fit subject for a searching Parliamentary inquiry.—*Durham County Advertiser.*

MAGISTRATES FOR SWANSEA.—The Lord Chancellor has added the names of George Grant Francis, James Walters, Evan M. Richards, John W. James, Timothy B. Essery, and Michael Martin Williams, Esquires, to the Commission of the Peace for the borough of Swansea.

A RACE.—On Monday last a Arab pony, brought from the seat of war by General Cannon, and presented by him to Lord Panmure, may be seen daily passing along the streets of Brecon. It is a beautiful animal, and the interest manifested in it is enhanced from the fact that three others were killed under the rider, and he has now proved to be a fit subject for a searching Parliamentary inquiry.—*Durham County Advertiser.*

SHORT-TIME MOVEMENT AT OLDHAM.—We understand that about thirty firms, producing an aggregate of about 120,000 lb. of yarn weekly, have signed a declaration to work from breakfast-time till dark for one month. Many others who decline to sign say that, upon the whole, the movement should it become general. It is stated that Messrs. Worthington and Sons, of Hollinwood; Messrs. J. Brideoake and Brothers, of Witherhead, and Messrs. Rowland and Sons, so far as their mills are concerned, commenced working short time two or three weeks since. It is pretty certain that on Monday next there will be a commencement of short time by a number of firms; but to what extent it will reach remains to be seen.—*Manchester Guardian*

CHARTIST DEMONSTRATION ON SUNDAY.—A meeting of Chartists, being an adjournment from one held on Tuesday evening last, in the People's Institute, Heyrod-street, was held in the open air in Stevenson-square, Oldham-street, on Sunday. Like the former, it was convened for the purpose of considering "the important questions of dear bread and justice." The obvious object of the assemblage was to arouse a Chartist agitation, based on the present high prices of provisions, and hence the very anomalous blending of topics, not generally connected, of "dear bread and justice." The assemblage numbered between four and five hundred persons, chiefly well-dressed mechanics and factory lands, and it was addressed by six or seven of the leading Chartist orators, who argued in favour of the recommendations contained in the address from the council of the National Chartist Association, which was adopted at the meeting on Tuesday, namely, the necessity of obtaining a law prohibiting the exportation of corn and flour whenever the price ranged above a fair average rate; and also the desirableness of inducing Parliament to pass an Act to enable the Government to import, at the national expense, a large amount of corn and flour from foreign countries, and to establish public granaries.—*Manchester Guardian.*

LOSS OF EIGHT LIVES NEAR ABERDARE.—On Thursday week eight men had just ascended from Messrs. Carr's and Co.'s coal-pit, Cwmaman, in a cage in the usual manner. After having arrived at the summit, from some unexplained cause, the cage was drawn by the engine towards the top pulleys, much higher than the usual sign on reaching which it ought to have been arrested. After the cage went over the shaft or pulley. The consequent shock was so great that the eight workmen were thrown out with great violence, and, falling into the pit, were immediately precipitated to a depth of no less than 150 yards, and were all killed.

THE REIGN OF TERROR IN IRELAND.—One of the Galway papers publishes a letter from Mrs. M. L. Blake, the owner of the Dartfield estates in that county, in reference to the recent collision arising out of the attempt of the authorities to eject some seven or eight families on the lands. Mrs. Blake states that her tenants promised last June to give up possession peaceably when called upon, and would pay half the rent. In October, however, she discovered that they had determined to hold the lands by force. Mrs. Blake admits that they paid the rent, but she had certain reasons for wishing to rid the estate of these particular tenants. What those reasons were are thus specifically set forth:—"Although, under the reign of terror, I dared not allude to the Ribbon conspiracy organised on the estate, the same being, during the past three weeks, pretty well made manifest to the public, I may, without fear of an attorney's letter, state that I have been cognisant of that conspiracy for the last two years and a half. Two years since our agent received a letter warning him out of the place (Dartfield), and informing him that the bullets were ready for him if he did not keep off. I received one a year and a half since, threatening that I was to be assassinated in the open day if I did not settle with the tenants; it is perfectly well known through the country, among the lower classes, that our faithful servants are doomed to assassination. I was informed by a man on the estate that there was a subscription raised among the tenants for £5 to pay a hired assassin to take my life, and the ringleader of my tenants was arrested, and various particulars detailed corroborative of the fact." Three persons against whom a verdict of "Wilful murder" has been returned for the recent murder at Tallow have been committed to the county of Waterford gaol. One of them, named Conway is described as a ferocious-looking man of about thirty-five years of age; his mother is an old woman over seventy, and his sister about thirty.

Several private Protestant schools which had been established in Hungary without the permission of Government having been obtained have been closed.

THE KING OF SARDINIA'S VISIT.

ARRIVAL AT DOVER.

VICTOR EMMANUEL, King of Sardinia, landed at Dover at five minutes before eight o'clock on Friday morning, from the *Vivid*, which left Calais at five o'clock. He was received by the naval and military authorities of the port, the Maquis d'Azeglio, the Sardinian Minister; General Grey, and the other members of the Queen's household sent down to welcome him. A salute was fired from the *Bleahaim* as his Majesty landed. His Majesty was loudly cheered as he passed to the Ship Hotel, and at that moment a grand salute was fired from the Drop Redoubt. At nine o'clock Mr. Bodkin, the Recorder, and the municipal authorities of Dover, waited upon his Majesty at the hotel, when the learned gentleman read an address, in which the authorities gave his Majesty a cordial welcome to England, and congratulated him upon the bravery displayed by the Sardinian troops in the war which, as they said, "was undertaken with no other object than to protect the weak against the strong, and such that aggressive Power which threatened the independence of surrounding nations." The reply of the King was read by the Marquis d'Azeglio, the Sardinian Ambassador; and then his Majesty and suite set out from the hotel for the railway station. By this time thousands of persons had assembled, and gave his Majesty a most hearty welcome.

THE JOURNEY TO LONDON.

On the King quitting the Ship Hotel, a Royal salute thundered forth from the Drop Redoubt on the heights, and a guard of honour attended his Majesty from thence to the station of the South-Eastern Railway, where he was received by Captain Barlow, Mr. Coles Child, Mr. Way, Mr. Smiles, and the other officers. The interior of the station was very elegantly decorated for the occasion with the flags of England, France, Sardinia, and Turkey, in addition to which whole regiments of evergreens and choice flowering plants were ranged on either side. All the arrangements connected with the Royal train were as complete as could be desired, and reflected the greatest credit on Captain Barlow and all who were in any way connected with them. The King, his suite, the Marquis d'Azeglio, and the other distinguished personages having taken their seats, the train left the station amidst the plaudits of the multitude, and arrived at the Bricklayers' Arms station at 12.10; the journey having been performed in exactly the time specified in the time-bills.

Along the line, on the way up to London, notwithstanding the high speed maintained, crowds of people assembled, who cheered lustily as the train swept on its course. Now it was a village school which had turned out to add its shrill voices to the general chorus of welcome; now the labourers from the country side had collected on embankment and in cutting to raise a passing cheer. The stations were all filled with well-dressed persons; and at Tunbridge, where the train stopped to take in water, the inhabitants were particularly fervent in their acclamations. Immediately after leaving Dover, the gloom which had prevailed during the early part of the morning disappeared, and the remainder of the journey was performed in one continual sunshine. At Croydon, amongst the spectators assembled were a number of Addiscombe cadets, who cheered heartily as the train passed. Then over the arches of Sydenham the Crystal Palace rose upon the view of the travellers, and its fairy architecture was displayed to extraordinary advantage through the reflection of the sunbeams, which made the glass roof and sides glow like a veritable mountain of light. At the hour above stated the Royal train drew up at the Bricklayers' Arms Terminus; and on the King alighting he was most cordially received by Prince Albert.

ARRIVAL IN LONDON.

At five minutes past twelve it was telegraphed from New Cross that the train was at that station; and great excitement prevailed as the time appointed for his Majesty's arrival approached. At ten minutes past twelve the train ran into the station, and the King of Sardinia stepped from his carriage. He was warmly greeted by Prince Albert, who introduced him to the Lord Mayor and Sheriffs.

Having taken a short rest, a procession consisting of several Royal carriages was formed, and it passed out of the station, the national Piedmontese air being played by the band of the 3rd Regiment of Fusiliers, who, with a squadron of Blues, were on the ground. It went at a slow pace along the Old and New Kent-road, over Westminster-bridge and Parliament-street, the bridge route being well lined with spectators, who loudly cheered his Majesty as he passed. At the Admiralty the national Piedmontese anthem was again played, together with "Rule Britannia." Along the line on the Surrey side of the water the people adopted such means as were within their reach of evidencing their cordiality towards the King, and from almost every house a banner of some sort was hanging. At several of the houses the national flags of England, France, Sardinia, and Turkey were exhibited. The most conspicuous manifestation of feeling was the demonstration at the Junior United Service Club, Pall-mall, where the whole of the Allied banners were hung out at the various windows. The entire route from Hyde-park, through the Victoria-gate, Westbourne-terrace, to the station of the Great Western Railway, was lined with well-dressed persons, who received his Majesty with continual cheers.

The directors of the Great Western Railway made preparations for the reception of his Majesty and his Royal Highness Prince Albert in a style that reflects the greatest credit upon their judgment. The central portion of the platform was paved off, seats being placed, with barriers, covered with crimson cloth, within the space allotted to the friends of the directors and shareholders. From the principal entrance a platform or bridge was placed, also covered with crimson cloth, to the down line; the platform of which was richly carpeted, and the barrier festooned with crimson drapery. The Royal carriages were in readiness to receive his Majesty and Prince Albert at half-past one, under the direction of Mr. Gooch, the locomotive superintendent of the company. Long before the arrival of his Majesty the platform was crowded by ladies and gentlemen who had the privilege of the *entrée* to the enclosed seats. Precisely at twenty-five minutes past one it was announced that his Majesty and the Prince had arrived. They were received at the entrance to the terminus by the Right Hon. Spencer Walpole, the chairman; Charles Russell, Esq., deputy-chairman; R. Potter, Esq., and other officials of the company. His Majesty frequently bowed, and appeared gratified with the enthusiastic manner in which he was received at the station. His Majesty was attired in a kind of hussar uniform, blue coat and jacket trimmed with silver lace, and wearing a cocked hat.

THE JOURNEY TO WINDSOR.

His Majesty having been conducted to the carriages, the train started at half-past one, the engine, which was decorated with the Sardinian flag, and also the tricolor of France and the union-jack of England, being driven by Mr. Gooch. The Prince and the King of Sardinia arrived at Windsor at 2 p.m.

Precisely at four minutes after two o'clock the firing of cannon announced the arrival of the Royal train at Windsor. His Majesty was received on the platform by the Mayor and magistrates of the borough. Five of the Royal carriages were in attendance; and as soon as the King and his suite had taken their places they proceeded at a slow pace to the Castle, escorted by the 2nd Life Guards. The King, as he passed through the streets, was greeted with the most enthusiastic reception by the assembled multitude; and upon his arrival in the Quadrangle he was received with a thorough Etonian welcome, as her Majesty had very considerately appropriated the mound of the Round Tower exclusively to the use of the students of Eton College.

Her Majesty received her illustrious guest on alighting from his carriage at the grand entrance. The Queen was accompanied by their Royal Highnesses the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, and was attended by the Duchess of Sutherland and the ladies in waiting, the officers of state of her household, and the gentlemen in waiting. His Royal Highness the Duke of Cambridge, Viscount Palmerston, and the Earl of Clarendon, were also at the grand entrance. His Royal Highness Prince Albert accompanied the King in his open carriage, his Royal Highness having left the Castle in the forenoon for the Bricklayers' Arms station of the South-Eastern Railway, for the purpose of meeting his Majesty on his arrival from Dover.

In the afternoon the King, with the Queen and Prince Albert and the Duke of Cambridge, visited her Royal Highness the Duchess of Kent at her residence, Frogmore. At half-past four o'clock the Lord Mayor and Sheriffs of the City of London arrived at the Castle. Alderman and Sheriff Kennedy and Alderman and Sheriff Rose, accompanied by the City Remembrancer, had an audience of the King, to

ask on what day his Majesty would receive an address of congratulation from the Lord Mayor, Aldermen, and Commons of the City of London, in Common Council assembled. The Lord Mayor and the Sheriffs, accompanied by the City Remembrancer, had another audience of the King, to invite his Majesty to partake of an entertainment on the presentation of the City address.

The King was pleased to appoint Tuesday for the reception of the address, and accepted the invitation of the Corporation. A deputation from the Young Men's Christian Association of London had an audience of the King, when the Hon. Arthur Kinnaird, M.P., read an address to his Majesty.

His Majesty was attended at the audiences and the reception of the address by the Marquis d'Azeglio, his Minister at this Court, and two of his Aides-de-Camp. The Queen gave a dinner in the evening, in St. George's Hall.

ROYAL VISIT TO WOOLWICH ARSENAL.

On Saturday morning her Majesty, Prince Albert, and the Duke of Cambridge, accompanied by the King of Sardinia, went on a visit of inspection through the working departments of the Royal Arsenal at Woolwich. For this visit very little display was made beyond decorating the Arsenal with the flags of England and her three brave allies; yet an immense concourse of people collected in all the streets of Woolwich through which the cortège passed, and gave the Royal visitors a most uproarious welcome, cheering until the air rang again. The party occupied six of the Royal carriages, and were escorted by a troop of the 4th Light Dragoons, most of the gallant fellows of which were their Balaclava medals. Her Majesty, the King of Sardinia, the Duchess of Sutherland, and the lady in waiting, the Hon. Flora Macdonald, occupied the first carriage. The Prince Consort, the Duke of Cambridge, and the suite of the King of Sardinia and the officers of her Majesty's Household followed in the others.

Among the distinguished individuals who attended their Majesties on this occasion were the Duke of Wellington, Sir De Lacy Evans, Major-General the Hon. C. Grey, Lord Byron, Colonel Biddulph, Captain Du Plat, Major-General Wylde, and several other naval and military officers; with the King of Sardinia were a most brilliant suite, all wearing the picturesque uniform of Sardinia. Among those who thus had the honour of accompanying his Majesty were his Excellency the Sardinian Minister, Count Louis Corti, First Secretary; Count La Tour; Count Camille Cavour, President of the Sardinian Council; Count Chevalier Messimo d'Azeglio, Aide-de Camp to the King; Duke Pasqua, Prefect of the Palace; Baron Nigra, Superintendent of the Royal Household; Major-General Count Morozzo Della Rocca, Premier Aide-de-Camp; Major-General the Marquis d'Angrogna, Aide-de-Camp; Major-General the Chevalier Cordenna, Aide-de-Camp; Count Cigala, Colonel of Cavalry; the Chevalier Persan, Commander of the port of Genoa; and the Count de Robilant, Artillery Officer. The King wore the uniform of a Sardinian general, with the insignia of the Supreme Order of the Annunziata. Her Majesty wore a plain walking-dress of dark silk, with a pink velvet bonnet, and a rich mantle of purple velvet, trimmed with ermine. Prince Albert was in the uniform of a field marshal, with the ribbon and star of the Garter; and the Duke of Cambridge was also in uniform, with the stars of the Garter and the Bath. The heads of the different departments having been presented to his Majesty, the Queen took his arm, and proceeded to inspect the various factories.

THE WORKSHOPS

The first visited were the extensive workshops in which all the various processes of "turning," "fining," "boring," and polishing the guns are gone through, and where, in fact, the rough castings are turned into perfect pieces of ordinance. The different peculiarities of the ponderous blocks of machinery were here fully explained by Col. Wilmott, who conducted the Royal visitors through the departments. All the processes which a gun has to undergo are at certain stages at its last stage very fully exemplified, and the different methods employed to facilitate labour carefully displayed. The King seemed much interested with the operations of the powerful lathes, which were boring 24-pounder guns, and turning them smooth with as much facility as if the pieces had been made of wood.

THE FOUNDRY.

After passing through the engine-room their Majesties entered the foundry for small castings. There they witnessed the molten iron poured in a dazzling stream into the mould for a "sweep" for one of the mortar-vessels, and Prince Albert explained to his Majesty the peculiar construction of some small mortar models which had just been completed. Adjoining this factory was a smaller one for casting shells, and about 50 shells of all sizes, from 32-pounders to mortar shells of 13 inches, were cast in the presence of the illustrious visitors. In this department 1200 shells *per diem* are manufactured. An iron mill-roller weighing 10 cwt. was also cast, and while this was going forward the Prince drew for his Majesty aside to explain to him the peculiar rapid progress by which the moulds are constructed. Her Majesty also appeared to take much interest in viewing this operation, and at her request several shot moulds were made, and the different processes fully explained by Colonel Wilmott. The Royal party then entered the laboratory—beyond all doubt of its kind the most perfect and most wonderful workshop in the world. The King paused at the entrance in perfect astonishment at the sight which met his view, and acclamations of wonder and admiration burst from all his suite. It was not without good reason that this surprise was expressed, for under one extensive roof his Majesty beheld nearly 800 steam-machines at work, all performing different duties and executing the most difficult mechanical details with a rapidity and precision that it would be impossible for any amount of hand labour ever to attain. In this one factory, where not less than 1000 men and boys are employed, every twelve hours witnesses the completion of a greater amount of work than one million skilful artisans could accomplish in the same space of time. High as the King of Sardinia has rated the manufacturing ingenuity of the English people, the sight which he witnessed in the laboratory on Saturday must have completely exceeded his expectations. In no other country, nor in all the other countries of the world united, could he have beheld such varied and such perfect triumphs of mechanical art.

MANUFACTURE OF MINIÉ BULLETS.

Her Majesty called the King of Sardinia's special attention to the machines for manufacturing minié bullets. Four of these wonderful inventions are united in one block, and each block produces noiselessly and without the waste of a grain of metal 120 perfect minié bullets every minute. Four such blocks of machinery are in operation day and night, never once even for a second ceasing their labours. Every twenty-four hours 600,000 minié bullets are added to the gigantic resources collecting daily for next year's campaign—a campaign which all the world looks forward to as a decisive one. These minié machines—if we may use the expression—require no care beyond that of one boy to each, to oil the wheels, and occasionally draw away the boxes of bullets as they become full.

An ingenious little machine for making wooden plugs to fit into the base of minié bullets, instead of the iron cup formerly used, was also examined with interest. At a row of small benches numbers of workmen were employed in making "friction-tubes," a clever adaptation of the principle of the congreve match, applied to firing sea-guns. Its construction is novel, and we will not, therefore, make it public. On a large table in the room were arranged specimens illustrative of every process of manufacture adopted in the Arsenal, which were carefully examined by her Majesty.

THE ARSENAL-YARD.

Quitting the laboratory, their Majesties proceeded across the Arsenal yard. In this yard, after the tremendous expenditure of material to which we have just been put in order to lay Sebastopol in ruins, it would not have been surprised to have found the stocks of shot and shell rather diminished; but such was not the case. Great pyramids of shot and shell, amounting in the aggregate to 13,000 tons weight of metal, covered the ground in all directions. Here also lay long tiers of massive ordnance, ready for the proof-yard, and waiting their turn to be transported to the seat of war. Dwarfing all the 13-inch shells to the appearance of mere trifles were a number of great 36-inch shell, each weighing 17 cwt. uncharged. These shells are for the great mortar which is being cast by Mr. Mare, and which is to weigh 35 tons. The bursting charge for this shell will be 91 lb. of powder, and the forcing charge of the mortar 200 lb.

In this yard also were a number of curious guns, of most extraordinary forms, and some evidently of great antiquity, which were taken from the Russians in the Kertch expedition; here, also, was the 32-pounder brass field-piece, with its limber, captured by the Guards in the great battery on the heights of the Alma. The Duke of Cambridge explained to his Majesty some interesting particulars connected with the taking of this trophy. Close by this piece was a very well-formed Russian military medicine-chest, taken by the Scots Greys at the Mackenzie Farm. Their Majesties examined this with much interest; it was completely stocked with drugs of all kinds, and with three sets of surgical instruments.

THE PROOF DEPARTMENT.

From the inspection of these trophies their Majesties entered the proof department. A machine constructed for the purpose of testing the tensile power of metals excited great attention on the part of her Majesty. In order to show the operation and the surprising force of the apparatus, which was a very slight-looking affair, a piece of iron 1.3 inches in diameter was placed under it, and, by an ingenious combination of levers, a pressure of 33,900 lb. was brought to bear on the bar, when the metal fractured with a noise like the explosion of a rifle. In various parts of the yard lay fractured masses of iron, several inches thick, which had once formed part of guns that had been burst in service, and which afforded extraordinary evidence of the tremendous explosive force to which they had been subjected.

One of these fractured masses was a portion of a 10-inch gun, weighing 116 cwt. and 10 feet in length, which, charged with 16 lb. of powder and an eccentric shot of 100 lb. weight, burst at Shaebury-ness in 1852 after the fifty-fourth round. The extreme range was 5860 yards, or upwards of three miles, and it was fired at an elevation of 52 degrees. When this piece exploded it caused the death of several artillerymen who were standing near.

THE LANCASTER-SHELL FACTORY.

The next department visited was the Lancaster-shell factory, at the entrance to which were arranged specimens illustrative of each stage in the process of manufacture of these projectiles. First was shown the plate of iron out of which the shell was to be constructed; then it was shown "scarphed," bent, welded into a tube, crimped, solid, or with both ends closed; next the outside turned; then wholly turned, half "wedged," ovaled, bored, half "bushed," and wholly "bushed."

In the manufacture of these shells a steam-engine of 100-horse power is employed to drive the steam-hammers and the other machines through which the shell in its various incipient stages is made to pass. Each shell weighs, when charged with powder, 91 lb., and their cost is stated to be from 50s. to 60s. each. When made by hand they are said to have cost the enormous sum of £30 each. About 200 shells per day is the average rate of working of the different machines. Nine steam-hammers are employed in this factory of a power varying from one to three tons. After leaving the proof-yard her Majesty, accompanied by the Duchess of Sutherland and Miss Macdonald, entered her carriage, and proceeded towards the common, while the King, Prince Albert, the Duke of Cambridge, and their respective suites, made a short visit to the carriage department, where the gun carriages, waggons, ambulances, and all the vehicles used in warfare are constructed, and where, as a matter of course, machinery does the whole of the planing, morticing, drilling, sawing, and turning.

INSPECTION OF THE ARTILLERY.

After a cursory inspection of this department, the Royal visitors and the officers by whom they were attended mounted their chargers and followed her Majesty through Woolwich to the common. All the route by which they passed was lined by dense crowds of people, who gave his Majesty and the Queen and Prince a deafening welcome. Arrived upon the common, the Royal party inspected a troop of the Royal Horse Artillery and two field batteries, which were turned out in full marching order, and carried everything they use in active service, except their blankets. The Horse Artillery fired a few rounds, but this portion of the day's proceedings was much shortened by the descent of a thick fog which hid everything from view; and, after flying past, the inspection terminated by the King, Prince Albert, and the Duke galloping forward and examining the guns and their fittings. After this display the Queen and her guest returned to the barracks on the common, followed by the escort and the guard of honour of the Bucks Militia, which had received her at the Arsenal on the common. The ground round the barracks was kept by detachments of Sappers and Royal Artillery, who had hard work to prevent the immense crowds from trespassing on the space marked off.

INSPECTION OF WOUNDED SOLDIERS.

The illustrious party on alighting proceeded to the officers' quarters, where an elegant déjeûner had been prepared for them, after partaking of which they were conducted by General Tyrwhitt to the officers' library. About forty artillerymen and twenty sappers, all of whom had been rendered unfit for future service by the severe character of their wounds, were presented to the Queen's most gracious attention. At about twenty minutes past three o'clock the illustrious visitors and their respective suites again took their seats in the Royal carriages. On the departure of the cortège the enthusiasm of the multitude of spectators which thronged the outside of the barracks was almost unbounded, the deafening cheering and waving of handkerchiefs continuing until it had passed out of sight. The Royal carriages passed over Blackheath, and thus returned by the same route they had followed in the morning. At every point along the line crowds of people had collected in anticipation of their return, who greeted them warmly as they passed. Their Majesties arrived at the Nine-elms station about five o'clock, and from thence proceeded by special train at once to Windsor Castle.

THE ROYAL SARDINIAN CHAPEL.

His Majesty the King of Sardinia attended divine service on Sunday at the Royal Sardinian Chapel, Lincoln's-inn-fields, accompanied by a numerous suite. His Majesty arrived precisely at eleven o'clock, and was received at the entrance of the chapel by Cardinal Wiseman and the chaplains of the embassy. The Cardinal addressed his Majesty in Italian, and the following is a correct translation of his eminence's words:—

Sire, permit me to take advantage of this occasion, the first of its kind that will be enrolled in the annals of the Royal Sardinian Chapel, to convey to your Majesty the sincere and humble homage of the clergy who officiate, and the numerous congregation, native and Italian, who frequent it, and derive from it so many spiritual blessings. It is the most ancient of our Catholic chapels or churches. Founded by the piety and zeal of your Majesty's august ancestors, entirely maintained by them during centuries of peril and affliction, generously endowed by your Majesty, it has been one of the principal supports of our holy religion in the metropolis. And, if your Majesty will find it but insignificant and poor, not the less fervent on that account are the prayers daily offered up in it to the Almighty, to beg him to enrich your Majesty and your Royal house with abundant mercies and heavenly graces.

His Majesty returned thanks, and asked several questions about the chapel, its origin, &c. He was then conducted by the Cardinal and clergy, in procession, to the throne erected for him in the chapel. The altar and sanctuary were as handsomely decorated as the very limited time allowed. His Majesty stood or knelt during the entire service, and the immense congregation were particularly struck with his unostentatious piety, and dignified, soldier-like bearing. The mass (Beethoven in C) was admirably played and sung by the numerous choir. A large body of police were in attendance, who kept excellent order among the dense crowd assembled in front of the chapel to welcome his Majesty.

On his return the King lunched at Richmond, and paid a visit to the ex-Royal family of France. The King, in order to see the country, posted to Windsor, where he arrived at half-past five o'clock. The terrace on Sunday afternoon was crowded with visitors from London and the surrounding district, many of whom had journeyed to Windsor in the expectation of catching a glimpse of the King of Sardinia. His Majesty, however, to their great disappointment, did not return to the Castle in time to join the Court in promenade, which took place between three and four o'clock, when the Queen, with Prince Albert, and the Royal children and suite, made her appearance, and remained some time on the terrace, to the gratification of her loyal subjects; the fine bands of the Grenadier Guards and 22nd Regiment of Foot being in attendance.

VISIT TO PORTSMOUTH.

On Monday his Majesty, accompanied by Prince Albert and the Duke of Cambridge, paid a visit to Portsmouth Dockyard and the fleet at Spithead, travelling from Windsor by the Great Western Railway branch to Basingstoke, and thence on the South-Western Railway to Gosport. They reached the Clarence Victualling-yard at eleven o'clock, and there passed forth short time, in order to inspect the Marine Battalion, just landed from the *Jura*, which came into harbour with them from the Crimea a few days ago. The men had made no change in their dress, and were just as they had been put on board the transport—their boards untouched, their uniforms threadbare, and their water-bottles slung round their shoulders, as if they had come fresh from the trenches. The Royal party, in passing up and down the ranks of these war-worn fellows, manifested a lively interest in them. At the close of their inspection they embarked on board the *Fairy*, which steamed rapidly out of harbour straight for the fleet. It consisted of the following men-of-war:—

Exmouth, 91, Captain W. K. Hall, C.B.; *Calcutta*, 84, Captain J. Stopford; *Chimera*, 80, Captain Robinson; *Rhadamanth*, 60, Captain Hall; *Hawke*, 60, Captain Ommaney; *Russell*, 60, Captain Francis Scott; *Arrogant*, 60; Captain Warden, C.B.; *Hastings*, 50, Captain R. G. Fanshawe; *Edinburgh*, 50, Captain Hewlett, C.B.; *Arrogant*, 26, Captain Yelverton, C.B. *Monarch*, 84, Captain Baillie; *Samson*, 6 (steam-frigate), Captain Hurd; *Pluto*, 6, Commander Warren; *Hecla*, 6, Commander Aplin; *Salamander*, 6, Commander Meehan; *Urgent* (steam troop-ship), Commander Phillips.

The fleet was moored in two lines N.W. and W., one cable (120 fathoms) apart, the small vessels forming the port line, and the line-of-battle ships and *Arrogant* forming the northern or starboard line. The course taken by the Royal yacht was, first, ahead of the weather line, then close astern of the weathermost ship, and then astern of the leewardmost and round the spit into harbour. As she approached a Royal salute was fired, and the crews manned yards and cheered. We have all been so accustomed for the last two years to witness these ceremonial observances at Spithead that it would be out of place here to dilate upon the effect produced by them; but the spectacle of so many of England's floating castles, alive with sailors, and startling the Solent with their salvos of artillery, must have powerfully impressed King Victor Emmanuel, who probably never in his life before witnessed such a naval display. The Royal party did not go on board the men-of-war, nor were any evolutions performed; but on their leaving another salute was fired by the fleet, and it was taken up by the *Victory* and other ships in the harbour as the *Fairy* passed Blockhouse Fort on her way back.

In making the harbour his Majesty was steered in the Royal barge by Captain Denman to the time-honoured old *Victory*, on board of which he was received by Captain G. Gordon and Commander Strode. They conducted his Majesty to the quarter-deck, and showed him the spot where Nelson fell. He then descended to the cockpit and viewed the cabin where our great naval hero died.

The attention of the King was next directed to some experiments made off the dockyard with Clarkson's new cork life-boat, which was launched bodily off the dockyard jetty with a full crew, but righted at once.

THE "VICTOR EMMANUEL."

After visiting the wood-mills, the smithery, and the steam-factory, the Prince took his Majesty on board a 91-gun ship, hitherto called the *Repulse*, but which is henceforth to bear the name of *Victor Emmanuel*. The King had completed his inspection of the ship, and was about quitting her, when Prince Albert announced to him the change contemplated, and he seemed highly gratified by the compliment. She is a noble vessel, and will, no doubt, make her new title respected by the enemies of England and Sardinia in whatever sea she floats. His Majesty also visited the *Marlborough*, 131, and appeared much struck by the weight of her main-deck, which was cleared of the suits on one side, in order that he might see its extent.

This concluded the Royal survey of the Dockyard, and the illustrious party proceeded to Sir Thomas Cochrane's house, where luncheon had been prepared for them.

After the déjeûner the Mayor of Portsmouth was presented to the King by Sir Charles Wood, on the intr oduction of Captain Dacres, and delivered a congratulatory address. His Majesty having, through his Minister, made a gracious reply, proceeded on board the gunnery-ship *Excellent*, commanded by his old friend Admiral Maitland, and was for some time engaged in witnessing the practice with shot and shell, as well as broadside firing. Shortly after four o'clock the Royal party returned to Clarence Victualling-yard, and proceeded by special train to Windsor, which they reached in perfect safety.

(*Continued in Number, page* 669.)

THE QUEEN'S VISIT TO FORT PITT.

FORT PITT has been a general hospital forty years; standing on elevated ground, it commands a pleasing panoramic view in every direction, and may not inappropriately be termed the "Hon" of Chatham. In the year 1805 the ground on which Fort Pitt stands was cultivated, and formed Louche's Farm, but in 1805, during the great fire at Chatham, sparks falling on a thatched roof the entire premises were destroyed. Fort Pitt was used as an artillery barrack, and the grounds, which have been laid out so judiciously by Mr. G. Pratt, the purveyor, were originally used as a drying-ground for the garrison. Fort Pitt, with Fort Amherst and Fort Clarence, surrounded by a line of fortifications, commanding the dockyard and high road from Dover to London.

The visit of the Queen to the hospitals at Chatham, where so many hundreds of the brave have arrived within a few months, took place on Wednesday, the 28th ultimo. Her Majesty arrived at the Strood Station, having left Windsor at ten, and the Bricklayers' Arms at eleven o'clock. In the carriage with her Majesty were his Royal Highness Prince Albert, the Hon. Miss M'Donald, and Miss Cavendish; in the next carriage, General Wetherall, Earl Grey, and Captain Du Plat; her Majesty being received by his brother the military department and a guard of honour of the Royal Marines with their band. The Royal cortège proceeded to Fort Pitt, where, under a Royal salute and a guard of honour of the 91st Regiment, her Majesty entered the fort, and was received by Colonel Henry Eden, Commandant of the Garrison, and George Russell Dartnell, Esq., Deputy-Inspector of Hospitals, surrounded by Colonels Sandham, Savage, Phipps, and the entire staff of the establishment, through which her Majesty, Prince Albert, and the ladies and gentlemen in waiting passed to view those men whose mutilated forms told too truly the sad results of war—Miss Florence William Parry, head of the surgical department, accompanied by Mr. Dartnell, explaining the different cases as they presented themselves. Each man held a card in his hand, on which was inscribed his name, regiment, the nature of wound, and where received. Her Majesty passed up one side of the ward, returning in an opposite direction—stopped repeatedly to speak to the wounded, and made some inquiries, at the same time adding encouraging words, that quickly found their way to the heart, the tear in the eye of many a brave man betraying their intense feeling.

By a kind permission, to the writer of the ILLUSTRATED LONDON NEWS of the 21st of July will be seen an engraving from the photographic likenesses of four of the wounded, taken expressly for her Majesty at Scutari, with Corporal Shaw, of the 4th, and Denny, of the 13th Light Dragoons, the third man, are still in hospital, and attracted her Majesty's attention, particularly the poor boy Walker, as the Queen termed him.

Another likeness in the group taken on the lawn of Fort Pitt, and given in the ILLUSTRATED LONDON NEWS, is that of Francis Denny, 1st Battalion Rifle Brigade, who was wounded at Inkerman while skirmishing, by a ball entering behind his shoulder, passing straight through his body, and breaking his arm; thus wounded, he kept his position until two of his comrades, observing his fainting condition, led him back two hundred yards, where, from loss of blood, he laid some hours behind a Commissariat cart of hay. He was in Fort Pitt on the first and second visit of the Queen; on the latter occasion, Mr. Dartnell, on coming to him, observed, "Your Majesty has seen this lad before," upon which her Majesty asked him several questions. A few days after the Royal visit Denny visited the hospital, and sent Denny a most complete sling for his arm, made of black morocco, lined with wash leather, a sufficient length of mohair to pass over his shoulder, to which was attached a card, "Presented to Private Francis Denny—the gift of her Majesty the Queen." Denny would not use it, but would often show it with great delight. He took it home to his parents; and, in a letter received from him, he speaks of wearing it on Sundays, and the great comfort it has been to him.

The Queen, having inspected the invalids, left Fort Pitt on her way to the Supplemental Hospital, Brompton. The old chapel had been tastefully arranged: here it was her Majesty inspected several hundreds more of the Crimean men, after which she passed through some of the wards of the first-Class Surgeon C. Rose. At half-past two o'clock her Majesty left, under a Royal salute, apparently pleased with the arrangements of the day, both as regarded the great cleanliness of the hospitals, no less than the general good spirits of the wounded, and the great comfort it has been to him.

The Queen, having inspected the invalids, left Fort Pitt on her way to the Supplemental Hospital, Brompton. The old chapel had been tastefully arranged: here it was her Majesty inspected several hundreds more of the Crimean men, after which she passed through some of the wards of the first-Class Surgeon C. Rose. At half-past two o'clock her Majesty left, under a Royal salute, apparently pleased with the arrangements of the day, both as regarded the great cleanliness of the hospitals, no less than the general good spirits of the wounded, and the loyalty of her Kentish subjects.

THE IMPERIAL HUNT AT COMPIEGNE.

HUNTING is known to be a favourite sport with the Emperor of the French; and part of one of the days of the recent visit of the King of Sardinia was appropriated to the pleasures of the chase, in the very extensive park and neighbouring forest of Compiègne. This place has been a favourite residence of the French Monarchs, with few exceptions, from the time of Clovis. The Imperial Hunt is a stately and exciting scene: it took place on Monday week, and the Emperor and the King returned in the evening to the Tuileries.

THE KING OF SARDINIA AND THE EMPEROR AT THE FRENCH HUNTING AT COMPIEGNE.—SEE PREVIOUS PAGE.

SARDINIAN CHASSEURS RESCUING THE BODY OF THEIR COMMANDER, CAPTAIN PROLA, AT THE BATTLE OF RIVOLI.—(SEE NEXT PAGE.

WAR OF ITALIAN INDEPENDENCE. CAMPAIGN OF THE PIEDMONTESE ARMY IN 1848.

As a scene of memorable interest, in association with the Royal visit of the past week, we have engraved upon the previous page one of the events of the campaign of the Piedmontese army in the above year, from a cleverly-executed series of illustrations entitled "Campagna Lombarda," by Stanislas Grimaldi. Turin, 1848. The following are the details of the scene

On the 23rd July, at the affair of Rivoli, a company of chasseurs commanded by Captain Prola defended an important position from an enemy numbering twice their strength. The valiant Prola fought at the head of his men, and bore the brunt of the battle. Three of his trumpeters fell lifeless at his side one after the other; with the third he himself fell, a victim to his valour in the course. The soldiers, finding themselves on the point of being surrounded, were at length forced to retreat; but, remembering that the body of their chief remained behind, a band of brave fellows rushed back to the field, and, after a bloody struggle hand to hand with the affrighted enemy, bore their dead captain away with them in triumph.

EXTRAORDINARY INCIDENTS IN THE REIGNS OF THE PRINCES OF SAVOY, PIEDMONT, SARDINIA, AND CARIGNAN

The reigns of the Sovereigns who have preceded the present King of Sardinia present incidents more strange and romantic than any ever imagined by romance-writer or playwright. In addition to wars, revolutions, exile, and choppings and changings of dukedoms and princedoms for kingdoms, three Kings out of seven have abdicated, and the father of the present King succeeded to the throne by virtue of his descent from a common ancestor of the Dukes of Savoy in 1685—there having been no legitimate marriages between the two families from that remote date until 1831: when, on the death of Carlo Emmanuel IV., without issue, Carlo Alberto, Prince of Carignan, was called to the crested throne on claims which few except professed genealogists could trace; the sentinel-house which he succeeded having, in the intermediate generations, intermarried with nearly all the Royal houses of Europe—especially including France, Spain, Austria, and England.

The history of the family now occupying the throne of Sardinia commences with Carlo Emmanuel I., Duke of Savoy, born in 1562, whose second son, Tomaso Francesco, was the founder of the younger branch of the house of Savoy, from which the present King is descended. We may pass over the reigns of the Dukes of Savoy, of Carlo Amadeo I., of his eldest son, Vittorio Amadeo I., and of his grandson, Carlo Emmanuel II., whose eldest son, Vittorio Amadeo II., succeeded him as Duke of Savoy in 1675, and was not only the first King, but one of the most remarkable men, of his race.

In 1713, by the Treaty of Utrecht, it was arranged that, in order to prevent the thrones of France and Spain from ever centering in one Sovereign, if the descendants of Philip of Anjou, grandson of Louis XIV., recognised as Philip V. of Spain, failed, the crown of Spain should go to the Duke of Savoy, who was by the same treaty created King of Sicily, that island being then in the possession of Spain, at the same time Nice and other conquests made by France were restored to Savoy. Three years later (1718), by the treaty of quadruple alliance between France, the Emperor of Germany, Great Britain, and Holland, the Duke of Savoy renounced the title of King of Sicily, then recently conquered from him by Spain, in favour of the Emperor, and received in lieu the island of Sardinia. Thus it is that the present Sovereign holds the title of Duke of Savoy, Prince of Piedmont, and King of Sardinia.

In order to carry out the terms of the treaty, the Court of Vienna agreed by a supplemental treaty, and assisted in obtaining, the cession of Sardinia; and, by an English fleet under the command of the celebrated Admiral Byng, co-operated. The cession, however, took place peaceably, and, on the 8th August, Vittorio Amadeo II. was formally proclaimed King of Sardinia.

The first King of Sardinia is said to have compared Italy to an artichoke "which must be eaten leaf by leaf." He seems to have had then visions of Italian unity which it may be the fate of this generation to see realised.

Another parallel appears in his differences with the Pope. He defended his rights, and defied the threats of excommunication. In 1716 he expelled the Jesuits from all their offices in colleges and schools—moved to so bold a step, according to report, by the dying words of his Jesuit father confessor, who sent for him, exclaiming every one else to retire, said, "*Overpowered with all the kindness I have received at your hands, I cannot show my gratitude more strongly than by giving you one last counsel—Never have a Jesuit for a confessor.*" Ask me not the motives for this counsel: it is enough for me to declare them."

An additional historical parallel between the position of the present King and his Royal ancestor may be found in the circumstance that Louis XIV. of France, although fearful of increasing the power of the house of Savoy, was desirous of seeing them established as Kings of Lombardy. But, squeezed between the two great rival powers of France and Austria, Victor Amadeo's policy varied with the fortune of war—in the latter month, as Voltaire observes, he was generally one of the Emperor's generalissimo of Louis XIV. In 1730 he abdicated, whether [illegible] by the nature of his secret and double negotiations with Spain, Austria on the one hand, and Austria on the other, or by real disgust with the fatigues of office, and a desire to enjoy repose with the Countess de Sebastien, whom he married in that year, it is difficult now to decide. At any rate, although his son, Carlo Emmanuel III., strenuously opposed the step, counselling a temporary retirement, he was obstinate, and "on the 3rd Sept., in a full assembly of his Ministers and nobility, all unprepared for the announcement," he read aloud his abdication in the form, with the ceremonial, used by Charles V. in 1556; then went and congratulated his daughter in law, the Princess of Piedmont, and proceeded to mass at his chapel. "Whilst the priest, hesitating at the passage in the prayer for the King, as to whether the name of the son or the father should be mentioned or not, hastily exclaimed 'Carolum Emmanuelem!' But soon wearied of his hasty resolution, and the excitement at Chambery, he resolved by a *coup d'état* to recover the throne, and [illegible] Accordingly to return, by proceeding to Turin, while his son was visiting him at Chambery. The plot was accidentally overheard by a young country priest, who, [illegible] his way in the castle, from fright remained concealed behind the tapestry; when the King and his counsellor entered there he overheard the conversation of the ex-King and the Countess, or rather Marchioness. The priest escaped, and immediately informed the young King. Within an hour Carlo Emmanuel was on horseback, passed the little bridge, and entered his capital on the same day that his father, unconscious of the discovery, of his plots also travelling secretly and rapidly, entered the Château Rivoli, close to Turin. The salute of cannon welcoming the son first informed the father that he was King. The following day they met, "both sad and embarrassed." That interview would be a subject worthy of a great dramatist.

Victor Amadeo having complained that the air of Savoy did not agree with him, the son ordered the Castle of Montcalieri to be prepared for him; but had him carefully watched, although treated with the greatest respect. It is thought that Carlo Emmanuel might even then have resigned the throne, but the revelry of the young Queen with the Marchioness made that step impossible. The Marchioness's character was not spotless—she had been the king's mistress previously to her marriage with Count de Sebastian, and the son would not unqueen his Queen for such a person.

The old King, after sounding the principal Ministers, without success, sent for the Marquis del Borgo, and required him to deliver up the act of abdication. The Marquis refused. The old King paced his chamber in great agitation until midnight; then, mounting his horse, followed by a single attendant, he passed himself as one of the gates of the citadel, and required that it should be opened to him. The Governor, the Baron St. Remy, informed of the strange application, proceeded to the gate, and peremptorily refused to comply without a written order signed by the King.

While the young King, informed of the interview with De Borgo, was deliberating with his Council, who pressed him to retain the crown, a messenger arrived with the news of the attempt to seize the citadel. The Ministers, allowed by the Spanish example, here the first act of Philip [illegible] sending the throne, was to sacrifice the Ministers of his son, goaded Carlo Emmanuel's trembling hand, while with tears in his eyes he signed the order for his father's arrest. The Castle of Montcalieri was surrounded by troops on the 27th September, 1731. The doors were burst open, the Marchioness was seized in an attempt to escape in her night-clothes, and sent off in a carriage to the Castle of Cova, but the King remained undisturbed by the commotion in the deep slumber that was one of his peculiarities. When he was awakened, his conduct and language were so violent that the guards were compelled to wrap him up in the bedclothes. Thus hampered, they conveyed him to the Castle of Rivoli, where he was strictly guarded, lest he should destroy himself. In a frenzy of passion he smashed a marble slab with one blow. He was afterwards removed to Montcalieri at his own request. The Marchioness was restored to him, he was allowed to receive visitors; and there he died, on the 31st October, 1732, without again seeing his son.

Carlo Emmanuel III. performed the duties of an absolute King with great industry, zeal, and economy. He appears to have meant well, and meddled with everything, even the private expenses of his nobles. He was, in the caricature sense of the term, the most utilitarian King ever known: he encouraged painting as a Royal duty, but detested both music and poetry. Strictly punctual and economical himself, he insisted that his courtiers should be the same. It is to once stated in history, but we suspect he modelled his Government on that portrait of a good King described by Fenelon in "Telemachus." He never allowed his daughters or daughters-in-law to appear before him unless in Court costume. His personal courage was also of the first order. In the island of Sardinia his memory was long venerated as the author of many useful reforms. But he was a faithless ally, and intolerant of the slightest approach to liberty.

His third wife was the sister of Francis I. of Austria. He died in 1774. He was succeeded by his son, Victor Amadio III., who had married Maria, the daughter of Philip V. of Spain. He married his two daughters to the two French Princes who afterwards became Louis XVIII. and Charles X.; and his son, Carlo Emmanuel, to their sister, Adelaide Clothilde. She brought him two million francs dowry; and two more the price of the sale of the ancient palace of the Duke of Savoy at Lyons.

But, while all apparently were "merry as the marriage-bell," the French Revolution broke out. Napoleon's conquest of Italy ruined him, compelled him to renounce the title of Duke of Savoy, and left him in possession of little except the mountainous island of Sardinia. The Fort of La Maddalena has the honour of bearing off an artillery attack commanded by the young General Bonaparte.

On the 16th October, 1796, the King died, ruined and bankrupt, of an apoplectic fit five months after the disastrous treaty of Paris, by which he surrendered all his dominions on terra firma and the title of Duke of Savoy. He was succeeded by his son, Carlo Emmanuel IV., who had been educated by a Jesuit, and was as much a Jesuit as a weak man could be. He was obliged to take refuge in the island of Sardinia, where he arrived, protected by an English frigate commanded by Lord Nelson, March, 1799, and was received with enthusiasm. Sardinia had been a model of Ireland of Piedmont treated in the manner that Ireland was when Burke was rejected by Bristol, and until after Sydney Smith wrote "Peter Plymley's Letters." The late King had made many concessions to the Sardinians. The Jesuit King began by repudiating the solemn treaties he had signed with the French, and recalling all the concessions made to his Savoy subjects by his faith r. He increased the taxes, and suppressed the Council of State, and closed the Statute of Local Parliament. When he had tried the brave islanders to the utmost, he left, under the form of resuming the throne of Piedmont, after the victory of Suwarrow, but the battle of Marengo closed that dream. After successively living in Florence, Rome, and Naples, constantly disturbed by the advance of French conquests, in March, 1802, he resigned what he called his crown of thorns, in favour of his brother, Vittorio Emmanuel, became a member of the order of Jesuits in 1815, and died in their monastery in 1819.

Vittorio Emmanuel's reign may be described in one sentence After the Restoration in 1814, which added Genoa to the kingdom of Sardinia, Von Rantzau relates that the King asked "What was to be done?" "For sovereignty, Sire," replied an old Minister, a Marquis de Carabas, "your Majesty may put everything in the best order immediately. Buy an old State calendar for the year 1790, and replace all as you find there." The King took and followed the dead man's counsel. Personally he was a respectable man. He had entered into a solemn engagement with the house of Austria "never to give the Piedmontese any liberal institutions." And when, following the Spanish Revolution, the Italian Revolution broke out, he abdicated in favour of his brother, Carlo Felice

His reign of five days appeared, as Regent and supporter of the Liberal Constitution at Turin, Carlo Alberto, Prince de Carignan, cadet of the house of Savoy, a descendant in the male line of the three hundred years of unbroken descent in the male line of the elder branch.

The Austrians soon put down the detested revolution in Italy. Carlo Felice, on learning his brother's abdication, issued a proclamation dictated by the Duke of Modena, as remembering from commencing to any change whatsoever, he saw rebellion and revolution in every encroachment upon the plenitude of his Royal authority. His first acts were the condemnation to death or the galleys of the foremost revolutionists—the abolition of the press—and the closing of the Universities of Turin and Genoa—restoring the Jesuits and placing education entirely in their hands. In other respects he was a mild Monarch!

He died in April, 1831, and the branch became, happily for Italy, extinct. The heralds of Europe, in search of pedigrees, found Carlo Alberto, Prince de Carignan, the lawful successor to the throne of Sardinia. His life, his abdication, are parts of the history of our own days. He and his son, our present welcome guest, have made three kingdom pros perous, powerful, and free, by spurning Austrian counsels and Jesuit advisers, and supporting under no common difficulties liberty political, social, religious, and commercial!

The Sound Dues.—The deliberation of the Commission respecting the Sound Dues, which were to commence on the 5th ult., but were postponed, will not now commence before the arrival at Copenhagen of M. Tegoborski, formerly Russian Minister of Finance, who is expected with instructions from St. Petersburg. The other Governments represented in the question will be represented by their respective diplomatic agents at Copenhagen. Mr. Buddinger, the United States' Minister, still remains without instructions. The President of the Chamber of Commerce arrived in Copenhagen.

A National Curiosity. Mr. Disraeli's clerks have presented the following "[illegible] from which it appears that the Nation is indebted to the right hon. gentleman in a [illegible] gratitude: "We owe mainly to Mr. Disraeli, and the [illegible] of Commons of which he is the leader, that the country [illegible] necessary, and carried on the war which we [illegible] Mr. [illegible] and even disarmed [illegible] Mr. Disraeli that there is an [illegible] like de[illegible] the object of the war, and who [illegible] *The Press.*

Decline of Applied Fe[illegible]. I have [illegible] and there has been any fall [illegible] [illegible] lines in various [illegible] [illegible] the expenditure down, so far, at least, as the Atlantic ports are concerned, is so much about the Pacific ports, of which [illegible] respondents can tell you. But I can speak positively that in this port, Liverpool, as well as in other cotton ports, there is no falling off. The [illegible] [illegible] whose auspices its schemes were to be carried out. It has been decided [illegible] out any open manifestation, and Lord Palmerston has been [illegible] Queen Victoria's name when Cuban affairs were so quiet as now, as I am told.—*The Times' New York Correspondent.*

The Victoria Upper House.—Orders have been issued to the colonial engineer to prepare plans for the Queen's Speech, with a view to the conversion into a "Upper House," for the *quasi* Lords, as [illegible] [illegible] by *Punch* about a year ago—our Legislative Council that is to be. [illegible] understand that, although we have £10,000,000 worth of gold to sell every year, the Government has found itself too poor (I use the word advisedly) to build either a Council Chamber or a Government House, both being listed at "fabulous rents." The Legislative Council has hitherto held its sittings in a building called St. Patrick's Hall, belonging to the St. Patrick's Society. The room will about hold [illegible] [illegible] [illegible] [illegible] [illegible] communication is wanting. The Speaker's room is about [illegible] [illegible] room. There is a little anteroom and passage, in which [illegible] good one is deposited. One or two rooms are devoted to Committees, and a few more, three small rooms to the Council Chamber. There is a Council Club, a substitute for Bellamy's, about a quarter of a mile off [illegible] for gentlemen, who smoke, the Speaker is himself a smoker, so that when certain speakers who are [illegible] to be "good for half-an-hour" get up the Speaker's den becomes the smoking-room. As the House was for the most part elected by the small population of 1851, more than three-fourths of the members are "Old Chums," and that [illegible] pipe and cigar or cheroot. Such is the Council Chamber with its appurtenances. But where to go now to [illegible] that is the question. In a certain street called Queen's, midway between [illegible] and the Council Circle, [illegible] under an old wooden verandah roof, where John Thomas Smith, Mayor of Melbourne, and [illegible] made his "pot of money." Well, this public-house is called the "St. John's Inn," because the Mayor is a great mason; and the theatre is called the "Queen's," to mark masonic-publican Mayor's loyalty. But, besides being loyal, the Mayor is ever [illegible] [illegible] and so he has got it suggested that his [illegible] might be made into a cleaner for the Upper House; and, to say the truth, as the colony is too poor to build a Parliament House, I do not know of any better scheme.—*Letter from Melbourne.*

THE BODY AND SOUL OF THE RUSSIAN FORCES.

(From a Polish Correspondent.)

We have been favoured with the perusal of private letters from the banks of the Vistula which throw a new light upon the sources whence the military power of Russia is derived. Poland and Finland were acquisitions of the most vital importance to Russia, and at the same time most dangerous to the Western nations. The former is the chief source of her military strength, and has produced, even in times of peace, an army of observation in the centre of Europe; whilst the latter is well known to be the great nursery of the Russian navy. It is through ancient Poland (Volhynia, Ukraine, and Podolia) that the Czar weighs so heavily upon Turkey. It is through the participation of Austria and Prussia in that most heinous crime, the partition of Poland, that he possesses such an influence at the Courts of Vienna and Berlin. It is through Poland and Finland that he has had such preponderance in the rest of Europe.

To admit that the Emperor of Russia, at the close of the present war, is not to lose any territory, but only his navy, is the same thing as to leave untouched for ever the cause of a perpetual war. The ambition of Peter I., Catherine II., and Nicholas has very little to do with the matter. Peter I. "peaceful" Alexander I. and still more "mild" Alexander II. must of necessity pursue the career of conquests. By the slumber of European policy, and the rivalry of England with France, Russia being permitted to invade and to subdue so many countries, and possessing now such a vast territory, she wants, absolutely for her existence, the two contiguous seas exclusively for herself, and will renew the contest for the possession of them as long as she holds Poland and Finland.

For the same reason the chief care of the Russian State is the increase of the military organisation and conquest, especially through the means of the subdued countries, in a manner similar to that of the Roman empire. We put aside the consideration of her naval force, its construction being more generally known, and being partly destroyed in the Black Sea; and take Russia as a Continental power.

There exists no nation in Europe in which the military profession ranks so high as within the "Northern colossus." In fact, it is esteemed by Government the only honourable occupation of a man. Rewards are chiefly bestowed upon military men in money, estates, decorations, and other honours. The breasts of some Russian officers are literally covered with sparkling stars and crosses, to dazzle the beholder's eye: and what, by the by, is worthy of imitation, the meritorious men generally obtain all these distinctions and emoluments attached to them without any regard to whether they are well born. In Russia you may often meet with native heroes sprung from the poorest people. Occasionally you may meet with opulent men who could neither read nor write, when, owing to their bravery, they were raised to the rank of superior officers and Generals.

The appearance of Russian soldiers at the review is magnificent. They are constantly well made, robust, and well trained; and their accoutrement is very good. Besides, they are inured from childhood to cold, wet, and heat, to all sorts of hardships and privations. Badly fed as they are, and harassed during the war without relaxation from filth, fatigue, and misery, they become literally the very nests and the reservoir of pestilence, diarrhœa, and cholera. Their apathetic souls are stimulated in the battle not so much by superstition as by the strong *vodka* (a kind of brandy), and plentiful bribes.

We are about to see the new Russian forces called by the last manifesto of the Emperor into action throughout the empire. Their number is *ordered* to be 400,000 men. They are destined to support the regular army, more than half destroyed; to come to fill the reserves, and some to act separately, as the "National Militia." Let us take a bird's-eye view of this military force from the Frozen Ocean to the Black Sea, and from the Pacific to the Baltic. Except by a few learned men, many of these peoples are unknown to Europe. Let us make a closer acquaintance with them before we meet them on the battle field. They brandish various arms, from the European weapons to axes and pikes, bows and arrows, and even the lasso. We are fighting, as it were, with the epitome of mankind entirely, whilst Russia only possesses within herself races as those who existed before the establishment of Christianity and with the Middle Ages, attained by the craft of modern materialism.

The whole population called to arms may be classed as follows:—

The *Russians* proper, dwelling in the northern and central part of the empire. They compose no more than 12,000,000 of male and female population. They are considered the most "patriotic;" but, by sundry "donations" and repeated conscriptions, having given up already about 1,500,000 men, are nearly exhausted. Moreover, in that heart of the State no union ever existed, and, at the time when some event causes at St. Petersburg mirth and festivals, at Novgorod, Pleskow, and Moscow a deep mourning is strictly observed.

The *Poles*, inhabitants of ancient Poland, never incorporated with the militia, but with the regular army. As long as the usurper's crown is exposed to great dangers they are naturally suspected of harbouring "profane thoughts" for the recovery of their national independence. Several Governments, by various endeavours to bleed, almost to drain, with savage [illegible] [illegible] of that warlike people in every generation. It is at present [illegible] to have Russia, and to render [illegible] [illegible] the [illegible] barbarity of ages. Not content with [illegible] [illegible] by barefaced propaganda—flattering [illegible] in Poland proper, in Lithuania, Samogitia, Volhynia, and other ancient Polish [illegible] plan is connected with the projected residence of the Emperor at Warsaw in the coming winter, which was postponed on account of general discontent and excitement in that country. According to private letters from that capital, [illegible] resented to the Polish patriots by Russian agents that Alexander [illegible] intends to improve the scheme of Alexander I. by the creation of a larger kingdom of Poland than that erected in 1815, "if the Poles will deserve it." "You can expect nothing," they add, "from the egotism of the Western Powers. The 'nation of shopkeepers' stood always indifferent to the dismemberment of your country; and the French Republic, disregarding her promises in 1794, abandoned you under Kosciusko. You know that that hero was more admired by Paul and Alexander than by any Sovereign in Europe: it is a great pity that he did not appreciate them. You have been deluded and cheated by Napoleon, and particularly by the years 1806—1812, by which you like birdlime to his standards blind instruments wasting away, for his ambition, your far-famed bravery and your national blood. In spite of all that, you were delivered up to Russia in 1815 by the same Western Powers; and that was your best of fortunes. You disregarded it for a moment, and, abandoned again by France and England, you fell, in 1831, the victim of your own folly. In the actual war these Powers deny you even any hope for the future, and openly refuse to form the Polish legions. You know the misfortunes of your duped fathers, brothers, and sons in exile—they die from sorrow, starvation, and the longing to see their own 'sweet home.' If you display a real zeal, and manifest earnestly your conspicuous gallantry in the defence of the modern tyranny (our diabolic commonwealth), it is not [illegible] pity but the envy of nations that will follow your brilliant [illegible] The young Poles in the army are ostensibly more exposed than the Russians, and you may observe with painful feelings a great many of them, from sixty to twenty years old, wearing from three to seven Russian crosses. The permanent commission to try political offences and the secret police are abolished at Warsaw, and everybody is not only allowed but encouraged to speak out his mind.

What the majority of the Poles think of that propaganda may be easily guessed. But, at this juncture of so many dangers to the Crown, ask what the young generation of the Russians themselves think. In the letter from which we quoted above it is stated that lately a pamphlet appeared at Moscow itself, representing the flag of the militia, with the following inscription:—"Brave defenders of Holy Russia! remember that we are the only country which nobly conserves slavery by the knout!"

The *Russian* provinces are also excessively drained by the late repeated conscriptions, and the last one exempts some of them from the new levy. The inhabitants speak a language between the Polish and Russian, but more resembling the former. Their pleasant traditions are all Polish, and they are instructed in the religion like the Poles themselves.

The *Letonic* race—and particularly the Lithuanian, the Samogitians, and the Kures—for many ages were spontaneously incorporated with ancient Poland. Consequently numbers of that hardy people are driven to the regular army, not to serve in the militia, whose discipline is of necessity relaxed. In general, Poland, with all her ancient provinces (without reckoning the Cossacks), has already furnished to the army more than 900,000 men. Surely it is not their fault and their sole misfortune if what is synonymous against their own dearest interests. We are glad that some wise thoughts of Napoleon have been quoted lately and commented upon. Let our statesmen seriously study what that "hero of the age" said about the certainty of desolation and ruin awaiting Europe if the Court of St. Petersburg should succeed in amalgamating Poland with Russia.

The *Cossacks*—who are a mixture of Polish, Russniack, and Tartar races—compose an irregular Light Cavalry, something between the regular army and the militia. A majority of them served in the last campaign; the remainder is called to fill the vacancies caused by death and

casualties. There is a great variety of them. The Cossacks of Ukraine, formerly the subjects of Poland, the most numerous and warlike, and by their traditions, language, and manners, more Poles than Russians, were greatly sacrificed in the last campaign, especially in Asia. The defection of these Cossacks from the Polish republic was the first step to the annihilation of that country, as was its partition to the general encroachments of the Czar upon the rest of Europe. The Don Cossacks (said to be the most faithful to the Government) compose the excellent Light Cavalry of Irregulars; they are at present much favoured by the authorities: they have already furnished 36,000 men. In order to attach them the more to the reigning dynasty, the heir to the throne is commonly named the Hetman of the Don Cossacks. They are still recruited along the Don, and in the governments of Ekaterinoslaw, Voronejs, Saratof, and in the Caucasus. The distinct *pulks* of the Cossacks of the Volga, the Cossacks of Mosdok, the Cossacks of the Terek, the Cossacks Grebanskia, the Cossacks Seymenz, are not numerous, and a part of them used to guard the important places in the interior. The Cossacks of the Ural (formerly of Yaïk), which produced the famous pretender to the crown, a peasant, Pouhatchef; the Cossacks of Astrasan, the Cossacks of Siberia, the Cossacks of Slobodia (originally sprung from Ukraine), the Tchernomorskie, or the Black Sea Cossacks; lastly, the Cossacks of the Boug and those of Tchouguoief, are partly moved from their abodes. Generally speaking, they are never used for pitched battles

The *Teutonic* and the *Scandinavian* races are not inactive in the defence of the throne. Above all, the German nobility, the burghers and the merchants of the governments of Finland, Esthonia, Livonia, and Courland, and many German colonists established in the interior, vie with the Russians in their zeal for the Emperor. They form chiefly the aristocracy of the army and of the administration. Meantime, the Swedes in Finland and on the coasts of the Baltic Sea, and the Danes inhabiting the isles of Vorms and Cross-Roog, are not overbusy to take up arms

The people from the race of *Finns*, who call themselves *Suomo* (by the Russians named Tchoukhontzys), living on the shores of the Bay of Finland, on the coasts of Ladoga, and in Finland in general, and with them the Esthes, the Lives, and the Kriviens, in the governments of Pskof and Revel, are forcibly driven, like the Poles, to the reserved army. Their kindred, the Laplanders, the Syrianes, the Vogules, the Permiakes, the Votiakes, the Tcheremisses, the Tchouvaches, the Mordvines, the Teptiares, and the Ostiaks of Obi, are not spared.

The *Tartar* race forms the separate corps of the irregular Cavalry, like the Cossacks. Many of them served since hostilities commenced with Turkey. They are various. The Tartars proper settled in the Crimea, in the Caucasus, about the Terek and the Couma, on the southern parts of the Volga and the Oural, in Siberia, on the side of the Tours, and in the governments of Oremburg, Cazan, Nijnei-Novgorod, and Tambow, sent as many horsemen as they could. Besides the other Tartars, the Nogais, the Coumyes, the Tcoulemenes, the Bashkirs, the Meschtcheriaks, the Kirguises, the Boukhares, the Barabines, the Teleoutes, the Catchines, the Sieltires, the Yukoutes, and the Meschcheriakes, furnish their contingency, and expect a harvest of pillage.

The *Caucasian* peoples—the Grusians or Georgians, the Lesguians, a part of the Circassians, the Awchaes, the Ossetes, and the Midzghigis — serve already among the Irregular Cavalry.

The *Mongolian* race—namely, the Mongolians proper—move from the meridional part of Siberia, from the borders of the Selenga and the Chilka; and, along with them, their kindred the Bouriates, the Kalkas, and, in larger number, the Calmouks, or Oolots, descendants of Ghenguis-Khan, &c.

The race of *Samoyedes*, nomading on the coasts of the Frozen Ocean—on the borders of Petchora and Jenissey, the Cobals, the Caragusses, the Soi es, &c.—are not left undisturbed.

Even the *Mandjoure* race, the Toungouses, and the particular race from Eastern Siberia, the Koraikes, the Tchoukchers, the Youkaghires, the Camtchadales, the Courils, and Aleutes, the Esquimaux, the Tchouktches, the Kitaigues, the K ingatches, the Konsiges, the Kenaitzes, sent off their armed representatives to the field of battle.

From Asiatic nations—the Jews, the Armeniane, the Tadjiks, or Persian Bouklares, the Zigani, or Gipsy race, the Hindoos, the Arabs, and the Parsee, are comprised in the general levy.

However, the heterogeneous peoples of Russia, whose very names stir ke our ears so strangely, will hardly be sufficient to complete a new levy of 400,000 men, as ordered by the Emperor's last manifesto. Their efficiency, too, to protect the State is more than doubtful. Numerous bands of stragglers and deserters of these *drouchines* already commit highway robberies, burglaries, and murders. In proper Russia, in Poland, and Lithuania some land-proprietors were unmercifully butchered by them. Combined with similar elements, the whole Russian army will present the most variegated aspect in features, dresses, arms, and sentiments. Within the camp of the Russian regular army nearly eighty distinct idioms are spoken. Such a barbarous concourse of various armed tribes, who are going to meet us in the next campaign, never was seen in the annals of the world, even at the time of Attila, Tamerlane, and Ghenguis-Khan.

S

Preparations for Winter.—I have not been able to learn how many of these new buildings have been finished, or how far they have proceeded. What are to be seen already brought up, or in daily course of transit to the Camp, they appear to be considerable. They should, however, have been here a month ago, for had the season set in severe, as it now soon must. The project for a theatre, too, is on the *tapis*—the "properties" to be purchased at Constantinople, and their cost, with that also of a special hut, to be defrayed by a general subscription amongst the officers of all the five divisions. Altogether, there will be greater hardships in the world than we expect to suffer from during the coming three months of this same Crimean winter. Well fed, well clothed, and warmly housed, our physique is not likely to go down in "condition!" And, when the dry winds of March again begin to blow, we shall be able to render to England and all Europe a perfectly satisfactory account of any body of Muscovites whom Prince Menschikoff's hardihood may choose to leave within our reach.—*Letter from the Camp.*

The Spoils of Sebastopol.—Kitchen-ranges, boilers, iron bars, Stourbridge bricks—I mean in a chimney-built into the side of my hut, and marked "Harpers, Stourbridge"—cornices, brass, iron, and copper rods, pots and pans, flues, bottles, and hundreds of similar articles, have been seized and utilised with wonderful tact. Fine well-built cookhouses are constructed from the cut stone of Schastopol, and the timbers of large (the Russian) officers' houses, are taken from the ruined edifices and walls about the place. Mechanical ingenuity has been largely developed in the use of necessaries. One officer converts the funnel of a small steamer into a chimney—another uses the pipes of an engine as a hot-air apparatus to heat his hut—a third has arranged a portion of machinery so that he can communicate from his salon, sleeping-room, and dining-room (three single gentlemen called into one), with the kitchen, in the adjacent kitchen, and dinner is handed through direct from the fire to the table after the fashion of those mysterious apparatus which obey the behests of Lord on waiters in the matter of "roast meats, boiled beefs, and their satellites." Many officers have distinguished themselves by the trouble they have taken in showing the men how to make themselves comfortable. Two number of those employed on the roads and in various other works, and that it difficult to get on with these works, and in many cases the officers are unable to complete their huts for want of wood and labour, and the unfinished walls stand as grim ruins here and there about the Camp. Wood, canvas, panes of glass, tar and pitch, and, above all, nails and tacks, are eagerly sought after. At the head-quarters sale, on General Simpson's departure the other day, a hammer, a hatchet, and saw sold for £2 15s. A bag of nails was disposed of by auction the same week for 40s., and on counting the contents it was found there were only 190 nails in the bag. Friendly little felonies of plashing and such things are not unheard of, and the greatest favour you can do a friend is to "let him have a piece of board about six feet long by a foot wide;" or, "the Captain says, Sir, as how he'd be very grateful if you could give him a bit of glass about three inches square, for his windors." The heart soon gets hardened under such constant pressure, and one is obliged at last to refuse "a couple of tenpenny nails" or "the loan of the hammer for an hour" with the sternness of a Brutus.—*Letter from the Camp.*

A Harour at Raschid Adventure.—Several anecdotes are in circulation in connection with the stay of the King of Sardinia in Paris. It is said that, wishing to escape for a while the formalities of the Court, he left the Tuileries one evening in the garb of a private gentleman, and in the company of one of his suite walked through the streets of Paris. He had not gone far before he discovered that he was followed by two individuals. At length one of the latter approached and asked Le Roi, who was smoking, for a light. The King lent him his cigar with a good grace, and, then turning to his companion, said, in the Piedmontese patois, "These are spies; if they continue to follow us, I shall knock one of them down." The two individuals immediately disappeared.

The Lyons journals speak of a spectacle at once singular and touching. Eight one-handed Zouaves from the Crimea have been seen walking in the streets, in twos, keeping together by the only arm which is left them

Among the candidates who presented themselves a few days ago at Turin, for admission to the diplomatic career, there was a young Israelite, who was passed *nem. con.* for his excellent replies on the subject of concordats.

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

A little chink may let in much light.—Old Proverb.

RARE OR UNPUBLISHED LETTERS.

The following letters, derived from the collection previously mentioned, have none of them been printed:

FROM SIR WILLIAM SCOTT, BROTHER OF LORD ELDON, TO SIR ISAAC HEARD, GARTER KING OF ARMS

Dear Sir Isaac,—I received your obliging letter and its inclosure, which a perfectly satisfactory one. It is impossible for me to have any objection to an elegant memorial of the professional success which Providence has blessed my brother and myself with, and of the *concordia animæ* with which we have travelled through life." But as it is more ha limned-ace common than mine, I have referred the matter entirely to his Indination and Judgement. As to a Motto I recommended to him "Sit sine Labe Decus" (Let Honour be without a stain)—an admonition to himself for the Remainder of his life, and likewise a Prescript to his Posterity." I dislike many *mottoes*, in which the Bearers seem to express a high opinion of their own deserts, and almost tell you that their honours are no more than what they have a right to. I see no sufficient Reason why a man should bid farewell to his modesty in his Motto. I am here taking a warm sea-bath on account of my health, which my long campaign in Doctors' Commons has not a little affected. I wish you all the benefit you expect from Cheltenham, and am, dear Sir Isaac, Your faithful and obed.ent

Yarmouth, Sept. 13, 1799. Wm. Scott.

TO SIR ISAAC HEARD, GARTER KING OF ARMS, FROM LORD ELDON, ON THE SUBJECT OF HIS ARMS, AND THE TAKING HIS SEAT IN THE HOUSE OF LORDS

Dear Sir Isaac,—I received the favour of your letter together with a painting of the proposed arms; and I have also heard from my brother upon the subject of them. In consequence of having heard from him and of some things which have occurred to myself, I beg the favour of you to postpone proceeding further with the matter of the arms, *or at least to anything or step which finally settles what they are to be, 'till you hear again from me.*

I shall feel myself also very much obliged to you if you should be able to relieve my mind upon what has occurred to me in consequence of the very unexpected calling of Parliament. I know that it will be impossible for me to avoid taking my seat: and it appears to me to be equally impossible, absolutely so, to enable myself to comply in all its particulars with the standing order, about Pedigree, which you were so good as to send me in the short Time which must elapse between this day and the 24th, considering the extreme distance from which copies of some Registers must be got. I presume, I hope that in these circumstances the House will allow me to take my seat, complying with its order as soon as I can, tho' I should be on the 24th utterly unable fully to comply with it.] You will have the goodness to tell me whether I may make myself reasonably easy upon the subject.

Upon that of the Arms I shall write to you again very shortly, and in the meantime some considerations induce me to desire that no *final steps* may be taken to fix what they, or the additions to them, shall be

I am, with much Respect, your obliged and obed't Servt, Eldon.

Lin. Inn, Friday, Sep. 13, 1799

QUERIES.

The proper place for the publication of the bans of marriage was formerly after the Nicene Creed. In the eighteenth century great laxity in religious matters prevailed, and in many churches there was no morning service. An Act of Parliament was therefore passed authorising the publication of the bans of marriage in the afternoon, after the Communion. Was the time or place of the publication of bans during morning service altered by this Act of Parliament?—T. H.

In this part of the country, when any member of a cottager's family dies, some one is immediately sent into the garden to tap on the bee-hives, or, as it is termed, to "wake the bees." The people tell you that if this ceremony be neglected the bees will all die in a short time. Can any of your readers give an account of the origin of this strange superstition?—H. L. C., East St.ace

The Term of "Yankee Doodle."—The origin and application of the term "Yankee" have been discussed *ad nauseam*. Can you tell me to who we are indebted for the not unpleasing air of "Yankee Doodle"? J. B. S, Spalding.

Can you or any of your correspondents inform me of the existence of an authentic portrait of Thomas Fuller, author of "The Worthies," "The Holy War," &c, and Dean of Salisbury? I mean by *portrait* an *oil painting*. Most of the engravings I have seen appear to have been copied from the large plate in the folio edition of his works, which is a vigorous and characteristic portrait. Fuller was one of the Fellows of our College, and we feel anxious to obtain an authentic portrait of him, or to be allowed to have it copied, if such a one exists.—A Fellow of Sidney Sussex College

There is an opinion entertained in this country, as well as in some districts in England, that any dwelling erased in one night, in which a fire has been lighted before sunrise, becomes the property of the builder, as well as the land on which it stands, and that the proprietor of the estate thus encroached upon has not the power of turning out its inmates. Will you or your readers, by means of your useful column "Memorabilia," be so good as to inform me whence it originates? Your obedient servant, A. T. B., Cardiganshire.

Old Clem.—There is a custom prevailing in some villages in Kent on St. Clement's-day known by the above name. It consists of from a dozen to twenty men (blacksmiths, I believe), dressed in various costumes, some carrying lighted torches and others flags, going from door to door and making a short speech: they then expect money to be given to them. Could any of your readers tell me the origin or any further particulars of such a custom, or whether it prevails in any other parts?—R. H.

What is the English or French Proverb answering the Spanish "refran," *Mas da el charo que el dornudo?* -Leon.

Can any of our readers furnish, from his own knowledge, an instance of a living toad being found encased in a solid stone or the trunk of a tree? The provincial press is continually publishing reports of this wonderful phenomenon, while scientific writers deny that it can occur. The following is the opinion of the celebrated physiologist, Muller, on the subject (vol. i., p. 39):—"The numerous accounts of toads having been found, living, in blocks of marble, or in trees, are to be regarded as instances of deception and credulity. For, although in large blocks and Elements of such animals alive for some little time enclosed in gypsum, the latter observer is convinced that gypsum is permeable to atmospheric air, for, when the reptiles were surrounded both by gypsum and mercury, they died as quickly as if under water"

NOTES.

"Collapsed Ladies."—In a pamphlet of 114 pages, printed in 1669, entitled "A Letter to Mr. T. H., late Minister, now Fugitive, from Sir Edward Hoby, Knight, in answer of his first Motive," there is an introductory address, commencing thus:—"To all Romish collapsed ladies of Great Brittaine." "Comm.scable ladies, &c., &c., &c." The ladies in question had evidently forsaken the Protestant for the Romish faith, and zealous Sir Edward Hoby here remonstrates with them. Can any of our readers inform me if "collapsed" was the term which in 1669 was ordinarily used to designate those who in the present day are generally called "perverts"? To my mind "collapsed" is far the most expressive phrase of the two, and I should be glad to see it restored to general use on similar occasions. The T. H to whom the letter is addressed was a Mr. Theophilus Higgon.—Gartan.

A Penny Post Suggested Two Hundred Years Ago. It is a curious coincidence that nearly two hundred years since a penny post should have been suggested by a writer of the same name as the well-known promoter of that great modern reform, Mr. Hill. In the Library of the British Museum is a small work, entitled "A Penny Post: or, a Vindication of the Liberty and Birthright of every Englishman, in carrying Merchants' and other *Private Letters*, against any Restraint or Pretence of Farming of such Employments. By John Hill, ... London: Printed in the years 1659."—MS. From the Library of the late W. F. Newman, Esq., the late Solicitor to the City of London; purchased at the sale of his books by Southgate and Co., July 19, 1855.—J. M., Oxford.

---

* As Lord Eldon's elevation to the Peerage entitled him to add supporters to his arms, the opportunity was taken of conferring on him his exorbitant seven honourable augmentations, commemorating the high position now attained both by him and his brother, Sir William Scott, in different branches of the Law. It is to this circumstance Sir William alludes (see "Life of Lord Eldon," by Twiss, vol. i., p. 336)

† In a letter to his brother, at this time, Lord Eldon says—"'Sit sine labe Decus' is the best motto by far that I have heard of. John tells me he had it of you."

‡ Lord Eldon took his seat in the House of Lords on the appointed day, Sept. 24th, 1799, introduced by Lords Grenville and Walsingham, and, as his biographer asserts, delivered his pedigree at that time according to the usual custom—a custom, however, which we believe no longer exists, and which he was instrumental in abolishing.

The King of Sardinia.—In one of Horace Walpole's "Letters to Sir Horace Mann," vol. ii., p. 130, occurs the following passage relative to Charles Emmanuel III., the then King of Sardinia, which forms a similarity so striking to the position of the present illustrious ruler of the Sardinian kingdom, and England's honoured guest, that, although penned more than a century ago, it might pass for a fresh piece of writing of to-day.—"The King of Sardinia has not only carried his own character and success to the highest pitch, but seems to have given a turn to the general face of the war, which has a much more favourable aspect than was to be expected three months ago. He has made himself as considerable in the east as the Prussian, but with real valour, and as great abilities, and without the infamy of the other's politics."—H. A. Kennedy, Bath, Dec. 1, 1855.

Speculative Society, Edinburgh.—I was gratified to perceive, by your paper of No. 24, that the above society is still in existence. As an interchange of civilities must be still desirable between the students at Dublin and Edinburgh Universities, I beg to forward a copy of certain resolutions passed in the Historical Society, Trinity College, Dublin, June 18, 1783. The latter society had as famous men for its members as any of the kind that ever existed; and I may state that it is still in being, and opens its session for this season on next Thursday evening. I have the journal from which the following is copied, and presume these laws are still in force.—T. T. Rowland, 88, Abbey-street, Dublin.

Trinity Historical Society, Trinity College, Dublin, June 18, 1783; Mr. O'Connor in the chair. Proposed by Mr. Plunket (afterwards Lord Chancellor of Ireland), and seconded by Mr. Gabriel Stokes: Resolved—"That the admission, used to send his picture, and in the same piece was drawn the figure of a bird or beast; which, for distinction or humour's sake, he fancied to be called after. On birthdays, and other family festivals, they used always to dine together. At all which times, by the ancient statutes of the order, if any gentleman called any brother by any other name than that of the bird or beast in his picture, he was liable to a fine of five shillings forfeit, which was given to one Mr. Clark, an ancient decayed gentleman, then secretary of the order. When any gentleman died his picture was removed, the gilded frame taken off, and a black one put on it; after which it was hung up in a room called *Dead Bedlam*, and a new brother was named in place of the deceased.

ANSWERS TO QUERIES.

Prince Rupert's Dogge-Boy. Prince Rupert is said to have been very partial to animals. His favourite dog "Boy" is often mentioned in the political squibs of the day, and also a petted "she-monkey"! Thus we have "an exact descr ption of Prince Rupert's malignant she-monkey, a great delinquent; having approved heretike in more heavie sort than his white dog called Boy." 4to, 1643. Shortly after the battle of Marston Moor a poem appeared entitled "A Dog's Elegy; or Rupert's Teare, for the late Defeat given him at Marston Moor, where his beloved dog, named Boy, was killed by a valiant Souldier, who had skill in Necromancy." 4to, London, July 27, 1644. A popular song of the time has this stanza:—

Prince Rupert's monkey is a toy
That doth excess of fun dog called Boy,
Which, through dogged folly,
Both barkes and bites.
But thus deligh.s
The Prince when's melancholy.

These quotations may help to clear up the mystery as to whom the dog and monkey really were. Edward F. Rimbault.

"The Fine Old English Gentleman."—The song is a parody on an admirable old song, called "The Old and Young Courtier," published anonymously in the beginning of the seventeenth century, but supposed to be written by Deuker. "The Old and Young Courtier" is printed in Percy's "Reliques," and was taken from an ancient black-letter copy in the Pepys collection of ballads, garlands, &c., preserved at Magdalen College, Cambridge, accompanied with another printed among some unbelonging poems and songs in a book entitled "The Prince d'Amour, 1660."—H. T., Exeter

In answer to M. G., Leek, about the old cross, and whether persons were in the habit of kneeling before it in ancient times, I beg to inform him that in an old record in the Town-hall, dated 1611, there appears an entry that "the cross was the place where all *exhortations* were made to kneel," and that "a certaine personne named Alsoppe, of well to do in the towne, was placed there by a Justice of the Peace, named Gaunte, descended from the ancyente familie of Join of Gaunte, for wilful contention, and saying that the doctrine of purgatorie was wasted," and that "the said Alsoppe did kneel at the Crosse for one houre at noon, in the sight of all people." And there is also in this record a remarkable prediction:

When this old crosse shall be removed from the towne,
A lyinge tongue shall rise, and truthe be knocked down.

The cross has been removed, and there has been lately nothing but strife as to whom the ground belongs on which the cross was originally placed. The magistrates claim the property.

"Halewares" and "Handwal'd."—Dr. Rimbault indicates some uncertainty as to the meaning of these words. "Halewares" means simply the entire stock-in-trade of a trafficker in any kind of merchandise; "Handwal'd" means carefully selected picked with the hand.—Scotus.

N or M.—In the Liturgies of 1549, 1552, and 1559, the letter N only is used; as, "I, N, take thee, N, &c." In the Catechism it is "N or M." In Queen Anne's Prayer Book N only is used in the marriage service; but in the form for the publication of bans M and N are used:—"I publish the bans of marriage between M, of ——, and N, of ——." &c. When the letter N only is used, it most probably stands for *nomen*, the name.—T. H., Exeter

R. V., Pontefract, asks the signification of "M. and N." in the Church Catechism, &c., and proposes *maritus* and *nupta*, but if R. V. will pay more attention he will find N. or M., not M. or N. This most probably signifies N, *nomen*, M (NN), *nomina*.—L. G. R.

TO CORRESPONDENTS.

Francis Moore.—There was no paucity of almanacks at the period mentioned. We have before us a volume containing no less that twelve different ones, all published in London, for the year 1660. Among them is "A Tea and Nay Almanack," intended to ridicule the Quakers, the wit of which is not remarkable either for point or delicacy; and "Poor Robin's Almanack," which appears to have been the "Comic Almanack" of those days, but from which the most jocose would find it difficult to extract a laugh.

Venator.—Send us a list of places in Yorkshire beginning as described. Alpha's "Yorkshire" is nearly gone. "Doomsday Book" only three.

Clericus.—Archbishop Tenison's Library.—We shall probably in our next give some account of this institution.

Time's Man in the Moon Dunkes Charet.—For this remarkable old ballad, from Mr. Halliwell's collection, we hope to find room next week

Ancient Ballads in the Possession of George Daniel, Esq.—It affords us have been the "Comic Almanack" of those days, but from which the most jocose would find it difficult to extract a laugh.

R. S. Hawker.—The title of Mr. Chappell's valuable work is "Popular Music of the Olden Time."

J. Adams, Uns Madre, R. Elliot, H. M. Copdock, W. Collison, M. B., W. S. K., Sir Frederick Madden, Dr. Kennedy, W. Metcalf, M. C. H., D. D., G. Raitskil; M., Plymouth; H. Russell, G. Daniel, Dr. Rimbault, W. Chappel, Sigma, Liverpool, H. Bernard, A Fellow of Christchurch, Oxford. Received with thanks.

PEDITION OF GENERAL CA

EMBARKATION OF THE KING

T AT STOCKHOLM. (SEE NEXT PAGE.)

ARDINIA AT GENOA.—(SEE NEXT PAGE.)

GENERAL CANROBERT'S VISIT TO SWEDEN.

THE enthusiastic reception of General Canrobert by the population of Stockholm fully confirms all that has been said of the anti-Russian feeling of the Swedish population. The prevalence of this feeling is easily accounted for, independently of that common feeling of our race which so frequently renders nearly neighbouring States what we call natural enemies. The Swedes have peculiar reasons for a thorough detestation of the Muscovites, which is dating back more than a century. Sweden has to complain of the robbery of Finland by Alexander from his brother-in-law, the King of Sweden, the two Sovereigns being at the time at peace and in alliance—a robbery upon which the first Napoleon remarked at the time, "One may take liberties with his near relations." Since the perpetration of that robbery, Russia, moreover, has done all that was possible to ruin the commerce of what was left of the plundered country. Little wonder, therefore, at the strong indignation felt by the people of Sweden against their Russian neighbour. As regards the object of General Canrobert's mission, the most contradictory statements have been made. At one time we were told that he had been sent to Stockholm merely to present to the King of Sweden the Grand Cross of the Legion of Honour, and to endeavour to obtain for the allied fleets permission to winter in Swedish ports. The general impression was, however, that Louis Napoleon had something more important in view than either of these two points. The *Ost Deutsche Post*, in speaking of it, said—

The mission of General Canrobert to Stockholm is a matter of the highest interest to Europe, for its results will decide the question whether the old order of things is still to be considered as an adequate basis for a future peace, or whether additional articles are to be attached supplementary to the original demands.

It is no secret whatever that Canrobert's mission has for its object the engagement of Sweden in the alliance of the Western Powers. The Scandinavian Power is at present in the condition for any assistance which she may afford, and a fitting indemnification is said to have been offered in the restoration of Finland. Should Sweden consent to depart from her neutrality and incur the danger of a war with Russia, the outgoing powers of the West will themselves guarantee her the possession of all that territory which was forcibly rent from her grasp by Russia in the year 1810. In the moment in which such a treaty shall be signed between England and France and Sweden, the conditions of peace which they hitherto insisted upon will be thrown to the winds, and the war will then only be brought to a close with the conquest of the lands which lie adjacent to the Gulfs of Bothnia and Finland.

In a political point of view the consequences of this treaty would be very wide indeed. The separation of Finland from the empire of Russia would cause a new programme, the programme of dismemberment to be put forth by the Allies, stating from the motive of contracting the limits of the Czar's dominion, and to create a change in the map of the Baltic unless an alteration were effected, too, in the map of the Euxine. The Allies are not as yet in possession of more than one-half of the Crimea, and yet voices are everywhere making themselves heard, which plead with energy for the separation of the whole from Russia. The determination to wrest Finland from Russia will decide at once the fate of the Crimea.

General Canrobert, arrived at Hamburg on the evening of the 30th of October, from Paris, in company with Admiral Virgin, of the Swedish Navy, and his Aide-de-Camp, Lieutenant Colonel Corrally, and left on the following day for Lubeck. He was visited during his stay at the Vienna Hotel, Hamburg, by Colonel Hodges, C.B., the English representative, and was taken by him in his carriage to the railway station at the appointed time for departure. On the 1st November he embarked on board the steamer *Gothland*, at Lubeck, for Stockholm. In every part of Germany through which he passed, and particularly at Hanau and Hamburg, the populations of the towns gave him a *bond fide* ovation. At Lubeck the most enthusiastic cheers hailed his arrival, and accompanied him to the place of embarkation.

His first official audience given to General Canrobert showed the friendly feeling of the Swedish Court. On the day appointed for that ceremony, the Baron de Rosen, the Grand Master of the Ceremonies, Count Gyllenstierna, Lieutenant Colonel from his hotel in a carriage drawn by six horses, and preceded by two runners; by the side of the carriage walked two footmen, and each horse was held by a groom in grand costume. The carriage was followed by another, drawn by four horses, in which was seated the Ambassador and the two officers of his staff. Captain Count de Bjornstierna and Colonel Lamp to the King, who was placed at the disposal of General Canrobert during his stay in Stockholm. In the hall of the castle the Ambassador was received by the First Marshal of the Palace, surrounded by the chamberlains of the Court, who conducted the Ambassador to the apartments of his Majesty. At the top of the staircase were twenty-four guards of honour; in the ball-room were twelve pages in livery at one of the doors, whilst the officers of the bodyguard were stationed at the lower part of the great gallery with the personal staff of the King. At the door of the bed chamber where the audience took place was posted the body-guard. When the Ambassador entered, the Grand Chamberlain, Count de Lowenhemm, received him, and conducted him to the King with the Grand Master of the Ceremonies. All the doors were open. At the side of his Majesty were the Dukes of Ostgothland and Dalecarlia, with the Minister of state for Foreign Affairs, the Baron Stjernfelt. The Ambassador made a profound bow, and handed the insignia of the Grand Cross of the Legion of Honour to the King. When his Majesty had replied the doors were closed. At a quarter to three the Ambassador returned to his hotel with the same ceremony. In going, as in returning, the streets and places were crowded with persons, who loudly expressed their sympathies by cries of "Vive Canrobert!" "Vive la France!" A grand dinner was given in the evening in the King and Queen's banqueting room, at which were present the following personages:—The Crown Prince and Princess, with their suite; the Ambassador with his Aide-de-Camp; the French Embassy of Stockholm, the high dignitaries of the Crown, and Admiral Virgin.

During the whole of the time he spent in Stockholm the people of that city manifested the warmest enthusiasm in favour of the French Ambassador. Whenever the Royal carriages, which had been placed at his disposal, were seen, the crowd cheered him heartily. On the 12th ult. he went, by invitation, to the Royal Box at the Opera, where he was the subject of a real ovation. On his arrival the band played the Swedish national airs. When the King of Sweden arrived, shortly afterwards, he also was cheered most heartily. As a striking mark of his feelings towards the Western Powers, and the cause in which they are engaged, the King of Sweden named the ex General-in-Chief of the Army in the Crimea as Grand Cross of the Order of the Seraphim. It is high distinction seldom conferred except on crowned heads and members of sovereign families.

General Canrobert left Stockholm for Copenhagen on the 20th ult. on the King's adjutants, Count Bjornstierna, accompanying him to the frontier. He arrived at Copenhagen on the 24th, at four o'clock, by an English steamer. He was received on landing by the Aide-de-Camp in waiting for him with a Court carriage. The crowd assembled in front of the Hotel d'Angleterre, where he alighted, cheered him as he was taken in a Royal state carriage to the palace where the Ambassador of the king of Denmark. After the audience there was a gala banquet, at which Prince Ferdinand was present.

The accompanying illustration is from a sketch by an artist at Stockholm.

GENOA. EMBARKATION OF THE KING OF SARDINIA.

IN our Journal of last week we described the Embarkation of the King of Sardinia at Genoa for Marseilles, *en route* to visit the Emperor of the French at Paris. We now engrave the stirring scene at the port of "Genoa Superba," with the departure of the King, a glimpse of the picturesque line of the promenades, and the domes and towers of the city, which may justly be proud of her palaces.

REFORMATORY SCHOOLS.—It is said that the Roman Catholics of London and of the provinces are at length about to follow up the movement already so widely and beneficially begun in Scotland by similar institutions. A large house adjoining the Training College at Brook-green, Hammersmith, has been taken by Lord Edward Howard, the Rev. Dr. Manning, and other private individuals, and is now being adapted to the reception of some twenty-four inmates, who, of course, will be mostly poor Irish Roman Catholics. The management of this Reformatory School will be in the hands of the "Brothers of Charity," who direct all these institutions in Belgium, four of whose members, including one English brother, have recently arrived in England for this especial purpose. This reformatory school will be at once commenced as soon as the inspector of prisons has certified it in his report. Another institution of a similar kind is about to be established in connection with the monastery of Mount St. Bernard, which was founded, in 1840 by the late Lord Shrewsbury, in Charnwood Forest, Leicestershire.

MUSICAL REVIEW.

POPULAR MUSIC OF THE OLDEN TIME: A Collection of Ancient Songs, Ballads, and Dance Tunes, Illustrative of the National Music of England, with short introductions to the different Periods and Notices of the Airs from Writers of the Sixteenth and Seventeenth Centuries; also a short Account of the Minstrels. By W. Chappell, F.S.A.

It is a common prejudice of the present day that despite the unparalleled excellence of our public performances, and the unparalleled sums of money expended upon them, England is not a musical nation. Mr. Chappell, whose antiquarian researches upon the subject of our musical nationality have before interested the admirers of the curious, has stepped forward to prove, not only from our own records, and the testimony of our early writers, but also from the reports of ambassadors or other illustrious visitors from foreign countries, that music was not carefully cultivated, as widely appreciated, and as universally enjoyed in England as in any part of Europe, and that the name of "merrie England" was neither vainly assumed nor unworthily maintained. Not to dwell upon the establishment of a professorship at Oxford for the cultivation of music by the great Alfred in the ninth century, nor on the peculiar custom of the English in singing their melodies in parts in the twelfth; not to dilate upon the practices of the minstrels, nor upon the honours proved to have been paid to them; we may draw attention to one important fact, that while the earlier Flemish writers attribute the origin of counterpoint to the English, our claim to that pre-eminence is even now substantiated by the existence of an English composition, in six parts, of a date not later than the year 1260. This is not only the earliest piece of harmony extant, but also superior to any that has been produced abroad before the fifteenth century.

We will but allude to the singular fact that England is the only country which grants the honorary degrees of Bachelor and Doctor for musical attainments (a practice that can be traced back in the University of Cambridge to the year 1463), and proceed to consider the more direct purpose of the present work, which is to show that music was not only the studied science and the practised art of the learned, but the natural enjoyment of every class of the community. The tinker, the tailor, milkmaids and ballads, carters whistled, each trade, and even beggars, had their special songs; the bass-viol hung in the drawing room, for the amusement of waiting visitors, and the lute, cittern, and virginals, for the amusement of waiting customers, were necessary furniture of the barber's shop."

The four parts of the collection that are issued contain about ninety tunes, many of which are conspicuous for beauty, for expression, and for marked individuality of character; and, from the evidence which Mr. Chappell has adduced, we may be satisfied that no country in the world is richer than England in national melodies of unquestionable antiquity.

We may select such passages as the following to exemplify the research which has been bestowed upon the history of the airs as well as the character of the quotations selected to illustrate them.

Speaking of the cultivation of music in the reign of Henry VIII., and of the King's habit of singing Freemen's songs with Sir Peter Carew, the following lines are quoted from Skelton's "Bowge at Court," in which Barry Baller laments his inability to sing "on the booke:"—

Wolde to God it wolde please you some day
A bande bake before me for to laye,
And lerne me for to synge re, *mi, fa, sol;*
And when I fayle, bobbe me on the noll.

And, as to ballads in the same reign, from Barklay's "Fourth Eclogue" (about 1515)

Many a ballad doth serve to sell the pot,
Their wode ye songs, and ballads magnify,
If they be merry, or written crafftely,
Over all people have their audience,
And one may in another have a proper sentence.

Again, from Miles Coverdale's "Address unto the Christian Reader," prefixed to his "Goostly Psalmes and Spirituall Songes," 1538:

Welde God that our mynstrels had none other thynge to play upon, neither our *carters* and *ploumen* other thynge to whystle upon, save psalmes, hymns, and such like godly songes. And if *women at the rocke* (distaff) and *spynnynge at the wheele* had none other songes to pass their tyme withal, they should be better [illegible] and [illegible] the [illegible] and sadde like [illegible].

Until the last passage Mr. Chappell remarks that "despite the excellent intent with which the advice was given, it did not evidently make much impression either then or after. The traditional tunes of every country seem as natural to its common people as warbling is to birds in a state of nature. The carters and ploughmen continued to be celebrated for their whistling to the end of the eighteenth century, and the words ought rather to have been *whistle*. You must whistle, and you call him a down-a. Oh, *how he whistleth!* he would say."

The passages which are quoted to prove the popularity of the times are frequently such as serve also to illustrate the manners and customs of the time. Thus in Shirley's (or Mr. Leger's) Round, which "John Hawkin brought to be the oldest country dance extant," stating that it is to be found in Queen Elizabeth's and Lady Nevile's Virginal Books, he quotes from Shadwell's "Father Hubbard's Tales, 1604": "Do but hear the word, and [illegible] tunes we have kept in the country without either the words or the tune, such as *Sellenger's Round*, *the Mouldwarp might about Mr. grieve*, shoeing the mare, hoodman blind, hot cockles, or any of our Christmas gambols; no, not so much as choosing King and Queen on Twelfth Night." And, at a later date, from Shirley's "Lady of Pleasure," where Lady Bornwell complains that "to hear a fellow make himself merry, and his horse, by whistling 'Sellenger's Round,' and to observe with what solemnity they keep their wakes, moriscoes, and Whitsun ales, are the only amusements of the country.

Many of the airs in the collection are traced from the sixteenth century down to the present time under a succession of names derived from different ballads and songs which have been sung to them at various periods. The references to the books or manuscripts in which the airs and songs are to be found are also in all cases given.

Mr. Maclarren has wisely resisted the temptation to a musician of overloading the airs with harmony, by which so many collections of national music have been spoiled. They are arranged in a simple manner, and being all put into modern notation, are within the reach of every performer.

SACRED SONGS: THE WORDS SELECTED FROM THE HOLY SCRIPTURES. Composed by W. H. Birch. Horsham Birch.

At a time when the preponderance of the modern German school of vocal music is exercising so injurious an influence on the style of our native composers, it is pleasing to meet with really English music from an English pen. In music, as in literature, there is "a well of English undefiled" from which they who most require it may best draw for their country men have most plentifully drawn. Among these, in our day, the foremost was the late lamented Bishop, whose greatest praise is, and will long continue to be, that he was a genuine Englishman.

We shall not be surprised if in addition to the great German masters, whose genius we have ere long found, and whose beauties to their art we have ever acknowledged. Where the study does harm, the evil lies not in them, but in the use which is made of them. It is no fault of theirs that they have given birth, among us, to a host of servile imitators, who labour to copy their intricate counterpoint, peculiar modulations, and complex instrumental accompaniments, without being able to reach their inventive power and profundity of thought. One new English composition is a reminiscence of Spohr, another of Marschner, another of Mendelssohn; but it is not in one among a hundred that we find English melody dictated by English thought and English feeling.

Mr. Birch's sacred songs are among the comparatively few English compositions which claim this pleasing distinction. These are before us are the first three numbers of a series not yet completed; and they form a most favourable specimen of the whole. They are remarkable for their great simplicity; but it is a simplicity very far from being bald or invalid. Each song is the expression of a single thought, conveyed in one brief passage of Scripture.

The first is, "Consider the lilies of the field, how they grow. And yet I say unto you, he comen in all his glory was not arrayed like one of these."

The second is, "Behold, O thou Creator in the days of thy youth; when the evil days come not, nor the years draw nigh, when thou shalt say, I have no pleasure in them."

The third is, "I will arise and go to my Father, and will say unto him, Father, I have sinned against Heaven and before thee, and am no more worthy to be called thy Son."

Each of these passages of Holy Writ forms the subject of a little canzonet, simply constructed, and free from any parade of art. The melodies are flowing, natural, and perfectly adapted to the meaning and accentuation of the words. There is no affectation of startling modulations—an occasional transition to the key of the dominant, or the relative minor, is sufficient to give the requisite variety and effect. They are easy to sing, their compass being within the reach of the generality of voices; and the pianoforte accompaniments are calculated, by their full and rich harmony, to support the voice without overpowering it. Of the three, we are inclined to give the preference to the third, "I will arise and go to my Father," because the passionate appeal of the prodigal son is peculiarly susceptible of musical expression.

SIX GERMAN VOLKSLIEDER. For the Pianoforte. By ADOLPH GOLLMICK.—Boosey and Sons.

These are six of the most popular German ballad airs, made into short pieces for the pianoforte. This is done by prefixing to the melody a few short symbols or introductions, when giving the melody itself, and prolonging it by a series of brilliant passages appropriate to its character and expression. Herr Gollmick, who is one of the most accomplished pianists and successful composers of the day, has thus produced a set of pianoforte pieces which will be found highly attractive, not only from the beauty of the airs themselves, but from the taste and skill with which he has treated them. The melodies will be familiar to every one acquainted with German national music. Their titles are—"Treue Liebe" (True Love), "Wanderlied" (Parting song), "Liebe und Glück" (Love and Happiness), "Rheinweinlied" (Rhine drinking song), "Aennchen von Tharau" (a serenade), and "Der Gute Kamerad" (the Faithful Comrade). These pleasant compositions have the further merit of being purely and simply written, and free from the unmeaning difficulties too prevalent in the fashionable pianoforte music of the day.

FINE ARTS.

THE SEAT OF WAR IN THE EAST. By WILLIAM SIMPSON. Folio.—THE CAMPAIGN IN THE CRIMEA: AN HISTORICAL SKETCH. By GEORGE BRACKENBURY. Accompanied by Forty Double-tinted Plates, from Drawings taken on the Spot. By WILLIAM SIMPSON. Colnaghi and Co.

The Crimean expedition will be memorable to all time as one of the boldest, most romantic, and most perilous ever undertaken in war; and the siege of Sebastopol is without a parallel in the history of the world. It is remarkable, also, that this stupendous enterprise has been chronicled and illustrated in a manner that no previous operations of war have been: writers of ability recording every day's occurrences for the columns of the newspaper press, besides publications of a more enduring character; artists of high professional standing forsaking their studios for the more exciting atmosphere of the camp and the battle-field, and transferring their "graphic" notes to paper for multiplication amongst their countrymen at home, until the mysteries of batteries, gabions, covered ways, mortar practice, pallet picket and trench duty became familiar to us all as household occupations; and all the trials, the struggles, and the dangers of the soldier's life, robbed of the poet's gloss, stand out in grim reality before us. Let us hope that these terrible experiences may not be without their use, and that in after and more peaceful days the siege of Sebastopol, and all the horrors of war which accompanied it, as pictured by contemporary artists in the pages of the ILLUSTRATED LONDON NEWS, and in such publications as those now before us, may be looked back upon as "a dream that is past."

Mr. Simpson, having been a visitor in the camps of the Allied armies, from the time of their sitting down before Sebastopol, has had abundant opportunities of studying the soldier's life in all its phases, and every operation and work connected with that most arduous undertaking, a siege, upon the grand scale so recently carried to completion. The natural features of the country in which this memorable campaign was fought, and the stupendous structural arrangements of the city and its defences, would alone have supplied ample materials for an artistic tour, and these Mr. Simpson has rendered with admirable taste and fidelity. Indeed, the actual battle-scenes, with their confused atmosphere of smoke, are few in comparison with the quiet days which fell to his lot. He truthfully gives us illustrations of the real character of the struggle. Thus, we have interspersed with the imperishable feats of arms at Inkermann, Balaclava, and Alma, and the terrible gale of the 14th November, views of Balaclava looking towards the sea; of Sebastopol from various points, including one from the sea, on the deck of the *Sidon*; of Lord Raglan's head-quarters; of the graves of the heroes of Inkerman; of the various camps of the several divisions of the Allied armies, introducing portraits of some of the principal officers: of the Valley of Death, the shadow of Death, the excavated church in the Caves of Inkerman, the Lighthouse of Cape Chersonese, and, in short, every building and spot of ground of any beauty or interest near the place: and that glimpse of camp life, such as it will never be again in our time; "A Grand Field Day in the Batteries," contrasted with "A Hot Day in the Batteries:" outlying bits on the "extreme right" of the attack, showing the pickets in their little stone nests; "The New Siege Works," showing the unmistakable progress of the Allies round the beleaguered city the advances and parallels being now apparently close under the Malakoff, and, lastly, all sorts of episodes, of various comp.exion, from a burial at Balaclava to "a Christmas dinner party on the heights before Sebastopol; 3rd Bactal on of Grenadier Guards.

Mr. Simpson's drawings are produced in two forms—in imperial folio for the portfolio or for framing, which compose two series of ten parts each—forty plates in all; and in the handsome octavo volume, containing the well-written Historical "Sketch" by Mr. George Brackenbury, the drawings being carefully reduced for the purpose. In both, the artistic execution and the mode of production are all that could be desired or expected of the respectable publishers of the work. The Rhizographic tint-printing by Messrs. Day and Son is, indeed, a triumph of art.

A DESCRIPTIVE AND ILLUSTRATED CATALOGUE OF THE HISTOLOGICAL SERIES CONTAINED IN THE MUSEUM OF THE ROYAL COLLEGE OF SURGEONS OF ENGLAND. Vol. 2. Quarto.—The Council of the Royal College of Surgeons, being thoroughly impressed with the value of microscopic anatomy to the profession, determined, in the year 1851, to stamp it as importance as a scientific department of study, by founding a Professorship of Histology: the Professor to give annually a course of lectures, with preparations of the elementary tissues both of animals and vegetables, healthy and morbid, adapted to the present state of microscopic investigations. All the most successful [illegible] out; and, in addition, their talented Professor, John Quekett, has found time to produce a second handsome volume of the papers read in the Museum which, in the present volume is the structure of the skeleton of vertebrate animals. It contains descriptions of 945 preparations, with 432 representations of the most striking specimens, all drawn upon the wood by the microscope with the greatest care and accuracy, forming a valuable record and book of reference to those members of the profession who cannot avail themselves of the lectures given by the learned Professor. The getting up of the volume is excellent, and indispensable to the College of Surgeons, and we cordially recommend it to the [illegible] in microscopic [illegible].

THE GRANITE HILLS OF NEW SOUTH WALES.—(*From a Correspondent.*)—In the ILLUSTRATED LONDON NEWS of the 20th September, 1851, vol. xxv., there is an exceedingly truthful and fine engraving of a remarkable discovery in the grand science of [illegible]. It was also remarked that "an aboriginal native had guided our [illegible] to the remarkable hill, who gave the discovery wings of forwardness to each of the same to London; not, however, for some years after he had accompanied the brave and generous savage to the appointed plateau or tableland of forest and rock, and visited the same again and again." It is, perhaps, not generally known that a fine collection of [illegible] had been forwarded to the Royal Society of Antiquaries in Scotland; another to the British Museum, and a third to the Geological Society at Somerset House. Of course, the impressive force of the extraordinary fancy of Nature, or band of Providence, in producing so singular a representation on the crown of a precipitous hill is not conveyed to [illegible] inspection thereunder: but the completeness of their form [illegible] of what a singular effect is produced by their being hat fixed in masses of rock, and water rolled from the circumference of the hill of the heaviest ordnance had played upon the cliffs from the valley beneath. The native chief gave perhaps the best and wisest answer that can possibly be given by the most profound philosopher of this or any other age when in his own native language he uttered with great natural energy as he gazed at the scene those expressive words "Kangaroo! Tree! [illegible] Jalloo," which simply mean that Nature is [illegible] "Lightning and Thunder." The hills are of a fine sparkling grey granite, and some of them when beaten up were found quite white at the heart, the colour of the granite becoming whiter and whiter from the circumference of the hill, reached the centre, clearly proving that an original creative power formed them so many ages ago, if not [illegible] when the world began—as no trace whatever is to find that the island of New Holland was ever more than a savage country.—*From Robert Cook's Notes.*

THE GRAVES OF THE NAVIES.—One day, intending to make a short cut from Balaclava to the Camp, I leaped my pony over a ditch a little above the town of Kadikoi, and to the right-hand side of the road. The ground was dry and barren, bare and there a mass of leafless bramble-bushes or gigantic thistles. Last year the whole plain was a blooming vineyard. At a little distance I noticed that the soil had been disturbed, and then I saw several mounds, shaped like graves, and a solitary slab of yellow stone standing in the midst. The navvies had evidently, with their own hands, buried their unlucky mates, hewn the slab, erected the tablet, and composed the inscription, which is verbatim as follows:—"SACRED TO THE MEMORY OF THE NAVIES WHO DIED OF measles PETO, BRASSEY, and betts crimean expedition. 1855. 39 bodies lyeth here."—*From an Occasional Correspondent.*

LITERATURE.

History of the Reign of Philip II., King of Spain. By William H. Prescott, Corresponding Member of the Institute of France, of the Royal Academy of History at Madrid, &c. 2 vols. Bentley.

Spain was something in former days; and, if we make allowance for the improvement of all branches of instrumental science, if we make allowance for that general technical advance and increased co-operative skill the effect of which is incalculably to enrich the heritage of power in the hands of each successive occupant, no greater dominion has since towered among men, nor has a more puissant sceptre than Philip II.'s been grasped by any monarch. This remark scarcely needs support or explanation; for we refer to relative contemporary positions. For example, no State has ever held among nations the proud place so long maintained by the ancient Roman Empire—that is, the first, the *real* "Cæsarian" Roman Empire, but, were all its might suddenly revived to-morrow, it would at once succumb in a conflict with the least of the second-rate States of modern Europe, armed with their amended appliances. It could not stand against the kingdom of the Two Sicilies for a twelvemonth, nor against that of Sardinia for six weeks. Yet these last have equals and superiors all around them, whereas, when Rome (Imperial Rome) was first, she had no second. Nothing equalled, nothing balanced, nothing approached, the supremacy of her sway. In this peculiar and significant meaning of the words "national power," not only was the monarchy of Philip II. the strongest and most splendid of its own times; but no subsequent empire has filled the same relative situation among the states and kingdoms of the earth. What adds to the interest of the spectacle presented by that vast dominion, and still vaster influence, is that they not only found, as we have said, no heirs, but that they were succeeded by something worse than positive mediocrity in the same scenes, and among the same people; they were succeeded by relative abasement, by deposition, it was the last blazing up of the glory which had shed light around the high throne of Spain and the Indies. Nor should we be blind to the circumstance that this does not augment merely the interest of the historic spectacle, but also the instructiveness of the political lesson. We have it in full; we have read it out to the last word. There is nothing to be yet adduced to qualify its moral, nothing to change its import. "Is not Croesus the happiest of men?" said the Lydian Monarch himself, to the wisest of Greece's Seven. "I cannot answer for this, O King," said Solon, "till Croesus has died." Well, Spanish secondamy has died, the tale is complete: and Mr. Prescott has taken the pains not to make it the idler's delight, and the statesman's homily, and the autocrat's warning, and the people's edification—all in one—by this luminous and beautiful production.

Before we say anything on the character and subject of the work we may allude to something less intrinsic. There frowns upon us in the frontispiece a magnificent engraving of Titian's wondrous portrait. There be stands, in his likeness, as he lived, as he strove, and as he reigned. Philip, indeed, by the startlingly calm sternness of the expression, reminds us of that Thomas Wentworth whom Vandyke has made famous to after ages. Queen Mary of England, the Duke of Alva, and Margaret of Parma, are also portrayed—the first from a picture in the Duke of Grafton's collection; and the second from Titian's original. The two volumes are printed in exceedingly clear, large, and beautiful type; and all the mechanical adjuncts of the publication are worthy at once of Mr. Prescott's fame and of his theme.

The age here treated was literally alive with great or remarkable characters; and the genius of some of the very finest writers of our own and some recent generations has been employed upon its elucidation and treatment; indeed, some of the more striking of the incidental heroes of Mr. Prescott's history have been described already with the force and fidelity of Schiller's vehement genius. Thus, the character of that most extraordinary and most able man, the Cardinal Granvella (the Second), Archbishop of Arras at twenty-five, a wiser Wolsey; the characters of both the Counts Egmont, the still more exciting and interesting character, impossible, of the Netherlands Regent, Margaret of Parma (a very different Archduchess from Maria Louisa); that of Egmont the Impulsive—theme of ballad, drama, and legend; that of William the Taciturn: in short, a host of striking, large and mighty, whom Schiller has drawn in succession—these Mr. Prescott, we say, recalls with less magical effect, but in time more grey, sober, and painstaking. The weird pageant walks by again, and we recognise the wizard only the greater, just because the march is less phantasmagoric and more natural.

In this parent epoch, so filled with throes, so torn with struggles, so swarming with new, ever new, relays of Athletes on both sides, so vaunted in adventurous, so disastrophes, so persevering in hope amid despair, so inexplicable, humanly speaking, in the ability of the overthrown—there is, we say, in this epoch, one broad pervading attribute of *largeness*. All is flung out on a grand scale, cast in a colossal mould. In short, within the limits of half a century had its scenes been as well fathomed then as now, a Shakspeare and a Scott might have found enough to chronicle the whole real story of men, under that ideal guise imperfectly described as fiction. From 1540 to the seventeenth century there is a most wondrous outburst of vitality which so overspreads the torpor of the past, and so anticipated the lassitude of the future, that the main interest of the human story, in all its more salient vicissitudes, could be found exemplified in about fifty years.

Philip II.'s history is, in brief, the history of all that the middle, the decline, and the close of the sixteenth century has left us, of either suggestions in artistic lore, or of profitable study in political wisdom.

Mr. Prescott, independently of that charming honesty of style (more pleasing to scholars than to the general) which characterises all his productions, is chiefly remarkable for a painstaking and conscientious view of the necessity for a sound basis under all narratives professing to be narratives of matters of fact. He has taken unspeakable trouble, as his custom is. Robertson's most agreeable story of Charles V. did not quite satisfy Mr. Prescott's estimate of needful preparation. One may write pleasantly fascinatingly, but what is expected of a historian is to write fully, and to be exact in the fulness—to tell the truth, the whole truth, and nothing but the truth. He is not sworn, but he is held as one sworn. Few such witnesses mind the obligation; but, tacit though it be, Mr Prescott comes with religious gravity to its discharge. And if he has not fully redeemed the unspoken pledges of a simple minded chronicler, it is because no mortal Englishman can be quite judge-like where his own country is "a party in the record."

But, at least Watson," with his disproportionate superstructure" on a slender basis, is not imitated; and Robertson is somewhat excelled in lighter minutiæ, while left utterly behind in the more serious discussions belonging to an interpreter of his past. Their subjects were not the same; their success in their subjects would be an excellent criterion by which to estimate Mr. Prescott's in his. He would gain at almost every turn and touch of the comparison. Equal to Watson in graceful style, superior to Watson's superior, Robertson, in concinnity and quietude —though yielding to this last in general rotundity and artistic effect—he excels them altogether in the foundations on which he has built the beautiful new literary structure. They scarcely knew even the place of the mine into which he has sunk his principal shafts; and, worst of all, the ignorance was not wholly unavoidable—it came of their way and custom—and these the later methods have amended.

In general, if we take the world's history, it is not the things we are told, but the way in which they are told, which has ever been of the most use to the teller. *Hinc illæ iræ.* We are glad for Mr. Prescott's renown, however diverse the topics undoubtedly are, that the continuation of Mr. Macaulay's work has not preceded it to precompy the public. A fairer and more open space for attention remains in which to obtain the calm approval which this distinguished work so well deserves. To mention only some of the sources from which Mr. Prescott has derived the information forming the groundwork of this elaborate work upon Philip II.'s momentous reign, we may instance the "Archives of Simancas"—a rich repertory, sealed against the carelessness, rather than against the curiosity or acuteness, of all his English predecessors. The London State Paper Office, the Brussels Library of the Dukes of Burgundy, that of the Leyden University, the Hôtel Soubise Archives, and, in short, a mass of other equally invaluable and essential materials, have attracted and rewarded the unwearied perseverance of his researches.

But let no reader suppose that Mr. Prescott's literary conscientiousness makes him a dull writer. This work, painstaking and observant of facts as it is, reads like a romance. The personal portraitures are particularly vivid. We see; we hear, we converse. Not a look, not a tone, is lost. Those who study this book will keenly realise an era, without appreciating which all subsequent historic lore is a heap of confusion, and modern political knowledge is vain. People must begin here. Beginning later, nothing is before them but a series of locks without a key—of ciphers without the secret.

CHESS.

TO CORRESPONDENTS.

H. F. F. Kensington.—It is rumoured that Herr Löwenthal is about to form an Evening Chess-club at the Wellington Arms, Regent-street, and that he will be the first president of the club.

Kawlinge.—The groundwork of the game of the Knights Templars is said to be the attempt to prove a real boon to the knot, connect one chain of consciousness to the story of chess.

J. D. Pau Secretary.—We shall take an early opportunity of calling attention to your club.

Wm. H. C. L.—The pieces has reached us safely. Many thanks for it.

A Subscriber.—Mr. Tomlinson's "Chess Manual for 1856," we are told, is ready for the press, and will probably be published at the open ng of the year.

Rota, Lambeth.—1. The Austrian player, Herr Falkbeer, is still a resident of London.

2. We are in daily expectation of receiving the prospectus of the new Chess magazine.

F. S. A. Tetbury.—The Annual Meeting of the Chess Association, as mentioned the 8th of September, will be holden at Worcester, and one game of the Tourney in numbers. There is no entrance fee. For further particulars apply to the Secretary, Mr. Lowen, 3, Alma-terrace, St. James's-street.

J. C. L.—The main defect is an utter absence of point and subtlety. Set yourself the task of solving *from the printed diagrams alone*, without the aid of board and men, a hundred of the best strategems by Bronzed-ith D'Orville Bolton, &c., and you will soon understand the difference between their productions and such as you have sent for publication.

Jasper has our warmest sympathy, and the communications he sends will always receive attention.

Bishop's Castle.—The secretary of the new friendship club at Leeds is Mr. Millard, from whom you can obtain all the information learnt.

A Subscriber.—1. The passage quoted is from the child old Burton; we wish it were more compl mentary to the game. 2 Impossible. We have a difficulty a dwelling even one which is to the subject. 3. The President of the Liverpool Club is Mr. G. S. Sycamore.

Dublin.—"The Chess Player's Handbook," published by Bohn, of Covent-garden.

W. H. G.—Black's 29 g5 g4 would not p event the mate.

Savoy.—The next meeting of the Northern and Midland Chess Association will be held at Birmingham next year.

Bethnal Green.—It shall be examined.

Pawn.—It is worth only two or three shillings.

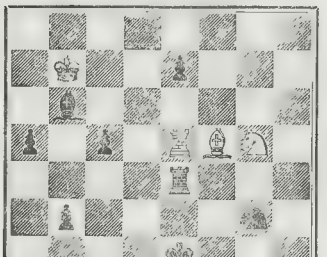
R. W.—It is quite clear as well as correct.

Solutions of Problem No. 615, by A Subscriber, W. D. Longfield, Paris, D. T., Rex and Dex, J. W. Bird, D. Dee, Tyro, Hydrogen, W. T. C., Norman, Mercy, S. T. K., G. P. V., Anthony, Lex, Bombardier, A Working Man, Rugby Boy, Jeremy, H. G., A Middy, Deveron, C. P. J. V., Oxford Student, Dr. Pell, Ballenger, Alfred, Rosherry, T. Simpson, F. Mather, Celia, R. B., C. B., Exeter, H. A. T., Sherborn, W. H. G., Sheddon, H. W. J. R., Kilmore, R. Fountain, Emmanuel, Corvin, A. G. Legard, R. S., F. T. Hewett, are correct.

PROBLEM No. 616.

By J. B., of Bridport.

BLACK.



WHITE.

2. P to K B 4th	P takes P	17. Q Kt to K B 6th	K R to K Kt 3rd
3. K B to Q B 4th	Q to K R 5th (ch)		
4. K to B sq	P to K Kt 4th	18. K Kt to K 5th (c)	B takes Kt
5. Q Kt to Q B 3rd	K B to K Kt 2nd	19. B takes K B P (ch)	K to K 2nd
6. P to K Kt 3rd	P takes P	20. B takes R	Q takes B
7. K to K 2nd	P to Q 3rd	21. P to K 6th	Kt takes P
8. P takes P	Q to K Kt 5th	22. Kt to K B 4th (d)	Q to K Kt 4th
9. K Kt to K B 3rd	K Kt to K 2nd	23. Q to Q B 3rd	P to Q B 3rd
10. P to Q 4th	P to K B 3rd	24. K Kt to K R 5th	Q to K Kt 2nd
11. Q to Q 3rd	Q Kt to Q B 3rd	25. Kt to Q 3rd (e)	Q to K Kt 3rd
12. B to K 3rd	K Kt to K Kt 3rd	26. R takes Kt (ch)	P takes R
13. Q R to K B sq	K Kt to K B 5th (ch)	27. Q takes P (ch)	B to K 3rd
14. B takes Kt	P take s B	28. Kt to K 4th	Q to K Kt 5th
15. Q Kt to K 2nd	K B to K R 3rd	29. Kt takes B	And Black resigns.

(a) This is a clever move, and one to which there is no satisfactory answer, as if Black take the Kt with h s Q Pawn, then Bl ck's Rakes B. and White has by much the better game, if Black take Kt with Kt, White then captures the Kt with Pawn, and again has a master of the situation.

(b) Very well, conceived. If Black were to seize the Queen, he would lose not only her Queen, but a Kt besides.

(c) Here Mr. Owen plays too timidly. He should have taken off the Kt at once, for if

K takes Kt (ch)

it is see obvious that (see g with the Queen would be to sacrifice the Queen)

26. Q to Q 7 5th (ch)

Crimean Rations.—The health of our troops is excellent; the draughts which arrive are rather younger than is desirable, but they will get experience and instruction during the winter. They are admirably clothed, and fat as to grey was ever seen in the field. Fresh meat, bread, and vegetables are frequently issued to all. Henceforth the men are to get fresh meat only three times a week, and bread only three times a week, instead of every day. On the other days they will receive pork or salt beef, and excellent biscuit. In respect of winter clothing, hutting, and feeding, our men are immeasurably better off than our allies; and it is not unusual to see the latter eating in the English Camp of the excess of our soldiers' cooking-kettles. Little friendships have sprung up in this way. "Francoese" comes over with his spoon, a smile, an onion, and a bit of salt, or savoury condiment, to some Sapper or Grenadier, day after day, about dinner-time, indulges in pantomime conversation, interlarded with many "bons," and regales on good soup and broth, to the great delight of his entertainer. Thus both are satisfied: a true *entente cordiale* is established through the medium of the stomach, and no one is a loser.—*Letter from the Camp.*

NAVAL AND MILITARY INTELLIGENCE.

The Queen, in the exercise of her Royal prerogative, has been pleased to issue an order in Council promoting Rear-Admiral Sir Edmund Lyons, G.C.B., C.C.H., to the rank of Admiral of the Blue. His Royal Highness the Duke of Clarence (the late King William IV.) was advanced over the heads of a number of veteran officers to the rank of Admiral of the Fleet. The reason assigned for the exercise of this power on the present occasion is that it is deemed advisable the command of the Allied Fleet should be vested in the British Admiral, and that for the purpose he should have priority of rank over the French Admiral

Five sail-of-the-line and two frigates of the Black Sea fleet—the *Hannibal*, the *Agamemnon*, the *Arethusa*, the *Princess Royal*, the *Leander*, and the *Sphynx*—sailed from Constantinople on the 17th, under the orders of Admiral Stewart. They were to remain for a fortnight, and then to leave for Malta, touching at the Dardanelles, Smyrna, and several other points of the Archipelago and of Greece. Admiral Lyons, who has his flag on board the *Royal Albert*, remains in the Black Sea, but it is thought that he will also soon proceed to Malta.

Several of the regiments in the Crimea have written to London agents to send out immediately books of plays and materials for decorating theatres in readiness that our brave fellows intend to make themselves happy during the approaching winter, to make amends for the wretchedness of the past. The Zouaves set the example some months since, and caused immense business to be done by their performances.

There were two Royal standards taken at the capture of Kinburn; one was assigned to the French troops, and the other was sent to Windsor Castle for the inspection of her Majesty. The Queen has now assented to the request to be favoured by the Royal Military Hospital, Chelsea, as the most fit place for its final deposit. It is very large nearly twenty feet wide, and fourteen feet deep, and has a large double-headed spread eagle painted on it.

The success as well as the indisputable utility of the mortar-boats both in the Baltic and the Black Seas, has warranted a large increase in this description of vessel for war purposes.

Should the experimental iron mortar fleet at Portsmouth prove equal to the requirements, we shall have one hundred mortar-vessels equipped by next March. At all events it is said that more than one hundred 13-inch mortars are being manufactured under contract for the Ordnance department.

Of the small class of high-pressure screw gun-boats (230 tons) there are about thirty-six afloat, and between eighty and ninety in course of construction at the various mercantile establishments. By next March it is anticipated that we shall possess an equipped fleet of no less than 120 of this serviceable class of vessels.

The Late Blockade in the White Sea.—The American ship *Telegraph* arrived in the Humber on Thursday week from Archangel for London. The blockade was raised, and the Allied fleet left the White Sea, the *Telegraph* and about eighty other vessels, chiefly Dutch and American, slipped into the Dwina, and discharged their hazard cargoes. By great dispatch about half of them will get away again, whilst the other half remain

On Monday last the shipwrights commenced laying blocks in ships Nos. 3 and 4 in the Plymouth dockyard for the construction of two steam gun-boats. The order was received on Saturday, and the boats are to be built with extraordinary dispatch.

Colonel Faddy, R.A., of Exeter, has been for some time past planning a raft of sheet iron for the preservation of life and property at sea. The patent Colonel proposes that every line-of-battle-ship or troop ship should carry one of these rafts, the cylinders and parts of which could be put together in half an hour, and rendered capable of conveying 300 men and 40 horses, while not drawing more than two feet of water.

The Leicestershire Militia, under the command of Lieut.-Col. King, has received orders immediately to proceed to the Camp at Aldershott. The regiment consists of nearly 600 rank and file, and has given above 300 men to the Line since it was embodied in December last. Lieutenant Buckley has been selected to remain at the depôt in order to obtain recruits as the full complement of the regiment should be upwards of 1000 men.

The American ships *Edgar P. Stringer* and *J. Ash*, in the French transport service, arrived at Malta from Sebastopol. Government supplied the latter vessel's voyage, and that has left the other, as mentioned, in charge of the Government powder-magazine in Valetta Harbour, until she can sail running on the Point, and came in collision with the *Ash*, which was under iron steam-tug, consequently her damages to the amount of £250 to £300, the repair of which will cause at least a week's detention

As interesting experiment has taken place off Shoeburyness, by setting fire to a clay work with orders to fire at certain intervals 100 pounds from a 13-inch mortar with a charge of 20lb of powder, the dead result was about 200lb. In consequence of the state of the weather up to Friday, only one round had been fired, the range ascertained to be about 4000 yards, without any visible action taking place on the platform framing of the raft, except a few of the planks forming the deck or platform bats starting with the concussion.

Until recently, convalescents from the scene of war in the East on arrival at the port of debarkation in England were allowed to go on furlough at once; but an order has since been promulgated that, on invaliding from the East, they must rejoin their regiments at the depôt of their regiments before they can obtain furlough. Thus, a soldier whose friends reside in Portsmouth or Southampton cannot be allowed to visit them until he has been, probably, to Ireland or Scotland, if his depôt should be there, in order to gain leave.

The Danish Sound Dues.—The *Washington Union* of the 15th November, the semi-official organ of the United States Government, notices the question of the Sound Dues as follows:—"We have noticed some traces of apprehension that the pending controversy between the United States and Denmark may affect unfavorably upon our relations with Great Britain. This we know to be untrue. There is no difference of opinion between the two Governments on the subject. We believe that in Great Britain, as well as in the United States, the public judgment is all but unanimous to refuse giving the least head to the attempt of the Danish Government to convert the matter of the Sound Dues into a political question, and thus to run the chances of keeping this preposterous exaction alive, by means of some possible political difficulties between the Governments of Europe and America. Nor does the absurd idea of the Danish Government of having the Sound Dues confirmed by all the nations, of inducing the Government to pay all possible bribes, and of threatening, until such a way the least consideration in England. I represented will be made the case of Russia, who has no rightful foundation; but it is such a case as will make it a character, in which no nation can possess any true right; in a word, the whole thing and nature the Danish Sound Dues are precisely the same as the Barbary States, which President Jefferson put an end to as a tribute done nothing to the sum paid it, just as President Pierce proposes to put an end to this similar tribute to Denmark. Of course, it is quite absurd for Denmark to suppose that Great Britain, Prussia, or the United States is to pay the Sound Dues as a lump, and in advance, for ten or twenty years ahead. The thing is ridiculous."

COLONIAL SCREW STEAM-SLOOP "VICTORIA."

This smart and beautiful sloop of war—the launch of which we noticed in July last—is now ready for sea, and will leave the Thames in a few days for Melbourne.

She has been ordered in this country by the Colonial Government, and is the first instance of our Australian colonies providing themselves with maritime 'protection', she is completely fitted as a man of war sloop, and carries on her upper decks six 32-pounder guns on her broadsides, and one long 32-pounder swivel gun of nine feet six inches long, which can be fought both at stem and stern

The *Victoria* is built on the diagonal principle of Mr. O. W. Lang. She was launched from the building yard of Messrs. Young, Son, and Co., of Limehouse, and does equal credit to the designers and constructors of the ship and engines.

The engines were designed and built by G. Rennie and Sons, on their patent direct-action principle; each cylinder and its condenser and air-pump being placed on either side of the main shaft, arranged with the cylinder both air-pumps alternated, so that the pull and thrust upon the screw-shaft is equalised; and one of the advantages found as appertaining to this arrangement of the condensers being close to the cylinders is that a better vacuum is ensured. By a recent improvement in marine boilers, Messrs. Rennie and Sons have succeeded in constructing boilers for vessels of very shallow draught, from which the steam can be drawn perfectly free from the risk of priming over, and by which they are enabled to ensure the steam being delivered into the engines in a superheated condition, and thereby effecting economy of fuel.

They have fitted with engines, on the same principle as those of the *Victoria*, the steam-ships *Victor Emanuelli* and the *Comte de Cavour*, both for the Sardinian Steam Navigation Company, and which have recently been employed in the French Transport Service, and performed most satisfactorily.

THE NEW COLONIAL STEAM WAR-SLOOP "VICTORIA."

They are also fitting these kind of engines in two vessels of 800 tons each for the Guarda Costa service of the Mexican Government; and similarly equipping a new line of 1600-ton ships, to trade between Liverpool and the Havannah. This vessel has been prepared for sea under the superintendence of Commander Lookyer, R.N. She has been tried in the river, and showed an average speed of twelve knots per hour, the engines working to above the required number of revolutions, eighty-two with plenty of steam, and no hot bearings. The *Victoria* is nearly 600-tons burden, 150-horse power, draught 11 feet 12 inches. The diameter of the screw is 10 feet, the length of blade 2 feet 10 inches the pitch 15 feet; number of blades, two.

SHIPBUILDING BY GASLIGHT.

The extraordinary scene—not to say spectacle—engraved below, was recently sketched in the shipbuilding yard of Messrs. John and Robert White, at Cowes. The incident represented is the building of the *Lapwing* and *Ringdove* dispatch gun-vessels. Their size respectively is—length, 180 feet; breadth, 22 feet; tons, 670. Also, two gun-boats, length respectively, 108 feet; breadth, 22 feet; depth, 8 feet; tons, 233 69-94ths. There are likewise forty boats building in the same yard for the Government.

To meet the exigencies of the work, the operations are carried on night and day; the facilities afforded by the introduction of gaslight in Messrs. White's establishment being very great. Gas is laid all over the yard, and in the extensive docks; so that at any time when pressed with work, extra time can be made by the men, attended with an amount of comfort and safety that is scarcely to be equalled in any yard in England.

The principal dock is the largest private dock in the south of England, and as it is so near to Portsmouth proves most valuable to the Government. This establishment, with many others of which the Government has availed itself during recent and present exigencies, are good illustrations of the vast resources of the empire, when its energies are called forth for furnishing ships, in addition to our splendid dockyards and arsenals.

BUILDING THE "LAPWING" AND "RINGDOVE" DISPATCH GUN VESSELS BY GASLIGHT, AT COWES.

ANCIENT RUNIC STONE,

RECENTLY FOUND IN THE ISLE OF MAN.

For upwards of seventy years a stone which, as far as it could be discerned, had the appearance of what is called a Danish cross, has been known to exist in the steeple of Kirk Braddan, Isle of Man. It was partly bedded in mortar and stones above the lintel of a doorway leading to a loft above the gallery. On the 19th of November it was removed from its place under the superintendence of an English gentleman who had

ANCIENT RUNIC STONE RECENTLY FOUND IN THE ISLE OF MAN.

been travelling about the island. It not only proved to be a Northern cross, but a Runic one; that is, it bore a Runic inscription. As soon as the stone had been taken out of the wall the gentleman in question copied the inscription and translated it, to the best of his ability, in the presence of the church clerk who had removed the stone. The Runes were in beautiful preservation, and looked as fresh as if they had just come out of the workshop of Orokoth Gaut. Unfortunately the upper part of the cross was partly broken, so that the original inscription was not entire. In the inscription, as it is, the concluding word is mutilated; in its original state it was probably "sonr," son; the Runic character which answers to *s* being distinct, and likewise the greater part of one which stands for *o*. Yet there is reason for believing that sonr was not the concluding word of the original, but the penultimate, and that the original terminated with some Norwegian name: we will suppose "Olf."

The writing at present on the stone is to this effect:—

Otr . Risti . Kros . Thuna . Aft . Fruka .
Fathor . Sin . In . Thorwisori . S . . . [Sonr Olfs.]
Otr raised this Cross to Fruki his father,
The Thorwisori, so[n of Olf.]

The names Otr and Fruki have never before been found on any of the Runic stones in the Isle of Man. The words In . Thorwisori, which either denote the place where the individual to whom they relate lived, or one of his attributes or peculiarities, will perhaps fling some light on the words In . Arthur, which appear on the beautiful cross which stands nearly opposite the door of Kirk Braddan. The present cross is curiously ornamented. The side which we here present to the public bears two monsters, perhaps intended to represent dragons, tied with a single cord, which passes round the neck and body of one whose head is slightly averted, whilst, though it passes round the body of the other, it leaves the neck free. Little at present can be said about the other side of the stone, which is still in some degree covered with the very hard mortar in which it was found lying. The gentleman of whom we have already spoken, before leaving the island, made arrangements for placing the stone beside the other cross, which has long been considered one of the principal ornaments of the beautiful churchyard of Braddan.

TESTIMONIAL TO THE HON. E. DEAS THOMSON, COLONIAL SECRETARY OF NEW SOUTH WALES.

This magnificent piece of Plate has been presented to Mr. Thomson—who for seventeen years has held the office of Colonial Secretary in this great colony, and for nearly twenty-five years has been engaged in its official service—as a testimonial of the esteem and respect in which he is held, and of the gratitude to which he is entitled from the colonists of New South Wales. The noble subscription raised for the purchase of the Plate from the purses of the colonists was rendered yet more acceptable to Mr. Thomson by the feeling manifested on the occasion; the brilliant assemblage who witnessed the presentation showing, at least, that talent, industry, and devoted service, honestly directed to the welfare of the country, obtain in New South Wales their best reward; and, what perhaps is of more importance, it is distinctly asserted on the part of the most respectable portion of this community, that sterling worth, exposed as it may, and must ever, be to prejudice and malignant aspersions, has found in the hearts of a generous people a secure and abiding place.

In the *Sydney Morning Herald* it is asserted that "Mr. Thomson's name will, even in his lifetime, and more eminently in the pages of history, be distinguished by his connection with the great Australian Colonies of Great Britain. In the most arduous struggles of those colonies to assume their proper place in the first rank of British dependencies, his courage and faith in their innate resources, his reliance on their energies, his wise application of their latent powers, will strike the student of the future with equal admiration, with the calm decision, the moderate exultation, the deliberative restriction, which characterised his conduct and his policy when that great event took place which made New South Wales the first gold producing English colony, and which has since made the Southern Pacific the field to which the attention of the statesman, the schemes of the adventurer, the theories of the philosopher, and the dreams of the speculative student have alike been turned."

The presentation took place in the Theatre at Sydney; Mr. John Gilchrist, the President of the Testimonial Committee in the chair. Mr Gilchrist, in opening the proceedings, stated the total amount collected for the testimonial to be £2300, but it was believed that this sum would yet be considerably enlarged. According to the wish of Mr. Thomson, one thousand guineas only of this sum was to be invested in the purchase of plate; the remainder of the sum, also in accordance with Mr. Thomson's wish, to be disposed of in the foundation of a scholarship in the Sydney University.

The presentation of the gift was made by the Hon. Sir Charles Nicholson, the elected President of the re-

TESTIMONIAL PRESENTED TO THE HON. E. DEAS THOMSON, COLONIAL SECRETARY OF NEW SOUTH WALES.

HORSES FOR THE LAND TRANSPORT CORPS ENCAMPED AT TUCAT, IN ASIA MINOR.—(SEE NEXT PAGE)

presentatives of the colony, who, in the course of an eloquent address, paid this tribute to the merits of Mr. Thomson :—

As a loyal and faithful servant of the Crown, we believe it has ever been your aim and object to promote all the best interests of the colony, to aid the development of its physical resources, and to advance its social, moral, and political welfare. In illustration of this assertion and success which has attended, and have characterised, your administration, we would beg to point to the improvements made in our fiscal regulations, carried out in accordance with (and in some instances anticipating) those great changes in the law of the mother country, by which commerce is rendered perfectly free and unrestricted, to those universal means of education (as well of an elementary as of a higher character) which have recently been provided for all classes and denominations of her Majesty's subjects in the colony to those measures for the simplification and improvement of the law, by which a close approximation has been kept up with the great and beneficial ameliorations that are now taking place in the jurisprudence of England; and more part cularly to the vigorous aid and unbounded encouragement ever afforded by you to railway enterprise. As a member of the Legislature, and as the chief executive organ of Government, the part taken by you in the initiation and support of all the foregoing great questions and principles has been most prominent and effectual.

Mr. Thomson read to the assembly his address of thanks, in the course of which he thus explained the origin of his connection with the colony :—

I rejoice to find that the great and immutable principles of Free-trade embodied in that measure have, in their application, been found eminently successful in a commercial, economical, and financial point of view. And, having thus touched on the topic of Free-trade, I may, perhaps, be permitted, on an occasion such as the present, to state (what at any other time might partake of egotism) the circumstance which first led to my connection with this colony. It is a connection, then, for which I am indebted to the great author of Free-trade, Mr. Huskisson; and it arose in this way. Shortly before I came to this colony I had occasion to make an extensive tour in the United States of America and Canada. Some private letters in which I described, as I best could, the scenes I visited, and the impressions they made upon me, were communicated to Mr. Huskisson, who then held the seals of the Colonial office. He was pleased to read and speak approvingly of them, with a request that I should be introduced to him. I was accordingly presented to him, and on that occasion he did me the honour to offer me a colonial appointment. These are the circumstances from which led to my connection with this colony, and which now closes, at least temporarily, with the significant proof which this day's proceedings afford that I have not done discredit, either to the appointment with which you honoured me, or to the great principle of Free-trade with which his reputation is identified, and which have secured to his name an undying renown.

At the conclusion of the hon. gentleman's address the cheering was renewed most cordially, and at length having subsided, the following inscription to be engraved on the plate presented to Mr. Thomson was read by the Chairman :—

Cui honor honorem.

Three cheers were then given most heartily for Mr. Thomson, the ladies waving their handkerchiefs and evincing equal enthusiasm with the gentlemen present.

At the close of the proceedings, it having been announced that the Address was now open for signature, and that Mr. Thomson would be glad to take leave of those who wished to shake hands with him, a general rush to the place was made, and for a considerable time the ceremony of "farewell" detained the meeting—it being, in many instances at least, obviously no idle and empty form. At length the band struck up "God Save the Queen," and the meeting separated.

The superb gift is a centre-piece of table-plate, of noble design; and has been manufactured by Messrs. Smith, Nicholson, and Co., Duke-street, Lincoln's-inn-fields. It is a very fine specimen of work in metal. The group is composed with the zoology and vegetation of Australia prominently characterised; and around the stem are representatives of the aboriginal and colonial population.

It should be explained that Mr. Thomson, who came to England on account of ill-health about two years since, returned early in last month, to resume his duties as Colonial Secretary.

LAND TRANSPORT CORPS.—ENCAMPMENT AT TOCAT.

We have been favoured by Mr. W. B. Barker with the accompanying account of his recent experience as Chief Agent for the Land Transport Corps in Syria and Asia Minor. Barker's exertions in this arduous service are entitled to special commendation. His narrative commences from his leaving Constantinople :—

On my arrival at Aleppo I made every preparation for a journey overland to Smyrna through Scutari, intending to collect 1000 horses and 1000 mules on my way. When nearly ready to start, having had to make tents and form a staff of guards, &c., I received notice that the *Trent* was coming to Alexandrette for what animals and men I could give her. I went down to the port from Aleppo, and delivered over 314 animals (four mules and gelding) and 114 men, with their tents, pickaxes, cooks, farriers, &c., quite a little division. I returned to Aleppo, taking, of course, the Alexandretta fever, which hung on me for months afterwards: I now collected more animals and fresh men to start with. I further made arrangements with my agent in Aleppo and Antioch should he enabled to continue to furnish 314 animals and 114 men per month during my absence, to be shipped at Alexandretta periodically, and started for Marash. Here we got more animals, and I established an agent at this place, as it is an important one, particularly for all kinds of horse equipments. Our next place was Albistan, where I procured the beautiful specimen of lanner since seen in the Zoological Gardens. It is a bird of the falcon genus that has not been seen in ingrained since falconry fell into disuse. It is the best and most gentle of the sporting hawks, and much esteemed among sportsmen. It can be made to attack the eagle and pursue the gazelle, hare, &c., and take partridges, francolines, &c. Our next place of consequence was Gurun, where I procured, quite by chance, one of the most beautiful tigolins I have ever seen.

We stayed a day or two at Tocat, where the Rev. Henry John Van Lennip kindly took a view of our camp, which I send you herewith. Tocat is a charming place, celebrated for its good pears and all kinds of fruit. The fertility of the soil between this and Amasia is something wonderful. It is equal to anything I have ever seen elsewhere. At Merzephun, the ancient Phagemon capital, of the kingdom of Pontus, I made some American memorandums. I procured here a very fine specimen of stag-horns (twelve points), of immense size, which I have sent to the Zoological Gardens, together with the skin of the same kind of animal that had borne such tremendous horns. This kind of stag is as large as an ox, and is called by the people of the country Shah-ki. It is only seen in the highest tops of the mountains to the south of Sinope. I also procured a small kind of deer, size of a gazelle, which is to be found in these mountains. It is very beautiful, and has a black upper lip like a cat. I am told that this deer exists in Scotland, but I had never seen the like of it.

We waded across the Holys (perfidious stream), a little to the north of Wezir-Kopir, and encamped for one night along its borders, where I recalled to mind associations of disease of the most fearful character, as I had been at different epochs before and during the Roman Empire. We are going to have a ferry-boat built, to cross it in the winter, as all the animals procured at Bagdad and Musul will have to come this road on their way to Sinope.

I opened Sinope with upwards of 1000 animals and 250 men, whom I consigned to the agent here of the Land Transport Corps: having thus by great exertions been the means of procuring in four months about 2000 animals and 750 men as drivers. I had also brought with me seventy horses for officers, which cost on an average £10 a-piece, and were worth £50 at Constantinople. I had also formed a corps of Affghans, who are excellent guards. They speak only Persian, so that I had a capital opportunity of exercising myself in this language, there being no one who understood it here. We were joined at Tocat by a Persian Prince refugee at the Porte, who accompanied us to Sinope on his way to Constantinople. He amused and instructed me by his quotations of Persian poets as we rode along. How superior a race of men is the Persian to the Turk-sh

DIVING APPARATUS.—PARIS EXHIBITION.—In the article on "Diving at Paris," in the ILLUSTRATED LONDON NEWS of Nov. 24, it should have been explained that it was the apparatus of Messrs. C. E. Heinke that succeeded to the satisfaction of the Imperial Commission; and to Messrs. Heinke the only first-class medal was awarded for the patent valve, which enables the diver to descend and ascend at pleasure with the whole of his gear, weighing nearly 200lbs., without shifting any weights; as well as the improved slide in the helmet, which enables him to remain beneath the surface even should the glass be accidentally broken: all of which was successfully witnessed on the Seine; and the operations cannot be executed with any other apparatus.

Up to the last inst. the quantity of beetroot sugar manufactured in France was 157,712 kilogrammes more than to the same date last year.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Queen and Prince Albert have each subscribed 1000 thalers (£150) towards a monument to be erected in 1858 to the memory of the Elector Johann Friedrich the Generous, on occasion of the 300th anniversary of the foundation of the University of Jena.

The Emperor of the French has subscribed £50 to the fund for the erection of a monument to the late Marquis of Londonderry

The King of Sardinia has conferred on the Archbishop of Paris the Grand Cordon of the Order of St. Maurice and St. Lazare.

The Duke of Newcastle has arrived in Paris from the Crimea and Caucasus, and is expected in London soon

The Sultan has ordered medals in gold and silver to be struck off in honour of the fall of Sebastopol. They are to be distributed to all the officers of the Allied armies who have taken part in the siege.

The Countess de Montijo, mother of the Empress of the French, passed through Orleans on the 29th ult., accompanied by the Duchess d'Alba, her daughter, and several persons of her suite.

The Duke and Duchess de Montpensier arrived at Seville on the 25th ult.

Lord and Lady Lyndhurst and the Hon. Miss Copley were received by the French Emperor and Empress on the 30th ult

Lord Teignmouth is not a candidate for the Irish representative peerage.

The King of Sardinia has invested Prince Napoleon with the Collar of the Order of the Annunciada. The collars of this order are limited to twenty-four—twelve for natives and twelve for foreigners.

According to the latest accounts the health of Marie Amelie, ex-Queen of France, is decidedly better.

The Emperor Napoleon has presented to the Princess Royal of England a fan once belonging to Marie Antoinette, and to the Prince of Wales a small watch, of which the case is composed of a single ruby split in half.

The Bishop of New Zealand arrived safely at Auckland on the 5th of July, after a prosperous voyage of ninety-eight days.

His Imperial Highness the Archduke Max has recovered his health sufficiently to be enabled to take a drive.

It has been proposed, from an influential quarter, that, as no public demonstration has been made by the town of Birmingham and the midland counties, the forthcoming anniversary ball at the Town-hall should commemorate the glorious victories of the Alma, Inkerman, and Sebastopol

At the review last week the French Emperor presented to the King of Sardinia the Military Medal, saying that he could not allow him to present himself to the French Army without that honourable distinction.

M. Biraloff, Adjutant Major to the Emperor of Russia, and an officer who distinguished himself greatly last winter by heading several sallies from Sebastopol, has arrived at Warsaw from Frankfort-on-Maine, on his road to St. Petersburg.

The betrothal of the Grand Duke Nicholas, younger brother of the Emperor Alexander II., with the Princess of Oldenburg, daughter of Prince Peter of Oldenburg, was celebrated on the 26th ult. at St. Petersburg. Prince Peter is son of the Grand Duchess Catherine, who married the King of Wirtemberg, father of Queen Sophia of the Netherlands.

Sir Colin Campbell has been invited to a public dinner in Liverpool, but has declined the invitation, in consequence of his approaching departure from England.

The Count de Hatzfeld, the Prussian Plenipotentiary, has arrived in Paris from Berlin after a short absence. It is rumoured that Count Walewski has already asked him for explanations touching the King of Prussia's speech.

France has this year lost two Admirals MM. de Mackau and Brust. There now remain MM. Parseval Deschenes and Hamelin.

Mr. Bright and Mr. Milner Gibson were not to be invited to the corporation dinner, given to the ex-mayor of Manchester, on account of their sentiments on the war. The Bishop of Manchester and Sir Harry Smith have received invitations

The body of Admiral Brunt will, it is said, be deposited in a military Necropolis of the Invalides, in the midst of the illustrations surrounding the tomb of Napoleon.

The estate of the late Mr. Maurice O'Connell, M.P., was sold last week in the Encumbered Estates Court. It contained about 2200 acres of land, producing a net profit rent of £185 odd, and it was purchased in trust for £5350.

Madame Borghi-Mamo has signed an engagement for three years with the Grand Opera in Paris. M. Roger has also been re-engaged for a lengthened period

Mrs. Gaskell, of Manchester, author of "Mary Barton," has undertaken to write the "Life of Charlotte Bronte" (author of "Jane Eyre"), having been requested to do so by both father and husband

Rear-Admiral C. H. Jacquinot, who commands the French naval squadron in the Levant, has been promoted to the rank of Vice-Admiral; and Captain Juriez de la Gravière to that of Rear-Admiral. Rear-Admiral Odet Pellion has been appointed to the dignity of Grand Officer of the Legion of Honour.

The *Scotsman* says that the friends of the poet Robert Nicoll are making considerable progress in getting up a monument to his memory.

MM. Lorieux and Eugene de Fourey are preparing for publication, in seventeen large maps, an Atlas of Subterranean Paris.

A letter from Berlin says :—"It is announced officially that the United States of America will take no part in the conference on the question of the Sound Dues"

The Old Temple at the Col de Balaclava has given up some coins. A man in Kadikoi asks 18,000f. for those he possesses. A single coin with a Greek inscription (Karate') is put up at 150 sovereigns.

A drama entitled "Jane Eyre," and founded upon the celebrated novel of that name, has been performed with great success at the Théâtre du Vaudeville, Brussels

The new Concordat will set aside no less than 21,000 Aulic decrees which have been issued at various times to explain or explain the application of the civil code in matters relating to the Roman Catholic Church.

The extension of the South Dock at Sunderland was unostentatiously opened on Saturday for the admission of ships

An edict has appeared at Verona declaring the Provincial Congregations of the United Kingdom of Venice and Lombardy to be permanently constituted

In consequence of the high price of provisions, the journeymen silkweavers of Bristol have applied to their employers for an advance of wages to the amount of 6d. per hundred yards, to which request they have readily acceded

Orders have been given by the Austrian War-office to construct several saltpetre refineries in different parts of the empire.

The loss of life from wrecks during the year 1854 amounted to 1549 lives, being 560 more than in the previous year; while the number of vessels lost was 967, being 158 more than in 1853.

Remonstrances have been made by the English and American Governments against Portugal's recent resumption of the possession of Ambriz as the frontier limit of its territories on the western coast of Africa.

The ship *Kent*, Coleman, from Melbourne, which arrived in the river on Saturday, brought home 132,000 ounces of gold—the largest importation to the port of London since the discovery of gold-fields in Australia.

The tariff question is likely to cause great embarrassment to the Spanish Government, the Catalonian Deputies having called upon the manufacturers of their principality to unite their efforts for the defence of their rights.

The missing clergyman, acting under the impulse of an unaccountable illusion, has gone over to America, where he now is.

St. Petersburg letters of the 25th of November state that the Neva was full of ice, and that a heavy fall of snow had occurred during the preceding night. At Riga, on the 26th of November, passengers could walk across the frozen river.

The High Court of Justice of Copenhagen decided, in its sitting of the 27th ult., upon declaring itself fully competent to try the ex-Ministers accused of high treason.

A fearful catastrophe lately occurred in the harbour of Tunis. A waterspout passed over at half-past seven o'clock a.m. on the 18th ult., and in an instant five vessels foundered, and one was dismasted.

The Westminster Play this year will be the "Phormio" of Terence, and the days fixed for its performance are the 10th, 13th, and 17th of December.

A Republican conspiracy it is said has been discovered at Rome but the particulars have not transpired.

An Ultramontane journal, to resemble the *Univers* at Paris, is about to appear at Vienna.

There has been a large increase in the importation of guano this year. In ten months ended the 5th of November last year it was 170,667 tons, and in the same period of 1855 it was 235,723 tons.

ENGLAND AND THE DANUBIAN PRINCIPALITIES.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—The inclosed is a copy of a letter in my possession which may be not uninteresting to some of your readers, proving, as it does, that even as early as Charles II.'s reign some interest in the affairs of the Principalities was taken by the Government of this country. The original is engrossed on vellum, and is emblazoned with the arms of England and France, and it a first letter encircles a highly-finished miniature of the King. The subscription is in Charles's handwriting.

A. P. S. V.

"Charles the Second, by the grace of God King of England, Scotland, France, and Ireland, Defender of the Faith, &c. To the Most High and Mighty Emperor Sultan Mahomet, Chefe Lord and Commander of the Musulman Kingdome, Sole Monarch of the Supreame Monarch of the Eastern Empire, Sendeth Greeting. Most High and Mighty Emperor. Our good friend Georgius Stephianus, late Prince of Moldavia, having informed Us of his unhappiness to have taken some yeares since into your disfavour, whereby he became dispossessed of his said Principality, and reduced by consequence into extreame misery, under which he yet suffers, and having besought Our mediation in his favor, In the greate Compassion wee have of his distresse, remembring how much it is the part of Princes to preserve from contempt and want those that have themselves sometimes borne that Character, Wee could not refuse him in that suite, and have therefore commanded Our Ambassador Extraordinary in your Court, Our Right Trusty and Right Well beloved Cousin the Earle of Winchelsea, in Our Name to beseech your pardon for the said unfortunate Prince, who vowes his happiness to be in your favor, and by it alone desires to receave restauration to * * * nd dignity, which he promises shall ever be employed, in deserving that Grace We now aske for him. * * * Wee have commanded our Ambassador to say more at large whome Wee beseech you to heare patiently * * * and whatever else he hath in charge from us, and to believe intirely in what he shall say, especially when he assures you of the continuance of Our inviolable Friendship and Kindness and soe We bid you farewell and Mighte Emperor most heartily farewell. Given at Our Royall Palace of Whitehall the fifth day of Jun in the Eighteenth yeare of our Reigne, and of the Incarnation of Our Lord, 16 6.

"Your most affectionate frinde (&c),

"CHARLES R"

A CORRESPONDENT, Sound, Finland, is thanked; but we had not room for the Sketches

A Correspondent, M. H. MONITOR, writes to recommend the rich to limit their consumption of bread at meals, a hint which, thus given, they will no doubt comply with.

T. B.—Apply for a fountain to Mr. Freeman Roe, opposite the Adelphi Theatre, Strand

M. A. V. should provide herself with Mr. Goss's small book on Aqua Vivaria, lately published

T. D., Hoxton, should complain to the authorities at the General Post-office

C. E. V.—We cannot inform you.

D. D.—Declined

IGNORANCE, Greenwich.—The oft-quoted lines commencing "Music hath charms," are from Congreve's "Mourning Bride."

N., Birmingham.—See "Barrow's Life of Peter the Great" in the Family Library

A CONSTANT READER, Bayswater.—The account of the Dacca Cotton Manufacture is published by Mortimer, Strand.

AGAMEMNON is thanked, although we could not avail ourselves of his rough sketches

J. R. S. should write to the Secretary of the War Department.

AN INJURED MAN, Gray's-inn-road, should write to Mr. Bourne, C.E., who built the *Ajax* steamer, for the best description of liner engines.

W. G., Horsham.—A. is liable for the amount.

ANTI-MONOPOLY.—We have not room for the queries

T. R., Tonbridge.—The charge is incorrect, if the Post-office regulation has been strictly complied with.

M. P., Manchester.—Apply at the War Department.

H. R., Vegesack-on-the-Weser.—We have not room.

W. S., Bradford.—We cannot inform you.

A CONSTANT SUBSCRIBER.—Remarks on the Paris Exhibition reached us too late for insertion.

The Letters from ulf Genitch and Berdiansk requires authentication by name.

LAMBA.—We have not room.

A SUBSCRIBER.—The "Ingoldsby Legends" are by the late Rev. C. Barham.

B. V., Pontefract.—Received

EDGAR.—For excellent authorities on Modern History see the list of books recommended and refe red to in Prof. Smyth's "Lectures on Modern History," and prefixed to that work (John's edition)

A SUBSCRIBER.—The spade guineas of George III. have no numismatic value

A. D. A.—The coin of which you have sent an impression is a penny of Edward I., struck at Canterbury

GLASGUENSIS.—The last editions of Porter's "Progress of the Nation," and of M'Culloch's "Statistical Account of the British Empire," are the best standard works you can follow. The French word "Monetaire," *s. m.*, is Master of the Mint; *adj.*, monetary, or relating to money. It can scarcely be used to express the idea of moneyed capitalist

W. H., Oxton.—The best illustrated works on Roman Coins are—"Pedrusi: Cesari in Oro, in Argento, in Medaglioni, in Metallo Grande, in Metallo Mezzano e Piccolo, nuovo del Farnese M seo." 10 vols. fo. Parma: 1694—1727. Price 80s. Spanheimi: "Dissertationes de Prestantia et usu Numismatum Antiquorum." 2 vols. fo. Lond. et Amst.: 1706—17. Price 30s.—Vaillant: "Numismata aera Imperatorum Augustarum et Cesarum in Colonia." 2 vols. in 1, fo. Paris, 1697. Price 10s.—Vaillant: "Numismata Imperatorum Romanorum praestantiora." 3 vols. 4to. Rome, 1743. Price 15s. And for the non-illustrated works—Mionnet: "De la Rareté et du prix des Medailles Romaines." 2 vols. 8vo. Third edition. Paris, 1841. Price 30s.—Akerman: "Descriptive Catalogue of Roman Coins." 2 vols. 8vo. London, 1834. Price 30s.—Pinkerton: "Essay on Medals." 2 vols. 8vo. Third edition. Price 1.s.

W. H. R., Plymouth, entirely mistakes the nature of a bank-note, which was never anything but a promise to pay, always redeemable by the person who issued it, till the Government made it otherwise, first by the Bank Restriction Act, and next by making the Bank of England note a legal tender. The security of the Act of 1844 is no security at all, for it merely provides for the promises to pay issued, and leaves the deposits in banks wholly unprotected; enabling, as W. H. R remarks, persons like Messrs. Paul, Strahan, and Bates to defraud their customers to any amount. Till the Act of 1844 every bank-note was legally convertible, but the Act created an inconvertible currency to the extent of £14,000,000. It also created an abundance of money, when gold is plentiful and scarce by compelling the Bank to buy gold at the rate of £3 17s. 9d. per ounce, by its legal-tender notes, whatever may be the value of gold in the market. Gold coined into money is worth more than gold uncoined; and the Act of 1844 confers this additional value on gold by merely depositing it in the Bank without waiting for coinage. The Act makes bank-notes equivalent to sovereigns; and whether the community prefer gold or bank-notes, the Act mints at once as it were all that is carried to the Bank, and thus turns gold into money, when it should remain in use as a commodity. Where there is no scarcity and no limitation to the issue of bank-notes, as there was formerly none in Scotland, bank-notes were found perfectly safe, and always valid.

STEAM FIRE-ENGINES.—We have received from Mr. Baddeley a letter impugning the statement in the Liverpool LONDON NEWS of Nov. 24, that the Cincinnati Steam Fire-engine is "the only one in the world." Mr Baddeley states that, in the year 1839, Mr. John Braithwaite constructed a steam fire-engine of about six-horse power, which came into public operation at the burning of the Argyll Rooms, in February, 1830, where its performances gave great satisfaction—the quantity of water delivered, the height to which it was thrown, and the continuity of the performances, contrasting favourably with those of the hand-worked engines. This engine ran out to many subsequent fires; among others, that which occurred in Messrs. Barclay and Co.'s brewery, in May, 1832, where it threw itself great celebrity. Mr. Braithwaite had previously built a steam fire-engine of ten-horse power, which was sent to the Docks at Liverpool, but was not much used. In 1832 Mr. Braithwaite completed a third steam fire-engine, named the "Comet," for the Prussian Government, which is now at Berlin. Unlike the American engine, Mr. Braithwaite's were remarkable for their light and elegant appearance: they were also superior also in their performances, and cost but about half the money. In 1852 the London Fire Insurance Companies applied this agent to a floating fire-engine on the river Thames, which has rendered the most essential service on several fires. Very recently a second steam floating fire-engine (by Mr. James Shand) has been placed on the river, at least three times as powerful as the American, being capable of working at 100-horse power. Mr. Baddeley concludes thus:—"The Cincinnati steam fire-engine, therefore, is not the *first* machine of the kind, neither is it the *only one* in the world."

INTELLIGENS.—"Lines on Sebastopol," by a Subscriber, Jamaica; by John Hopkins, Notts; by M. E. B.; by J. W. T. Helmsley; by J. R.; by Delta; and by H. G. G. Also, "There stood forth;" "Prince of Wales' Birthday;" "Bis thee, Shallop;" "To a Bird found in the Redan," by Maca; "On the Death of Colonel Hammond," by J. B. R.; "The Warriors of Old England," by Old Times; "Where are they?" by M. S. W.; "Sound," by G. E.; "The Anglo-French," by A. F. C., Kentish Town; Sonnet, by J. F.; "Simplicity," by Anon; Lines, by A. C.

DE LA RUE and CO.'S INDELIBLE RED-LETTER DIARIES for 1856

Will be published on the 1st December,
DE LA RUE and CO.'S MEDICAL MEMORANDUM BOOK and INDELIBLE DIARY for 1856.

DE LA RUE and CO.'S PLAYING-CARDS, The New Patterns for the Season are now ready.

MEDICAL SOMNAMBULISM.—The Nobility and Gentry of England are respectfully informed that the most celebrated Medical Somnambulist and Mesmerist, Madame la Marquise DE SAN MIGUEL TERREIRO, whose wonderful powers may still be remembered by those who have long during her former stay in England, has returned to our country. She has been residing for some time at Munich, where, with many other patients, she had the good fortune to cure H.R.H. the Princess Alexandra of Bavaria, whose mental or bodily illness had been pronounced incurable by her physicians. Madame la Marquise will give daily consultations at her residence, 73, Baker-street, Portman-square.

MEDICAL PUPIL REQUIRED.—A Medical Man, with very high qualifications, residing in a fashionable Watering-place on the South Coast, wishes to meet with a Pupil, who would have the advantage of acquiring a thoroughly practical knowledge of his profession; the strictest attention would also be given to the morals and comfort Premium, Two Hundred Guineas, which may be paid by instalments. Address, F.R.C.S., Messrs. Oslis, Baker, Warde, and Co., Wholesale Druggists, Bouverie-street, Fleet-street, London.

PRICE'S PATENT CANDLE COMPANY'S new concentrated, distilled GLYCERINE, without unpleasant taste or smell, may now be had from all Druggists, in shilling bottles with sealed corks. A few drops cure chapped hands. At the Universal Fair (Paris) in 1855, it competed with the candle manufacturers of all nations. Price's Patent Candle Company carried off one of the two gold medals of honour awarded for the Candle Manufactures, Belmont, Vauxhall, London

PIANOFORTES for HIRE at CHAPPELL'S.—The best of every description, by Broadwood, Collard, and Erard, for Sale or Hire.—50, New Bond-street

CHAPPELL'S FOREIGN MODEL PIANO-FORTE, price Fifty Guineas.—This instrument has (unlike the ordinary cottage pianoforte) three strings, and the fullest grand compass of seven octaves. It is strongly recommended by every possible guarantee to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship of the best description, the tone is round, full, and rich, and the power equal to that of a Bishopd grand. The patent check action, of new construction, is beautiful to touch, and the repetition very rapid. Every possible precaution has been taken to ensure the standing well in tune. The attention of the public, the profession, and merchants is invited to the foreign model, as no pianoforte, in a similar space, can possibly be found to equal it in Engl and at the same price Every instrument will be warranted, and (if desired), exchanged within six months of the purchase.—50, New Bond-street

CARL A. LAUE (from Stuttgart) has pleasure in stating that his METHOD for the CITHER (Zither) is in the press, and will very shortly be published. Also the BERKELEY PALETOT OVERCOAT, being a coat entirely of their own invention, celebrated for durability and comfort, at Three and a half Five Guineas, 136, Strand, two doors west of Somerset House

OUR MOTTO: "To give the greatest possible value for money."—This motto has been verified by supplying to the world the Re-fac-tioned LYDENHAM TROUSERS, 17s 6d. The success and patronage that has crowned the undertaking of producing better trousers at a cheaper rate has enabled SAMUEL BROTHERS to add to the business premises the remains of another, and the same time such superior quality, that it is needless to say more than 17s 6d. for trousers of the same repute.—N.B. Only one address—81, 82, and 83, Aldgate. Observe the number. Samuel Brothers' stock of Overcoats stands unrivalled. The New Victory Coat, 25s., combines every requisite either as an overcoat or for every-day wear. In every department the greatest value for money that is possible to be obtained is carried out, so that Samuel Brothers' Tailoring Establishment, 81, Aldgate-hill, stands unrivalled for superior gentlemen's clothing at the lowest possible prices.

SHRIMPTON and HOOPER'S GRADUATED ORGANIC CHEST PROTECTORS.—"Lieut.-Col. Phipps has received the commands of his Royal Highness the Prince Albert to thank Messrs Shrimpton and Hooper for the very curious specimens of the perfection to which they have been brought the art of making the eyes of needles.—Buckingham Palace, July 16, 1851."
On the 5th May, 1854, Messrs Shrimpton and Hooper obtained an Injunction from his Honour the Master of the Rolls against a Manufacturer at Reddish for imitating the Labels of their highly-approved Needles.
None but Fine-class Goods made by SHRIMPTON and HOOPER.
Established more than a Century
Albion Works, Saddler; and 13, King's-square, London.

GAS FITTINGS.—W. BASSINGHAM and SON, Gas Consultants and Fitting Manufacturers, Gas-fitters, and Contractors, 4 and 5, Whitecross-street, City Gas Baths, Stoves, &c. Established 1816. Designs submitted. Estimates given.

PAPERHANGINGS and DECORATIONS. —At CROSS'S, 22, Great Portland-street, Oxford-street, the Public are invited to view Trade Lots supplied from the great stock now in the kingdom, commencing at twelve yards for Sixpence. N.B. Estimates given for House Painting, General Repairs, &c

MARINE ENGINES for SALE.—Messrs. JOHN BOURNE and CO., Engineers, Glasgow, have now ready THREE DIRECT ACTING SCREW ENGINES of Sixty Horses each-power, of the same construction as that which they have just put into the Screw-steamer "Anof." For further particulars apply to Messrs. Bourne and Co., Engineers, Glasgow

VENTILATING STOVES! SUSPENSION STOVES!—Purchase one or the other, for they are the best, cheapest, most healthy, and economical for Churches, Chapels, Halls, Schools, Warehouses, Shops, Greenhouses, Bedrooms, Libraries, &c. Prospectuses with Prices sent free. DEANE, DRAY, and CO., Stove Range, Ironmongery, and Furnishing Warehouse, London-bridge.

FOREIGN EMPORIUM of BRONZES, PORCELAIN, and GLASS.—Admirers of Bronze, Porcelain, and Glass Decorations for the Drawing-room, the Library, and the Hall, are respectfully invited to view the unequalled collection of these and other articles of luxe at the Foreign Emporium of S. G. ZIMMERMANN, 108, Strand (opposite Exeter-hall), London.

MODERATOR LAMPS.—Simplicity, strength, and good finish continue to recommend the Lamps of T. PEARCE and SON above every other kind. The patterns are allowed to be the best in the trade. They are new, very uncommon, and in refined taste, most of them belonging exclusively to this house.—THOMAS PEARCE and SON, 33, Lodgate-hill, direct Importers of Oil of only the finest quality.

MODERATEUR LAMPS.—EVANS, SON, and CO. respectfully invite their Friends and the Public to an inspection of the extensive and beautiful STOCK of these much-admired LAMPS, just received from Paris, embracing all recent improvements, and in every variety of pattern, including a large assortment of various elegant designs, suitable for the cottage or mansion.—Show-rooms, 33, KING WILLIAM-STREET, London-bridge.

D. HULETT and CO., Manufacturers of CAB CHANDLERIES, Hall Lanterns, Glass Lustres, and every description of Metal Furnishing. A large assortment of the Newest Designs always on hand. Every article marked in plain figures. Patentees of the Improved Kitchen Range. Gas Regulator.—56 and 56, High Holborn.

PAINLESS TOOTH EXTRACTION without Chloroform, from 10 to 4.—Mr. J. WHITEHEAD WEBB, L.S.A., Surgeon-Dentist, 21, Southam pton-street, Bloomsbury-square.

HOWARD'S GUTTA PERCHA TOOTH-BRUSHES. The universal complaint of hairs coming out of tooth-brushes is removed by the application of this useful material. Manufactory, 9, Crescent-place, Jermyn-street, 33, Great Russell-street, Bloomsbury. Price 6d., 9d., and 1s. each. A sample brush for 8 postage stamps.

DO YOU BRUISE YOUR OATS YET?—Corn and Hay will be dear this year.—Examine your bills for Horse-keeping.—Economise by Bruising.—GAY-BRUISERS, 27 1s. 6d.; Chaff-cutters, £1 10s and £3 7s. 6d. Mangles, 50s.; Flour Mills, £4 10s.; Turnip-cutters, 30s. Prospectuses sent free. Book on Feeding, its, post-free. WEDLAKE and CO., 118, Fenchurch-street.

SLACK'S NICKEL ELECTRO-PLATED is the best substitute and quite as durable as Silver. Tables, spoons or forks, full size, 10 to 14 ounces, per dozen, 30s. and 36s.; teaspoons, 12s and 18s. Catalogues, with 200 engravings and prices of Electro-plate, Table Cutlery, and every requisite for furnishing at the lowest prices, may be had gratis or post-free. Orders above £2 carriage-paid. R. and J. SLACK, 336, Strand.

THE BEST FOOD FOR CHILDREN, INVALIDS, AND OTHERS.
ROBINSON'S PATENT BARLEY, for Making Superior BARLEY-WATER in three minutes, has not only obtained the patronage of her Majesty and the Royal Family but has become in fact in use to every class of the community; and is acknowledged to stand unrivalled as an eminently pure, nutritious, and light food for Infants and Invalids; much approved for making a delicious custard-pudding, more economical for thickening broths or soups.
ROBINSON'S PATENT GROATS for more than thirty years have been held in constant and increasing public estimation as the purest farina of the oat, and as the best and most valuable preparation for making a pure and delicate GRUEL, which forms a light and nutritious morning repast. Also a popular recipe for cooks and invalids, is of general use in the sick-chamber, and, alternately with the Patent Barley, is an excellent food for infants and children
Prepared only by the Patentees, ROBINSON, BELLVILLE, and CO., Purveyors to the Queen, 64, Red Lion-street, Holborn, London.
Sold by all respectable Grocers, Druggists, and others, in town and country, in Packets of 6d. and 1s.; and Family Canisters, at 2s., 5s., and 10s. each.

London: Printed and Published at the Office, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLER, 198, Strand, aforesaid.—SATURDAY, DECEMBER 8 1855.

THE ILLUSTRATED LONDON NEWS.

No. 774.—VOL. XXVII.] SATURDAY, DECEMBER 15, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE "RAW MATERIAL" OF OUR ARMIES.

If the war were to be brought to a conclusion to-morrow would England retain the credit, the *prestige*, and the glory that she possessed before it broke out? We doubt it. Our soldiers have been brave, and our people have been enthusiastic; but either from want of skill or of heart among our governing classes—or from want of means to make a figure as a great military nation—or perhaps from a combination of all these, with many other causes not yet developed, or even suspected, we are not looked upon in the Continental States of Europe with the same feelings as before. We are still a great and a mighty nation—far from having reached the culmination of our splendour; but Europe has learned to doubt whether our high pretensions are altogether justified by facts, and whether there be not in existence amongst us a germ of decay that will disable us in future from playing that part in the affairs of the world to which we conceive ourselves entitled. Are foreign nations misled in this respect? If not, and if there be a weak part in our legal constitution or our social economy which prevents us from being as powerful as we desire to be, it is the duty of every patriot and every honest man in the country to aid in its discovery and in its remedy, that we may continue to hold our own against all opponents, come whence they will. A leading Power in Europe cannot afford to lose caste. If we desire to stand as we have stood before, in the very front of the world; foremost in the arts of peace, but foremost also in the arts of war, whenever war becomes necessary to maintain among ourselves the blessings of civilisation and freedom, or to extend them among our neighbours, we must beware lest we go to sleep when the rest of mankind are awake: or flatter

ARRIVAL OF THE KING OF SARDINIA AT WINDSOR CASTLE. THE GRAND STAIRCASE. (SEE NEXT PAGE.)

ourselves with our invulnerability, when, in reality, by thoughtless and inconsiderate legislation, or by the progress of social changes to which we have shut our eyes, we are growing weak instead of strong, and imperilling both our honour and our security.

If the righteous war in which the nation is now engaged should not speedily be brought to an honourable conclusion, it is obvious that we cannot continue to play our proper part in it without putting forth a greater amount of strength than we have yet done. To strike hard and effectually, England requires a large army; or, failing that, it must put greater strength into its navy;—so that, while leaving the success of military operations to our brave allies the French, we may reap all the glory and advantage from that naval arm in which it is acknowledged by the whole world that we have no equal. Our navy may easily be made all that can be wished. The service is popular. A seafaring life appeals to the tastes, the sympathies, and the habits of the people; and there is nothing to prevent us from increasing our maritime strength to any extent that the policy or the exigencies of the war may demand. But with the army the case is different. The truth is patent to all the world, that we cannot get as many soldiers as we require. How is this? Why are we obliged to hunt up for foreigners, as auxiliaries? And why, with all our efforts, do we fall short by fifty, if not by a hundred, thousand men of the number requisite—not only for speedy success, but for fair share of honour?

We think that there are three causes for this state of things:—*first*, that, without a conscription, it is impossible for the nation to compete with Trade and Industry in offering sufficiently high terms for a supply of men; *second*, that in our voluntarily-enlisted army we do not offer fair play to the best men, or hold out to them the prospect of high promotion as the reward of zeal, bravery, intelligence, and good conduct: and *third*, that by the operations of a social system, partly caused by the laws relating to the tenure and occupation of land, and partly by the aggregation of large masses of men in our great towns, there is no longer such a body of hale, able-bodied, brave, and active peasantry as existed in England, Scotland, and Ireland, so lately even as the close of the last war.

A few words on each of these heads will enable our readers to form something like a clear conception of the difficulties which during the present war have prevented Great Britain from organising an army sufficient for her needs. The subject of a conscription may be easily dealt with. As often remarked, it is alien to our habits, and to the free spirit of our people, and would not be endured unless an invading enemy were in sight of our shores, when the same free spirit would render it unnecessary. Until the hour of such danger the subject may be dismissed. We shall have no conscription for our distant wars were Russia ten times as strong, and fifty times as obstinate as she is.

With regard to the second point, it is beginning to be generally acknowledged that we have never yet done justice to our soldiery. The aristocratic element that pervades British society is one that cannot be destroyed; but, as we do not in the serious business of life or death trust to aristocracy to help us, neither should we trust to it exclusively in so serious a business as war. Who will call in an aristocratic physician—if such a person there be—to help him through a dangerous illness? Who will submit his limb to the amputation of an aristocratic surgeon? Who will confide his complicated affairs to the management of an aristocratic solicitor? None;—unless the hopelessly stupid or fatuous. In such emergencies we look for skill and merit to aid us, and care nothing for a man's birth or connections, provided he have the ability which we require. In the business of war we ought, if we were wise, to act upon the same principle. How can we expect the flower of our youth and manhood—our men with strong hands, resolute hearts, and high ambition—to enter into our service, unless we open up to them the fullest advantages and highest rewards of the military career? If the man of genius and of plebeian birth is not to rise by his merits, as he would in the civil and open professions, he will avoid the army as he would suicide, and become physician, lawyer, shoemaker, tailor, or even ticket-porter, rather than a soldier. The war, young as it is, has already taught us this lesson; and mischief may even yet befall us, if we are too obstinate or too careless to profit by it.

The third point leads to a far larger and far more important question. Have we the same "raw material" for our armies as we had before the forty years' peace that was conquered at Waterloo? Let us hear upon this subject the statement of a writer in the current number of *Blackwood's Magazine*, who in an article entitled "Our Rural Population and the War,"—full of melancholy and, we are sorry to believe, indisputable facts,—proves the gradual but sure decrease of the numbers of the peasantry, not only of Ireland and of Scotland, but of England also, under the operation of social laws which either force the bone and sinew of the people to emigrate from their native land, or to congregate together in large towns for absorption amid the great wheels of monster manufactories. "Take," says the writer,

> "The northern half of the kingdom first,—and what do we find? *One-half of the parishes, and two-thirds of the area, of Scotland are decreasing in population!* The fact, which we may well call astounding, is established by the last Census Returns, and is acknowledged by all parties to be indisputable. Over two-thirds of its extent, Scotland has suffered a positive diminution in the number of its inhabitants,—a diminution not merely relative (that is to say, with reference to the increase of the population generally), but absolute,—the population in those parts falling short of the amount which it once reached. And what deserves to be noticed is, that the decrease is most apparent *throughout the rural districts*. The wastes of Sutherland, the black mountains of Argyll, are hardly (if at all) decreasing faster than the populous and green districts of the Lowlands: than the green hills of the Border, or the smiling region of the Kitrick and Yarrow. Beside Teviotdale with its sunny haughs, and the sheltered valley-land of the bright-running Tweed, exhibit the same phenomena as do the bleaker valleys of the Nith and the Spey. 'The Flowers of the Forest are a' wede away!' The lament for the loss of the bone and sinew of the country after the disastrous fight of Flodden may be renewed now with still more justice and not less regret. War made the first clearance. Peace and false theories have done the last. War has swept away its thousands, but Peace has taken away its tens of thousands. The so-called 'progress of society' is sweeping our peasantry from the fields. The acres which their fathers reared or owned are now merged in the *latifundia* that are creeping over the country; and they themselves have either emigrated, or gone to swell the pauperism and sink into the physical degeneracy of the factory towns. A Juggernaut civilisation is crushing them beneath the wheels of its onward car.
>
> "It is hardly a century since a rebellion of the Highland Clans sufficed to shake the British throne to its base—where is that host of matchless soldiers now? We have it on record that in 1745 there were upwards of 30,000 able-bodied claasmen in the Highlands, fit for home or foreign service—every man of them, alike in frame and spirit, a warrior. There is not a tithe of that number now; and many districts which furnished their 500, 700, or 800 soldiers in time of the wars, are now without a single human being in them but a shepherd or two and a brace of gamekeepers. Even the Western Isles, now noted only for their poverty, were once a nursery for brave soldiers; and it is stated that the Island of Skye alone furnished, during the Peninsular War, no fewer than 21 Lieutenant-Generals and Major-Generals, 48 Lieutenant-Colonels, 600 Majors, Captains, and subalterns, 10,000 foot-soldiers, 120 pipers—besides 3 persons for the public service, 4 Governors of British colonies, 1 Governor-General, 1 Chief Baron of England, and 1 Judge of the Supreme Court of Scotland. The cottages and the cairns are now herried to make way for grouse and deer: and, so far as the production of food is concerned, food available for the ordinary purposes of life—hundreds of thousands of acres that once grew, and supported soldiers enough to make who were stopped, might as well be sunk in the bottom of the sea. Not only are they not cultivated, but, in some cases, they are not even to be seen."

"But it is not the Highlands only that have been depopulated. The diminution of the rural population is almost as great in the Lowlands. In the five Highland counties of Argyll, Inverness, Perth, Ross, and Sutherland, 156 out of their 211 parishes show an actual decrease—a proportion one-fourth greater than that exhibited by the country generally; and in the rural districts of Sutherland there is only one person to each 50 acres—being the thinnest population in Scotland. But even in the most fertile of the mainly agricultural counties of the Lowlands more than a *half* of the parishes are decreasing in population. Excluding in both cases the town population, so as to get at the state of the rural population, we find that the population in the square mile in the shires of Selkirk, Peebles, Kirkcudbright, and Dumfries, is only a shade less sparse than it is in Inverness, Ross, Argyll, and Perth: and the population of the bleak isles of Lewis and Skye is nearly three times greater in proportion to their extent than that of the infinitely more fertile Selkirkshire."

And while such is the condition of Scotland, and while the sons of the brave men who fought with Wellington, and enabled us at that time to maintain our ground against the world, and raise Great Britain to that high position which she has since so gloriously held, have tilled and owned the fields of Western America, of Canada, New Brunswick, Nova Scotia, and Australia, what has happened in England? The same writer shall tell the story:—

"Turn to England, and we find the same sad spectacle. Between 1831 and 1841 not a single county (though many parishes) showed a decrease of population, but in the ten years which followed—namely, from 1841 to 51—as we learn from the last Census, no fewer than *twenty-seven entire counties have undergone a diminution!* [The writer means as regards the rural population only, and not the whole population inclusive of that in the great cities and towns.] If the abolition of the old system of tenantry and pauperism paved the way for the Highland 'clearances,' the incentive of the commons has not been without a similar, though lesser, effect upon the rural population of England. 'Both measures,' says Hugh Miller, 'had essentially the same result in one respect—essentially a different result in another. They both left a country population composed of a very small number of landed proprietors, surrounded by a dependent and almost subject tenantry, outside of which remained the mass of those who live by labour alone—those who have been cast loose from all interest in the soil, and who are regarded as chaff for the execution of work.' In England, it is true, the inclosure of the commons brought these lands into cultivation—unlike the corresponding measure in the Highlands which threw the lands *out of* cultivation. Still, even supposing that the produce after the inclosure was five or ten times greater than before, it was more advantageous to the peasantry (that is, to the great body of the rural population) to have only the fifth or the tenth as their own, than to be deprived of it altogether, and to see ten times the produce passing into the hands of the great landlords and great agriculturists. The landlords and farmers acquired wealth, the peasants went on the parish, and were supported by the parish rates.' Besides the decline in the numbers of the English peasantry, there has, we regret to say, been a simultaneous lagging behind in their comforts and condition. Take the case of Lincolnshire—the best-cultivated district in England and the very paradise of the agricultural labourer. Comparing the rate of wages and price of provisions in that county in 1797-8-9, the period ever which Arthur Young's report extends, with the rate current in 1846, when Mr. Clarke's prize-essay on the farming of Lincolnshire was written, we find that the labourer's command over the necessaries of life has remained stationary, if not retrograded, while the rental of the county has increased 87 per cent! Thus the only parties benefited by the improvements in farming and general progress of the county have been the landlords and tenants, while the farm-labourers are no better off than they were half a century ago. Can we wonder that our rural population should emigrate, when they thus find themselves stationary in comfort, while not only their employers, but every other class of the community around them, have immensely improved?"

These facts afford matter for grave reflection. To those who wish to study them at greater length and fulness than can be allowed in the columns of a newspaper we recommend the article in *Blackwood*. We shall return to the subject at a future time, convinced that the evil has not yet assumed such gigantic proportions as to be incapable of a remedy. The true materials for a great army are a free-spirited and stalwart peasantry. If there be no such peasantry left, we must either set about restoring it, or we must trust to other means than our armies for holding our place in Europe. Had we no navy, our situation would look darker; but, with or without a great army, we may still be confident that that true bulwark of our nation will, if we do it justice, enable us to hold our own, and justify our great pretensions by our still greater actions.

VISIT OF THE KING OF SARDINIA.

In our account of the visit of the King of Sardinia we described the reception his Majesty met with at Windsor. We now engrave the interesting scene at the foot of the grand staircase of the Castle. Her Majesty received her illustrious guest on alighting from his carriage at the grand entrance. The Queen was accompanied by the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, and was attended by the Duchess of Sutherland, and the Ladies in Waiting, the Officers of State of her Household, and the Gentlemen in Waiting. The Duke of Cambridge, Viscount Palmerston, and the Earl of Clarendon were also at the grand entrance.

The King of Sardinia and her Majesty the Queen passed up the grand staircase, followed by Prince Albert, the Prince of Wales, the Princess Royal, Prince Alfred, the Princess Alice, and the Duke of Cambridge, and were conducted by the great Officers of State to one of the State rooms, where the Queen and Prince presented to his Majesty the ladies and gentlemen of their Court, and the King introduced the noblemen and gentlemen of his suite to the Queen and Prince. The walls and staircase are of stone, but the lantern and ceiling are not of the same durable material, being of wood, coloured to represent stone. They are framed into panels by mouldings enriched with bosses at their intersections, the bosses being somewhat of the plainest; and there are fleurs-de-lis at the lower part of the panels. The mouldings to the ceiling are extremely bold and simple in design, and indeed the architectural features generally are more distinguished for their massiveness than ornateness of character. On the landing of the stairs, under a deeply-recessed arch, is a splendid statue by Sir Francis Chantrey of George IV., forming a colossal and appropriate ornament to the staircase. It is a principal object in our View. At the head of the stairs on each hand are glass doors, on the north side, communicating with and giving light to the State ante-room, as we have mentioned in our notice of that apartment; and on the southern side similar glass doors open on to the back staircase. The balustrade to the stairs is of stone, pierced, with foliated-headed arches, to correspond with a series of arches skirting the walls at the head of the stair.

ANNUAL SCHOOL-FÊTE.—The day week the second annual [illegible] took place, by the young gentlemen pupils of Mr. West, Esq. The concert was under the direction of W. H. Birch, Esq., and the several pieces were admirably executed. At the close of the entertainment the captain of the school, Mr. Hardy, presented, on behalf of the pupils, an elegant timepiece to Mr. Birch, "as a testimonial of their esteem for the diligent discharge of his duty as a teacher of music and singing."

A grand banquet is to be given on Monday, the 17th inst., at Brussels, by the Belgian exhibitors, to the members of the Jury and the Directing Commission of the Paris Exhibition.

It is said that Mme. Goldschmidt has accepted an engagement to sing in Liverpool at two concerts, one to be held on the 4th and the other on the 7th of January.

FOREIGN AND COLONIAL NEWS.

AMERICA.

The mail steam-ship *Pacific*, which left New York on the 28th ultimo, arrived at Liverpool last Saturday night.

The New York papers are still almost wholly filled with matter having reference to the recent reported misunderstanding between the Governments of Great Britain and America, but the additional facts they furnish are meagre. We give below the following despatches from Washington:—

Nov. 20.—Having made inquiry to-night at head-quarters, I am authorised to contradict, emphatically, that the President has received any demand from England for the redress of anything growing out of the Crampton case. I am also authorised to state that Lord Clarendon says, explicitly, that the only object of the fleet is to intercept privateers.

Nov. 22.—Mr Secretary Dobbin has addressed a letter to Mr Crampton, tendering the thanks of our Government for the generous promptness with which the British Admiral, Johnston, on the coast of Brazil, recently placed the British steamer *Trident* at the service of Commodore Slater, to search for the missing boats containing the crew of the American ship *Cleopatra*, abandoned at sea.

The President's Message will show that Lord Clarendon has never attempted, even, to answer Mr. Buchanan's last argument on the Central American question; but when, in September, he pressed him to answer, Lord Clarendon declared the correspondence closed, declined to reopen it, and indicated the determination of Great Britain to construe the treaty as not applying to her Bonton Colony. There is little doubt that Great Britain would yield the Mosquito Protectorate, if we would submit her claim in Ruatan.

The Americans seem to consider that the recent augmentation of the West India squadron was prompted by the receipt of news of the seizure of the brig *Maury* in New York, and the view is supported by the following:—"The *Maury* affidavits were taken on the 10th October. They were evidently transmitted at about the same time, and reached London probably on the 22nd. Immediately thereafter a large additional force was ordered to the North American stations, and the London journals of the 22nd, 24th, 25th, simultaneously blew their ferocious war blasts."

With reference to this vessel the New York papers publish the report of Attorney-General Cushing to Mr. Marcy, on the result of his inquiries concerning the barque *Maury*. It appears from this document, that on the 11th of October the British Minister at Washington made a communication to the United States Government, founded upon a series of affidavits, namely, one by Mr. Barclay, setting forth that he believed, and expected to be able to prove, that the *Maury* was built, fitted out, and armed, with intent to be employed by the Russian Government to cruise against the subjects of Great Britain, and that he stood ready to bring forward proofs thereof; another by J. N. Cornell, a police-officer of the Seventh Ward, New York, describing the build, equipment, armament, and cargo of the *Maury*, and concluding with expression of belief that she was built, armed, and equipped by the Russian Government for war purposes against Great Britain; another from a person named Craft, a police officer in New York, who briefly describes the visible armament of the *Maury*, and expresses his belief that she is a vessel of war; finally, the affidavit of Mr Edwards, counsellor-at-law in New York, who says that he verily believes that the *Maury* was built, equipped, and loaded by and for the Russian Government, to be used in the present war against the vessels and subjects of Great Britain. Mr. Edwards then proceeds to state that a person who he believes has been in the pay of the Russian Government gave him a full explanation of the armament and destination of the *Maury*. He (Mr. Edwards) gathered from the person referred to that the plan of the *Maury* was to attack and capture one of the Cunard British mail-steamers, arm the prize, and, after being joined by other vessels of the same construction, built and fitted out by the Russian Government, to proceed to attack the "British Possessions" in the East Indies.

Mr. Cushing then relates the result of the examination into the circumstances, and says:—

> It appears that the *Maury* was owned in part by Messrs A. A. Low and Brother, who have afforded satisfactory information as to her construction, character, and destination. They make affidavit that she was built and equipped for trade with China, having, in addition to the ordinary armament of vessels in that business, only two deck-guns, deemed requisite on account of the increase of piracy in the seas of China. It further appears by these explanations that the statements made as to the guns and munitions of war and extra spars on board the *Maury* were inaccurate, to use the mildest admissible expression; that the armless as to the allegatry of her character are not sustained by proof; that she is in fact advertised for general advertisement, and receiving cargo destined for Shanghae. Neither Mr. Barclay nor Mr. Edwards brought forward any evidence to contradict these facts. On the contrary, Mr Edwards has, in a letter addressed to Mr McKeon, expressed the intention of dismissing the libel; which is also recommended unreservedly by Mr. McKeon. Under these circumstances, it affords me pleasure to enable you to give assurances that the Cunard mail-steamers may continue to enter and leave our ports without apprehension of being captured by the *Maury* and converted into Russian men-of-war for the purpose of depredation in the East Indies. * * *
>
> I am, very respectfully, C. CUSHING.
>
> Hon Wm. L. Marcy, Secretary of State.

Great preparations were being made for the assembling of Congress, which would meet in a few days. The general belief was that Governor Cobb, of Georgia, will be chosen Speaker of the House.

The danger of a collision between the Federal Government and the Free States Government of Kansas is imminent. The Free States Convention have adopted a constitution, which is to be approved by the Anti-Slavery voters on the 15th of December, and put in operation in January.

The *New York Journal of Commerce*, referring to the enlistment question and the rumoured recall of Mr Crampton, the British Minister, regrets to learn that it is the determination of the Administration to make that gentleman the expiatiting victim of the offence alleged to have been perpetrated.

An Irish aid meeting was lately held in Richmond. It appears that the movement had taken a firm hold on the minds of a large number of people there; and it seems, from the tone of the resolutions adopted at the meeting alluded to, that the spirit evoked is not likely to die out soon. A delegate was elected to attend at the Convention to be held at the Astor House, in New York, in December. It was said that, if the organisation failed to liberate Ireland, it will be perpetuated as a political counterpoise to Know-Nothing hostility towards emigrants from that country.

By the arrival of the steam-ship *Daniel Webster* at New Orleans advices have been received from California to the 6th ult. The mining news is of an encouraging nature. The Indians in Oregon were continuing their depredations on an extensive scale.

An additional force of 900 men had left San Francisco to join Colonel Walker, who still retained quiet possession of Granada and the transit route. He was daily receiving accessions. On the 13th Mr. Wheeler, the United States' Minister at Nicaragua, formally recognised Walker's Government. General Corral had been found guilty of treason and shot, and Espinosa had been banished. Colonel Manley remained at Greytown, but fifty of his followers had joined the Walker party.

From Mexico the dates are to the 18th ult. General Alvarez had entered the capital with 5000 men, the garrison having evacuated, and a cordial feeling existed between the General and Vidaurri.

THE AMERICAN PRESIDENT'S FORTHCOMING MESSAGE.

A private communication from Washington enables us to anticipate the substance of this important State document, which will probably be received in London on Monday or Tuesday next. The Message, in adverting to the great contest now going on in Europe, will assure the citizens of the Union that Government, abiding by the maxim of Washington, have refrained from intermeddling in the affairs of Europe, and avoided "entangling alliances." In reference to the disputes with the United Kingdom, it will announce that the misunderstanding with regard to the affairs of Central America has unhappily not yet been settled, but that there is every confidence that the good sense of the people of both countries may enable the two Governments to arrive at that much-desired result. With regard to the late recruitment of the West India squadron it will state that the fleet is to remain. It is explained to the American Minister at their Court that the object of the reinforcement was the protection of the West India Islands, and of British merchantmen, against privateers, it having been reported that vessels were fitting out in some of the American ports to sail in the capacity, under a neutral flag. The correspondence on the subject is still carried on, but with every prospect of being brought to a satisfactory conclusion. The Message will recommend improvements in the military organisation of the States, and direct the formation of a staff for purposes of discipline and practice in different parts of the Union. This will be commended, as much from considerations of internal security as of external defence. The Message will reprobate all attempts at filibustering, and threaten with punishment those who may be taken while engaged in such unlawful expeditions.—*Morning Advertiser*.

THE WAR IN THE CRIMEA.

The accounts from the seat of war are growing more uninteresting every day, and each successive arrival only makes matters worse. Winter is ever approaching, the process of but building is always going on, and Sebastopol is still being demolished. The only novelty in the most recent letters is that the northern forts had been firing rather more briskly of late. The *Journal de St. Petersbourg* of Dec. 4 publishes the following:—

Under date 1st December, Prince Gortschakoff has sent the following message:—"Everything goes on well in the Crimea—there is nothing new. An enemy's picket has been surprised on the south side: on this occasion ten Frenchmen were captured."

It was lately stated that the effective of the French troops who are to winter in the Crimea had been reduced. This is an error. The soldiers returning from the East had been already replaced, and whole divisions were on the road to Constantinople before the Imperial Guard had quitted Sebastopol.

The *Moniteur* of Thursday announces that the Minister of War has received the following telegraphic despatch from Marshal Pelissier:—

SEBASTOPOL, Dec. 8, 1 P.M.

I have received the following despatch from the General in command of the 1st division of the 1st corps:—"A body of from 2000 to 3000 infantry, and about 400 or 500 horse, at daybreak this morning attacked Bags-O'rkousna-Skvaka. The enemy beat a retreat after a sharp fusillade, which lasted for an hour and a half. Some 30 prisoners were left in our hands, two of whom were officers. I am not aware of the number of killed and wounded. Our loss is insignificant."

The Russian organs throughout Germany are vaunting the preparations that Russia is making to renew the war in the spring. They state also, that, as soon as the Sea of Azoff is frozen over, the Russians will make an attempt on Kertch and the other positions of the Allies in that quarter of the Crimea.

FALL OF KARS.

The *Morning Post* states that authentic intelligence has been received which leaves no doubt as to the fate of Kars. Ismail Pasha (General Kmety), and another officer, who succeeded in eluding the vigilance of the Russian cossacks, are said to have effected their escape. When they quitted Kars, General Williams had been compelled by famine to send a flag of truce to the Russian camp, offering capitulation.

The *German Frankfort Journal* says:—Selim Pacha has been compelled to renounce his attempt to relieve Kars, because his detachment of 8000 regulars and 5000 irregular troops, which was to guard the great convoy of provisions destined for the besieged town, was too late to pass the defiles occupied by the enemy. In Kars the distress was at its height for famine and typhus ravaged the garrison, which only received a third of its primitive rations. The garrison did not hope to be able to maintain themselves beyond the 18th of November, when they would be forced to surrender if not succoured."

The date of this communication is November 3, and we have news up to November 19, when we know Kars had not fallen.

The Russian paper *Cavcasus* contains a letter dated October 30, before Kars, which speaks of the Russian mounted militia having captured fifty-five Turkish horses almost under the batteries of Kars on the 24th of that month, together with the arms which the Bashi-bozouks and the regular cavalry had thrown away in their flight. In the night from the 28th to the 29th the Cossacks intercepted a courier, who was on his road to Kars with six men from the Pachalic of Erzeroum, carrying the mail. The letter-bags have, of course, been opened; they were found to contain a number of English, French, German, Greek, Armenian, and Turkish letters, as well as some official documents and numerous missives of less importance. It is said that they allude for the most part to the critical condition of the fortress, and betray information as to the intention of the Turkish commanders (?) On the morning after the capture of the courier a number of private letters were found near the spot where the affair took place, in one of which it is related Mrs. Anna Thompson in London expresses to her son in Kars her apprehension of provisions failing in that town, and sends him some visiting cards. With a prophetic foresight of the fate that awaited the courier, Mrs. Thompson had directed her letter "To General Mouravieff, and in case the mail should escape his spies to be delivered to Captain Henry Thompson, in Kars." In this letter, also, this thoughtful and affectionate mamma begged the Commander-in-Chief to have the goodness to forward her letter and her little packet to her son at Kars, as all has turned out as she had expected, so also the prayer of her petition has been granted The Russian Commander has sent Captain Thompson his letter and his visiting cards.

A letter from Soucheum Kaleh, dated Nov. 18, in the *Moniteur*, says:

Omer Pacha is at Zongdidi, where he is awaiting supplies to continue his operations. His troops have occupied Si-naki, opened communications with Redout-Kaleh and Anakles, and advanced towards Kutais. There is every reason to believe that another engagement will take place on the banks of the river Zoounts-Kaleh, and that the Russians will obstinately defend the passage of the Rion at Kutais, where they have no doubt concentrated the small force left disposable in Georgia, in consequence of their operations against Kars.

The *Constitutionnel* publishes a telegraphic despatch, dated Berlin, Dec. 7, which says:—"The Russian journal the *Caucase* states that General Lonsiloff had been under the necessity of sending a detachment of troops towards Van and Allagh Dag, to put down a revolt of the Kurds against the Russians."

THE RUSSIAN DIFFICULTY.

The following telegraphic despatch from Berlin shows that the Russian Government is beginning to feel the pressure of the war in a way which no *Invalide Russe* bulletins can disguise:—

BERLIN, Wednesday, Dec. 12.

Yesterday the house of Mendelssohn here opened subscriptions for a new Russian Five per Cent Loan, at 86, with but little success.

A despatch in the *Post*, from Hamburg, Dec. 12, says:—

A Russian loan of 50,000,000 roubles (nearly £8,000,000) is issued at 82, bearing 5 per cent interest. A money panic has commenced in Russia. At Moscow, Nishni-Novgorod, Astrakan, and other places, bank-notes are refused

THE OVERLAND MAIL.

The steamer *Australia* arrived at Trieste on Monday morning. The India mail had arrived at Alexandria, with advices from Calcutta of the 8th of November and Bombay of the 16th of November. The Santhal rebellion was being put down by martial law. The Bengal army had been strengthened by 6000 men. The Governor-General was at Madras on his way to Burmah. The India mails could not leave Alexandria till the 6th of December.

IMPORTANT IF TRUE.—The *Ceas* of Cracow states positivelythat it is the intention of the Russian Government to effect the immediate emancipation of the serfs of the whole empire. The Emperor personally is favourable to the measure, and the land-owning aristocracy who have been sounded offer no opposition.

THE HANGO MASSACRE.—A despatch from Lieutenant Genestè, giving the details of the Hango massacre, has been communicated by the Admiralty. The despatch is calm and business-like, but it adds little to our information on the subject. However, it brings out clearly the fact that the murderers of the boat's crew were not irregular militia, but grenadiers of the regiment which the King of Prussia is Colonel; that Lieutenant Genestè and Mr. Sullivan were bound tightly with cords after their capture, and laid on their backs in a cart; that the seamen, wounded and unwounded, were compelled to walk by the Cossacks, who struck them with their lances; and that the officers of a Russian regiment at Eckness, disgusted with the treatment of the prisoners, cut the cords that bound them. One Russian officer present at the capture shook his fist in the face of Genestè, who was all the time held by eight or ten men. It is clear from this despatch that the ambush was prepared.

ITALIAN POLITICS.—Signor Manin has addressed a letter to the Piedmontese existing committee, but it appears that the committee has unanimously expressed their favourable to the national aspirations of Italy, and asking for a similar expression of opinion from the Italian press. He says:—"The Italian people require freedom for themselves, the enjoyment of a complete national existence. They cannot, therefore, to desire as, indeed, they do desire—the return of their independence of Italy, but their efforts are partly shackled by a fatal prejudice. A phantom stands in their path—they shall not speak differently to their countrymen from what they say to foreigners, lest they should be taxed with the want of that grand contingent, and ever will, more than the half of Italy, by reason of its very valour, at least. The Italian cause is not to be carried in its grand and legitimate pride, France and England, those leaders of European civilisation, must be, and are, inaccessible to any sentiments of rivalry or envy with respect to any nationality; and, in the might of their manful intelligence, they understand that their grandeur and prosperity must gain by the increasing grandeur and prosperity of their neighbours. My conviction on this point is firm; but it would be powerless for the refutation of the error which I have pointed out were it not supported by the organs of public opinion in France and England."

NOTES OF THE WEEK.

THE King of Sardinia has returned to his own dominions, no doubt with increased determination to carry out the policy which has made him the friend of the two great Powers of Europe, and guaranteed his throne to him amid the coming shaking of the nations. The ultramontane party in Ireland and in France have been greatly bewildered to know how to deal with a Sovereign with whom, under other circumstances, they would have dealt savagely enough. King Victor has reformed the Church, and swept away the rabble of friars, monks, and other parasites that render the religion of Italy something worse than a superstition, and for this he is under the "serious displeasure" of Rome. For, be it noted, the wrath of Rome is of a very elastic character, and can, according to the demands or permission of the times, be either gentle rebuke or fiery excommunication. Had Victor Emmanuel shrunk from joining the Allies and remained neutral, Rome would not have been afraid to launch at him all the fireworks of St. Angelo. But, as it is, infallibility knew better; the French bayonets in Rome presented significant hints that the evil King had good friends—and so the officious, which, if Papal dogmas are anything but shuffling jesuitry, ought, in accordance with the teaching of the Church, to have been terribly punished, are skimmed over, and the Romish representatives, here and in France, are obliged to pay every religious attention to the Church reformer. They growl viciously in newspapers, but they crouch in public; and their anger manifests itself in abuse of those who, humbly and for the sake of information, ask on what principle the severe displeasure of Rome produces prayers and compliments in Paris and London. The vaunted "bonds of the Church" must surely be india-rubber bands, and Cardinal Wiseman's "ecclesiastical Latin" must be in larger use than we knew of. Nothing equals the ingenuity of interpretation—the immortal instance in the "Tale of a Tub" is no caricature. The father bequeathed estates to his sons conditionally that they should never wear lace on their coats. Lace came into fashion, and then they discovered that the word they had supposed to mean "lace" meant, in some old Hebrew manuscript, rather illegible, "a broomstick." It was objected that this could not be the father's meaning—it was absurd, nobody ever wore a broomstick, it was "non-natural reading." Upon this the objector was abused as profane for bringing his human reason to bear upon such a matter, and out came the brethren in the best lace to be bought in France. The broomstick principle of interpretation is not lost, either in Rome, or nearer home, when awkward words come awkwardly in the way.

The singular poison case, in which Mr. Wooler was committed, in August last, for the murder of his wife by continuous dose of arsenic, has just terminated, after a long trial at Durham, in the acquittal of the accused person. The inquiry was very elaborate, but the Judge (Mr. Justice Martin) evidently summed up for the prisoner, and, after the verdict, intimated that he would have interfered earlier, but that he thought it best the case should be heard to the end. He added that, if he had to make a surmise, his "fancy" would have lighted upon another person than the husband. By an exhaustive process, it is possible to arrive at a species of impression as to the individual to whom suspicion will, by some persons, be transferred; but the case is still in mystery, and it is far from impossible that a second investigation may take place. It is proved, and more than admitted, that the poor lady was destroyed by the mineral poison in question, gradually and skilfully administered. The medical witnesses were very roughly handled: it is matter of remark that the Bar, have the same kind of feeling towards the other profession that the fishermen on the coast have for the dog-fish, and that whenever a doctor is caught by a lawyer he is tormented. But in this instance the medical men were subjected to something graver than mere forensic castigation. The prisoner's counsel spoke of their "shameful conduct;" and the Judge, though not adopting such language, censured them severely by implication. Yet, in justice to these gentlemen, be it said that they were placed in a situation requiring a singular and painful discretion. Doubtless, their duty, when discovering that poisoning was going on, was to take the rough-and-ready course of calling in the police. But they knew, at least believed, that their doing so would have at once slain their patient, whom they imagined they could preserve by silently fighting the murderer across the death-bed. After what has occurred, and after the intimation from the Judge that the criminal has yet to be looked for, it is probable that, on the second occasion, Justice will not make her search in vain.

The "Redemptorist Father" who was tried for burning the Protestant Bible has been acquitted, for want of proof that he knew what he was burning. It is alleged that his intention was only to consume a quantity of "immoral works" of a secular character, as certain histories written in a Protestant spirit, and the penny publications that guide servant-maids in their choice of sweethearts, creeds, and colour to remove freckles. It was suggested that, as the inflammatory Father had to convey these wares for some distance, a malicious Protestant might have dropped the Bibles into the heap, *in transitu*, in order to get up the present charge. Ah this was possible, though no human being, either Catholic or Protestant, believed it for a moment, and the law could do no more. The Attorney-General. Mr. Keogh, spoke well, and it was hardly to be expected that, as a Catholic, he would have gone to work and demolished the strolling friars, as Mr. Whiteside, Q.C., would have done. The Government has done all that was proper; and, though a month at the crank might have done Pecherini no harm, it is far better that the scrupulous demands of law should have been complied with, than that a conviction should have been irregularly obtained. The lower order in Dublin are wild with delight at the escape of the priest, an ecstasy partly national (for the Irish peasant always likes to see an accused person get off, innocent or guilty), and partly fanatical. One sympathiser carried his delight so far as to commit a brutal assault upon one of the witnesses, and this indiscretion transferred the honours of martyrdom from the priest to the layman, for as it was difficult even for a Redemptorist's tool to prove that he did not know what he was hitting, and that a Protestant showed himself in the way in order to get up a prosecution, he was handed into gaol for three months' hard labour. He will, however, be favourably mentioned from a good many altars during his martyrdom.

The insecure state of the metropolis in regard to robberies with violence is a subject of alarming interest, and, now that the dark cold nights have come on, it really behoves those whose lives have any real or supposed value to beware how they pass along unfrequented roads or solitary streets. You seldom join a social circle in which one or more of the party has not to tell of some outrage, more or less violent, within his own knowledge One will tell you that in St. John's Wood a friend of his was felled by a blow from a man who pretended to wish to know his way; another will report that he was trapped up in a court near St Martin's-lane, kicked, and robbed; and a third will inform you of an attempt to garotte him within a few doors of his own house in the Adelphi. A lady will tell you that, being a few yards in advance of her husband, near the Regent's-park, a man rushed up from a by-turning and pushed her down, but took to flight on discovering that she was accompanied. These, and hundreds of similar cases, are unpublished; but the police cases where a ruffian has been captured can event that happens once in fifty times) will further illustrate the state of the metropolis in this period of high civilisation. We were rather better off in this respect in the days of King Alfred, when the criminal, taken in the fact, instead of being coddled and presented with tracts, and a ticket of leave was simply tucked up to the next tree. The British ruffian knows how many chances he has: first, he may not be caught; secondly, he will not be convicted if magistrates, or any one else, can help him to escape; and thirdly, his sentence, should the worst happen, will be an agreeable retirement, in which fetters and flogging are unmentionable things, and where any gaoler who may take the liberty of annoying him will be indignantly put in his place. Such is the state of things, and it seems likely to be worse before long, as the ticket-of-leave men become more alive to the advantages afforded them.

PROROGATION OF PARLIAMENT.

HOUSE OF LORDS

Their Lordships met at two o'clock on Tuesday. The Lords Commissioners (the Lord Chancellor, Earl Granville, and the Earl of Harrowby) took their seats on the cross bench, in front of the throne.

The Commons having been summoned (the House being represented by Mr. Shaw Lefevre), the commission was read, and the Lord Chancellor rose and said, that, by virtue of the commission just read, he, in the name of her Majesty, declared Parliament further prorogued until Tuesday, the 31st of January, then and there to proceed with dispatch of business.

The Commons then retired, and their Lordships adjourned.

THE MONETARY REFORM COMMITTEE.

(From a Correspondent.)

THE meeting of currency reformers, metropolitan and provincial, held last week at the London Tavern, has appointed a committee to communicate with the Chambers of Commerce of the United Kingdom, with the view to national organisation. It has also been intimated that a bill for presentation to Parliament will be prepared within a fortnight; but this celerity of movement appears scarcely compatible with an extended consultation with the Chambers of Commerce, which must occupy considerable time. The simple proposition which has for many years been before the public, and which has been adopted by all the older students of monetary science, is to put gold at its market price in national legal-tender money; and if any departure from this principle make a false premium will arise. Bullionism has asserted, but never proved, that it is the essence of money to possess intrinsic value, and thus taken for granted the very gist of the controversy. The advocates of representative money insist that legal tender need not and ought not to possess any intrinsic value whatever, but that it is simply a token of value. Until these antagonistic preliminaries are settled, it is waste of time to talk about a true monetary system, and any argument on details must end in a verbal dispute.

The *Times*, on the 7th inst., calls on the committee "to settle the few cabalistic words to be engraved on the paper. There is a force and simplicity in the words 'I promise to pay £5 on demand,' which will not be easily matched by any more philosophic formula that we are aware of."

This has an air of smartness about it, and may probably satisfy superficial readers; but, on analysis, it will be found to be mere *ad captandum*, for it proceeds on the assumption that it is the essence of money to possess intrinsic value, and that legal tender can be made of no other material than gold. This is a sheer *petitio principii*, a begging of the question. A penny postage-stamp does not bear on its face the cabalistic words "I promise to carry a letter," and still it does carry a letter. It has no intrinsic value, but it has a conventional value derived from the authority of the State, which called it into existence for a special national purpose. That purpose it discharges. It will not, indeed, carry a letter from Paris to Bordeaux, or from Petersburg to Moscow, and it would be comparatively worthless if it did, for then it would be liable to exportation; and, if the number of these stamps were annually limited by the Post-office, of course those which remained after many of them had been exported would rise in price, and we might have to pay a shilling or half-a-crown for the transmission of a letter instead of a penny. We are preserved from this inconvenience and injustice simply because the postage-stamp is valuable at home, while it is valueless abroad; and, if our money were of a similar character, the export of gold would do us no more harm than the export of cotton or iron.

But are the cabalistic words "I promise to pay," which, according to the *Times*, contain so much "force and simplicity," words of truth or words of deception? Let us quote Lord Overstone's interpretation of "I promise to pay." Writing in 1840, his Lordship said:—"It is not sufficient merely to ordain, as Peel's Bill did (the Act of 1819), the convertibility of the notes; it is further necessary to see that effectual means are provided for that end. It is now discovered that there is a liability to excessive issues of paper, even while that paper is convertible at will; and that, to preserve the value of a paper circulation, not only must that paper be convertible into metallic money, but the whole of its oscillations must be made to correspond exactly, both in time and amount, with what would be the oscillations of a metallic currency, as indicated by the course of the bullion." In this passage we are told in plain terms that, if the Bank puts out a five pound note, it must always hold five sovereigns in its coffers to redeem its promise to pay. This we can perfectly understand; there is such an identity between the note and the bullion that the only fault we could find with the arrangement, as a theory, is the existence of notes at all; dismiss them altogether, and operate with bullion alone. That would be consistent, for, under this scheme, bullion is the substance and paper only the shadow.

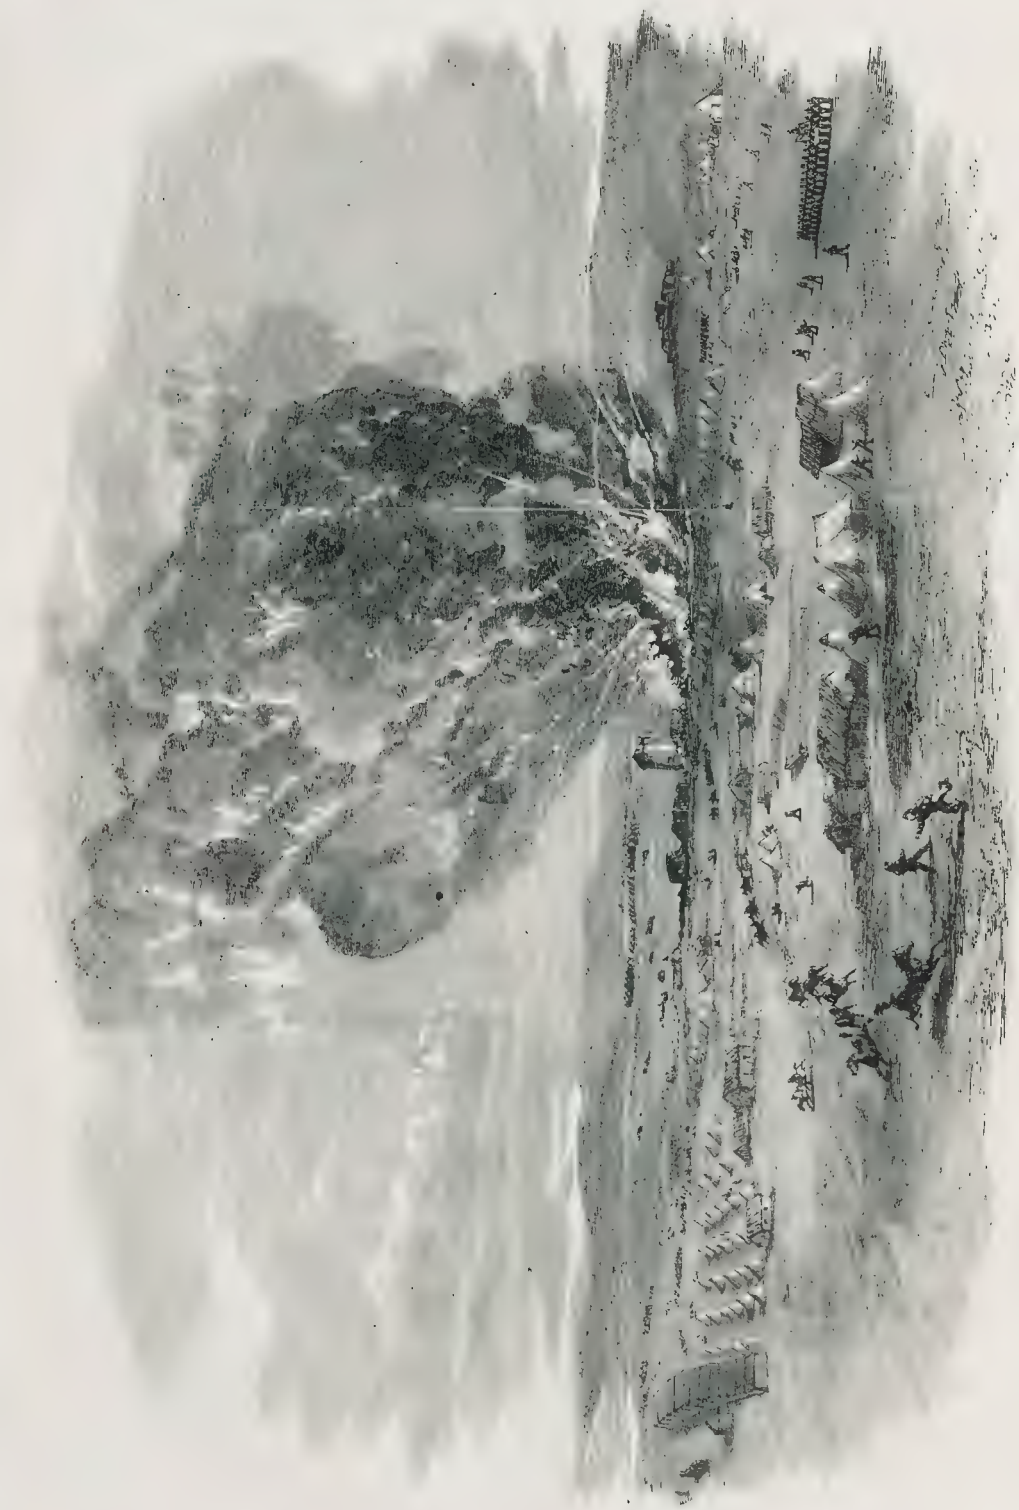
But is the system recommended by Lord Overstone embodied in the Act of 1844? Far from it. The Bank is allowed to issue fourteen millions of promises to pay without holding any bullion to redeem that promise, so that the cabalistic words are moonshine, or what is worse, sheer deception. If the Bank has twenty millions of outstanding promises to pay, she must hold gold for six millions, but need not hold a grain of gold for the other fourteen millions. All the notes, however, bear on their face the same engraving of "I promise to pay," though the Legislature has made no provision for such payment, and thus the public are deluded. But, if we look at the whole permitted circulation, we find that the promises to pay for which no metallic equivalent is held amount in round numbers to thirty-one millions: thus, the Bank of England, fourteen millions; English provincial banks, eight millions; Irish, six millions; Scotch, three millions. Surely this is not the plan of Lord Overstone. Surely this is not a practical response to the doctrine of Sir Robert Peel, who, on bringing forward the Act of 1844, expressed himself in the following terms:—"The whole foundation of my measure rests on the assumption that, according to practice—according to law—according to the ancient monetary policy of the country the meaning of a pound is neither more nor less than a certain quantity of gold, with a mark upon it to determine its weight and fineness; and that the engagement to pay a pound means nothing, and can mean nothing, else than the promise to pay to the holder on demand, when he demands it, a definite quantity of the precious metals." Why, then, allow the issue of thirty-one millions of notes not secured by bullion, and therefore inconvertible? Surely the Act belies itself.

. . . . Amphora coepit
Institui; currente rotâ, cur urceus exit?

The Bank is never in a condition to redeem its promises to pay; it always depends on the forbearance of its customers; but, when gold is being exported, it is not allowed to show any forbearance to the public. It must avail itself by decreasing all around it; but, if that decrease is not sufficient, it calls on the Government to suspend the law, and the Government complies—the very best evidence that the cabalistic words "I promise to pay" have a force which becomes paralytic, and a simplicity which amounts to deception.

The national note recommended as imperial legal tender would be of a very different character; nor would it have engraved upon its face "I promise to pay," but "I promise to receive." The Executive would put it into circulation by paying with it the salaries of all public functionaries, of the Army and Navy, the dividends of the fundholder, and whatever it might owe to contractors; and it would covenant to take back the notes, in discharge of taxes, at precisely the same value as that at which they had been issued. The promise to receive would always be fulfilled; whereas the promise to pay is a mere contingency. It reflects no credit on the honour of the press to persist in charges repeatedly denied, and to accuse its opponents of a desire to put out unlimited issues, when it is notorious that the advocates of imperial money rigidly limit the amount to the amount of annual taxation: it is unmanly to insist that this money would depreciate, since provision is made for its constant, even daily, redemption; and it is wilful misrepresentation to describe such notes as inconvertible, since the very condition of their existence would be their convertibility into taxes; or, if the holder chose, into gold at its *market* price

A RUSSIAN VIEW OF THE PEACE RUMOURS.—The rumours of peace, one day favourably received, are next day regarded with incredulity. Owing to what has been published in England and France about the exhaustion of Russia, many people are quite disposed to believe that Russia is suplicating peace. These good folks completely delude themselves. Undoubtedly Russia would prefer peace to war; she would gladly accept peace, but she does not sue for it as a beggar. Russia, to whom the war is inducing heavy losses, is not ignorant that it costs her enemies dear also, and she feels in herself a genial current quite adequate to the preservation of her full vitality, notwithstanding the bold attacks, or about to be, levelled against her. She does not underestimate the strength of her aggressors, but she knows her own strength of resistance, a strength increased tenfold by the feeling of national honour, by the enthusiasm of a people, and an army fighting in defence of their native land, in sight of God, whom they invoke, and in the name of the Emperor, who blesses them. Russia has done nothing, has said nothing, to authorise the belief that she will now go beyond the concessions she made at Vienna for the sake of securing the peace of the world. We repeat, and we do so without growing weary, that the armours of peace will be entitled to no sort of credit so long as the Western Alliance shall not have categorically laid down what the conditions are which in its opinion will render peace possible.—*Le Nord.*



THE EXPLOSION OF THE RIGHT SIEGE-TRAIN, NEAR INKERMAN MILL.—SKETCHED BY E. A. GOODALL.—(SEE PAGE 631.)

RUINS OF THE CHURCH OF ST. PETER AND ST. PAUL, SEBASTOPOL.—SKETCHED BY E. A. GOODALL.—SEE PAGE

RUINS OF THE CHURCH OF ST. PETER AND ST. PAUL AT SEBASTOPOL.

WE engrave the interior of this edifice as it appeared after the siege, when sketched by Mr. Goodall. We add the descriptive notes by a Correspondent who accompanied the Artist.

No building—of its class at least—excited more attention or admiration during the siege than that the interior of which is represented in Mr. Goodall's Sketch. Though stripped of its decorations, and bearing the marks of rough usage here and there on the outside from the artillery of the besieging army, it did not appear to have experienced at the hands of the Russians the same treatment as they gave all other parts of the ill-fated town with much impartiality. On the 27th of September, however, they seemed to have repented of their lenient usage, for on that day they sent a shell into it which converted it into a complete wreck. It was set on fire the roof was burnt and fell in; every particle of combustible matter in and about it was consumed; and it was reduced to the condition a literal copy of which is now seen in the Engraving The outside remains nearly as it was represented in the ILLUSTRATED LONDON NEWS a few weeks since, the roof and one column of the west front excepted. This column had been damaged by a shot during the siege, and toppled over during the burning of the roof. As Marshal Pelissier was close to the building when the shell descended, it is not unlikely that the missile in question was meant for him. It failed in its errand to a gallant soldier, but succeeded to admiration in making a most interesting ruin. Once an artist gets into it how it is no easy matter to get him out, it "composes" so well, and the lights, at the proper times of course, are so admirable. A gun from the redoubt to the right of Fort Catherine has thrown a shot just three feet below the window, through which a figure is represented looking through a telescope. It is a very nice ruin as it stands, wanting only ivy to make it perfect; and the Russian gunners would do well to let it alone, for another shell or two will assuredly spoil it.

The Illustration opposite that of the Remains above described shows the *Explosion at Inkerman*, which was narrated in our Correspondent's Letter in the ILLUSTRATED LONDON NEWS of Dec. 1; and was further detailed in our Journal of last week. The effect of the explosion is there described as if of an upheaving of the ground, and at the same time that a violent shock was felt from the concussion of the air:—"Almost instantly followed the loud report of the explosion; not sounding as if a single charge or magazine had been fired, and without the report of a salvo of artillery, but seeming rather as if a number of magazines had been discharged, so rapidly that all the reports were blended into one. Then came the sharp cracking sounds of shells bursting high in the air, the rush of fragments falling to the ground, and the loud bangs of shells which had been scattered and were exploding on all sides. The appearance from a distance is described as a swelling column of smoke, out of which shot rays of light, ascending to a great height, and these, curving and bursting with brilliant star-like centres of light, had the appearance of a magnificent display of fireworks."

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 16.—3rd Sunday in Advent.
MONDAY, 17.—Guy, founder of the celebrated Hospital, died, 1724.
TUESDAY, 18.—General Bolivar died, 1830.
WEDNESDAY, 19.—Dr. Darwin died, 1732. Tycho Brahe born, 1586.
THURSDAY, 20.—Gray born, 1716.
FRIDAY, 21.—St. Thomas.
SATURDAY, 22.—Holcroft born, 1744. Selby died, 1641.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING DECEMBER 22, 1855.

LIST OF ENGRAVINGS
IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

VISIT OF THE KING OF SARDINIA TO FRANCE AND ENGLAND:
Arrival of his Majesty at Windsor Castle—The Grand Staircase *page* 689
Investiture of the King with the Order of the Garter at Windsor Castle... 704
The Imperial Hunt in the Forest of Fontainebleau (Two-Page Engraving) 696-697
Grand Staircase at the Hôtel de Ville, Paris 705
The Château at Compiegne 705
La Curée aux Flambeaux—The Stag Given to the Hounds by Torchlight (Two-Page Engraving) 708-709
The Explosion of the Right Siege-Train, near Inkerman Mill 692
Ruins of the Church of St. Peter and St. Paul, Sebastopol 693
Plan and Section of the Redan 707
Memorials (Two Engravings) 693
Cocoa Plantation in the Island of Grenada 709
Cocoa Mill in Grenada 709
Plate for the Goldsmiths' Company (Five Engravings) 704
Portrait of the late Admiral Brue 712
Ballot for the Officers under the New Metropolis Local Management Bill ... 712

THE SMITHFIELD CLUB PRIZES.

Next week we shall engrave some of the finest specimens of the PRIZE STOCK and IMPLEMENTS at the SMITHFIELD CLUB SHOW; also Groups of Prizes from the BIRMINGHAM POULTRY SHOW; with other Illustrations of the Season. To be published with the Grand Annual Christmas Number and the Christmas Supplement, printed in colours.

ANNUAL CHRISTMAS DOUBLE NUMBER (1855) OF THE ILLUSTRATED LONDON NEWS.

On SATURDAY next, DECEMBER 22nd, will be published the

CHRISTMAS ANNUAL NUMBER
OF
THE ILLUSTRATED LONDON NEWS.

And, besides the usual attractions, a New and Beautiful Supplement will be given, containing

MAGNIFICENT COLOURED PICTURES
OF
The Angel appearing to the Shepherds. Drawn by John Gilbert.
London Returning from Church on Christmas Morning. Drawn by George Thomas.
Bringing in the Boar's Head. Drawn by J. Gilbert.
Singing the Christmas Carol. Drawn by Phiz.

ALL PRINTED IN COLOURS.

In addition to these, the ordinary CHRISTMAS SUPPLEMENT will contain, among others, the following Illustrations:—

The Monster Snowball.
Cold Without. Drawn by S. Read.
The King and the Jolly Miller. Drawn by John Gilbert.
Christmas Eve and Christmas Day. Drawn by John O. Clayton.
The Shower of Toys; a German Custom.
Conjuring for Children's Parties. By Professor Anderson, the Great Wizard of the North. With an Illustration
Christmas Cattle Arriving at the Tottenham Station, Eastern Counties Railway.
And a variety of other subjects appropriate to the season.

NOTICE TO THE TRADE AND THE PUBLIC.—No Copies can be supplied of this Double Number unless subscribed for immediately.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 15, 1855.

WE regret to record the surrender of the city of Kars. But our gallant countrymen, who yielded to famine, and not to the might of the foe, have withdrawn with all the honours, leaving to History to emblazon their names in her brightest pages. The result, as regards the possession of this fortress, though not as regards the imperishable renown of its gallant defenders, might have been different if Omer Pacha had not—through jealousy, miscalculation, and other mismanagement—been allowed to waste the whole summer in the Crimea; or if he had been dispatched even a fortnight earlier into Asia. But it is too late to deplore the check the Allies have received. Let us hope that Omer Pacha will yet be enabled to besiege the Russians, as they besieged General Williams, and to recapture the fortress.

Austrian diplomacy still gives signs of life. It appears that the recent talk of peace which has fluttered the gentle bosoms that congregate in the Exchange of London and the Bourse of Paris, and in the minor porticos of the temples of Mammon in other cities of Europe, was first heard in Vienna, and that the Court of St. Petersburg has made no sign of approval—much less of acquiescence. It is well that the public should know exactly from what source these and other pacific overtures have emanated, that their proper value, and no more, should be attached to them. While refusing to join in the ridiculous outcry against anything and everything that Austria may do or recommend, which we regret to see indulged in by a gentleman in the position of Sir Robert Peel, we cannot anticipate any success for her efforts at pacification unless she be secretly prompted by the Russian Government. There is no proof whatever that such is the case; nor is there any ground for the belief that Russia is not as obstinately disposed as ever to carry on the war, and as ignorant as the late Czar Nicholas was of his own weakness, and the real feeling of Europe. The anxiety of Austria to put an end to the war is both laudable and natural; but it is the misfortune of the Government of that country to mistake the means, in its intense love for the end. With such dangers and such large powder-magazines in its territories and on its frontiers, Austria cannot look with complacency upon the lighted torches which Russia, France, Sardinia, Turkey, and England are brandishing in every direction. Wise statesmanship and true courage would enable the Emperor Francis Joseph to rise superior to the difficulty of his position; but he is not up to the mark; and, hating war as earnestly as John Bright, though with a different motive, he does the utmost in his power to perpetuate it, by setting his diplomatists to talk, when he ought to be putting his armies into motion. Fortunately for the cause of peace, the Allies are neither to be thwarted nor delayed in their warlike operations by the palaver, honestly or dishonestly meant, of the statesmen of Vienna or any other place. If, while the war is working itself out by the cogent argument of the sword, Austria can induce Russia to accede to terms which the Allies will ultimately extort from her, with additions,—so much the better for Austria and for Russia; and so much the better, we are free to admit, to the Allies themselves, who have no wish beyond honourable peace, solidly guaranteed. There is no harm in Diplomacy if it do not lead the British or French Governments to relax in their preparations for the continuance of the war, or lull them into laziness by illusory expectations. Of neither of these things is there any fear. It may please the friends of Russia, as it pleases some of the wise men of Manchester, to imagine that Napoleon III. is weary of the war, and anxious—from financial as well as other reasons—to get out of it, *coute qui coute*,—but the truth is not so. Great and mighty as is the Emperor of the French, he could not make peace on terms inconsistent with the honour of his own nation or with the security of Europe. His sceptre would snap in his hands, if anything in his character could justify the suspicion that he prized peace beyond justice. There may be men—happily not in office—who aspire to rank as British statesmen, and who can talk as glibly as Old Bailey barristers in support of a wrongful and dishonourable cause, who hold such opinions; but the instinct—the heart—the sound common sense of the English nation are against them. A Ministry composed of such men could not stand for a week, if by any fatality the country could be outraged by its appointment. If we can have peace such as we *can* conquer, without conquering it, by all means let us have it; and gratitude will be due to the men and to the States who do the world such service. In the mean time we place more reliance upon the fleet of gun-boats that will appear before Cronstadt in the spring than upon the mellifluous soft-sawder of Count Buol-Schauenstein, or the amiability of Baron Brück, who governs the Austrian Empire upon the same principles as he would a chandler's shop. If Austria means peace, why does she disband her army?

THE astrologers are more dull this Christmas than ever. Their predictions are helplessly general—scarcely beyond the oracular *nous verrons*, and their "fulfilments" of last year's prophecies are sadly childish. Even Dr. Cumming beats them. Can they see nothing through the blanket of the dark? One would think that a very ordinary intelligence, acting on a very slightly-excited imagination, could make better guesses than our star-gazing charlatans. Really we cannot call it prophecy to warn the world that "about this time a noble family will experience trouble," or consider the augury satisfactorily interpreted by our being reminded, a year afterwards, that at the time specified "Lord Tom Noddy had the measles." As the Vicar of Wakefield said to his daughter, "Is that all you got for two shillings? Why, child, I would have told you a better fortune for sixpence." We think that for the latter sum we can furnish the world with a prophecy affecting most people who will read it.

Some years ago there was a railway fever very prevalent throughout these islands. It raged everywhere. Like something else, of which the classics tell us, it kicked at every door with an impartial foot. The Shaksperean line wanted but the elision of a vowel to describe the state of things: "All the world's a stag." Most of us remember those days, and their ending. The great Pan was not dead, and one of his terrible Fears came upon us all. Who has forgotten that time? Who has forgotten the Railway Panic? Well, is it impossible that, one of these days, we may have another? Where are the prophets? Where is Dr. Dee's stone? Where is the book, written in red letters on unbaptised skin, that frightens the noble family that owns it by falling from its Gothic shelf when anything which it foretels is about to happen?

The prophets are dumb; the stone shines not; the book is tranquil between its neighbours. Suppose, then, that we look out for ourselves.

The trine
Of waning planets bodes it not Decay?
Does Schedir's staff of diamond wave no sign,
Monarch of midnight, Sirius, pales thy ray?

But perhaps one need not look so far as the stars for the indications that are to guide our prophetic researches. *Sapiens dominabitur astris?* The signs and tokens lie near at hand, and, from an examination of them, we have little hesitation in predicting that at no distant date there will be another railway earthquake, of a character dissimilar to the last, but one which will be felt all over the country, and which will probably end—if the most favourable result occur—in a re-settlement of the entire system of steam inland traffic.

For to what is that system now drifting? Few persons read the reports of railway meetings except—and the exception is a formidable one—the individuals personally interested. Others glance along the column, and unless they observe a bit of very spicy vituperation, or an account of how the shareholders tempered the despotism of their manager by a shower of missiles, they pass the affair by. Yet, if they would be good enough to read and to try to comprehend the proceedings at these meetings, they would be led to the inference that things cannot stop in the state in which they are. Let us pass, for the present, the Great Western Railway, and its remarkable politics, and one or two other cases, and let us look at this unhappy Eastern Counties Line, of which much has been heard, but of which there is much more to hear. We gave, last week, a summary of the report of the committee charged to inquire into the misconduct of the manager and his subordinates, and this disclosed one of the most singular illustrations of the rotten thing called commercial morality which it is possible to conceive. The report has been called an *ex parte* statement, and to a certain extent it is so; much as the master of a house who comes down to the ground-floor, and finds his plate gone and his larder stripped, offers an *ex parte* statement when he exclaims that he has been robbed. However, everybody assailed by the report threatens to exculpate himself at awful length. They advertise and protest, and beg that judgment may be suspended, and so forth. We only wonder that Isaac Moses, or whatever may be the respected name of the "marine-store keeper" who is stated to have bought as "old stores" goods that had cost the company "40 per cent over market price," has not written to the *Times*. Has *he* nothing to say for himself when so many other good men are on their defence?

But, people reply, what do we care about the squabbles of the company? There always seems to be a riot at such meetings; but Bradshaw comes out with the list of trains as usual, and they start, and arrive more or less punctually. To be sure, we have accidents occasionally, as on the North Kent line last week, when "all the unfortunate passengers were more or less contused, and four were frightfully hurt—one having his legs so fractured that one of them had to be amputated, and his only chance for life lay in having the second off; while another had fracture of the thigh, and a woman had a dislocated hip." But these are small matters, and, when described in the pleasant but somewhat cold-blooded phraseology of the railway officials, we can hardly feel shocked at them. Mr. Secretary Smiles coolly writes next day that, *though* there was much alarm, "the *only* serious case was that of a working-man whose legs are fractured." Mr. Smiles knows what is serious better than the people who are hurt—and, as he says, it is only a working-man: as if working-men did not want their legs like other people! These casualties, it is supposed, have nothing to do with the quarrels at the meetings; and besides, the Eastern Counties secretary has anticipated terror, by advertising that the executive officers continue to carry on the working management of the railway "with the same efficiency as before," and (merry Mr. Owen!) the arrangements "for the safe and regular conveyance of passengers remain unchanged." That comforting assurance must surely shut all mouths. Everybody knows how proverbially efficient the Eastern Counties management has been; and, as for safety, it will never be known how many accidents passengers on that line and the London and South-Eastern have escaped.

This is, in some sense, an answer, and the best that we are likely to get. It is possible that a mismanaged company—its directors at sixes and sevens, its managers defying the shareholders, and its officials feeling, of course, all the responsibility which makes the servants of a disorganised house so regular and obedient—may pay that scrupulous attention to the details of railway management without which no man's life is worth half an hour's purchase after his purchase of his ticket. This is the age of miracles, and why should not one be wrought on the Eastern Counties Line? The line is itself a miracle, and has been one ever since the company spent between London and Colchester all the money that ought to have franked them to Norwich. But if affairs should take a natural instead of a supernatural course, and the result of confusion, jobbery, and mystification in the higher department should be carelessness and recklessness in the lower, and one of the hundred chances of railway life should go against the traveller—in a word, if a disastrous accident should occur, the public, for whom, after all, railways are made, will begin with a Panic, and end with something very like Lynch law. Once convince the people that life and limb (which they ignorantly value, despite Mr. Smiles) are jeopardised by jobbery, and in six months the railways will be in the hands of Government, with a railway stock open in Threadneedle-street. In the mean time things look very awkwardly indeed, and prophecy is too easy to be worth offering.

RUSSIAN PREPARATIONS FOR 1856.—Travellers on their way from Nicolaieff relate that the town is quite metamorphosed. The most important fortifications are at a distance of five versts from it, at the confluence of the Ingoul with the Bug. A triple circle of defensive works protects the approaches to the town, and 400 guns of every calibre are in battery. Whole streets of little houses have been razed, in order to make way for the barracks and hospitals, and the magazines for military effects and munitions have been built background. The Admiralty that was is now changed into a star fort, and after Admiral Lazareff. Everywhere proclamations actively is displayed, and the bridge near Varvarofka is perpetually blocked up with guns and loaded waggons. The Grand Duke Constantine inspected lately 80 newly-arrived mortars, with which the batteries on Spaseka Point are to be armed. His Imperial Highness was extremely pleased with the range and power of these pieces of ordnance, the carriages of which have been made according to the suggestions of General Todleben.—*Letter from Odessa, Nov. 27.*

FAILURE OF THE PEACE NEGOTIATIONS.

SINCE writing the article which appears in another column, we have been informed on good authority that the peace negotiations have finally come to an end. Certain propositions were made by Austria to the Governments of Great Britain and France—propositions which were not in any way prompted or authorised by Russia, but which, if mutually accepted by all parties, would, in the opinion of Austria, be sufficient to secure and consolidate the peace of Europe, and to free the Ottoman Empire from all future danger of Russian aggression. Of the specific terms of these propositions we are not informed, but we believe we are correct in stating that they included the banishment of all ships of war, of every nation whatsoever, from the Black Sea; the destruction of the fortress of Sebastopol, and of every other Russian fortress on the shores of the Euxine; the opening up of the Danube to the free commerce of the whole world—the cession of a slip of Russian territory at the principal mouth of that river sufficient to guarantee that object; the renunciation of all Russian protectorate over the subjects of the Sultan; and a prohibition against the rebuilding of Bomarsund or any other Russian fortress in the Aland Islands. We are further informed that these terms were not considered insufficient either by the British or French Governments; but were accepted as satisfactory, or nearly so, by both; and returned to the Austrian Government with a notification to that effect. Russia, however, to whom the propositions were submitted by Austria, considered them unpalatable, and notified to the Emperor Francis Joseph that they would not be accepted, or even debated upon—and so the matter rests. It is therefore evident that the war must proceed; and that Russia stands before the civilised world as alone responsible for the bloodshed, the misery, and the guilt of its continuance. There can be but one opinion as to the conduct of Great Britain and France on the occasion. Having it in their power to enforce at some future, and possibly at no distant, day much harder conditions, they listened with calmness and dignity to the proposals of a neutral Power, as desirous as themselves of restoring to Europe the peace it so sorely needs. They insisted on no dismemberment of the Russian Empire; they did not even moot the question of indemnity for the past; but agreed to propositions emanating from a quasi-neutral Power, which seemed to meet the bare justice of the case, without inflicting either indignity or punishment upon the wanton aggressor. And while their magnanimity will throughout Europe lend additional lustre to their names, if not additional strength to their arms the obstinacy of Russia will only serve to put her more clearly in the wrong, and to show her more distinctly in her true colours before mankind, as a Power deaf to reason and justice, and solely intent upon her own aggrandisement without reference to the rights of her neighbours.

And how of Austria? the reader will doubtless ask. Did that Power agree to draw the sword against Russia if her friendly mediation was rejected? And is she prepared to take that step? We cannot answer these natural inquiries. One thing, however, is evident to every person of honour and honesty which is, that Austria is by this infructuous negotiation pledged to the Allies still more solemnly than before. That Power must see that she cannot put an end to the war by her policy of peace. By a war-policy she could restore peace in three months. Is she so far gone in political senility as to be unaware of a truth, so obvious, patent, and palpable to all the rest of the world? With or without her, the war will run its course; and it will be well for her if she be wise in time and help to extinguish by her strong right arm the conflagration which, it must now be clear to her, the fairest worlds are unavailing to stay.

THE COURT.

The Queen and Prince, accompanied by Prince Alfred, Prince Arthur, and Prince Leopold, the Princess Royal, Princess Alice, Princess Helena, and Princess Louise, left Windsor Castle on Monday morning, at ten o'clock, for Osborne.

The Prince of Wales remains at the Castle, attended by Mr. Gibbs.

Viscount and Viscountess Palmerston returned to London on Monday, from a visit to the Duke and Duchess of Bedford at Woburn Abbey.

The Lady Bertha Hastings, second daughter of the Marchioness of Hastings, was married to Capt. A. W. Clifton, late of the Rifle Brigade, son of the late Mr. Clifton, of Lytham Hall, Lancashire, on Tuesday last. The following young ladies attended Lady Bertha to the altar:—The Ladies Victoria and Constance Hastings (her sisters), the Hon. Barbara Yelverton, Miss Chandos Pole, Miss Howard, and Miss Thorpe.

The *Hamilton Spectator* (Canada West) announces the marriage of Sophia, second daughter of the Hon. Sir Alan Napier M'Nab, to Viscount Bury, only son of the Earl of Albemarle, which took place at Dundurn Castle, the residence of the bride's father, on Thursday, November 15th. The Roman Catholic marriage ceremony, rendered necessary by the bride's adherence to that faith, was performed at an early hour in the morning. Shortly after eleven a.m. his Excellency Sir Edmund and Lady Head arrived at Dundurn from Toronto. The Lord Bishop of Toronto, assisted by the Venerable the Archdeacon of Kingston, uncle of the bride, performed the marriage ceremony of the Church of England. The bride was given away by her father. At the déjeûner, after the ceremony, the health of the newly-married pair was proposed by his Excellency the Governor-General.

THE MINISTER OF CRATHIE AND THE QUEEN.—Her Majesty has commanded the publication of the sermon preached by the Rev. Mr. Caird, of Errol, in Crathie Church, in October last, during her Majesty's sojourn at Balmoral. The sermon is entitled "The Religion of Common Life."—"It is no secret about Balmoral that Prince Albert expresses his high satisfaction with Mr. Caird's pulpit discourse and appearance by stating that he had not heard a preacher like him for seven years, and did not expect to enjoy a like pleasure for as long a period to come.]—*Aberdeen Herald.*

REPRESENTATION OF NORTH STAFFORDSHIRE.—A change is likely to take place in the representation of North Staffordshire by the resignation of Mr. Smith Child, which is contemplated. Mr. Hugo Meynell Ingram, of Hoarcross-hall, Staffordshire, has been solicited to succeed him in the Conservative interest. Mr. Ingram, however, has declined to be put in nomination, and Mr. Child's committee have requested that gentleman to reconsider his decision. Should Mr Child still determine to retire from the representation of North Staffordshire, Lord Anson will be requested to offer himself.

LATEST INTELLIGENCE.

THE PEACE NEGOTIATIONS.

The Paris correspondent of the *Post* (Second Edition), yesterday (Friday), writes:—

The best information in my possession at the present moment, as to the peace question, is this:—Russia has not officially commissioned, or commissioned, any propositions. Austrian diplomacy has made suggestions, which have been submitted to Paris and London. The Cabinets of France and England have requested that the said propositions for peace should be stated more clearly, and that they should also be fully sanctioned by Russia, before any attempt is made at negotiation. At this stage of the affair, Austria is supposed to have communicated with St. Petersburg, and so matters remain. Meanwhile, every little German Court is busy in talking, and the large ones in writing. You must expect to hear the movements of German diplomatic gentlemen converted into "missions." We are at a period when the public read with great interest a romantic newspaper—literature founded on fiction. Russia is making immense preparations for the spring campaign. The Allies are doing the same. The Governments of France and England are perfectly agreed. Such is the data on which the public may really speculate (with the probability of arriving at correct conclusions) if they care not to be deceived by the exaggerated importance which is given to the most shadowy hopes of peace

THE ALLEGED FALL OF KARS.

The *Times* of yesterday (Friday) contains a despatch from its Vienna correspondent, dated eleven a.m. yesterday, stating that nothing was then known in that city of the fall of Kars. We fear, however, that this gives no ground for hope that the intelligence of the capitulation which has been published is otherwise than too true in every respect.

NAVAL AND MILITARY INTELLIGENCE.

THE shipwrights employed in the construction of gun-boats on the Wear have received an unsolicited addition of 1s per day to their pay, which is now two guineas a week. The increase has been given in order to secure the services of good and steady workmen to complete the boats early in the ensuing spring.

CONSIDERABLE activity is going on in the Royal Arsenal, Woolwich, a great number of workmen being employed in preparing 13-inch mortars and their beds, heavy gun-carriages, and all kinds of stores for the ensuing campaign in the spring. No less than twenty-eight of the large shells, which measure 2ft 4in. and weigh 2cwt each, are now lying in the Arsenal. The monster mortar for these shells is made, and, it is said, weighs between sixty and seventy tons, and is now lying at Messrs. Mare and Co.'s, Blackwall. The whole of the wharf is covered with 10 and 13 inch shells, besides a large quantity of 68 and 32 pounder guns, and 10 and 13 inch sea-service mortars. A number of small craft are lying off the Arsenal unloading shells from the different English and Scotch foundries.

IT is said that Admiral Sir Thomas Cochrane will not strike his flag as Commander-in-Chief at Portsmouth until the 31st, although his time expires on the 15th. The Flag Captain to Sir George Seymour has not yet been named.

THE British Italian Legion is likely to receive a large and immediate reinforcement. At least 2000 Sardinians, whose term of military service has expired, will be at liberty to enter the British Legion, and, as the recruiting officers are active in their vocation, there is reason to believe that a considerable number of them will be immediately enlisted.

AN assistant instructor in practical artillery, at the Royal Military Academy, Woolwich, is to be appointed on the pay of 8s. per diem, with quarters, and an allowance in lieu of fuel.

The shipbuilders at Bristol who have received orders for constructing gun-boats have been directed by Government to hasten their completion; and workmen are now employed upon them night and day.

CAPTAIN H. R. YELVERTON, C.B., of the *Arrogant* steam-frigate, has accepted the command of a divisional fleet of gun-boats, forty in number, for service in the Baltic next year.

ON the 27th ult. a grand review of all the troops in garrison at Malta took place in the presence of the Duke of Newcastle. The next day the *Great Britain* entered the port, having on board two battalions of the Anglo-Swiss Legion, mustering 1200 men. There were also on board thirty tons of winter clothing and forty-five tons of camp equipage.

THE *Royal George*, 102, arrived at the Nore on Saturday. On her leaving Kiel sharp frosty weather had set in. She has 300 Coast-guard men on board as part of her crew, who are spoken of very highly by their officers for their general good conduct and efficiency in gunnery and seamanship.

SOME cases of small-pox having manifested themselves during the past week in the garrison at Corfu, occasioned by the extremely crowded state of the barracks there, the whole of the troops have undergone a special medical examination, and, where necessary, have been vaccinated.

IT is in contemplation to make a complete alteration in the management of canteens in barracks on home stations. The rent usually paid by the master of the canteen for a house, together with the monthly charge per ten men, is to be abolished. A board of officers is to assemble every month for the purpose of fixing the prices of such articles as are usually sold in canteens; by which change the canteen will be let, subject to certain rules laid down by the authorities, the soldier being greatly benefited.

THE inhabitants of Bury, Lancashire, having last year presented the 68th Regiment (quartered in that town when ordered to the Crimea) with a quantity of warm clothing, with a request that they would return some trophy which the town might preserve as a memento of that gallant corps, Colonel Shirley, who has just come home from the Crimea, has accordingly presented the Corporation with two Russian muskets, a drum, and sword, found in the Redan when the 68th took possession of it on the 9th of September.

A CIRCULAR MEMORANDUM has been issued from the War-office, bearing date Nov. 20, 1855, with reference to the transmission of remittances by soldiers in the Crimea to their friends in England. In the new form, the signature of the officer commanding the company to which the soldier belongs and that of the soldier himself are omitted, and there is added a form of receipt, to be filled up by the postmaster and delivered to the soldier. It is hoped, with these additional facilities, that the men generally will be induced to remit a very considerable proportion of their surplus pay, after discharging the debts and obligations for messing and necessaries. Remittances in coin are in future to be discontinued as unsafe and (under the new arrangements) unnecessary.

A DETACHMENT of forty-four Polish refugee officers, sailed on Saturday from Deptford, on board the *Ottawa* steamer, for Turkey, to join the Division of the Cossacks of the Sultan, which is now in the British service, and forming a part of the Turkish Contingent. The Division is commanded by Count Zamoyski. The men, who were seen on board by Captain Szulczewski, agent to the Division, wore military coats, caps, and trousers, exhibited a martial look, and appeared in high spirits at the prospect of soon facing the armies of their most unrelenting foe. The present is the fifth transport of Poles from England since the war commenced, thus making a total of 400 Polish volunteers, among whom there were about 200 prisoners taken at Bomarsund. As the steamer was leaving the Deptford Dockyard, several hundred workmen assembled, and gave three cheers for Poland, wishing the Poles speedy success in their undertaking.

A COMMUNICATION just issued from the Quartermaster-General's Office, Horse Guards, states that the directors of the French Railway between Marseilles, Paris, and the north of France, have consented to allow British officers and soldiers on duty, proceeding to or returning from the Crimea, to travel on their lines at the half fare for whatever class they may choose to travel by. Officers for the Crimea availing themselves of this privilege should apply to the Quartermaster-General, at the Horse Guards, for an order to present at the railway stations, to entitle them to travel at the reduced rates. Officers returning from the Crimea should apply to the Commandant at Boulogne for the order of route to enable them to proceed at the reduced rates. Officers accompanied by soldier servants in uniform can have them conveyed at reduced rates. The great boon thus conferred on officers on duty, proceeding to or returning through France, to or from the seat of war, will, it is observed, be highly appreciated.

THE SLOW-POISONING CASE. This trial, in which Mr. Wooler was indicted for the murder of his wife, which took place at Durham Assizes, was brought to a close on Monday last. Mr. Baron Martin summed up for an acquittal in the most peremptory terms. The last words of his address to the jury were, "It is for you to say whether you can safely come to the conclusion that the prisoner administered the arsenic. I may observe that, if I were to make a surmise, there is a person it, on whom my fancy would rest rather than the prisoner." The jury, after ten minutes' deliberation, gave a verdict of "Not Guilty." After the verdict had been delivered, Mr. Baron Martin observed that he would have interfered at an earlier stage of the trial—that is, he would have stopped the case; but he thought upon the whole, it would be more satisfactory that it should be fully heard

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

"To my booksellers," as Mr. Pepys would say, "and there did hear mighty good news for poets and men who make books. They do tell me that, in spite of the war, books are looking up; and that Murray, whose father I knew when a boy at the 'Ship in full Sail,' over against the 'Paloon,' in Fleet-street, hath just had a mighty good sale at the Albion, in Aldersgate-street. It seems that the plan is to ask the trade to a dinner, at three, at the Albion, at Staples' (whom I have seen when a boy at the Blue coat School), and there, when the wine is in and the wit not out, to put up all the new books at a fixed sum much lower, Mr. Bohn tells me, than that at which they are sold, even to the trade, at any other time. Bohn, who *is*, I am told, a good German scholar, and much vaunteth thereon (as, indeed, he well may), tells me that he was not there, but that the sale was indeed great, that he seen good times again coming, and that readers, and, what he liketh still better, buyers, are now tenfold what they were in his father Simpkins' time. If this goeth on, I do see great store of roses at Twickenham when the Duke d'Aumale next doth call at Twittenham."

But to drop Mr. Pepys' vein. Murray's annual sale at the Albion was in every respect a success, and argues well for a steady rise in the book-buying market. Educational books were all sold well. This was to be expected. As the necessity of education is felt good educational books will increase in demand.

Murray's sale is not, however, the only proof of improvement in the book-market. The large and liberal purchases made from Mr. Ingram's stock of books by those leviathans of railway literature, the Messrs Smith, of the Strand, as well as by other dealers, more than denote a healthy state of things in the Row and Albemarle-street.

The Whigs were always adepts in ensuring success for any play or book in which they felt an interest. How well they ensured the triumphant success of Addison's 'Cato'! What ingenious devices they are adopting for the well-sustained reception of Mr. Macaulay's new volumes! A thousand little artifices were introduced to make "Cato" a triumph, and a triumph it was. A like number of artifices are in force to make Mr. Macaulay's History a continuous triumph. We will not pester our readers with the "plants" that were made for Addison's tragedy—but some of the incidents, perhaps unintentionally, made use of for "our forthcoming volumes" deserve description. We know, at least in our own circle, of ten different persons who have been permitted as a great privilege (each of course unknown to the other) to dip into a sheet or two of the great History. We know—as who at a club does not?—of at least three who (under a *very little* rose) have the first volume of the work, or some sheets of the second, "quietly at home." Nods of approbation expressions not to be mistaken of delight—proud references to certain passages—bits got by heart—and other allusions indicative of pleasure, and suggestive of pleasures to come, thousands besides ourselves are favoured with in advance of publication.

Mr. Moxon—for twenty years the poets' publisher, as old Moseley was before him (and both wrote poetry)—has nearly deserted the Muses He is, however, true to Mr. Tennyson, though no longer so to another bornpoet, Mr. Browning. The Muses are moving to Farringdon-street. Mr. Routledge—

Strahan, Tonson, Lintot of the times—

is not afraid of poetry, though Mr. Moxon is. The spirited publisher of Sir Edward Lytton's works courts true poets, and is about to publish a new poem by a real poet—by Charles Mackay—who has too long suffered his fine vein of poetry to lie unworked. We shall not, however, have occasion to quarrel with his nearly "five years" pause if, as we are assured—and from what we have seen, we gather for ourselves—the muse of Mackay has not fled in strength of wing, and consequently in height, by the time that has elapsed between his last work and the good poem (we purposely conceal its name) which is coming from the counter of Mr. Routledge.

If you love Edwin Laudseer's engravings, look in on Tuesday and Wednesday evening next, between six and eight in the evening, at Southgate and Barrett's, in Fleet-street. Charles Lewis, the celebrated engraver, has parted with his complete and unmatchable collection of engravings from the works of Landseer, and Messrs. Southgate and Barrett are to scatter them under the hammer on the days we have named. A choicer collection of engravings from the works of any one artist never was sold by public auction—nay, and what is still more wonderful, was never brought together. "Charles," for thus he is commonly called by a large circle of friends, was always a dandy in his prints. How careful he he was about his Landseers how he would weigh, and balance, and doubt, and finally decide right—before he selected his impression! And what a judge he was, and how careful he has been! He always chose the best and he always preserved them with a kind of religious care. Each engraving has its ample margin, and each possesses the gloss of its first appearance. His proof prints are unfingered, and can only be compared to ripe plums upon a south wall with their bloom unfingered even by the tenderest gardener.

The citizens of London are no longer content to abide by Lord Eldon's decision that a school founded more than three centuries ago must necessarily restrict its education to Latin and Greek. The Merchant Taylors are about to extend the circle of sciences taught within the walls of their once famous school. To Latin and Greek they are adding Drawing, and they are actively seeking for a first-rate master for their school. The terms offered are insignificant enough one hundred pounds a year, but then the hours are not irksome. We shall watch the selection with interest. There are several candidates, and one or two of name, in the field.

We paid a visit the other day to the church of St. Olave, Hart-street, London—the church so frequently mentioned in Pepys' "Diary," and recently restored: good service has been done. The monument to Sir John Mennis, the poet and wit, has been brought once more into light (it was hid somewhat by woodwork), and the original lettering has been renewed in good taste. We missed the gallery where the Commissioners of the Navy used to sit, and in front of which Mr. Pepys erected the monument to Mrs Pepys—still in its old locality in the church, a suggestive of a thousand associations.

The Manchester people are about to erect a statue to James Watt as a companion to that of Dalton, and are to copy—so we are assured—the statue of Chantrey in Westminster Abbey. We wish we could find use them to change their minds. Chantrey made at least five statues of Watt and hardly one without some little variation. That in the Abbey is the worst of the five. The best (we speak advisedly) is in the Hunterian Museum at Glasgow, and this should be copied rather than the statue in the Abbey. The son of Watt was a miser in all moods but one—and that respected his father's fame. He was a most liberal contributor to any scheme for the extension of a name that needs no false stays, and every subscription for a statue of Watt was encouraged by his son

More "Macaulay marvels" reach us as we write. To [illegible] panel of twenty-five thousand clamorous purchasers, Messrs Wi[illegible] and Co., the great binders, have undertaken to supply 5000 copies of the new volume work every day until the order is complete. Seven hundred and fifty minutes are not less marvellous. The 25,000 copies swallow 5000 reams of paper, six tons of milled boards, [illegible] yards of cloth, adding (hear this, Mr Chancellor of the Exchequer!) [illegible] to the revenue of the country.

A band of 448 Mormons, Swedes, Danes, and Norwegians, including 124 women and children, have embarked at Gluckstadt, under the direction of a Norwegian named Petersen, for Grimsby, whence they are to proceed to New York

THE IMPERIAL HUNT IN THE

EST OF FONTAINEBLEAU.—(SEE NEXT PAGE.)

THE IMPERIAL HUNT IN THE FOREST OF FONTAINEBLEAU.

In the ILLUSTRATED LONDON NEWS a year since (Dec. 10, 1854) we glanced at the splendid hunting parties given last season by the Emperor in the forest of Fontainebleau, which, under the Imperial sway, has assumed an entirely new air of animation. We also then gave some interesting details of the organisation which the Emperor has given to the service of the chase; the large sum allotted by him for the appointments of the officers of hunting; and the cost and maintenance of horses, dogs, equipements, &c. We also then described the hunting costume; and in the large Illustration upon the preceding page the dress is not the least striking portion of the scene,—in the three-cornered hats, trimmed with gold lace, and the richly-embroidered suits, and other costly appointments.

The forest of Fontainebleau is twelve leagues in circuit, and contains nearly 35,000 acres; and in its picturesque views, rocks, ravines, valleys, and plains, woods and glades, meadows, lawns, and cliffs, the domain is of almost unrivalled beauty. It formerly abounded with stags, deers, &c., but these were almost exterminated at the Revolution of 1830; nevertheless, it is still a favourite rendezvous for hunting. No forest in France possesses finer trees or a greater variety of indigenous plants. It is intersected with roads radiating in all directions. The locality selected by our Artist for displaying the stateliness of the Imperial Hunt is entitled *La Croix de Grand Veneur*, and marked by a cross at the point where four roads meet. It received its name from the legend of the spectral black huntsman who was supposed to haunt the forest: it is said he appeared to Henry IV. shortly before his assassination.

NATIONAL SPORTS.

WITH the close of the partridge-shooting season, on Monday, the frost and snow set in with just sufficient intensity to prove a great bar to the other sports of the field; and as strange birds have been sweeping round us, and heralding a hard winter for months past, hunting and coursing meets seem likely to be liable to considerable derangement for some weeks to come. Hence the steeplechase fixtures at Chertsey and Chippenham on Tuesday next have somewhat gloomy prospects. A match between Liverpool and Gay Lad is one of the features of the former meeting; while three steeplechases are proposed for the latter. The coursing meetings which are at present entitled for the week are—Hawkstone and Staunton Harold, on Tuesday; Southminster, on Tuesday and Wednesday; Limerick and Hainton, on Wednesday and Thursday; Baldock, on Wednesday, Thursday, and Friday; Market Drayton, on Thursday; and Biggar (Co.), on Friday.

Racing men have little else to do now than to con over the new volumes of "Ruff" and the "Book Calendar." We observe from the former that there were 171 race meetings in Great Britain last season, and that 412 two-year-olds started. From the latter we note that 812 blood colts and 506 fillies have been entered so far in this year's stud-book. Of these, forty-four young Fernhills are the property of Sir Tatton Sykes, and it is rather odd that one of the Cossack colts belongs to the Austrian Government, which seems studiously to have selected the consort for its mare Cambric. Sixty-one out of these 1018 foals died before December 1. We do not observe Crucifix's name among the dams; but Lady Evelyn has a colt to Touchstone, Alice Hawthorne one to the Flying Dutchman, and Kilwarlin a little sister to Ellington, by the same horse. Teddington's foals are but few. Grand Inquisitor is put to the stud; and Melbourne is to be at half his old price. "The Squire" has contradicted the report about his change of trainer; but Mr. Elwes has taken Onslow and his colts entirely from Danebury, and Mr. T. V. Turner intends to send some of his to Charles Marson at Royston Nearly half "the Ring" were at Westminster Hall last week to hear the trial of Ignatius Coyle, for whom they have always felt such a morbid sympathy. The Bench of Bar have become as tired of his name as they were of the card cheating case or Crouch's eternal railway-parcel disputes. Coyle first made himself notorious in the Running Rein trial (1844), and, after sundry other escapades, was convicted of picking pockets at the Goodwood incloture. Although his appeal against this conviction to the Quarter Sessions was quashed, Lord Palmerston pardoned him. He was then chiefly instrumental in convicting the three brothers Alleyne of a conspiracy to cheat. These gentlemen next obtained a writ of error, and, as there was no plea, they were pardoned, and Coyle in his turn was sentenced to two years for perjury on their trial. A new trial was granted him after he had been four months on the treadmill: and now he is sent back to serve out the remaining twenty. His trotting-match troubles with the American mare Fanny Jenks remind us that ten miles has lately been trotted in waggons over there in 30 min. 29 sec.; the sixth mile of which was done in 3 min. 1 sec.;—very different work to what we can make in England.

We understand that the King of Sardinia was very much pleased at Willesden Paddocks with Pyrrhus the First and his daughter Virago, than whom we possess few finer specimens of English blood stock. An own sister to Virago was born at these paddocks this season, and another of Pyrrhus' colts has been absurdly christened "F. M. the Duke of Daty."

We may here mention that a very seasonable memento of the late Sir Richard Sutton's Quorn dynasty has just been published by the Messrs. Graves. The original picture is by Mr. Frank Grant, R.A., and makes an admirable companion to his "Melton Hunt in the late Lord Suffield's Time," which has now, like his "Ascot Heath Meet," a very melancholy interest, from the fact of so many of his leading sitters being dead. The grouping of this present picture is very effectively managed, and the sixteen figures form a semicircle—Sir Richard (whose portrait we were kindly permitted to copy for our paper some three weeks since) holding the leading position on the right, while his first whip, Ben Morgan, on a somewhat groggy and varmint-looking white horse, is in the centre of the background. The second whip, Jack Morgan, who is busy taking a thorn out of a hound's foot, and Captain Frank Sutton, as he stands talking to his brother Henry, are among the most striking "bits" of the picture, and not far short of the celebrated one of "Lord Forester Bidding the Fire Good Morning in the Melton Breakfast." The Duke of Rutland is on Sir Richard's right, and his horse's head is the best piece of horse drawing, to our minds, in the picture. That venerable Yedworth octogenarian, Mr. Assheton Smith, whose long seat contrasts pleasantly with Sir Richard's short one, is talking to them from the back of his massive white-nosed chestnut. The remaining portraits of note are Colonel Lowther, the Marquis of Granby, Mr. Green of Rolleston, Mr. Hutton, and Captain Charles Sutton, &c. Would that Sir Richard himself had been alive to see the completion of a work in whose progress, while it was in the hard-riding artist's hands, he took no little pleasure

***

CONTRABAND OF WAR AT HAMBURG.—It is now several weeks since the British Consul-General here, Colonel Hodges, was instructed by the Government to protest to the Senate of Hamburg an energetic note, strongly protesting against the laxity with which the Government of this city observed their so-called neutrality, and the glaring and open manner in which contraband of war (and more especially the articles of sulphur and saltpetre) was sent from here by the Prussian railroad to Russia. Within the last ten days large quantities of these articles have been imported here without any notice being taken of it, or protest raised from any side whatever; and it is no secret here that the purchasers are the Government of St. Petersburg houses, and that the goods have been sent on by railway to Russia. Within the last ten days no less than five cargoes of sulphur and four of saltpetre have been imported, with the certain knowledge that they were sent on to Russia, and converted into gunpowder to be used against us. Within the last few days a large demand has sprung up here for empty sugar-chests, particularly for those from Havannah and the Brazils. These chests are conveyed to the so-called Thermal—a large isolated stack of warehouses used exclusively for warehousing tar, turpentine, sulphur, saltpetre, pitch, and other easily inflammable articles of merchandise—where they are filled with sulphur. As large quantities of Brazil and Havannah sugars are sent every day to Russia by the railroad, it is not irrational to suspect that this sulphur, packed in old sugar-cases, is also intended for transit to Russia: breakfast or dinner tables, and similar chests of real sugar, to mask the real nature of the transaction, and satisfy the easy consciences of the Prussian officials.—*Letter from Hamburg, Dec. 6*

CAPTURE OF A RUSSIAN ISLAND.—Letters from Okasaki, in the island of Japan, dated the 19th September last, state that two French frigates, belonging to the naval expedition sent to the coast of Kamschatka, took possession, on the 3rd of that month, in the name of the Allied Powers, of the island of Urup, in the centre of the Russian Kurile in the Kurile archipelago, and captured there a Russian cutter laden with a rich cargo of furs. The Russian name of the island has been changed to that of Alliance. The French frigate *Séphyr*, of 30 guns, was allowed to enter Okasaki without any opposition, and was received in the most hospitable manner by the local authorities. A Japanese temple was placed at the disposal of the French Captain for the accommodation of his sick; and two of the seamen having died were interred with all the ceremonies of the Catholic Church, in presence of a praying but evidently well-disposed multitude. Some of the chiefs daily visited the *Séphyr*, and readily accepted invitations to breakfast or dine at the table of her Captain, M. de Maisonneuve.

MUSIC.

JENNY LIND has come once more among us, after an absence of six years. She returns a matron, and with a changed name; but though in society she is called Madame Goldschmidt, as an artist she will never go by any other than the honoured name of her maidenhood. It was a question before she arrived whether she would again rouse the old enthusiasm, and doubts were expressed as to this, seeing that, though her powers might be as great as ever, she had abandoned that walk in which, above all others, she was pre-eminent—the opera stage. These doubts, however, did not diminish, but probably rather heightened, the curiosity and interest of the public. From the moment that she (or her agent Mr. Mitchell, of Bond-street) announced the oratorio performances at Exeter Hall, the general excitement became extreme. Notwithstanding the high rates of admission, every ticket was immediately sold, most of them being purchased by musicsellers and others on speculation. Long before the day of the first concert Mr. Mitchell informed all inquirers that he had not a single ticket to dispose of; so that there was nothing for it but to apply to those who had bought them up; and those persons, of course, made the most of their bargains, screwing up the prices of tickets to two or three times their ostensible value. This, we must say, though far from being unprecedented, was wrong. Jenny Lind or Mr. Mitchell may not have actually put money in their own pockets by the transaction, but it was an extortion on the public, and could easily have been prevented. Though the second concert has not yet taken place, no person can obtain an admission to it without yielding to the arbitrary demands of the ticket-holders. One good arrangement, however, has been made: the issue of tickets has been limited to the number that Exeter-hall can conveniently hold; so that on Monday evening last, when the first concert took place, there was no unpleasant crowd or pressure. The oratorio was Haydn's chef-d'œuvre, "The Creation," a work which some critics now-a-days show a disposition to depreciate. Because it is clear, simple, and melodious, it is denied the qualities of depth and grandeur. It is admitted to be beautiful but not allowed to be sublime. We can only judge from our own impressions; and if the choruses, "The marvellous work?" "Awake the harp," "The Lord is great," and, above all, "The heavens decline the glory of God," are not sublime, we are ignorant of what constitutes sublimity. The whole work is full of bright and cheering sunshine, and we pity those who can listen to it without being penetrated by the goodness as well as awed by the power of the Creator of all things. Jenny Lind sang in "The Creation" at Exeter Hall before she left England, when she charmed the audience, and showed that she was without a rival in the loftiest branch of her art. On Monday night she maintained her pre eminence as effectually as ever. She was welcomed with all the honours due to her character, and acknowledged her reception with grace and feeling. When she began to sing she showed considerable agitation. Her voice, for a brief space, was husky and tremulous; but she soon recovered herself, and showed that she was in full possession of all her powers of voice, intellect, and genius. To say that her vocal organ retains all its finest qualities—its sweetness, flexibility, and mellowness of tone—and her execution all its clearness and finish, is to give her the smallest part of the praise which is her due. Others may come near her in those things; but it is in her noble and beautiful simplicity, in her contempt for every frivolous ornament, in her faithful adherence to the text of the composer and the purity with which she renders it, in the grandeur of her conceptions, and the depth of expression which penetrates every bear, that she is unapproachable, and leaves every other competitor far behind. To enumerate the beauties of her performance would be to quote every passage she sang; but the things which most strongly roused the enthusiasm of the audience were the two charming descriptive airs, "With verdure clad the fields appear," and "On mighty pens the eagle wings his way;" and the enchanting duet between Adam and Eve, "Graceful consort, at thy side," so full of love and happiness. This was rapturously received, and the fair singer retired amid acclamations from every part of the hall. As a whole, the performance—which was conducted by Mr. Benedict—was satisfactory. The instrumental band and chorus were of sufficient numerical strength, and of respectable quality. The other solo parts (Jenny Lind being the soprano) were sung by Mr. Lockey as tenor, and Mr. Lawler as bass. "The Creation" having no contralto. Both performers acquitted themselves well; though, on the part of both, a little more energy and expression would have been desirable.

On Monday next the second concert is to take place, consisting of Mendelssohn's "Elijah."

MR. ELLA gave his concluding Lecture of this season at the London Institution on Monday evening. This lecture was "On Melody, Harmony, and Counterpoint;" subjects which he treated with much tact and skill, explaining with perspicuity the leading principles of the art, and analysing a number of pieces by the great masters, so as to show the effect of the technical rules of composition in producing musical beauty and effect. These analytical remarks were illustrated by Miss Ransford, Miss Corelli, Mr. Smythson, and a body of choristers from the Royal Italian Opera, who sang the pieces which came under the lecturer's review. The hall was crowded to the doors, and the audience received the lecture with the warmest expressions of satisfaction.

THE THEATRES, &c.

PRINCESS'.—The revival at this theatre, on Thursday evening last, of "Louis the Eleventh," occasioned considerable interest among the public generally, and drew together a fashionable and crowded audience. Those to whom the postponement of "Macbeth" was a disappointment will have found consolation in this revival. The character of *Louis XI.* has been so thoroughly appropriated by Mr. Charles Kean that it must ever be associated with his name. It would be the height of imprudence in any other living exponent of the histrionic art to attempt it; and we apprehend that a very long period must elapse before the English stage will produce a fitting successor to Mr. Kean in this difficult and original part. The transition scenes with which the play abounds, and which give so much scope for our great actor's peculiarities, were performed on Thursday evening with his accustomed power.

MARYLEBONE.—A new and original play, in five acts, was produced on Tuesday. It is from the pen of Mrs. Edward Thomas, and entitled the "Merchant's Daughter of Toulon." The dialogue of the piece is partly in prose and partly in blank verse. The heroine is our *Hortensia Joliffe* (Miss Edith Heraud), who, having been educated in a convent, is at the opening of the play described as paying her first morning calls in Toulon, and, from her beauty and talents, exciting the envy as well as the admiration of the city belles. Two of these, *Agnes* and *Josephine* (Miss Roberts and Miss Ellen Collier), are particularly affected by her sudden supremacy; for their lovers, *Duval* and *Godfrol* (Mr. Bennett and Mr. Plunkett), give fearful signs of a disposition to desert their old loves in favour of the new. Among her guests, also, is one *Dupont* (Mr. Lyon), an old friend of her father, who, having formerly loved her mother, is particularly struck by her perfect resemblance to the first object of his affection. And so a long-dormant passion at once revives. Out of this state of *Dupont's* feelings the situations of the play originate. *Agnes* was always of a morose disposition, and, though outwardly a pious maid, yet sinister in his dealings, and misanthropical in his sentiments. Accordingly, he plots against *Hortensia's* lovers in order to have the field clear for himself. He contrives that *Duval* and *Godfrol* shall make themselves ridiculous by shaving off their moustaches and wearing yellow for her sake; and in regard to his nephew *Francis* (Mr. Gaston), her real lover, he pursues him to extremity, forbidding him to visit at Dupont's and ultimately casting him from his house. Finding all these and other contrivances vain, at last he resorts to direct slander of *Hortensia* herself, the result of which is, that in the first ball to which she is invited with her father she is in the most marked manner cut by all the respectable folks of Toulon—by which incident, and some striking one, the fourth act closes. *Francisco*, who discredits the calumny, never believes remains faithful to her; and her father, though at first staggered, sees reason to believe her guiltless. *Hortensia*, however, will not be satisfied until *Dupont* is compelled to retract his charges; and at length effects such an appeal to his better nature that her clearance is decidedly pronounced by her fashionable acquaintance. There are also two or three underplots, connected with the pages and *soubrettes* of the country characters of the piece, which serve to vary the interest, and add humour to the tone of the scenes. This play, which was well acted, proved triumphantly successful. Much of this result was owing to the unusual preponderance of the humorous element; and the new drama would, in fact, be more appropriately denominated a comedy, in the Shakspearian sense of the term. The diction had frequently the ring of the old dramatists, and most of the jests told admirably. Laughter and applause, in fact, divided the evening. The audience were excited to extraordinary enthusiasm. Miss Heraud was recalled at the end of the fourth and fifth acts, and the author had to bow frequently from her private box.

PROFESSOR ANDERSON'S SPIRITUS MAGIQUES.—Thursday evening being the hundredth night of Professor Anderson's magical performances at the Lyceum Theatre, the event was celebrated by the Wizard in the presence of a numerous audience. Mr. Anderson had selected some of his best and most interesting tricks, including the great gun trick and the exhibiting of table-rapping and spiritual communications, and their exhibition was received by the audience with an interest and rewarded by an applause which are accorded to but few entertainments. That such success should be attained by a hundreth exhibition is a convincing proof of the sterling character of Mr. Anderson's performances, and of the great ability with which he executes the numerous tricks of sleight of hand and optical delusion, of which his entertainment is composed. In the course of the evening a number of costumes, portraits, and pieces of music were presented to the audience as souvenirs of the occasion, and, shortly before the conclusion, Mr. Anderson read a poetical address, in which he expressed his thanks for the patronage he has received at the Lyceum Theatre, and his regret that he is shortly about to leave it, cheering his numerous friends, however, with the promise that he will meet them on Boxing-night at Covent Garden.

THE WIZARD'S PANTOMIME AT COVENT GARDEN.—After a period of repose from the freaks of *Harlequin*, the fun of *Clown*, the charm of *Columbine*, the attractions of "Mother Goose," and the clever pantomimic efforts of the famous Farley, Covent Garden reopens at Christmas for the production of a single pantomime, under the management of Mr. Anderson. The pantomime is to be called "the Field of the Cloth of Gold," and will be suggestive of some of the happiest events of our own time, as it will be commemorative of the alliance of England and France in the days of Francis I. and Henry VIII. It will probably be necessary only to mention the names of the artists engaged to give a warranty for the excellency of that which is to be produced. Mr. A. Harris is the inventor, and has had the entire superintendence of the *mise en scène*. His fame and his inventive powers, well known as they are to the frequenters of the Royal Italian Opera, are sufficient guarantees for his department being unexceptionable. The scenery is by Mr. W. Beverley, the crowned monarch of fairy-land; the music is by Mr. Coote, the composer of "Night Dancers" and "Nourjahad" in himself a host. Messrs. G. A. Sala and the Brothers Brough have furnished the wit and humour of the words; not a word more need be said about their part being all that could be wished. The ballet is by the well-known and justly-celebrated Mr. H. Barnett; and the music, which are entirely novel, and very unlike the pasteboard platitudes common to pantomimes, are by Mr. George Ewing. Finally, Mr. Anderson's magic wand is to be waved over the whole, and will, doubtless work wonders far surpassing those of his predecessor. We had almost forgotten that the services of Mr. Fleamore the most clever of clowns—have been secured for what will, without doubt, be the great pantomime of [illegible].

MR. AND MRS. HOWARD PAUL' ENTERTAINMENT AT THE ROTUNDA, DUBLIN. The new entertainment called "Patchwork," recently opened at Dublin by Mr. and Mrs. Howard Paul, has met with decided success. The performance is partly musical and partly dramatic, and consists of two parts. The first part introduces fourteen characters, male and female, personified by Mr. Howard Paul (Mr. Featherstone), one of our Irish [illegible] controllers, and Howard Paul, well known as a playwright and [illegible]. The second part of the entertainment consists of [illegible] Paul assuming English, [illegible] and [illegible] characters. We select a few [illegible] French soprano, a Spanish tenor, and an Italian contralto [illegible] selected by this lady," says a local paper, "were executed in the most brilliant manner, and displayed to advantage the magnificent voice of which it is her good fortune to be in possession. It is needless to state that they were thoroughly enjoyed by the audience, whose satisfaction was manifested by frequent [illegible] Barnett's [illegible] "Il Segreto" and "Les Yeux Bleus" in particular [illegible] beautiful. Mr. Howard Paul's impersonations of [illegible] Irish characters was also very effective. The room was [illegible] and presented a brilliant appearance."

Note.—The sign — denotes below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29.41 inches at the beginning of the week to 30.08 inches by the 10th; decreased to 29.49 inches by the 12th, and increased to 30.06 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29.81 inches.

The mean temperature of the week was 39.6°—being 10° below the average.

The range of temperature during the week was 20.3°—being the difference between the highest reading of the thermometer, 38°, on the 7th, and the lowest, 17.7°, on the 13th.

The mean daily range of temperature during the week was 8.2°.

The weather during the week was for the most part fine, but dull, and the sky was cloudy, except in the evenings, which were clear.

Snow fell on several days during the week.

Lewisham, Dec. 14, 1855. JAMES GLAISHER.

HEALTH OF LONDON. During the week ending last Saturday (December 8th) the births of 1531 children were registered within the metropolitan district. Of these 789 were boys, and 742 were girls. In the ten corresponding weeks of the years 1845-54 the average numbers were 780 and 713 respectively. The number of deaths during the week was 1099; of whom 534 were males and 565 were females; a present mortality which it may be stated in general terms is not high for London at the beginning of December

THE KING OF SARDINIA AND THE CITY OF LONDON. The Sardinian Minister has placed in the hands of the Lord Mayor, by order of the King of Sardinia, in consequence of the magnificent reception his Majesty met with from the Corporation of London, a gold snuff-box, ornamented with diamonds, of the estimated value from his Majesty to his Lordship, and a token of the high gratification [illegible] by the Royal visitor at the splendid manner in which the [illegible] was performed, and the enthusiasm which [illegible] by the citizens of London

ORIENTAL KINGS MEMBERS OF THE ASIATIC SOCIETY.—At the last meeting of the Asiatic Society, the secretary, on behalf of the council, submitted to the meeting the name of the chief King of Nam, and that of his brother and subordinate prince, for election as honorary members of the society. The claim of these royal personages consisted in their distinguished position in the interior, and in their own learned attainments. The head King was a proficient in the Laos and Siamese tongues and had required a considerable [illegible] English. The second King is stated by Mr J [illegible] English with ease and correctn [illegible] observation [illegible] upon [illegible] written letters to [illegible] in French, which are creditable performances [illegible] entered into a treaty of amity and commerce with this country, and gave the Englishman a right to hold land and to be governed by their own laws in Siam, and grants other valuable privileges—thus opening up our enterprise a country which has hardly been less shut to us than Japan itself. Their Majesties were duly elected.

DINNER TO SIR CHARLES NAPIER.—On Tuesday [illegible] numerous body of the [illegible] at the Freemasons' Tavern, to celebrate his return [illegible] home Hotel, to celebrate his return [illegible] C Napier, in reply to his health, which [illegible] enthusiasm, made some remarks on the [illegible] army, should he make one of the conditions of peace [illegible] obtained an honourable peace (Hear, hear). With [illegible] peace it was not for him to say, but he thought it [illegible] England out of the Crimea before they talked of [illegible] Hear, hear). He also thought that Russia, which [illegible] [illegible] by the expenses which it [illegible] [illegible] Russia had thirty sail-of-the-line fully manned in the [illegible] there no danger to their shores in the proximity of such a fleet, as was of opinion that the retirement of that fleet, and also of the [illegible] to other countries, and especially to Sweden and Denmark.

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

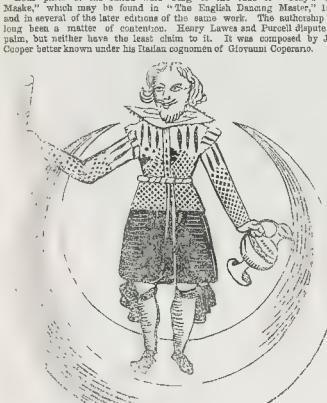
"A little chink may let in much light." -OLD PROVERB

ANCIENT BALLAD.—The following old ballad, and the curious cut which accompanies it—the former, unfortunately, too coarse for complete republication—are taken from a black-letter copy in the rich and varied collection of Mr. Halliwell, St. Mary's-place, Brompton: a collection numbering about 450 ballads, entirely in the black letter, obtained at great cost, and which, though not comprising so many of the very ancient ones as are to be found in the remarkable collection of Mr. Dance, is believed to be the most extensive of any in private hands.—

"The Man in the Moon drinks Claret" is the second part of the well-known ballad of "Old Mad Tom," printed in Percy's "Reliques." Heber conjectured that its author was the celebrated Tom D'Urfey, but it is certainly older, having been sung at the Curtain Theatre, Shoreditch, before the year 1610. Old Izaak Walton, in his delightful "Angler" (1653), says:—"I'll promise you I'll sing a song that was lately made at my request by Mr. William Basse, one that made the choice songs of 'The Hunter in his Career' and 'Tom of Bedlam,' and many others of note." If Walton here alludes to "Old Mad Tom," as Percy supposed, we get at the real name of the author; but the matter is somewhat doubtful, as we have several other ballads of "Mad Tom" possessing an equal claim to the Waltonian notice.

William Basse was a famous poet in his time; and Anthony Wood states that he was of Moreton, near Thame, in Oxfordshire, and was some time a retainer of Lord Wenman of Thame-park. He was the author of a poem called "The Sword and Buckler," 1602; a poem on the "Death of Prince Henry, 1613; of verses "On Mr. William Shakespeare, who died in April, 1616, &c." His song of "The Hunter in his Career" is preserved in "Wit and Drollery, Jovial Poems," 1682; and in the celebrated "Collection of Old Ballads," printed in 1726. The music is preserved in the Skene MS. in the Advocates' Library, Edinburgh.

Both parts of the ballad were sung to the tune of "Gray's Inne Meake," which may be found in "The English Dancing Master," 1650, and in several of the later editions of the same work. The authorship has long been a matter of contention. Henry Lawes and Purcell dispute the palm, but neither have the least claim to it. It was composed by John Cooper better known under his Italian cognomen of Giovanni Coperario.



The Man in the Moon drinks Claret.

As it was lately sung at The Curtain, Hollwel.'

Bacchus, the father of drunken nobles,
Full mazers, beakers, glasses, bowls,
Greate flagon dragons, flamish upsetrinse,
With healths stab'd in arms upon naked knees.

* * * *

Rich wine is good.
It heats the blood,
It makes a old man lusty.
The young to brawle,
And drawees up call
Before being too much musty.

* * * *

Such gambles, such tricks, such figaries,
We fetch, though we touch no Canaryes;
French wine till the welkin roares,
And cry out a plague of your scores.

* * *

There is no sound
The ears can wound
As hds of wine-pots cranking;
There's no such sport when, all amort,
Men cry let's fall to drinking.

* * *

Our man in the moon drinks claret,
With powder beef, tur'ep, and carret,
If he doth so, why should not you
Drink wine until the sky looks blew?

* * * *

Hey for a turn thus shoves gro. nd, hey!
O my noddle too heavy doth way?

Methegtin, perry, syder nor strong ale,
Are half so hevy, be they nere so stale.
Wine in our bodies can never rumble,
Down now and then, though it makes us at tumble.
Yet scambling up, a drunken feeble no pain,
But cryes,—sirra, boy, tother pottle again!

* * * *

We car drink no more unless we have full pipes of Trinidado.
Give us the best, it keeps our brains
More warm than can friezado.
It makes us sng,
And cry, hey jung,
And laugh when pipes lie broken.
For which to pay,
At going away
We scorn a mustard token.

* * * *

If, then, you do love my east claret,
Fat powder beef, turnep, and carret,
Come agen and agen,
And still welcome, gentlemen.

QUERIES

WHAT was the origin and value of the coin called a "Tester" or "Teston"? and was it of silver? In Heywood's "Epigrams" (1560) is the following:—"Of read Testons

These testons looke read. How lyke you the same?
Tys a token of grace—ther's no shame to blame."

What is meant by *red testons?* And what cause had this coin to blush in 1560?—J. L. D.

BEES.—In the Island of Jersey it is customary when the head of a family dies to put a bit of crape on the top of the hive: should this be forgotten, the bees in the course of a day or two desert the hive. My mother has told me that when her grandfather died, about the year 1813 or 1819, they got the crape, and the bees evacuated the hive; but when her grandmother, some ten years later, departed this life, the crape was placed on the top of the hive, and the bees, by their stay, acknowledged the new master. No reason has ever been assigned by the old witch-believing crones of Jersey for the assertion or fidelity of the bees. I have questioned several, and the answer invariably is, "Elles savent quand leur maître meurt." Mais comment? I ask. "Elles sont savantes comme nous autres, comme ainsi les abeilles. Je ne sais pas pourquoi elles s'en vont, mais je crois que les sorciers ont quelquechose à y faire."—CELIA YOUNG, Jersey.

THE SANCROFT MEDALS.—Can you, or any of your Correspondents, inform me if these are common, who caused them to be struck, if they are valuable, and any circumstances attending them? I have one dated 1688, with a figure of the Archbishop of Canterbury on one side, and on the other the following Bishops, viz.—St. Asaph, Ely, Chichester, London, Bath and Wells, Peterboro', Bristol. Why is the Bishop of London included, and placed in the centre? D.

WILL any one inform me of the derivation of "Gar sel," the Yorkshire vernacular for under wood? Also of "bow rake" and "pale dyse"? Your obedient servant, VENATOR.

IN the Diary of Ralph Thoresby, the historian of Leeds, occurs the following passage:—"Nov. 4th, 1701. Was to show the two Archdeacons (Nicholson of Carlisle and his cousin Pearson) our remarkable cloth-market: treated all three after the old manner at a *bridge and shot* for 6d." *Query*—What sort of a "treat" was it? B. WILSON, jun., Bramley, Leeds.

In an old volume, the titlepage of which is lost, I find the following "three things which are accounted very strange, or rather miraculous, in the country of Scotland":—"1. The Lake of Murton, part of whose waters do congeal in winter, part of them not. 2. The Lake of Lenox, twenty-four miles round, in which are thirty islands, one of which is driven to and fro in every vacquent. 3. The Deaf-Stone, extending about fifty-three feet in length, of this rare quality—that a musket shot off on the one side cannot be heard by a man standing on the other." What are the facts?—DAVID WALKINSHAW, Colford, Gloucestershire.

TO CORRESPONDENTS.

A. MACCOLLEAD.—It is not a medal, but a medallion: medals have two sides, medallions one. The metal is generally pewter, as that retains a brilliant surface for years, which common pewter soon becomes dull. This medallion is commemorative of the campaign 1770 in the Lawrence War, on which years a fleet of Sister Pilot for the Russian sixty more from the Black Sea captured by the English under Admiral Gambier and Sir H. Clinton, Portsmouth, Plymouth, Spithead Harbour, Downs, conquered. Stony Point assaulted, Stony Point, &c.

M. PYNSON JUNIOR, A. CLARA.—Answers to such questions may be obtained from a Solicitor.

A STUDENT.—They are not believed to be Shakespeare's.

W. HALLISON.—"Popular Music of the Olden Time" is published by Cramer, Beale, and Co., of Regent-street.

J. E.—You will find the word, not in Lydgate, we believe, but in the very curious old work, "A Dialog of creatures moste Necessary, Effect of all the Proverbs in the English tongue compact in a matter concernynge the manner of marriages," made by John Heywood, 1556:—

"And very fat fed, said this *Estrepefed* "—Signe. B. 4.

In the same you will meet with two other expressions new to us, relative to two pea mealings:—

"He is a *Kunck ebannyard* and verale moste
To matche a mynion nother fayre nor sweete.

And—

"Had you some husbande and sweete at hym thus,
I wys it would geve you a *peacocke-bridale*."

M.N.—See Black's Catalogue of the Ashmole Library, p. 21; see also Halliwell's "MSS. Relics of Comic Song," p. 29.

20. Q to K R 4th	R to K Kt 2nd	And Oxford resigns (f).	

(a. The attack and defence are both conducted *secundum artem*, and show the resources to be well up in their books.

(b) There is an admirable example of the present mode of conducting the Evans opening played between Horwitz and Kieseritzky, at page 136 of the "Chess-Player's Handbook," which we recommend the student to compare with the game before us.

(c) A good retort. If White, in answer to it, had snatched at the Knight, the game would probably have gone on thus:—

24. Kt takes R	Kt takes P (ch)
25. Q takes Kt	B takes Q
26. R takes B	B to K R 4th

And Black have the better game.

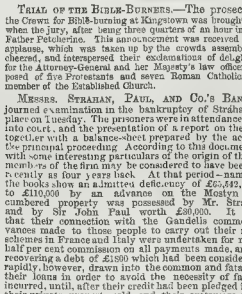
(d) Well played. Black have now a very unenviable and terrible battle to fight.

(e) Taking the K B P with the Kt would not have been prudent.

(f) Because one of their Rooks is hopelessly locked up, and it is impossible for them, with the other alone, to preserve both the Q and the Q R Pawn.

PROBLEM No. 617
By an AMERICAN AMATEUR.

BLACK.



WHITE.

White to play, and mate in four moves.

TRIAL OF THE BIBLE-BURNERS.—The prosecution at the suit of the Crown for Bible-burning at Kingstown was brought to a close on Saturday, when the jury, after being three quarters of an hour in deliberation, acquitted Father Petcherine. This announcement was received with the most vociferous applause, which was taken up by the crowds assembled outside, who loudly cheered, and interspersed their acclamations of delight with repeated groans for the Attorney-General and her Majesty's law officers. The jury was composed of five Protestants and seven Roman Catholics, the foreman being a member of the Established Church.

MESSRS. STRAHAN, PAUL, AND CO.'S BANKRUPTCY.—The adjourned examination in the bankruptcy of Strahan, Paul, and Co. took place on Tuesday. The prisoners were in attendance, but were not brought into court, and the private examination of a report, on the state of their affairs, together with a balance-sheet prepared by the accountant, constituted the principal proceeding. According to this document, which commences with some interesting particulars of the origin of the bank, the respective members of the firm may be considered to have been perfectly solvent as recently as four years back. At that period—namely, December, 1851—the books show an unrealized deficiency of £6,543, which was increased to £110,000 by an advance on the Mostyn colliery, but unincumbered property was possessed by Mr. Strahan worth £100,000, and by Sir John Paul worth £30,000. It was not until 1852 that their connection with the Gandells commenced, and the advances made to those people to carry out their railway and drainage schemes in Pimlico and Chelsea were undertaken for the profit than a half per cent commission on all payments made, and the expectation of recovering a debt of £1800 which had been considered bad. They were rapidly, however, drawn into the common and fatal course of increasing their loans in order to avoid the necessity of facing the loss already incurred, until, after their credit had been pledged to every possible way, their private property sold, and their customers plundered, they found the amount to have increased to nearly half a million sterling. The actual deficiency of the bank is stated at £662,263, and of this sum £467,000 is involved in the transactions with the Gandells and the Mostyn colliery. The estimated assets are placed at £127,870, and if these should be realised a distribution may be hoped of nearly 4s. in the pound. After the reading of the report an adjournment took place to the 11th of March.

THE SMITHFIELD CLUB SHOW.

IT would be mere affectation to attempt to say anything special about this last Smithfield Club Show, the fifty-eighth which has been held since Mr. Arthur Young proposed the formation of such a society at Woburn. The first was held at Goldler's yard, in Goswell street, close to now-deserted Smithfield, in 1798, where it continued until it outgrew its original dimensions. At the present day we have no doubt that the art of breeding and feeding for the market has been brought to perfection. The annual competition keeps the feeders who are no longer mere graziers, but rather manure-manufacturers—up to the mark, and occasionally brings into notice some new article of food—as, for instance, "Barber's cotton-oil cake," manufactured in America from the seeds of the cotton-pod, which was highly spoken of by competent authorities at the November meeting of the Central Farmers' Club. But for the rest, the Cattle Shows of the Smithfield Club for the last five or six years have been as like each other as peas. The same regular set breds—Devons, Shorthorns, Herefords, in strong numbers; a few Highlands, and an irregular entry of cross-breeds. The extra £20 has brought some Welsh this year—a breed which, in our opinion, would be best crossed away by Highlanders or Devons. These three are shown every year by nearly the same men. Sometimes a shorthorn comes from a distant county; sometimes a nobleman tries a curious cross; but, in cattle, four out of five of the principal exhibitors may be named very safely beforehand. In Sheep the last twenty years have produced an increase to the large cross-breeds of the Southdown variety and in the Cotswolds. The Down-Cotswolds have been made almost a distinct breed. The Shropshire-Downs have shared in the improvement. In Pigs the diffusion of Prince bacon seems universal. The Poultry Show tried once was a failure, and is left to Birmingham, where such things do succeed better. As for the Implement Show, it is no exhibition, but the greatest shop of the kind in the world. It seems to become more and more the custom for farmers to examine or read the reports of the Royal Agricultural Show in the summer, and then take advantage of the Smithfield variety to visit town, and give their orders in Baker-street at Christmas. Indeed this implement department has grown so great that it promises to surround and almost bury the live exhibition.

In order to do full justice to the illustrations, they will be reserved to appear with those of the Birmingham Show, which, unfortunately, occurs at the same time as the Smithfield. We are glad to learn, on authority, that this injurious competition of the two meetings will not occur again.

The Show is under an average in numbers, but a fair average in quality. The following summary may be useful:—

Seventeen Devons are shown. The Earl of Leicester takes the first prize for the best steer, not exceeding three years old; and his Royal Highness Prince Albert the second prize.

Lady Elizabeth Louisa Reynell, of Avisford House, near Arundel, Sussex, has the first prize for a Devon ox, over four years and ten months old; and Prince Albert the second prize.

John Tucker has the prize heifer, and the Prince again the first prize for fat Devon cows. Twenty Herefords are shown. Niblett, of the White Lion, Bristol, farmer and foxhunter, has the first prize in Class V. Longman, of Affordton, near Ludlow, the second. Niblett always has a prize. In Class VI., Mr Heath, near Norwich, has the first prize for an ox bred near Ludlow; and Prince Albert the second for an ox bred by J. Stephens, of Hay, Brecon. John Phillips, of Ardington, carries off the one prize for Hereford heifers, and the second for cows: John Gurney, of Catton Hall, has the first. Forty shorthorns appear as representatives of the beef for the million. J. Holmes, of Brook Hall, near Norwich, first prize for steers. R. Robinson, of Widnerpool, near Nottingham, the second: both bred by exhibitors. In oxen the Marquis of Exeter takes the first prize and the gold medal for the best beast in the yard for a three-year and ten months animal bred by him; and Thomas Morlin the second. W. Aldworth, near Abingdon, has the first prize, and C. H. Duffield, of Marchham Park, near Abingdon, the second prize for heifers. The Prince was an unsuccessful competitor in the shorthorn classes. Henry Ambler, of Watkinson Hall, near Halifax, has the first prize and gold medal for the best cow in the yard—a white one. In the Scotch and Irish steers or oxen there was a very poor show. The prize was taken by a yellow-polled Angus, fed by John Grove, of Ferne, near Salisbury.

In the new class for Welsh, Colonel Pennant, of Penrhyn Castle, has £20 for a black ox, nearly six years old; and Sir Richard Bulkeley the second prize. Messrs. Nesme have £10 for a very nice Sussex ox: only two of this breed exhibited. In the cross-breeds a handsome heifer, between shorthorn and Hereford, carried off £10. Poor show of extra stock. In sheep there were twenty-six entries of long-woolled, and the gold medal was won by R. L. Bradshaw, of Burley-on-the-Hill, Rutlandshire, with a pen of 21 months improved Leicester wethers. In cross-breeds of long and short woolled there were, including extra stock, twenty-eight entries; the first prize going to John Overman, of Burnham Sutton, Norfolk, for his pen of 20 months Downs and Leicesters. Charles Howard, near Bedford, the silver medal in extra stock for his Down and Cotswold wether.

In short-Woolled Breeds there were fifty entries. Mr. William Rigden of Howe, near Brighton, the celebrated high farmer, won the gold medal with his 20 months and 2 weeks Southdown wether, got by Jonas Webb's tup that carried a first prize as a yearling at the Windsor Agricultural Show in the year of the Great Exhibition. The Duke of Richmond had a first prize for his 32 months pen of wethers, bred by himself.

In Pigs there were twenty eight entries. Joan Coste, of Hammoon, near Blandford, has the gold medal for his black 24 weeks old improved Dorset small breed; Prince Albert a second prize for white 24 weeks old, bred by himself. The Prince has also a first prize and Mr. Coste a second for the two breeds of pigs above 20 weeks old. No. 245 is an extraordinary pig, as big as a donkey, as heavy as one of the Devon prizes, in fine condition. Commended. But 48 years old.

To say more on this Show would be like reviewing "Virginius," or any other stock play.

The Implement Display is too crowded for examination.

The handsome plate presented to the deservedly-popular honorary secretary of the Club was exhibited in the Cattle Division. It is very fairly executed, but the artist had not fair play: the committee, who understand Stock better than Art, did not give the modeller as many hours as it requires days to fatten a pig.

Next week we shall give our Illustrations of the Prize Stock, with some remarks.

AMERICAN PRIVATEERING.—The story which obtained currency in England and France regarding the fitting out of a Russian privateer in New York referred to the barque *Maury*, which was seized by the British Consul on the plea of having on board articles contraband of war, and which was subsequently released and another to no privateer at all. The English and French press do not seem to have been properly posted on the a spect of privateering. It is a settled and recognised law of nations that unless two-thirds of the crew of a vessel fitted out for a privateer are natives or subjects of the belligerent party under whose flag she sails she is not legally a privateer, but a pirate, and may be treated accordingly. Hence, when we commenced the war with Mexico, we gave public notice that all privateers sailing under the Mexican flag, unless two-thirds of the persons on board were citizens of Mexico, would be treated as pirates. Under this view of the case it will be seen that, even were the American disposed to fit out privateers under the Russian flag, it would be impossible to man them with Russian sailors. In all New York, indeed in the whole country, it is believed that not enough Russian sailors could be found to man a single vessel. Had the English and French papers fully comprehended the nature of the case they would not have exposed themselves to ridicule by giving currency to such an absurd rumour.—*New York Herald.*

CACAO.

THE Cacao-tree, or, as it is commonly called, Cocoa, may be considered as one of the most interesting productions of the West Indies which have become articles of general consumption. The accompanying Illustrations of the culture and manufacture of the valuable staple to the breakfast and evening table are selected by a correspondent resident in the West Indies, and to his many opportunities for observation we are indebted for the descriptive details

The scene is taken from a large cocoa estate in the island of Grenada, called Pleasant Hope. Its owner has made strenuous efforts to improve the moral and physical condition of the working classes (located on his own and neighbouring estates), by the introduction of a new system of labour, tending to promote equality of confidence between the employer and employed. The estate is nearly devoted to the cultivation of cocoa and coffee, which are generally grown together. It extends over a considerable tract of land forming the sloping sides of a lofty mountain known as Mount St. Katherine, whose dark outline, covered with dense forest to the very summit, forms a striking contrast to the bright and golden foliage of the cocoa. A long and wide road runs through the centre of the plantation, from which various paths and tracks diverge, leading to and dividing the allotments. These are in many parts bounded by rows of lofty evergreen trees, which are planted for the purpose of sheltering the cocoa and coffee from the wind, which is very detrimental. In the island of Trinidad a very beautiful tree, called the "Bois

THE CULTIVATION AND MANUFACTURE OF COCOA.

COCOA PLANTATION IN THE ISLAND OF GRENADA, FROM AN ORIGINAL SKETCH.

Immortal," bearing a brilliant scarlet blossom, is common, and during the season its bloom presents from a distance, when the sun is shining on it, a most splendid and novel appearance.

The cocoa-trees are planted in rows, like apple-trees in an orchard, and the coffee-trees between them. Great care is necessary to keep the young trees free from the quantity of small climbing parasitic plants and mosses which in those climates accumulate upon them to a vast extent, and ultimately destroy them. If attention be paid to this point, and the soil prove fertile, the trees commence bearing in less than three years.

Very few things can surpass in beauty the effect of a cocoa plantation when the trees are loaded with fruit.

Our Correspondent thus describes his visit to the above plantation:—

Our road lay by a narrow path, shaded by magnificent plantains and bananas, whose gigantic leaves—from twelve to fourteen feet long and nearly three feet broad—formed over our heads a beautiful canopy. Here and there from amidst the mass rose the towering stem of a mountain cabbage tree, waving its proud crest of dark green branches. Near the roots of these a small and neatly-cut channel conveyed a stream of water to supply the mill.

The bank was covered with every variety of plant; beautiful specimens of light feathery ferns bounded the other side; and swarms of vivid-coloured butterflies and buzzing insects darted to and fro in undisturbed enjoyment. This path soon led into the heart of the plantation, and nothing could be more beautiful than the view which broke upon us. An immense bower, extending as far as the eye could reach, appeared spread above us; and the long vistas formed by the numerous lines of trees were only broken here and there by the large leaves of some straggling plantain, or mass of broken rock clothed with lichens and mosses. The rays of the sun, as they shot through the rich foliage, fell in subdued light on the clusters of fruit, with which each tree was loaded, adding to their varied tints of purple, red, and gold a brilliancy that gave the scene an air of enchantment, and forcibly reminded me of the Garden of the Genii in the story of Aladdin.

The cocoa as sent to England for consumption is known as a brown seed or kernel, something like an almond, but usually larger. The kernels are contained in a pod, and vary in number from ten, twenty, and thirty in each. The pod somewhat resembles a cucumber in shape, and is composed of a thick fleshy substance, which hardens into a shell if dried; but which when the fruit is fit for gathering is soft, and easily broken. It hangs to the tree by a short stem, and usually grows in a manner so different from the European fruits (but not uncommon to many tropical ones) that it excites the surprise of a stranger. Instead of hanging from the tender twigs and branches, and intermixed with the foliage, it is generally seen growing out of the most solid parts of the stem and branches, particularly in clusters around the main trunk of the tree, and frequently within a foot or two of the root—conveying the idea of its being hung there by some artificial means, rather than by its own natural growth. The first of the accompanying Views shows the interior of a plantation. A negro girl is plucking coffee from the small trees between the cocoa-trees; and another girl is breaking with a stone the pods of some cocoa, for the purpose of extracting the seeds.

These seeds are then taken to the mill, represented in the second Engraving, and the outer husks are removed by a machine shown near the door, with a negro supplying it. This consists of a strong frame of timber firmly fixed to the floor, supporting a line of movable bars of wood placed perpendicularly, which, being lifted by means of arms attached to a roller, and alternately catching under a projecting pellet in each bar, causes it to fall in the manner of a pestle upon the cocoa placed in the trough below.

On the opposite side of the apartment is a small roller, which is armed with a grater, by which the outer husks of the coffee-berry are removed. A sloping trough, fed by a long bag affixed to a hole in the floor above, conveys the coffee to the roller, which passes by another trough into vessels preparatory to its being dried.

Great care is required in drying the cocoa prior to its being packed; otherwise it "heats," becomes mildewed, and unfit for use. The ordinary way is to spread it out on canvas sheets or skins, and expose it to the sun, continually turning it, that all parts may be equally dried. This method is attended with considerable trouble, and of course is only adopted by those whose means will not admit of more costly apparatus. The building employed for the purpose is called a boean: it is generally built in an airy situation, so as to obtain a thorough ventilation. The apartments are very lofty, and separated by strong and open lathwork. The upper floor is generally used for the coffee, and the lower for the cocoa. The latter is furnished with large shallow trays, raised a few inches from the floor by small wheels, which enable them to be moved and passed through apertures (made for the purpose in the external wall) on to a platform, which runs the whole length of the building, and in such a position as to present the greatest exposure to the sun during the whole day. By means of these trays the cocoa is easily removed or wheeled back into the interior of the

COCOA-MILL IN GRENADA.

PLATE FOR THE GOLDSMITHS' COMPANY.

Among the beneficial encouragement of Art which resulted from the Great Exhibition of 1851 was the commissioning, by persons of wealth and high station, of several artists to produce works in fitting commemoration of the great event. In this laudable spirit the Goldsmiths Company resolved to devote a large sum from their treasury to the production of such a specimen of the artistic skill of British design and working in metal as should be worthy of emanation from a Guild under whose special protection this branch of art may be said to be placed. Their object was specially to test the state of art as applied to silver-manufacture; and with this view the Company decided upon a group of plate, to be open to the competition of all the trade, in which Messrs. Hunt and Roskell were successful. The whole was designed and modelled by Mr. Alfred Brown; it is, altogether, a masterly work, strongly reminding us of the best age of the art. We have engraved the several pieces

There are two Candelabra for ten lights each. The figures on the first represent Benvenuto Cellini, George Heriot, and Sir Martin Bowes: each statue is attended by a figure of Genius, bearing emblems of the craft. On the base are the arms of the Company.

In the opposite Candelabrum, the group represents Michael Angelo in the Studio of his Master, Domenico Ghirlandaio, sketching a lady who is fitting on one of the garlands from the fabrication of which Corradi, Ghirlandaio's father, derived his name. Lorenzo de Medici, the great

BENVENUTO CELLINI.

MICHAEL ANGELO (GHIRLANDAIO'S STUDY).

building in case of rain, which—as most cocoa estates are in mountainous districts—is of frequent occurrence, and falls in very sudden and heavy showers. It is, I believe, well known that from the cocoa, when properly pounded, refined, and prepared, chocolate is made.

The coffee-berry is so well known that it is needless to enter into any lengthened description of it. The tree is an elegant shrub, with a light-coloured bark, very rough in appearance; its leaves are small, and of a beautiful dark glossy green; and the flower, which is a most delicate little white star with numerous anthers, not unlike the blossom of the myrtle, is closely clustered around the long and slender branches, and forms a beautiful contrast to the dark leaves with which it is intermixed.

The wood of the coffee-tree very closely resembles box, and is extremely hard; but, as it seldom grows to any great extent, is not turned to account. The berry, when ripe, is a deep purple colour, rather larger than a sloe, and consists of a pulpy substance, in which is contained the seed, or coffee of commerce.

The proper method of cultivating is to keep the trees from growing too high, by continually pruning the tops and allowing the lower branches to spread; to plant in a moist and shady situation; being very particular to protect it from the wind, and to keep the trees very clear at the roots from weeds. It is usually propagated from seed.

GRANTING THE CHARTER OF INCORPORATION.

Next is a group illustrating the benevolence of the Goldsmiths' Company. On the summit is a figure of Prudence, and by her side Benevolence is distributing to the necessitous from the horn of plenty. The figures underneath display the varied benefits conferred. On the left are the scholar and his tutor; in front is a sick man; on the right are the widow and her fatherless children, and the reduced and enfeebled artisan about to lay aside his implements of trade, all sustained and relieved by the Goldsmiths' Company. On the pedestal are medallions of Edward III., Henry VII., and James I.; and at the angles the arms and supporters of the Company.

The last group represents the Business Duties of the Goldsmiths' Company. On the summit is the figure of Science; her hand, resting on a crucible, points to the law, upheld by Justice, for the regulation of the standard of the precious metals. On the left stands Industry with various articles of plate, a beehive, an anvil, and other implements of labour. Underneath, on one side, Mercury represents Commerce, supporting Prosperity with the horn of plenty; and on the other side is Plutus, the God of Wealth. On the pedestal are medallions of Edward II'., Henry VII., and James I.; and at the angles the arms and supporters of the Company.

BENEVOLENCE.

patron of art, and Michael Angelo's friend, is inspecting some works handed to him by a page. On the base are the arms of the Company.

The subject of the large candelabrum represents the Granting of the Charter of Incorporation to the Goldsmiths' Company, by Richard II., A.D. 1392. The King is delivering the Charter into the hand of the Prime Warden. A warden kneels in front of the throne with specimens of the craft. Thomas d'Arundel, who was Chancellor and Archbishop of Canterbury, stands on the right of the King. The Queen, Ann of Bohemia, is seated on his left An attendant bears plate, a present to the king. William Standen, Mayor of London, is present with the insignia of his office. The Chamberlain, and pages playing with a greyhound, complete the group. On the base are the arms of the Company. The groups represent the processes of mining, refining, and working the precious metals. The style of the ornament is Italian, of the cinque cento period.

BUSINESS DUTIES.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

In reference to the rumour that the Prince of Wales is to enter at Oxford University, the *Oxford Chronicle* states that apartments are in course of preparation for his Royal Highness at Christchurch.

Preparations are in progress at Turin to celebrate the return of the King of Sardinia to his dominions. Trophies of flowers, to be illuminated by gas and other ornaments, are being erected on the Piazza Carlo Felice.

Marie Amelie, ex-Queen of the French, has been able to get up for several successive days, and is in a fair way of recovery.

No improvement has taken place in Prince Paskiewitsch's health. Prince Theodore, his son, has arrived at Warsaw; and Professor Oppolzer, a physician of great eminence, has been sent for from Vienna to attend on the illustrious patient.

Lord Canning, the new Governor-General of India, left Marseilles on the 5th instant, in the *Ormuloe*, for Alexandria. A steam-frigate will be in attendance for his Lordship at Suez, to convey him, his family, and suite to Bombay.

The Princess Amelia of Saxony, who lately underwent an operation for cataract, has fully recovered her sight, and is going on so well that no further bulletins are to be issued.

The Emperor of Russia, in returning through Moscow, devoted the short time he stopped there to religious acts. He visited in succession the numerous churches of the Kremlin, and paid his devotions to the relics, and at his departure he received from the Bishop the image of a saint.

The King of the Belgians is about to purchase an estate on the island of Marinkuz, near Warasdin, in Croatia, at the price of 4,600,000 florins.

Sir Hamilton Seymour has taken the apartments at Vienna which were occupied by M. Drouyn de Lhuys during the Conferences.

The Marquis de Turgot, French Minister at Madrid, has appealed to the Spanish tribunals relative to an article inserted in that journal insulting to the Empress Eugénie.

The marriage of General Canrobert with the daughter of a wealthy physician attached to the Imperial Court is spoken of in Paris. The Emperor interests himself very much in this union.

The *Opinione*, of Turin announces the arrival there of Mr. Smith O'Brien.

The Earl of Eglinton and Winton, president of the institution, occupied the chair at the annual soirée of the members and friends of the Glasgow Athenæum last week.

The young Count Orloff, who was wounded in the eye before Sinistria, has arrived at St. Petersburg with his mother and his physician.

The Emperor of Russia has given to M. Gretsch, the editor of the *Northern Bee*, a snuff-box, richly set with diamonds, and inscribed with the name of the Imperial donor.

Mr. Bunning has been presented with a very handsome diamond ring by the Marquis d'Azeglio, by order of his Majesty the King of Sardinia, as a memorial of his Majesty's approbation of the decorations at Guildhall on the 4th December.

The Russian Ambassador, in special audience by the King of Prussia on the 7th inst., presented to his Majesty an autograph letter from the Emperor Alexander, in which the latter announces the betrothal of the Grand Duke Nicholas.

The *Gazette* of Tuesday evening contains a notice for the election of a temporal peer of Ireland, in the room of the late Viscount De Vesci.

On the 22nd inst. the National Guard of Paris intend giving a banquet to the Imperial Guard in the Palace of the Universal Exhibition.

The rumour that General Shabelski, who commanded the Russian cavalry before Eupatoria on a recent occasion, and sustained a loss, had been disgraced by the Emperor is not correct. The Emperor has conferred on him the Order of St. Vladimir of the first class.

Sir James Fergusson, of Kilkerran, Bart., M.P., has compiled with a solicitation, forwarded to him by the Mechanic's Institution, Girvan, to deliver a public lecture there on the war.

Baron James Rothschild, who was at Compiègne with the Imperial and Royal party on Thursday week, arrived in Paris at twelve o'clock on Friday, in consequence of a telegraphic despatch informing him of the death of his eldest brother, M. Anselm Rothschild, of Frankfort.

A handsome monumental brass is about to be placed in Salisbury Cathedral in memory of Lieutenant Greathed, First Lieutenant of H.M.S. *Britannia*, who fell in the trenches before Sebastopol in October, 1854.

Dr. Cullen, who at one time had paramount influence at Rome, is said to have lost something of that influence, and Dr. McHale has proportionately risen in the estimation of the Pope and the Propaganda.

An order of the day of the Grand Duke Constantine, published at St. Petersburg on the 28th ult., announces that the crews of the fleet who have taken part in the defence of Sebastopol may now wear on their helmets the following inscription, "For Sebastopol, from Sept. 18, 1854, to Aug. 27, 1855."

A "monster concert" is about to be given at Vienna, and out of the proceeds a handsome monument is to be erected over the spot where Mozart's bones lie.

Mr. Charles Dickens has promised to read his "Christmas Carol" at Sheffield on the evening of Saturday, the 22nd instant, for the benefit of the Mechanics' Institution in that town.

The mother of M. Caussidière, who was Prefect of the Police during the early days of the Revolution of 1848, was interred on Saturday morning in the cemetery of Montmartre. From 30 to 100 persons followed her to the grave.

Mademoiselle Julie, whose clothes caught fire during the performance of the "Good Woman of the Wood," at the Plymouth Theatre, on the 20th ult., expired on Sunday morning last, in her nineteenth year.

Mdlle. Rachel's brother has written to the *Figaro* to state that the receipts of the French company for the first two months of their sojourn in America (at New York and Boston) amounted to upwards of £21,000.

The Austrian Minister of Finance has calculated that the proposed reduction of the army will be a saving to the Treasury of 30,000,000 florins—a sum equivalent to about £3,000,000.

Shakspeare's "Tempest" has been produced at the Munich Theatre with great success. The *Augsburg Gazette* says that this is the first time the drama has ever been played in its original form in Germany.

The Glasgow Cathedral improvements are now nearly completed. The contractors are at present engaged in fitting up the new seating and stalls.

Permission has been refused to a Prussian Protestant nobleman to purchase a domain in the Tyrol. This is looked on as one of the first fruits of the Austrian Concordat.

The receipts of the theatres, concerts, balls, and curiosities of Paris, in the month of November, amounted to 1,510,319f., being 363,859f. less than those of October.

The officers of the Oxfordshire Militia belonging to the staff now in Turkey, with some members of the University, giving two theatrical entertainments in the Town-hall on Thursday and Friday, Jan. 10 and 11.

The bridge of boats over the Rhine, at Mentz, was removed on the 3rd, as large masses of ice had begun to drift down the river.

A medical journal of St. Petersburg states that between October 1, 1852, and the 1st November, 1855, there have been 5366 cases of cholera in that city.

Last week, at the Somersetshire Winter Assizes, a verdict of "Not Guilty" was recorded in the case of Thomas Tatton, charged with wilfully administering a quantity of arsenic to his father at Batheaston, near Bath, in August last.

During the week ending November 17 the imports of foreign dry goods at New York were 100 per cent larger than in the corresponding period last year.

According to the *Echo du Pâtre*, it is in contemplation next year to form a camp on the banks of the Moselle.

The Liège journals mention as a remarkable fact that, on the 5th inst., not a single death was declared in that town, out of a population of 100,000 inhabitants.

The [illegible] cers of Newcastle and Gateshead have contributed £477 [illegible] ctic, in aid of the practice, which is to be abandoned, of giving [illegible] to their customers.

A letter from Genoa states that three hundred political refugees have just embarked at that port for Australia.

A reprieve has been granted the convict Lorden, now in Newgate, who was sentenced to death for the murder of his wife in a fit of drunken jealousy.

A fire broke out on the night of the 3rd at the terminus of the Prussian Railway at Vienna, and before it could be put out six carriages and [illegible] were destroyed.

The body of a man was found a few days ago buried in snow on the road over the Simplon.

The Government has asked the Highland Society to undertake permanently the collection of the agricultural statistics of Scotland.

THE BANK CHARTER ACT.

At the meeting of the Privy Council, held at Windsor on Friday, the 7th inst., the following order was sanctioned by her Majesty:—

It having been represented to her Majesty in Council by the Governor and Company of the Bank of England, that the agreement sealed with the seal of the said Governor and Company, and dated the 26th day of November, 1855, that certain bankers, in the said memorial named, who, on the 6th day of May, 1844, were issuing their own bank-notes to an amount not exceeding two-thirds of the amount which the bankers, so ceasing to issue, were authorized to issue under the provisions of that Act; now, it is this day ordered by her Majesty, by and with the advice of her Privy Council, that the said Governor and Company shall be, and they are hereby, authorised and empowered to increase the amount of securities in the Issue Department of the Bank of England to the extent of £4,475,000, beyond the total sum or value of £14,000,000 in the Act mentioned, and thereupon to issue additional Bank of England notes from the said Issue Department in manner in the said Act mentioned, to the amount of £4,475,000.

C. C. GREVILLE.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

As the late rumours in reference to peace with Russia have not been confirmed, we have had numerous sales of stock for the account, and the transactions in securities has, therefore, been heavy, and prices have fallen about one per cent. The order in Council in reference to an additional issue of notes, and to which we alluded some time since, has been published. By this order the Bank of England is empowered to issue notes to the extent of £4,475,000 beyond its present amount. This sum, it must be observed, is two-thirds of the notes thrown out of circulation through the late failures of banks of issue in the provinces.

We have had only two small arrivals of bullion—viz., 9,000 dollars from New York, and about £20,000 in silver from Belgium. The official returns for exports of the previous metals show a limited amount; but large quantities of gold still continue to leave the country through private hands. From the fact that we are now importing large quantities of produce from America, especially cotton, grain, and flour, and that immense supplies will be shipped during the next two months, we may anticipate very limited imports of gold from the United States for some time.

On Monday the dealings in Consols were small, and prices were rather drooping. The Reduced marked 89¾ ⅜; the Three per Consols, 89¼ ex div.; the New Three per Cents, 89¾ ⅜; and Consols for Account, 89⅞ 89¾. Exchequer bills, 210. Long Annuities, 1860, 3⅛; ditto, 1859, 3 5-16; ditto, 1855, 16 5-16. India Bonds, 6s. dis.; Exchequer Bills, 1s. to 6s. dis.; Exch-quer Bonds, both series, 99¾. Tuesday's business was chiefly confined to sales, as follows:—Bank Stock, 210¾; Three per Cents Reduced, 89½ to 89⅝; New Three per Cents, 89¾ to 89⅞; Long Annuities, 1860, 3⅛; ditto, 1885, 16⅛; India Bonds, 6s. dis.; Consols for Account, 89⅝ to 89¾; Exchequer Bills, 1s. to 6s. dis.; Exchequer Bonds, 99½ to 99⅞. On Wednesday there was considerable flatness in the market, arising in some measure from a report that Kars had fallen. Consols opened at 89¾ ⅜, then rose to 89⅞ ⅜. After wards declined to 89⅝ ½. The New Three per Cents were 89¾ to 89¾; and the Reduced, 89¾ ⅜. Bank Stock, 209: Exchequer Bills, 7s. to 2s. discount. Owing to an increased demand for discount accommodation, to meet the instalment of 15 per cent upon the new Turkish loan—which falls due on Friday, and the first one upon the English loan on the 16th—the Consol Market, on Thursday, was rather heavy, and prices were about one-eighth per cent lower. Consols marked 89¾ ⅝ 89¾ ⅞. The New Three per Cents were 89¾ to 89⅞; and the Reduced, 89⅝ to ¾. Exchequer Bills, 7s. to 2s.; India Bonds, 2s. to 5s. discount. There was no change in the rates of discount by the Bank of England.

A new Russian loan of £8,000 000 sterling has been opened at Hamburg, Vienna, and Amsterdam. The price is 82, with five per cent interest. As yet, it has met with very little favour.

The Foreign-house has been devoid of animation, yet we have no marked change to report in the quotations. Brazilian Five per Cents have been 99 to 100; Ditto, Small, 99½; Buenos Ayres Six per Cents, 57, Granada, New Active, One-and-a-Half per Cents, 19½; Ditto, Deferred, 8; Peruvian Four-and-a-Half per Cents, 75½; Russian Five per Cents, 98¾; Ditto, Four-and-a-Half per Cents, 90; Sardinian Five per Cents, ex ex div.; Spanish New Deferred, 20⅜; Turkish Six per Cents, 1854, Small, 85¾; Ditto, Six per Cent Scrip, for the Account, 3⅜ discount; Venezuela Four-and-a-Quarter per Cents, 24¼; Ditto, Deferred, 11¼; Dutch Two-and-a-half per Cents, 62⅜.

There has been a steady business doing in Joint-Stock Bank Shares, at fair quotations—City have realized 61. Commercial of London, 30¾. London Chartered of Australia, 9¾; Ditto New, 1¼; London and Westminster, 48; National Provincial of England, 7¾; Provincial of Ireland, 8¾; and Union of London, 20¾.

Most Miscellaneous Securities have ruled dull, but without much change in price. Canada Company's Hotels have sold at 145; Ditto Government Securities, Six per Cent, 109¾; Crystal Palace, 2¼; Ditto, Preference, 4¾; English and Australian Copper smelting Company, 1¾; General Screw Steam Shipping Company, 1⅝; Montreal, 5¾; South Australian, 5¾; Netherlands Steam Navigation, 3; European Steam, 12¾; Peel River Land and Mineral, 2¾; Peninsular and Oriental Steam, 69; St. Katharine Docks, 84¾; Victoria Docks, 9¾; Ringsend Docks, 12; Vauxhall, 21¼; Hungerford, 7; Grand Junction, 72¾; and Waterloo Bridge, 89¾; West Middlesex, 90.

Canal Shares have been almost nominal. Ashton and Oldham, 145; Derby, 84; Leicester, 49¾; Loughborough, 550; Stafford and Worcester, 220; Stourbridge, 290.

Insurance Companies' Shares have been almost wholly neglected.

The dealings in the Railway Share Market have been extremely restricted. In prices, however, no material change has taken place. The following are the leading quotations realised during the week:

ORDINARY SHARES AND STOCKS.—Aberdeen, 22¾; Bristol and Exeter, 80; Caledonian, 85¼; East Anglian, 12; Eastern Counties, 8¾; Edinburgh and Glasgow, 81; Edinburgh, Perth, and Dundee, 17¾; Great Northern, 87¾; Ditto, A Stock, 72; Great Southern and Western (Dublin), 102¾; Great Western, 86¾; Lancaster and Carlisle, 70¾; London and Brighton, 95; London and North-Western, 94¾; London and South-Western, 85½; Ditto, £50, 40¾; Midland, 64¾; Ditto, Birmingham and Derby, 37¾; Norfolk, 44, North-Eastern, Berwick, 65¾; Ditto, York, 45; North Staffordshire, 9¾; Oxford, Worcester, and Wolverhampton, 22¾; Scottish Central, 100, South-Eastern, 57¾.

LINES LEASED AT FIXED RENTALS.—Hull and Selby, 115; Midland and Bradford, 69¾.

PREFERENCE SHARES.—Eastern Counties, New, 5½ per Cent, 12; Great Northern Five per Cent, 114¾; Great North of Scotland, First Preference, 9¾; Great Western Irredeemable Four per Cent, 79½; Manchester, Sheffield, and Lincolnshire, New £10 Shares, 12¾; Ditto, £8 5; Consolid ted Bristol and Birmingham, 133; North Staffordshire, 20¾; Oxford, Worcester, and Wolverhampton, 96

FOREIGN.—Antwerp and Rotterdam, 7⅛; Bombay, Baroda, and Central India, 4¾; East Indian, 20¾; Grand Trunk of Canada, A Issue, 15¾; Ditto, B Issue, 16¾; Great Central of France, 13¾; Great Indian Peninsula, New, 3; Great Western of Canada, 24; Ditto, Bonds payable in 1873, 104; Namur and Liege, with interest, 9¾; Royal Swedish, 2¾; Illinois, Six per Cent, 70¾; Ditto, Free Land, 77¾.

Al. Mining Shares have been very dull. St. John del Rey have marked 20; Cobre Copper, 65¾; Colonial Gold, ¾; Copiapo, 19¾; Ex. Orch, 4¾; United Mexican, 4.

Friday Evening.

In the early part of the day the Consol-market was steady, but prices were rather on the advance. However, owing to some large sales of stock, it subsequently declined, and the Three per Cents Reduced were [illegible] and the New Three per Cents, 89¾ ⅞. Exchequer Bills and Railway Shares have been rather dra[illegible]

THE MARKETS.

CORN EXCHANGE [illegible].—To-day's market was but moderately supplied with English wheat, somewhat [illegible] arrivals from the Kent and Essex coasts, but not [illegible] Monday's decline in the quotations. Nearly 10 000 quarters of foreign wheat have come to hand, but the quantity of that sort of grain on sale was by no means large. So little business was doing that the rates from the finest numbers [illegible] barley, oats, and beans remained unaltered. Both barley and malt sold heavily, at barely stationary prices. The show of fresh up [illegible] was large. The demand was heavy, and prices were full 2s per quarter lower. In beans, peas, and flour very little was doing, at barely the late decline. Over 15,000 barrels of flour have come to hand from America.

Arrivals this Week.—Wheat, 23,200 barley, 8,730; malt, 1,510; flour, 1,810. Irish: oats 29 180. Foreign: wheat, 9,980; barley, 6,420; malt, 1,460; beans, 1,610; peas, 1,610; Wheat, Essex and Kent, red, 42s to 48s; ditto, white, 45s to 51s; Norfolk and Suffolk, red, 42s to 48s; ditto, white, 45s to 51s; grinding barley, 30s to 32s; distilling ditto, 33s to 36s; malting ditto, 38s to 44s; Lincoln and Norfolk malt, 75s to 80s; brown ditto, 64s to 68s; Kingston and Ware, 75s to 80s; Chevalier, 82s to 86s; Yorkshire and Lincoln, 75s to 80s; rye, 35s; peasle ditto, 40s to 42s; hingcans and maples, 42s to 45s; ditto, white, 40s to 43s; tick beans 40s to 42s; grey peas, 42s to 44s; maples, 44s to 46s; whites, 40s to 42s; pollers, 40s to 43s; flour, Essex and Suffolk, 37s to 39s; Kent, 36s to 38s; Stockton and Yorkshire, 35s to 36s; per 280 lbs. Linseed cakes were 10s per ton; rapes, £6 per barrel.

Seeds.—For the time of year about an average business is doing in most seeds, at full prices. Cakes move off slowly, at previous rates.

Linseed, Scottish crushing, 78s. to 80s.; Mediterranean, 78s. to 80s.; bumpseed, 56s. to 58s. per quarter. Linseed cakes, English, 10 5s. to 10 10s. per cwt. Brown mustard-seed, 10s. to 20s.; white ditto, 8s. to 10s.; tares, 6s. 6d. to 7s. 6d. per bushel. English rapeseed, 30s. to 36s. per quarter. Linseed cakes, English, £14 5s. to £15.; ditto, foreign, £13 10s. to £14 10s.; rape cakes, £7 10s. to £8 0s. per ton. Canary, 62s. to 68s. per quarter.

Imports of Foreign Agricultural Produce last week.—Wheat, [illegible] barley, [illegible] oats, 1,654 qrs.; malt, 53s. qrs.; beans, 2,270 qrs.; peas, 958 qrs.

The Six Weeks' Averages.—Wheat, 51s. 4d.; barley, 40s. 8d.; oats, 28s. 4d.; rye, 38s 7d.; beans, 37s. 6d.; peas, 38s 5d

English Grain sold last week.—Wheat, 114,883; barley, 129,145; oats, 17,203; rye, 201, beans, 9616; peas, 2658 quarters.

Bread. The prices of wheaten bread in the metropolis are from 10½d. to 11½d.; of household ditto, 9d. to 10d per 4lbs. loaf.

Tea.—The public sales held this week have passed off slowly, without leading to any material change in prices. In the private market about an average business is doing, on former terms.

Sugar.—Although dealers generally are very short of stock, a very limited business is doing in all kinds of raw sugar, and the prices ruling this week show a decline of from 6s to 6d. per cwt. from the highest point of the market. In refined goods no fresh sales have been made that the quotations are almost nominal. The imports and stocks are rapidly increasing.

Coffee.—On the whole our market is firm, especially for Plantation coffee, but we have no change to notice in the quotations. Good ord native Ceylon has changed hands at from 38s to 38s per cwt.

Rice.—For immediate delivery very few sales have been effected, at the late decline in value; but for 2000 tons have found buyers for forward arrival on rather easier terms.

Provisions.—We have no change to notice in the value of any kind of Irish butter, and the [illegible] by no means active. For [illegible] ship, at very full prices. Bacon [illegible] butter is a shade higher. [illegible] a fair demand, at previous rates. Hams are [illegible] a value of from 5s to 5s per cwt. Prime mess Waterford, to be shipped, would [illegible] shipments up to February next at 98s. and Limerick, for three months forward, at 95s. per cwt., on board. Hams are quite 4s. per cwt. cheaper.

Tallow.—The demand is steady, and prices have ruled in favour of sellers. P Y.C. on the spot, has changed hands at 66s 6d to 66s 9d per cwt. Rough fat, 3s. 3d. per 8lbs. The stock is now 8,580 casks against 23,357 ditto in 1854.

Oils.—Linseed oil moves off slowly, at 34s. 9d. per cwt on the spot, and 42s. 6d. forward delivery. Southern is selling at 42s to 43s on the spot, 44s to 45s; pales, 47s. to 48s; and rape, 38s. 6d. to 41s. per cwt. Turpentine is dull, at 36s. 6d. to 37s for spirits, and 35s 9d. to 36s for rough.

Spirits.—Rum continues steady, at full prices. Proof L. rewards, 1s. 3d. to 1s. 3d.; and Leeward Islands, 1s. 4d. to 1s. per gallon. Brandy is quite as dear as last week, with a firm demand. Malt spirit, 11s. 2d.

Potatoes.—As the supplies are large, the demand is heavy, as follows:—York Regents 80s to 110s.; Kent and Essex ditto, 80s. to 85s.; Scotch ditto, 75s. to 80s. per ton (*Mincing Lane*). There is a fair demand for the best new hops, at full quotations; but inferior stands are a dull inquiry. The imports this week are 320 bales from Hamburg, 1 from Calais, and 53 from Rotterdam. Mid and East Kent Pockets, £3 10s. to £6. Weald of Kents, £3 3s. to £4 15s.; bassets, £3 5s. to £4 10s. per cwt.

Coals.—Hetton (Lambton), for 9d.; Tanfield Moor, 17s. 6d.; Wylam, 18s. 3d.; Lambton 18s 6d.; South Hetton, 18s 9d.; Hetton Hall, 18s. 3d.; Tees, 20s. per ton.

Metropolitan Cattle Market (Friday). For the time of year, and coming after that the great show will be held next week in Baker-street, the supply of beasts was but moderate and in middling condition. The demand for all breeds ruled steady, and, in some instances, the prices obtained were 2d per 8lbs. above those on Monday. The highest figure for beef was 5s. 6d. per 8lbs. Sheep the show of which was very middling moved off slowly, at the late reduction. The supply of calves was limited, and the veal trade ruled heavy, at barely stationary prices. Pigs were dull, but cheaper. Milch cows sold slowly, at from [illegible] each, including their small [illegible]

Last Week, to which the following Comparison refers.—Coarse and inferior beasts, 3s. 8d. to 3s. 10d.; second ditto, 4s. 2d.; prime ditto, 4s. 4d.; prime coarse ditto, 4s. 6d. to 4s. 8d.; prime Scots, &c., 4s. 8d. to 5s. 4d.; coarse and inferior sheep, 3s. 6d. to 3s. 8d.; second quality ditto, 3s. 10d. to 4s. 2d.; prime coarse-woolled sheep, 4s. 4d. to 4s. 6d.; prime Southdowns, 4s. 8d. to 5s. 0d.; large coarse calves, 4s. 4d. to 4s. 6d.; prime small ditto, 4s. 8d. to 5s. 0d.; large [illegible] small porkers, 4s. 6d. to 5s. 0d.; [illegible] each; [illegible] each; [illegible] foreign beasts, 4s. 0d. to 4s. 4d.; foreign sheep, 3s. 6d. to 4s. 0d.; [illegible] each; [illegible] each; [illegible] each

INVESTITURE OF THE KING OF SARDINIA WITH THE ORDER OF THE GARTER, AT WINDSOR CASTLE.—(see page 702)

GRAND STAIRCASE AT THE HOTEL DE VILLE, PARIS.

GRAND BALL TO THE KING OF SARDINIA, AT THE HOTEL DE VILLE, PARIS.

THE fête given by the city of Paris to the King of Sardinia was of a most magnificent description, and, whilst it equalled any of its predecessors in splendour, it differed from them all in the variety of its decorations. Indeed, the Hôtel de Ville was made to possess a distinctive character of its own. The fine old building remained the same outside in the quaint simplicity of its architecture; but within, each room seemed to assume a more tasteful aspect on each new occasion. No more lovely scene could be viewed than what met the eye on entering the Cour Louis XIV. The winding staircase, of such graceful form, with its double ascent, which had been erected for the visit of Queen Victoria, still preserved its rich decorations; but the difference of the season had necessitated modifications in the arrangements. When the heat of summer raged, as much falling water as the limits of the hall could allow was alike delightful to the eye and ear; but in the present season water would strike unpleasantly. In consequence, the *jets d'eau* which played before each pillar round the hall were suppressed, as were the cascades which fell into the opening near the Salle St.-Jean. But the basin in the centre of the Hall, with its naiads, its dolphins, its winged boys, still presented the same fairy-like aspect. The figures of France and England, which on the previous occasion were placed in the centre of the fountain, were replaced by a group of children standing on a sphere surrounded with dolphins, and supporting a large vase, over which the water broke, as it fell, into a thousand sparkling drops. A line of lamps formed a fiery edging outside the spiral ascent of the staircase on the right and left, and a similar cordon ran along the front of the staircase above, over the statues of the water-nymphs, from whose urns the water gushed in a thick volume into the fountain below. At the foot of the staircase the statues of bronze, which hold at each side a mass of rich candelabra, with wax-lights, had been silvered. The walls of the cloister, round the hall, were entirely covered with a golden trellis-work, intertwined with vines bearing artificial fruit, producing a most charming effect. On the former occasion a flight of steps was arranged into the Salle St. Jean, at the back of the staircase between the two cascades; but as these latter were suppressed the steps disappeared with them, and two passages were contrived from the cloisters, one on each branch of the state staircase of the Hôtel. The general appearance of the hall was much improved by the upper part being ornamented with white marble slabs. The numerous falseaux of tri-coloured flags were removed, except immediately over the landing of the fairy staircase, where a quantity of them, surmounted with shields bearing the arms of France and Sardinia, were placed side by side. The other arrangements were only altered in the details. There were the same crimson velvet draperies trimmed with gold to every window. The figures of boys bearing masses of wax-lights stood before the pillars above; rich chandeliers were suspended between the arches; and above a rich border of living flowers ran round the edge of the roof, just below the point where the gutters are placed; the glass roof still covered the hall, letting down from its centre the magnificent lustre, which seemed almost self-suspended, so slight did the golden cord appear by which its huge weight was upheld. All the pillars were adorned at their base with flowers; and screens of evergreens were placed at each side of the entrance. In the Council Chamber, above the Hall, the bust of the King of Sardinia was placed over one fireplace, and that of the Emperor of the French over the other.

Chairs of state were arranged, as usual, in the middle of the Galerie des Fêtes, in front of the salon of introduction. Some French and Sardinian flags, mingled together, were clustered behind the place of honour. This noble gallery, one of the finest in Europe, was one blaze of light from its double line of chandeliers. Every other apartment was also magnificently lit up and adorned with flowers, statues, candelabra, bronzes, and hangings, with a profusion that the richest palace might envy. Not only were the usual apartments thrown open, but several rooms in the floor above were made available for refreshments and places of repose.

Not less than three entrances were arranged for the guests to reach the apartments: one by the Portal of Henry IV., in front of which a handsome tent had been erected to receive the Imperial party; and the other two by the courts which lead to the two extremities of the Salle St. Jean The whole front of the building outside was brilliantly illuminated, and the cipher of V.E. in honour of the King was to be seen in various places in jets of gas.

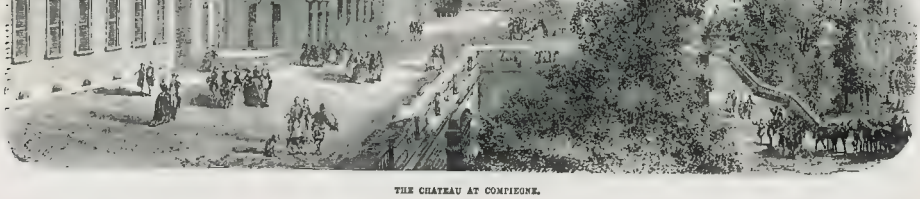
THE KING OF SARDINIA AT COMPIEGNE

THE French Emperor arrived at Compiègne on the evening of the 6th inst., at six o'clock. All the houses in the town were illuminated. His Majesty was received by the Sub-Prefect and the Mayor. At Creil, the Prefect and the authorities were at the station, and saluted his Imperial Majesty. The Emperor was received during his passage with the warmest acclamations. At a quarter before seven the King of Sardinia reached the Imperial château, of which we this week give an Engraving. The King was greeted at Compiègne with cries of "Vive le Roi Victor Emmanuel!" mingled with those of "Vive l'Empereur!"

In the evening there was a grand dinner at the palace, at which the principal public functionaries of the neighbourhood and the Bishop of Beauvais were present.

Next day (Friday) the Emperor and his Royal guest had a day's stag-hunting at Compiègne.

THE King of Sardinia, in order to testify to the French clergy his sense of the very cordial reception which he met with from them, has sent decorations to the several prelates with whom he has had personal communication in France—to the Archbishop of Paris, the Archbishop of Lyons, the Archbishop of Avignon, and the Bishop of Marseilles



THE CHATEAU AT COMPIEGNE.

WHY IS BREAD DEAR?

SOME FACTS ON IMPORTATION, EXPORTATION, AND CULTIVATION.

BREAD is very dear, and there is no probability that it will be cheaper for some time. Dear bread is an affliction that falls with peculiar severity on the working classes. Bread consumes a large share of their wages, and the lower the wages the larger the proportion paid for bread. Under these circumstances it is not extraordinary that the working classes should complain, should meet together to discuss their wants, and cry aloud, as men will do when they suffer pain, without considering whether such cries will help them.

For our own parts we think that, in times like the present, the complaints of the working classes should be listened to and discussed with the utmost attention and tenderness; that they suffer there can be no doubt; and, if the remedies they propose are unwise and unreasonable, they are only repeating what persons in a much higher station, with more means of education, believed to be sound political truths a very few years ago.

We hear at Manchester meetings one speaker calling for a law prohibiting the exportation of corn; and another, a Frenchman, arguing that if the land were divided into small lots among peasant proprietors, as in France, the country would grow more food at a cheaper price. We propose to discuss these points in the kindly spirit befitting a journal so much read among the humblest classes of society—for there are few reading-rooms even in villages where a copy of the ILLUSTRATED LONDON NEWS is not to be found. Now, first, why is corn dear after a harvest that appeared bountiful, and that at any rate was near if not quite an average, in spite of a bad sowing-time and the long severe winter, which destroyed wheat on much light—that is, the best-farmed—land? The first reason is that we are at all times, and have been for many years, an importing country. In the very best years, so great is the consumption of our population that we cannot grow enough wheat for our people, and barley and oats for our animals, brewers, and distillers. This country is now a wheat and meat eating country. Rye bread, the black bread of Europe, which will in climates grow where wheat will not, has long been dismissed; the scale of living among the labouring classes has risen continually for the last fifty years, and we trust it may continue to rise. Even in Ireland, since the famine year, a large quantity of grain is now consumed instead of potatoes. All over the Continent, especially in Belgium and Germany, grain of some kind has to a great extent taken the place of rotten potatoes; so, while we in Great Britain have been increasing in numbers on our small islands, and eating more bread and meat, less potatoes, less barley and oat bread, and have altogether discontinued rye-bread—in the more flourishing towns of the Continent, especially in Prussia, the people have also begun to eat more wheaten bread.

For many years we have imported not less than 24,000,000 bushels of grain, and in some years as much as 80,000,000 bushels, to make up the difference between what we grow, what we consume, and what we keep on hand to retail, as it were, to other less wealthier countries. But this increased importation has not been caused by a falling off in the produce of our fields; on the contrary, acre for acre, we grow more corn than any other country in Europe. As long as the countries from which we imported grain had a large surplus to sell, corn was cheap here. For more than forty years the seasons were so favourable that the continent of Europe had not only as much corn to sell every year as we wanted, but a good deal more that remained stored up in warehouses at every port and river side of the great corn countries.

But in 1852-1853 occurred the worst harvest season all over Europe that had been known since the time of the old war, when, King George III. setting the example, gentlefolk gave up eating puddings and pies to save flour. At that time the best bread that could be got was black, sticky, and sour. In 1853, in France, Holland, Belgium, the German provinces on the Rhine, Prussia, Switzerland, and Italy, which had all been sending us corn the previous year, the harvests failed: in some of these countries the people actually starved, and died like flies on the highway of fever and famine as they did in Ireland in 1848. The deficiency of the harvest of Europe in that year, without including England, was nearly fifty millions of quarters, or more than two years' consumption of Great Britain. Now, this universal dearth cleared out all the old stocks and warehouses everywhere. The great reservoirs of grain, which had previously filled up any partial deficiency, and been refilled by the next harvest, were exhausted. The warehouses were swept clean, so that we had only the surplus stock of America to fall back upon. But America had not large surplus. Californian gold-digging had drawn off her primest farmers and farm labourers, and prices in California had tempted away part of the supply that used to be sent to Europe. The million of British and German emigrants who were every year pouring into America required to be fed, and did not the first year of this emigration grow enough corn to feed themselves. In addition to Californian demands soon came the Australian gold-diggers, also consuming corn imported from the United States and South America; while at home, with good wages, more bread was eaten than ever.

Thus, between 1853 and 1854, we had in Europe a universal short harvest in the face of large consumption. And since that time there have never been overflowing harvests to fill up the reservoirs of grain on which before the dearth we were able to draw for any extra deficiency we required. On the contrary, France had another moderate harvest in 1854—a terrible calamity in a country where there is no regular legal relief for able-bodied poor out of work. In 1855 (for bad harvests almost always run in groups) the harvest was short again in France, as well as in Holland, Belgium, Prussia, Italy, and in almost all those British provinces from which we usually draw a supply to fill up our annual deficiency.

In addition, then, to one year of dearth all over Europe, three short harvests in France, and two in the north of Europe, we have the deficiency caused by war: war wastes food, in the carriage and distribution among armies. Besides the general waste, the Russian cavalry ate up the green corn in 1854 on the Danube; and Russians and Allies between them have eaten or destroyed the crops around the Sea of Azoff. The Black Sea importations and the importations from Poland have ceased: we even hear of famine there. The destruction and dearness of food are among the taxes of war. We must console ourselves by remembering that it is better to have war on the Danube and in the Crimea than in Scotland, or in Norfolk, Lincolnshire, and the Thames;—that, had we remained unarmed and unprepared, and permitted the fortress of Bomarsund to become as strong as Cronstadt, we certainly should have had the war at home, and perhaps Russians quite unexpectedly making a Sinope of Liverpool or Leith.

As to the proposal for prohibiting importation, the people who make it do not understand what they ask. Apparently they imagine that there is a great store of corn in the country, and that somebody or other is sending it away to other countries, leaving us with a smaller stock every week. But this is a complete mistake. We cannot do without foreign corn; we receive it every week and every day from every port in the world where there is corn to spare. Every one who can sends to England, because English merchants are the best customers. We consume at home and also send abroad. If we prohibit exportation we also prohibit importation. It would be as if when our sack was not half full we tied up the mouth—none would go out certainly, but then none could go in. At present, as our ports are free and our merchants have money and good credit, vessels come here in preference to France, and give employment to our sailors, and corn-porters, wharfingers, and bargemen, who earn money and spend wages, in Hull, Liverpool, London, Gloucester, and Southampton. But, if exportation were forbidden, the ships corn-laden would either lie out in the roads until they had found out where the highest price was to be got, or they would proceed to a free port like Hamburg, and land the cargo which we should have to fetch a week or a month afterwards, when we could not do without it, and pay the extra profit of the Hamburg merchant, wharfinger, and warehouseman. This is what is happening now to the French; although they secure the corn they grow, they have to pay us a profit for sending them cargoes which come to us first, because the purchasers know that if they don't sell here they can be sent elsewhere. The result in figures is, that we have this year imported, between the 12th September and 14th November, 412,000 quarters; and, after having sold 117,000 quarters to France and Holland, at a profit, we have retained for our own consumption 295,000 quarters—that being a balance in our favour, in addition to home growth.

We are perfectly aware that there is no more probability of return to the laws prohibiting exportation than of a law imposing a duty on importation; but it is, nevertheless, well to explain to the working classes how it is that to prohibit exportation would, by frightening away the supply, have just the same effect as a tax on food.

And now a few words on the cry, sometimes popular with amiable persons perfectly ignorant of operations of agriculture, for a division of farms into small plots in the hands of peasant proprietors as in France, instead of large farms rented from great landlords as in the best-cultivated counties of England and Scotland. On the political points of this question we shall say nothing, but confine ourselves entirely to the agricultural results. In England, out of sixteen million souls about four are engaged in agriculture. It is for the interest of these engaged in other callings that the agricultural class should produce as much as possible per head from each acre of land cultivated. If we compare the produce of the French and English systems of agriculture, the result is enormously in favour of England. France has a more fertile soil and a finer climate, but, in consequence of the poverty, the ignorance, the want of skill of the peasant farmers, and the dearness of iron, they grow very much less corn and meat per acre than we do.

For instance, in England thirty men cultivating two hundred and fifty acres produce an average profit of £3 4s. per acre, while in France it takes forty men to cultivate the same number of acres, and they only produce £1 12s. per acre. And if France, which contains fifty millions more acres than this country, produced as much corn per acre as we do, her produce would be doubled, she would require no imported corn, and have a large surplus.

Again, the number and quality of live stock are the best tests of the state of agriculture; because the more live stock the more manure—the more manure the more corn. Sheep are the best manure-distributors. Feeding off a turnip-field, they grow fat and distribute fertility at the same time. Great Britain, with 75,000,000 acres, has the same number of sheep (viz., 35,000,000) that France has with 126,000,000 acres; but, then, English sheep weigh twice as much as French sheep. In England (not Scotland and Ireland), in consequence of superior agriculture, 7½ acres, on an average, feed six sheep; in France, 7½ acres only feed two sheep: the six English sheep producing as much mutton as twelve French sheep. Great Britain has 8,000,000 horned cattle; France, 10,000,000; but the British cattle, better bred and better fed, although less in number by 2,000,000, produce 20 per cent. more meat than all the French beasts. And it is the opinion of an eminent French agricultural writer, who is favourable to small farms, that the English farmer paying rent makes as great a profit out of his farm as the French proprietor cultivating himself.

There is nothing surprising in this result; on the contrary, it is to be expected that French agriculture should be very unprofitable, as compared with English. We can only keep land fertile by restoring to it the fertility which each crop exhausts. In France, in order to rest the land, one-third is allowed to remain fallow every year; that is, to rest without a crop. Thus, one-third of what ought to be growing corn for France is every year a desert, because the peasant proprietors cannot afford to buy the live stock, or the implements for good cultivation, or the artificial manures necessary for keeping the land in heart.

In the best counties of England and Scotland (and the example is rapidly spreading) naked fallows are unknown; one crop succeeds another of a different kind, helped by the manure of live stock and purchased manures imported or manufactured by chemists.

But to farm land in perfection requires two capitals—one sunk in suitable farm buildings, in farm roads, draining wet land, fences, gates, &c.; and the other floating, in live stock, seeds, implements, and purchased manures. It is very rare that one man is rich enough to spare both these capitals; therefore, to make land as productive as possible, the division of land between the landlord who finds the land and fixed capital in farming plant and buildings, and the farmer who (on security of tenure) finds skill and floating capital, is decidedly advantageous to the nation. But this arrangement can only be successful where crops can always be sold at a market for cash, which is not always the case in France; and where landlords are sufficiently intelligent and independent to provide the requisite capital of buildings for their tenants, which is not always the case in Ireland. S. S.

A DECIMAL COINAGE.—It may fairly be inferred that any establishment of a decimal coinage which contemplates a grand measure of reconstruction, to be executed at one time, has no chance of success whatever. All experience now recognises that all the proposers declare that the existing coinage is to continue, until gradually absorbed by the Mint. But in all the plans, except that which adopts the pound and divides it into 10000 parts, this declaration is, in everyday concept intention, a subterfuge and an evasion. A system which invites us to begin reckoning in sums of 3d., 2½d., 2s. 1d., and £1 0s 10d., while our present coins exist, and while we are watching the gradual introduction of coins representing these sums, concurrently with the coins which now exist, will, we are satisfied, invite to nothing but laughter, when it becomes generally understood. The same may be said of the system which proposes 10d. and 8s. 4d. on the same terms. And any system which only gives the option of decimal reckoning, and leaves the power of continuance in our present reckoning, will assuredly never succeed in introducing decimal reckoning at all. We are now speaking of coinage, and therefore have nothing to compare with other our system in this one respect, referring to our number for 1854 for its description, &c. The farthing, halfpenny, and penny might remain in circulation, at four per cent under their present value, or at twenty-five farthings to the half-shilling. The principal new coin required would be the cent, ten new farthings, the hundredth of a pound. But the coin need not be fully introduced at the moment of the change: it would be quite practicable, with reasonable diligence, such as would not seriously inconvenience the Mint, should be used to issue it, and to call in the silver threepences and fourpences, which would, in the mean time, pass for twelve and sixteen new farthings. The recall of the half crowns, and the circulation of florins, might proceed with deliberate steadiness.—*Professor de Morgan's Notes on the History of the English Coinage.*

LEGACIES TO PUBLIC MEN.—The *British Friend* reports that the late Mr Alexander Morrison, of Finsley, in Surrey, has bequeathed the sum of £300 to the Peace Society, and £100 to each of the Friends who composed the deputation to the Emperor of Russia in 1853 on the impending war—viz. Joseph Sturge, Robert Charleton, and Henry Pease; and also an estate, each valued at about £1500, to John Bright and Richard Cobden.

THE PEBBLE-POLISHERS OF DARKTON.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—I have derived much pleasure from the perusal of your recent articles on the Cotton Manufactures of India, and have ventured, in humble imitation of them, to send you an account of a branch of art peculiar, I believe, to Great Britain. At most of the fashionable watering-places of England placards may be seen somewhat to the following effect:—

JOHN SCRUBBINGS,
Lapidary,
Pebbles Polished and Mounted with Expedition.

And we have no doubt but that in many instances the professions so set forth are honestly and faithfully realised. But, as there are rogues in all trades, the reputable craft of which Mr. John Scrubbings is a worthy member, has not failed to attract its due proportion of dishonest professors, and it is to caution the unwary pebble-seekers that we now proceed to describe the process by which much disappointment and some loss are frequently sustained by those "who go down to the sea" for health, amusement, or pebbles.

In order to secure a plentiful crop of customers, the sea-beach is cultivated with an industry that is worthy of a better cause. The first operation is that of—

Preparing the Seed.—This operation is performed by the dishonest lapidary in some secluded place, and in the following ingenious manner. The bottoms of broken bottles (as they are professionally called) of broken champagne-bottles are placed in a large mortar, and mixed with fragments of old sugar-basins, or other pieces of thick common glass. This mixture is generally pounded by a wooden pestle into small lumps, varying in size from a broad bean to a walnut, which are then carefully deposited in the pockets of a coat, and only await the proper time for sowing.

Seed time is late at night or early in the morning, and the sowing is performed by the lapidary, who proceeds to that part of the beach most frequented in the daytime by the pebble-seekers. He wears a thick glove to preserve the hand, and is thus enabled to sow broadcast on the margin of the sea handfuls of the prepared seed. Great care is required not to *over sow* any particular spot, in case the after crop should be too abundant. The seed thus deposited at intervals of time and distance by the lapidary is acted upon by the friction of the waves until it acquires that roundness and opacity necessary to constitute a Darkton diamond, or equally popular gem—the agua marine of sea-side commerce.

The *harvest* is not gathered by the lapidary himself at the sea-side; but in some places during the summer and autumn, at others during the winter and spring, numbers of lovely girls and handsome matrons may be seen busy on the beach seeking with all genius truly remarkable for these coveted productions of the ocean. These ladies are called "pebble-seekers," and nothing can excel the enthusiasm with which they pursue their toil, or the exultation they display when successful. The "pebble-seeker" carries the result of her industry to the expectant lapidary, who waits like a spider in his dingy cell to entwain the confiding victim. The opaque mass is placed before him, he turns it over and over, holds it up between his eye and the light, whilst the pebble-seeker, breathless with anxiety, stands agape—to be diddled. "Madam, I congratulate you," at length exclaims the lapidary; "I thought at first it was an aqua marine—a very fine one, but I am delighted to assure you that it is a Darkton diamond of the finest water. It is seldom that we are fortunate enough to have charge of such a valuable stone, and, if I might advise, a ring or a brooch should be its ultimate destination." The enraptured pebble-seeker does not hesitate a moment. "A brooch set in gold, Mr. Grater, if you please. The best gold, and plenty of it."

And now the lapidary begins to feel that his patience, his labour, and his ingenuity, are about to be rewarded. Having appointed a time for the completion of the jewel, he never disappoints the pebble-seeker, for, having a large stock of Brummagem jewellery, he selects something which bears a resemblance to the projected brooch, and which generally proves highly satisfactory to his confiding customer, who believes that the worthless piece of crystal is the product of her own good fortune and industry, and willingly pays whatever may be the cost of polishing and setting her Darkton diamond.

In some cases the harvest is not so easily reaped; for knowing husbands and quick-sighted brothers detect the imposition and remonstrate; but in vain. I do not wish to assert that there are no Darkton diamonds—no aqua marines—among honest lapidaries. I believe in the existence of all and every one; but I have been anxious to describe the manufacture of a spurious article of which I have myself been a recent purchaser. ARABELLA.

Darkton.

THERE MUST BE NO SHAM PEACE.—If it be necessary our soldiers will impose peace in St. Petersburg itself, and Russia feels this so acutely, that, shaken in her faith of the batteries of Cronstadt, she has bruited the shores of the Neva with cannon. Without pretending to be acquainted with strategy, we may assume that the Allies are not concentrating their strength in order to guard ruins. What is the Crimea without Sebastopol? and, now that the great arsenal of Russia is destroyed, why should the Allies employ an army of 200,000 men to dispute with Russia the possession of uninhabited mountains and sterile steppes? It is easy for them to menace all points of the Black Sea, and that most valuable part of Russia—the Danube—without giving up the position they have conquered. The first cannon fired on the banks of the Danube would cause Austria to abandon an inactivity which weighs heavily on some of her statesmen, and which ruins her authority in Europe without re-establishing her finances. Now, if Austria moves, she would draw with her the major portion, if not the whole, of Germany.—*Constitutionnel, French Government organ.*

THE RUSSIAN LOAN.—Active operations are being carried on here by members of the great Warsaw banking-house of Frenkel and Leski for the completion of the long-talked-of Russian loan. The amount and conditions are kept secret; but it appears that the preliminaries are settled. The Messieurs Leski are both at this place, and are in daily conference with the principals of the house of Magnus, Mendelsohn, &c., who are interested in the negotiation. A part of the loan will, it is said, be devoted to railway purposes, and especially for the completion of the Warsaw-Petersburg line, of which the earthworks are in a state of progression on divers points. In the event, or rather whenever peace shall be concluded, it is anticipated that a large amount of foreign capital will be attracted into Russia for railway and other joint-stock purposes. The Government, it appears, has opened its eyes fully to the advantage of interesting foreigners in the prosperity and well-being of Russian undertakings, and even in the invigoration of Russian political and financial power, by inducing them to invest capital in Russian undertakings.—*Berlin Correspondent of the Manchester Guardian.*

TRAVELLING AT THE ANTIPODES.—We have now two coaches every day to and from Ballarat—if coaches they may be called, for they are widely different from your notions of a coach. They have no springs, but they are hung on leather straps, so you are sure of being shaken well enough; nor have they any convenience for luggage—in fact, they are like a rough kind of open van. They carry about twelve persons, each of whom is allowed the liberal quantity of 28 pounds of luggage, all extra is charged for. The distance is about sixty miles, at the outside, and the fare is £3. They manage to get through in one day, which is very well, considering the roads. In some parts you have to pass through the primitive forest; and it is no joke to drive four horses amongst the trees, wind up about in every direction. In particularly muddy and dirty places the passengers have to get out and walk, but on the good parts the horses go at full gallop. About five miles of the road have been laid with planks placed close together, as an experiment. In dry weather it answers very well, but when it is wet it is very slippery. There are several towns growing up along the road, and good inns every few miles.—*Letter from Geelong, Sept.* 10.

SENDING GUNPOWDER TO RUSSIA.—We condemn the Yankees for doing somewhat business with Russia, and forget that Russia, at the moment, is obtaining matters of warfare in England. The trade is most extensive in the north, and we regret to say that the number engaged in it is particularly large. The terrible fire at Newcastle-on-Tyne is not yet forgotten, but what caused that fire? Nobody will tell us Newcastle knows that that fire originated in an explosion of yellow flask. Now, yellow flask was a designated name for saltpetre and nitre, which was shipped to the north of Europe in large quantities, and hence forwarded to Russia. On its arrival nothing was required to make it into gunpowder but a proper addition of charcoal.—*Liverpool Daily Post.*

A JOURNAL written in the Polish language exclusively, and intended to spread morality and enlightenment among the lower classes, is to be published at Warsaw, after the 1st of January next, under the auspices of Madame Petroff, wife of the Russian Under-Secretary of State in Poland.

THE DESTRUCTION OF CORN NEAR GHEISK.

Admiralty, Dec. 7.

Despatches, with inclosures, of which the following are copies, have been received from Admiral Sir Edmund Lyons, Bart., G.C.B., Commander-in-Chief of her Majesty's ships and vessels in the Mediterranean and Black Sea :—

Royal Albert, Kamiesch Bay, Nov. 21, 1855.

Sir,—Their Lordships are aware that when the squadron under my command was assembled and anchored in safety before Kertch, I was enabled to afford him the means of despatching at the latest period the second harvest of this year, which I understood to be collecting in the neighbourhood of Gheisk Iman, for the purpose of being transported to the western coast, apparently to the enemy's army in the Crimea over the Sea of Azoff, and probably to his army in the Caucasus by the military road.

2. The inclosed copy of a letter from Captain Osborn will show their Lordships that in this as on many former occasions he has fully justified the confidence I have placed in him. The skilfulness of the arrangements made by him, and the admirable manner in which they were executed by himself, by Commander Kennedy, of the *Curlew*, and by the officers and men under their orders, completely frustrated the efforts of the large force that was brought against them in defence of the stores, which the enemy appears to have considered safe from any naval attack, in consequence of the shallowness of the water.

3. The effects of this brilliant enterprise, on the destruction of so much corn and forage at the commencement of winter, cannot fail to be severely felt by the Russian armies both in the Crimea and the Caucasus.

4. Commander Kennedy, in reporting his large share in the proceedings of the day in the command of the *Curlew*, states to Captain Osborn that at one place alone the rows of stacks were six deep and extended two miles, and it appears that for economy in transport and storage the straw was cut near to the ears of the corn.

5. As the ice is now forming on the shores of the Sea of Azoff and the squadron is withdrawn, I feel it to be due to Captain Osborn to record that under circumstances of great difficulty, occasioned by unusually tempestuous weather, he has most zealously continued through the summer, and brought to a successful close in the autumn, operations novel in their nature and extremely detrimental to the enemy, which commenced auspiciously in the spring under the direction of the late Captain Lyons, of the *Miranda*; nor is it too much to say, that both commanding officers were supported throughout by as dashing and as intelligent a band of young officers, seamen, and marines, as ever shone in the British Navy.

I am, &c.,

(Signed) EDMUND LYONS.

Rear-Admiral and Commander-in-Chief.

The Secretary of the Admiralty, London.

Her Majesty's Steam-sloop *Vesuvius*, off Gheisk, Nov. 7

Sir,—After detaching the several ships of the Second Division under my command as ascertained and anchored in safety at Kertch, I proceeded with such arrangements for the removal of the large quantities of the Crimean collection of corn, forage, and fuel belonging to the enemy stacked along the shores, so as to distract the attention of the large force which, from previous observation, I knew to be in the neighbourhood.

Under Lieut. Ross, of the *Vixen*, I placed the *Curlew*, in the temporary charge of Lieut. Mull and the *Ardent*, in charge of Mr. Tily, second master, each vessel having sufficient men left in her to weigh an anchor, or fight a gun, and man a few boats, giving orders to Lieut. Ross to close on the northern face of Gheisk, and to be prepared to co-operate with me inside the limen.

The *Vesuvius* I left in the offing, denuded of every available person. Embarking officers and men as in the annexed list, from the *Vesuvius*, *Curlew*, *Vixen*, and *Ardent*, with their boats, we left at daylight, towed by her Majesty's gun-boats—*Recruit*, Lieut. G. Day; *Boxer*, Lieut. S. P. Townsend; *Cruiser*, Lieut. J. H. Marryat; *Clinker*, Lieut. J. S. Hudson

By 8.30 a.m. the flotilla was off Vodina, three miles north of Gheisk, having lines of corn-stacks and much fuel were stored in the coast, with a Cossack guard for their protection. I immediately detached Commander Kennedy with the boats, covering him with the gun vessels, and a shortly after all was in flames, and the party cleverly re-embarked at the moment that a large body of Cossacks rode up from Lazalitz.

The town of Gheisk became the next point of attack; it was greatly changed in appearance since visited by Captain Rowley Lambert in July last. Corn-stacks, for some miles in extent, might now be seen along its southern and eastern face, placed close to the water's edge ready for transport; and between the rows of houses ter on ter were to be seen

An intrenchment had been cut along the edge of the cliff commanding the spit; large bodies of dismounted cavalry were seen lining it, and armed men showed in the rear of every house

To endeavour to flank the defences, as well as destroy the corn-stacks stored on a high hill east of Gheisk, I dispatched Commander Kennedy, with the boats of her Majesty's ship *Curlew*, a paddle-box boat and cutter of the *Vesuvius*, the whole towed by the *Clinker*, Lieutenant Hudson, with orders to turn the spit end, and then attack in that direction, after giving a certain time to allow the enemy's attention to be divided by the other attack. The gun-boats *Recruit*, *Grinder*, *Boxer*, and *Cracker* opening fire on the intrenchments with Shrapnel shell, and on the corn-stacks with canister.

As the enemy could only be dislodged from the extreme west, and the carcases did not well answer, and moreover endangered the whole town, I despatched Lieutenants Day and Campion with the small force of marines available, a howitzer-boat and two rocket-boats, to aid more effectually in carrying out my object.

Lieutenant Campion, with Mr. Verey, gunner, charging at the head of the marines, supported by Lieutenant Day and the seamen, all being under a sharp fire of musketry, succeeded in driving the enemy, with considerable loss, out of their trench-work, and captured a small brass piece, and steadily forced them back, with loss, from store to store, until the whole of the vast quantity of corn, stacked ready for threshing and transport, was in flames

The gallant manner in which Lieutenant Campion led the marines deserves to be brought under your notice.

Seeing the enemy collecting a number of men, ready to charge our men if they advanced beyond a ravine on the east face of the town, I recalled my force, and had the satisfaction of seeing all embarked, with only one man wounded

The vessels off Gheisk were now seen to be engaged, Lieutenant Ross, of the *Vixen*, having placed them in capital positions; and, as the enemy moved down large bodies of troops, especially cavalry, to resist his landing, and opened fire on him, he very unwillingly had to fire on the town to dislodge them.

The proceedings of Lieutenant Ross were ably executed, and he fully succeeded in keeping in check a heavy body of cavalry which might have much incommoded the small force under Commander Kennedy, who, by the most strenuous exertions, had reached his position, and finding the cliff too steep to scale in the face of a large number of troops, who were firing on him from its crest, he very judiciously executed the duty I had entrusted to him, with the gun and the carcase rockets of the ship's boats, setting every store in flames, except one large Government building considerably in the rear

Commander Kennedy speaks in the highest terms of his party, for the shallowness of the water obliged the crews of the boats to be rowed and waded through the water from noon to midnight, the season, too, being now very cold.

Throughout the night the stores were burning fiercely, a sheet of flame extending fully two miles; but the town of Gheisk, except where the troops had used the houses against us, remained untouched.

At an early hour on the 6th of November we weighed and proceeded into the Limen, steering towards Gheisk. The valuable services of Mr. George Perry, Acting Master of the *Vesuvius*, and Mr. Parker, Second Master of the *Recruit*, came here into play; and, at an early period, I had the satisfaction of seeing all the gun-boats anchored just in their own draught of water, within long gun-shot of the east extreme of Gheisk and the neighbouring steppe, along the edge of which, for four miles, corn and hay were stacked in quantities far beyond what I had conceived to be possible; and at the base of the *Vesuvius*, as well as that part of the town commanded by the town, timber-yards, fish-stores, boats, &c., in addition were accumulated

To attack upon as many points as possible was, I thought, the only way to foil the troops that had now had thirty-six hours to prepare for my visit. The boats (Commander Kennedy, Lieutenant Hamilton, Campion, Marryat, and Mayne, with all the boats of the *Curlew*, *Ardent*, *Grinder*, and *Cresson*, and port rocket and gun boats of the *Vesuvius*, in charge of the officers named in the margin;* the right division, under Lieutenant Chetham Strode and Hon. Count Hussain, consisted of the starboard gun boats of *Vesuvius* and those of *Clinker*, together with some marines—Mr. R. Farquharson, Midshipman, in charge of the latter. Lieutenant Ross, on the west side of Gheisk spit, in charge of the starboard gun-boat of the *Vixen*, with a small force from the *Curlew* and *Ardent*, under Lieutenant Mull, and Mr. Tily, second Master. The [illegible] placed, from [illegible] top [illegible] row [illegible] how [illegible]

On the right and centre the enemy mustered strongest; and at one time, observing a column of some 1500 Cossacks moving rapidly off the left, I directed Commander Kennedy (who by this time had connected his fires with those of Lieutenant Day) to re-embark all but the marines, and with them to proceed to his right; and I reinforced him with the marines of the *Recruit* and *Boxer*, under Lieutenant Campion. This answered perfectly; the enemy arrived too late to save anything on the left, whilst our men steadily worked towards the right division, under Lieutenants Strode and Ross, who, in spite of a heavy but badly-directed fire from the houses on the heights, steadily held their ground, as I effectually destroyed a great accumulation of materials for boats and ship building, fish-stores, cavalry camp gear, and granaries.

When everything but the town of Gheisk was destroyed I ordered the embarkation to take place, and detached some boats to cover Lieutenant Ross, between whom and his boat the enemy were throwing a body of men, who, by their uniform, I believed to be regular infantry.

By two p.m. everything was finished, and all the parties safely re-embarked on board their respective gun-boats, the casualties amounting to only six men wounded in all—one of them dangerously, and another severely.

Nothing further being left within our reach in Gheisk Iman, except the store of corn which escaped on the previous day at Glofira, I therefore ordered Commander Kennedy, with the moiety of the boats, to return to their respective ships, and remained with the *Recruit*, *Ardent*, *Boxer*, and *Cracker's* boats, to finish what had escaped east of Glofira.

On the 6th the weather, which had favoured us most providentially, changed; fogs and strong breezes came on; but, directly I was able, the rocket-boats and carcases were again employed upon Glofira until the fires extinguished yesterday were re-lighted, and another extensive accumulation of corn in flames. I then weighed and returned to the *Vesuvius*, reaching her the same afternoon

I despair of being able to convey to you my idea of the extraordinary quantity of corn, rye, hay, wood, and other supplies, so necessary for the existence of Russian armies both in the Caucasus and the Crimea, which it has been our good fortune to destroy.

That these vast stores should have been collected here, so close to the sea, whilst we were still in the neighbourhood, is only to be accounted for by their supposing that they could not be reached by us, and, judging by the position the squadron under the late Captain Edmund Lyons took up in May last, the Russians had established a camp and fortified them only to meet a similar attack.

During these proceedings we never had more than 200 men engaged, the enemy had, from the concurrent testimony of Lieutenants Ross and Strode, and my own observation, from 3000 to 4000 men in Gheisk alone.

Where every officer exerted himself to the utmost, and did all and more than I expected of them, it would be invidious for me to mention one more than another; it was their coolness, zeal, and example, that rendered steady many of the younger men, who for the first time were under fire; and but for the general intelligence and zeal the enemy would have easily frustrated our operations.

The zeal, good conduct, and gallantry of the men were deserving of every praise.

Commander Kennedy, my second in command, gave me the most valuable co-operation, and from him, as well as the reports of the other officers, I feel justified in placing before you the names of the following warrant officers and men who, under fire, behaved remarkably well, viz.—Mr. Rowland Verey, acting gunner of her Majesty's ship *Ardent*; Thomas Kerr, gunner, Royal Marine Artillery, her Majesty's ship *Vesuvius*; Peter Hanlan, A.B., her Majesty's ship *Curlew*; David Barry, A.B., her Majesty's ship *Curlew*.

The inclosed plan, illustrative of our operations, by Mr. George Perry, Acting Master of the *Vesuvius*, will, I trust, be of use; and I beg you will allow me to call your attention to the unvarying zeal of that officer.

I have, &c.,

(Signed) SHERARD OSBORN,

Captain and Senior Officer in the Sea of Azoff.

Rear-Admiral Sir Edmund Lyons, Bart, G.C.B., &c.

Return of Men Wounded during the operations of the 4th, 5th, and 6th November, 1855, in Gheisk Iman. Peter Hanlan, Curlew, A.B., dangerously; Thomas Dandeley Curlew, private R.M.; John Burke, Recruit, A.B., severely; Thomas Middleton, Vesuvius, gunner, R.M.A.; John Cook, Vesuvius, red; Robert Alward, Vesuvius, private R.M., slightly (8 cases).

SHERARD OSBORN, Captain and Senior Officer.

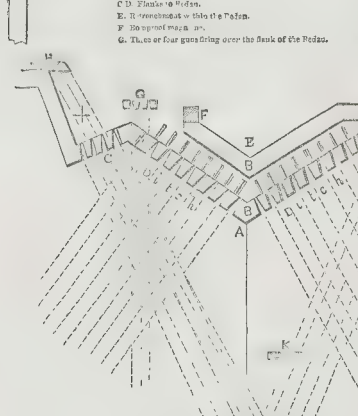
In consideration of the services mentioned in the above despatches, Commander John James Kennedy will be promoted to the rank of Captain as soon as he shall be qualified, and Lieutenant Hubert Campion has been promoted to the rank of Commander.

THE ATTACK ON THE REDAN.

THE following is an extract from a letter of a young cavalry officer in the Crimea, with a Plan of the Fortifications and Approaches to the Redan :—

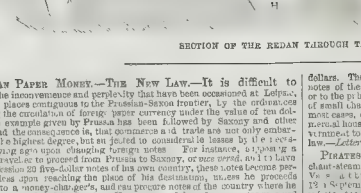
Sebastopol, 9th Nov., 1855.

I must now have a little argument with you in reply to your doubts about my former description of the Redan. I was there again yesterday afternoon, to see how far I was right in what I told you. I inclose a ground plan and section, which, though not scientifically correct, will answer my purpose, to satisfy you that I was sufficiently accurate; but I had on first to notice the peculiarity of the guns standing on the banquette. One thing you must remember, that on each side of the Redan there is a deep ravine, which of course leave the flanks of the work lower than the body of the work,—a circumstance which enabled the Russians on the flank (C) to have two heavy guns—one being who got into the work were in the space (H) (vide section) between the rampart and the retrenchment; and in case they had been reinforced they would have carried the retrenchment and forced the rear open, commanded certainly by some town batteries which would have punished them; but the Redan would have been theirs, and the Russian loss perhaps twice what it was. The distance between our trenches (I) and the salient angle (A) of the Redan (vide ground plan) or rather from I to the counterscarp—I measured myself, and found to be *three hundred and thirty paces*. Now just cast your eyes upon the cross lines of fire, represented by dotted lines, and the wonder is that any of our brave fellows of the storming party survived to reach the ditch—much less to get into the Redan and hold it for one hour and fifty-five minutes. What say you?



A. Salient Angle.
B. Flanks of Redan.
C. Retrenchment to the Redan.
D. Banquette.
E. Traverses.
F. Traverse to cover each gun.
G. Three or four guns firing over the flank of the Redan.
H. Here were two small traverses, 8 or 9 feet long, mounted on swivels, firing grape shot.
I. Trenches. Parallels.
K. A small ditch 5 or 6 miles at night.
+ Explosion.
||. Traverse to cover each gun.

GROUND-PLAN OF THE REDAN.



A. Ditch.
B C D E. Rampart.
F. Banquette.
G. Retrenchment in the Redan.
H. Space between the Rampart of the Redan and the Retrenchment.

SECTION OF THE REDAN THROUGH THE LINE A E.

GERMAN PAPER MONEY.—THE NEW LAW.—It is difficult to describe the inconvenience and perplexity that have been occasioned at Leipsic, and other places contiguous to the Prussian-Saxon frontier, by the ordinances forbidding the circulation of foreign paper currency under the value of ten dollars. The example given by Prussia has been followed by Saxony and other States; and the consequence is, that commerce and trade are not only embarrassed in the highest degree, but are jostled to considerable losses by the necessity of paying or upon changing foreign notes. For instance, a shopping lady, a traveller or traveller is proposed from Prussia to Saxony, or *vice versâ*, would have in his possession 20 five-dollar notes of his own country, these notes become perfectly useless upon reaching the place of his destination, unless he proceeds forthwith to a money-changer's, and can procure notes of the country where he may be, at the reduced local value. Nor are any of these foreign notes received at a single of the railway offices; so that any one having to send parcels or transact business and make payments in different states, must be at great pains to provide himself with ten-dollar notes of each State where such is the limit to the circulation of paper money. Confusion, or changing of notes of lesser amount. This state of affairs is regarded as a calamity at Leipsic, and calculated to produce most serious prejudice at the ensuing fairs, a the law of the 8th of July comes into stringent force upon the last of January. It may not be irrelevant, therefore, to warn such persons as may have occasion to visit Leipsic after that period, and who may provide themselves with German paper currency for that purpose, that they will subject themselves to great inconvenience unless the notes be of the value of ten dollars. The wholesale dealers are also preparing for the fair by collecting notes of the latter value. But this is no alleviation of the evil to small traders or to the public, who are put to extraordinary inconvenience from the scarcity of small change. The only class that profit are the money-changers, who, in the present case, demand arbitrary agios. It is intended, meantime, by great commercial houses at Leipsic, Chemnitz, and elsewhere, to petition the Saxon Government to postpone, for another year at least, the action of the restrictive law.—*Letter from Berlin.*

PIRATES IN CHINA.—Her Majesty's sloop *Hutcrs* and the merchant-steamer *Fawkins*, which had been placed at the disposal of Captain Vansittart, other owners for the purpose of towing, &c., left Shanghai on the 13th September, to destroy a well-organised body of pirates, who for months past had infested the port of China, stopping all native trade, and occasionally plundering vessels under the English flag. At Sheepoo, a harbour strongly fortified, they found a fleet of twenty-two large piratical vessels, moored head and stern, fully prepared for an attack, the rigging and bulwarks dying at the mast-heads, guns in the ports, and the water's edge. The pirates having in great force taken possession of a joss-house a few miles over the hills, Captain Vansittart, at the urgent entreaty of the merchants, landed the marines and small-arms men to dislodge them. After skirmishing through the hills we found many of the temple were forced, and the pirates discovered. Only [illegible] were captured by the *Hutcrs*'s crew, although many [illegible] the Dresden Government to take negotiations with Prussia [illegible] were forthwith [illegible] of Dresden receptive of bankers' [illegible] [illegible] freely; but it appears that these negotiations have [illegible] in order to lessen the inconvenience, and to obtain circulation for their currency, all the private railway companies and local banks are drawing in their small notes, and replacing them by others of the value of ten

---

CUREE AUX FLAMBEAUX.—THE STAG GIVEN

THE HOUNDS BY TORCHLIGHT.—(SEE NEXT PAGE.)

"LA CURÉE AUX FLAMBEAUX."

THE *Curée* (that is to say, the giving up to the hounds of the entrails of the animal chased) is not always held at night. It generally takes place on the spot where the stag, to use the French sporting idiom, *a forcé* and *abattu*. This ceremony is preceded by another, called "Le Pied," which consists in cutting off one of the feet, and offering it to the person to whose honour the chase was held.

When the *curée* takes place by torchlight, the body of the animal is carried beneath the windows of the château. A circle is formed by the *piqueurs*, or head hunters, and all the persons who have participated in the pursuit; and, to the sound of a *fanfare*, blown by the equestrian men, one of the *valets de ventrie* cuts up the stag. The *ventes* -that is to say, the hounds, which are let slip last of all, and which terminate the chase—are then brought by the *valets de chien*, who have great difficulty in keeping them from breaking loose. When the entrails have been cut away, the valet sits astride the animal, holding up the *nappe*, or head and neck, and shaking it at the already furious hounds. It is the care of the valet during this interval to conceal the pieces of flesh which are strewn under the body. The hounds are then unbuckled, but are kept within respectful bounds by the whips of the *piqueurs* and the *valets de chien*. When they are sufficiently exasperated the brutes are allowed to rush upon the remains of their victim; only, however, to be driven back again by a whirlwind of whips. When their docility has been thus put to the test, the definitive signal, "Lachez tout!" is given, and the hounds rush towards the stag.

That is the critical moment for the valet holding the *nappe*, who has now to carry it off and discover the *curée* to the yelling hounds

This preparatory retreat requires a great deal of skill; for the brutes, maddened by the whip and the shouts of the *piqueurs*, are ready to tear the poor valet limb from limb.

The *curée* then presents a savage spectacle: the air is filled with growling, barking and yelling; while the ground is covered with scrambling legs of dogs and mouths reeking with blood.

Un horrible mêlange,
Des os de chairs meurtris et tirés à la fange,
Des lambeaux pleins de sang et des membres affreux,
Que des chiens devorans se disputent entr'eux! -RACINE.

All this time an inspiriting *fanfare* is blown by the whole strength of the company. The definitive signal is invariably given by the person in whose honour the chase is held.

RESULTS OF THE WAR TO RUSSIA.

According to a letter from Russian Poland, dated November 28th, the war is causing very severe distress throughout the Czar's dominions —

Here (says the writer) the dearest silence covers all the acts of Government. Orders are levied, demolished, embodied, marched to the north or to the south, or retrace their steps; diplomatic agents or secret emissaries are dispatched in all directions; but all is done mysteriously. Yet, in spite of all precautions, we occasionally learn sufficient to enable us to form an opinion of the misery into which the war has plunged Russia.

The Chamber of Public Relief of St. Petersburg has been obliged to sell by auction the property on which it had made advances, but which it was impossible for the borrowers to pay when the moment arrived; and the number of insolvent debtors increases daily. The population itself has suffered from this state of things. A census has been taken of the male population, and, though for years have passed since the last, yet the numbers remain still the same. On certain days of the week it is the turn of the 1851, owing, doubtless, to the numerous levies since then. It is not the loss on the field of battle which is solely the cause of this decrease: the general health of the army has much to do with it, and the last report of General Paniutin on the most among the troops is extremely frightful. These unhappy wretches are decimated by epidemic diseases which assume every sort of character.

For several years past the cholera has not ceased a single day at St. Petersburg. The number of cases may vary, but the malady never disappears. It is not in Russia only that it exists; it rages in England, in the Low Countries, in Poland, in the Crimea, and in the Caucasus; and wherever troops are assembled in numbers cholera is sure to be in the midst of them

It is now many years since the plague has ceased its ravages in Europe, but the mortality among the female population exceeded the ratio in proportion for the Prussian territory, and the great difference between

So now more remarkable than ever

Whatever be the sacrifices made by the Allied Powers in carrying on the war, they will never be comparable to those of Russia. She has now eight armies on foot—in Livonia, of Finland, under General Berg; the second, of Riga, under General Rudiger; the third, of the Dniester, under General [illegible]; the fourth, of Poland, under General Gortschakoff; the fifth, of the centre, under General Paniutin; the sixth, of the centre, under General [illegible]; that of the Crimea, under General Gortschakoff; and the eighth, of the Caucasus, under General Mouravieff. Russia must possess great stability to meet so many claims; but these violent efforts must produce exhaustion, and that exhaustion her fall

It would be difficult to give an exact notion of the misery which prevails in the provinces of the empire, and particularly in Poland. I have just left the whole southern portion of Volhynia, and I have found everywhere the same evils. The most ordinary articles of consumption are so dear that the peasants are deprived of a portion of what is most necessary, and those who can afford to purchase arrive in crowds to empty markets, from which the greatest part return empty. The harvest has not, however, been bad; indeed, it is said that we have had an average year; but the corn is taken off for the troops in masses and sent to the south, to form immense magazines which are destined to be the prey of flames, and are consequently lost to every one. In certain provinces the grain intended for seed has failed, and I can declare, without fear of contradiction, that, at the very least, one-fourth of the arable land will remain out of cultivation for want of seed and of hands. The peasants are not the only class that suffer from this state of things. The nobles—even the richest among them—whose fortunes consist of corn, see their revenues reduced in proportion which, for most of them, the continuance of the war will change into absolute ruin. All classes of industry are in a state of prostration; the national activity is paralysed, and commerce has suffered irreparable evil. Distilleries are the only establishments that are fully at work. As the Russian Government supplies the national exhibitions of its troops with the excitement of intoxication, spirituous liquors are made in enormous quantities for the Crimea and Bessarabia, in order to beat up the courage of the soldiers. All the grain employed by manufactures is taken away for consumption, and increases the general misery. We had counted on the potato crop, which at first presented a favourable aspect; but the blight has made terrible ravages, and fully one-third of the whole is affected already. To these evils is to be added that of the levies, if we call by that name the impress system which in a few hours makes a soldier of a quiet peasant, and tears him off from his family, without the remotest hope of ever seeing him doing him dead or alive. The peasants make the most desperate efforts to escape from the recruiting parties; and I could quote you thousands of instances of the perseverance and audacity displayed in flying from them.

SIR R. PEEL, M.P., ON THE NEGOTIATIONS FOR PEACE.—At a dinner held at Barton-on-Trent, on Wednesday week, Sir R. Peel said:—Hitherto I was that there was little improvision to be attached to these rumours of peace (Hear, hear). He admitted the importance of peace; and, with every one else, would be glad to see it re-established; and to this end he would say, so long as the honour of the Allies was secured, that it mattered not through what intervention it was established, that of Austria or of a friendly Power (Hear, hear). He knew, and they all knew as well as he did, that Austria was no friend of ours (Hear). Austria, under a professed lukewarm friendship, had only cloaked an ill-disguised hostility. And what he would say was, that if they did have negotiations for peace, they must be cautious how they dealt with proposals that came from Austria (Hear, hear," and cheers). He wished to put the case fairly before them. He wanted peace as much as any man, but if the negotiations for peace were to come from Austria he should be exceedingly cautious about them. He could not forget the past—he could not forget the hesitation and vacillation of Austria during recent proceedings, and he could not close his eyes to the treacherous conduct of Austria in the Danubian Principalities. Austria entered the Principalities as our friend, but her conduct had been nothing else than that of the ally of Russia. If they were to have a peace, the onus on the Allies had exposed, and would have to bear what they might say, by the blood of our countrymen, absolutely demanded that it must be satisfactory to the country, and also to the sacrifices it had made demanded (Cheers). The country had cheerfully accepted them because the war was just, and the hardships and burdens war imposed from the highest to the lowest there had been breathed a spirit of patriotism, as witness of which he might mention the noble contributions to the Patriotic and other funds; and these burdens were accepted in a spirit of magnanimity as great as any nation had ever shown, as we were fighting for a cause whose safety was threatened, and her very people threatened with a far more despotic than any which had ever enthralled Greece or Rome (Hear, hear). Independently of all this, there was the honour of our own country to be still sacred, and therefore he said they must not be satisfied with the bare Four Points (Cheers). The Crimea was no longer an integral part of Russia, and it never must be, and, he would add, it never should be (Great cheering).

ON THE ADVANCEMENT OF LEARNING IN SCOTLAND.*

It is already a good many years since Professor Blackie became known to the whole British public as the translator of Æschylus. It is only now, however, that we in the south have to be familiar with another phase of his varied activity, in which, it seems, he has been long well known to his countrymen. Of the formidable and very determined school of University Reformers which has recently sprung up in Scotland, Professor Blackie was one of the earliest representatives; and from before Mr. Lorimer's articles appeared in the *North British Review*, or the Association for the Extension of the Scottish Universities was formed, he had in his published essays and addresses urged his countrymen to the defective condition of their highest educational institutions. We are all used to [illegible] our own acquaintance with his earliest labours in this most important department of the social politics of our day [illegible] is not so accurate as for our own sakes we could now wish that it had been. All that we can say of them with confidence is that they must have been very spirited indeed if they surpassed his present performances in that respect; and that they could scarcely have equalled it in maturity of view we may gather from the fact that his connection with the Scottish Universities has been unbroken, and his means of judging of their virtues and their defects consequently increasing from day to day. The following extracts will convey to our readers the best conception of his view of their present condition. The confessions which they involve must have been painful to a Scotchman, and all the more to a Scotch professor; but Professor Blackie is evidently one of those whose watchword is the old maxim, "Speak truth and shame the devil" —

For I feel myself constrained, by a sacred regard to truth, to make the broad assertion, that Scotland at the present moment is, in no sense of the word, a learned country; specially, that in our Universities learning is at the lowest possible ebb, and in some of their branches intentionally discouraged, while in others it is altogether ignored; and if at any past period of our history we were entitled to take rank with the most learned nations of Europe, it is only the more sad that we stand in that rank contemptibly no longer now. We have notable names in science,—Brewster, Lyell, Miller, Forbes, Fleming, Wilson; we have notable names in literature,—Wilson, Lockhart, Walter Scott, though recently departed, are still with us, and [illegible] Chalmers of Scotland in Europe, when Christianity put her breast [illegible], but in the high fields of learning our [illegible] is only sufficient to show what we might achieve, if circumstances were as favourable [illegible] diverse, and if patronage were [illegible] as it [illegible] Universities, will ought to be its grand [illegible] done something to support our national reputation for [illegible] research are not academical men at all, but either private gentlemen indulging their own erudite humour, or gentlemen connected with the profession of the law, who could scarcely have attained making a certain display of historic and antiquarian research, the gift of a purely local type, even supposing there were no University in the country [illegible] Colonel Mure of Caldwell, Dr Adam Bisschory Tennis, Dr Daniel Wilson, now in Canada, George Fraser, reading in Athens, Thomas Thomson, lately deceased, James Reddie, George Brodie, and John Hill Burton, were unable to show on what basis of notorious facts the above statement is made. These are names to be proud of, names, some of them known not in Scotland only and in England, but as far as European science sends its voice; but if you inquire at Berlin on the banks of the Spree, or at Munich on the banks of the Isar, or at Bonn on the Rhine, for any famous names of Scottish professors who have taken a distinguished part in the advancement of those branches of academical learning which form the just pride and boast of Continental Universities, I am afraid you will receive for answer, either no voice at all, or a voice so slow

NEW BOOKS, &c.

Just published, with Twelve Illustrations 4s 6d., cloth, elegant,

THE LATE ADMIRAL BRUAT.

This able and distinguished Admiral passed nearly his whole life in the naval service of his country. He was educated at the Ecole de Brest, and was an *aspirant* of the first class in 1808. Ensign in 1819, a Lieutenant in 1827, and commanded a frigate in 1841. He obtained the rank of Vice-Admiral in 1852, and became an Admiral of France in 1855. He was known in the French Navy as a brave, indefatigable, and generous officer. He was early in life engaged on the African coast, where he was wrecked and taken as a prisoner of war to Algiers. On his return to France he commanded the *Jemmapes* and the *Triton*, firm-rasses ships. Afterwards he was Governor of the French colonies in Oceania, and subsequent to that he occupied important naval posts under the Government of General Cavaignac. The present war brought Bruat prominently before the public: he was named second to Admiral Hamelin in command of the French fleet, and he was present at the bombardment of Sebastopol, October 17. When Admiral Hamelin returned, Bruat was placed at the head of the Allied squadrons. He had just left Constantinople, after a grand reception from the Sultan, amid the congratulations of the Ambassadors of the Allies, when an attack of gout in the stomach proved fatal to him. The gallant Admiral died on board, while his fleet was leaving the roadstead of Messina.

THE LATE ADMIRAL BRUAT.

METROPOLIS LOCAL MANAGEMENT BILL.

The annexed Engraving represents the first election of vestrymen under Sir Benjamin Hall's Act. If a churchwarden does not preside at the election he may appoint a substitute, by giving notice three clear days before the election, and notifying the appointment to the vestry clerk of the parish. The rate-collectors, or persons appointed by them, are required to attend the churchwardens and persons presiding at elections, and also inspectors of votes, to assist in ascertaining that the persons presenting themselves to vote are parishioners rated to the relief of the poor in the parish, or the respective wards thereof, and duly qualified to vote at the election. At the election the parishioners rated to the relief of the poor are empowered to nominate two ratepayers of the parish or, if the parish be divided into wards, of the ward for which the election is held; after this nomination has taken place the president is authorised to nominate two other ratepayers to act as inspectors. The next step is for the parishioners to choose vestrymen and auditors: but each can vote, although resident in the parish, unless they have been rated for one year next before the election, and have paid all parochial rates, taxes, and assessments due at the time of voting, except such as have been made or become due within six months immediately preceding. There is one clause which deserves especial notice—it is that which refers to the ballot, which we quote at length:—

"Provided always, that any five ratepayers may then and there in writing or otherwise, demand a poll, which shall be taken by ballot on the day next following, and shall commence at eight of the clock in the forenoon, and close at such hour as hereinafter mentioned; that is to say, at six of the clock in the afternoon in the case of any election to be holden in Oct., 1855, and at eight of the clock in the afternoon in all other cases; each rate-payer depositing, as hereinafter provided, two folded papers, one of which papers shall contain the names of the persons for whom such parishioner may vote as fit and proper to be members of the vestry, and the other shall contain the names or name of the persons or person for whom such parishioner may vote as fit and proper to be auditors, or auditor of accounts.

"The next provision is, that the folded papers are to be deposited into two separate sets of balloting glasses or boxes, one set for voting-papers for members of the vestry, and another for voting-papers for auditors. At the end of the poll these glasses or boxes are to be closed, and the inspectors are allowed two days to examine them, and their decision is final: in case of an equality of votes for any two or more persons, either as vestrymen or auditors, the inspectors are to select the party they deem most worthy. Any person forging or falsifying any voting-paper is liable to a penalty of not less than ten pounds, nor more than fifty pounds; and, in default of payment, to be imprisoned for not more than six months nor less than three months. When the election is over the inspectors are to deliver a list of the persons chosen as vestrymen and auditors to the churchwardens. The expenses incurred in providing a place for taking the votes, publishing notices, and taking the poll, are to be paid out of the poor-rates of the parish, by order of the vestry. Where the whole vestry consists of eighteen members five are to constitute a quorum; if of twenty-four, seven; if of thirty-six and up wards, nine; and all questions are to be decided by the votes of the majority. Clause xxxi. is important:—"At every meeting of any vestry under this Act, in the absence of the parties authorised by law or custom to take the chair, the members present shall elect a chairman for the occasion before proceeding to other business; and the chairman, in case of an equality of votes on any question, shall have a second or casting vote."

The recognition of the principle of the ballot in these elections is important, and it is to be hoped that a Liberal Government will no longer withhold the extension of the same principle to Parliamentary elections. If it is deemed right by both Houses of the Legislature to protect the ratepayers against intimidation in so comparatively minor an affair as the choice of vestrymen, it is sheer hypocrisy to pretend that it would be dangerous when applied in electing members for the House of Commons.

BALLOT FOR THE OFFICERS UNDER THE NEW METROPOLIS LOCAL MANAGEMENT BILL.

THE ILLUSTRATED LONDON NEWS

No. 775.—VOL. XXVII.] SATURDAY, DECEMBER 22, 1855. TWO NUMBERS AND COLOURED SUPPLEMENT } TENPENCE.

THE CAMPAIGN IN ASIA.

THE CZAR ALEXANDER is reported to have said, on beholding from the northern forts the ruins of his beautiful Sebastapol, that those ruins had made peace impossible. If the statement be true, and if the sentiment it conveys be translated into plain language, it means that the hour has passed when the ruler of Russia might have been induced to listen to reason; and that, his city having been destroyed, he can be swayed by no arguments higher than those ignoble ones which have their source in wounded pride, and the desire of vengeance. If this be the state of the Imperial mind, peace, we are afraid, is yet far distant, and may possibly not be assured even on the day when Cronstadt shall lie as low as Sebastopol, and a victorious British fleet shall be thundering at the arsenals and Admiralty of St. Petersburg. If we could imagine that the Emperor, finding the world against him, and knowing that inevitable defeat and disgrace were before him, if he persisted in braving the opinions and the justice of mankind, were anxious for an opportunity to retire with comparative credit from a false and untenable position, we might see in the surrender of Kars that salve to his self-love which might prepare the way for satisfactory negotiation. But there is nothing in his character, or in that of his nation, to justify such a calculation; and, on their part, the Allies have not done sufficient to convey the salutary lesson of their invincibility. They have not put forth their whole strength as they might have done. They have but goaded the wild beast, whom it ought to have been their object to have disabled; and have been cutting away at a serpent's tail when they ought to have been aiming at its head, or striking at its heart.

The British people will not undervalue the importance to Russia of the surrender of Kars. That event lifts the fortunes of the Emperor from the slough of despond into which the miscalculating ambition of his late father had sunk them, and will inflate the spirits and exasperate the ferocity of his whole nation. It is for the Allies to be prepared to confront this new danger, and to awaken to the full knowledge of the fact, that not in the Crimea and in the Baltic alone is the fight in which they are engaged to be fought out. Hitherto, whatever may be said for the French, it must be confessed that the British have been deficient in generalship. We have neither had first-rate sailors nor soldiers in command. If our Admirals had been equal to their duty, they have been thwarted, insulted, and rendered worse than useless by the pettifogging interference of pragmatic martinets at home; whilst our Generals—whatever may have been the advantages or disadvantages of the system under which they were nominated—have either not shown a capacity for great command, or they have been overshadowed by the superiority of their allies both in military experience and in the force at their disposal. Our brave soldiers and our gallant subalterns have vindicated in every respect the ancient renown of their country and their race; but we have had no General, except in Asia. If there be one name which stands out more prominently and more gloriously than that of any other Englishman in the war, it is that of General Williams. The British people, who were not slow to admit the ability and to honour the courage of the brave Gortschakoff at Sebastopol, have not been less ready to recognise the eminent genius, the consummate skill, the unflinching heroism, of General Williams and the true-hearted comrades who fought with him at Kars, and defeated for a whole season by their resistance the utmost available strength, and all the plans, of the Russians. Hard terms have been imposed upon them by their conquerors—conquerors who would not have conquered if the noble garrison had had bread to eat and water to drink but for a few days longer; but they will carry with them into their captivity the homage of all Europe; and, we venture to add, the respect even of the Russians. To have lost even for a time the services of such a General and of such an army is indeed a calamity. It would be bad taste as well as bad policy to underrate it. The triumph of Russia may not be wounding to the self-love, but it is damaging to the interests, of England.

It is for the British Government to turn the disaster to proper account. The past cannot be recalled, but it can throw a light upon, and serve as a guide or a beacon to, the future. The Asiatic campaign is one that particularly interests this country. It is of far more importance to us than it is to our ally, and has been neglected and mismanaged too long. France has no great Indian empire at stake as we have, and Asia Minor is not on the high road to any of its possessions. Between the outer limits of Asia Minor and the borders of Hindostan, as well as in Hindostan itself, are tribes, populations, and states, that yield nothing to love, but everything to fear—that have no allegiance for any ruler, no respect

MADAME GOLDSCHMIDT (JENNY LIND), AT EXETER-HALL.—(SEE NEXT PAGE.)

for any neighbour that is not physically superior to themselves. We cannot afford to let these populations believe that we are inferior in fair fight to the Russians, or that we can be outgeneralled, outmanœuvred, or defeated by them. We owe India a victory in Asia. We owe it a campaign that shall make amends to our fame for the temporary check we have received at Kars—a check which we would not have experienced if during the last summer we had known how to make use of such a soldier as Omer Pachs, and had been guiltless of the folly of detaining him in the Crimea, where he was of no service, and got nothing for his loss of time but snubs, discouragement, and bitterness of heart. If, in consequence of our dilatoriness, or want of skill and foresight, the army of Omer Pacha—as, unfortunately, is but too probable—should be caught in a trap by General Mouravieff, and taken prisoners *en masse*, it will take a very splendid and final victory on our part before we can expect to recover the *prestige* which we have lost.

Surely Marshal Pelissier and the Sardinians are sufficient to drive the Russians from the Crimea? Let them have the danger and the glory of the achievement; and let England open the next campaign with a great fleet in the Baltic and a great army in Asia. If Russia has her point of honour, so also has England. Inkerman was a mistake, but it was a victory. We cannot always expect such fruit from such trees. We have no right to go on calculating that our blunders will somehow or other be turned at the last moment into successes; or that we can fight a desperate and cunning enemy without adequate preparations on every possible side. Turkey herself is not so deeply involved as Great Britain is in the result of the next campaign in Asia. The winter may prevent General Mouravieff from turning his triumph to immediate account. If fortune so far favours us, it is for the Government of this country to take care that the spring shall not find him in as good a position as that in which he now stands.

JENNY LIND AT EXETER HALL.

MADAME GOLDSCHMIDT—or to call her by that which must ever be her artistic name, Jenny Lind—appeared a second time at Exeter Hall on Monday evening, in Mendelssohn's "Elijah." She was again received with enthusiasm by a vast assemblage, and again justified that enthusiasm by a performance of incomparable grandeur and beauty.

At this time of day it is the idlest thing imaginable to expatiate on the merits of a work respecting which the opinion of the world is so completely and decidedly fixed. "Elijah," of all the emanations of genius in the highest branch of the musical art, stands second to the "Messiah" alone, not only in intrinsic excellence, but in the affections of the people of England, for whom, in truth, it was produced, and to whom it is now almost as well known as the "Messiah" itself. To attempt to analyse its construction, to criticise its style, to eulogise its numberless beauties, is merely to ring useless changes on what has been said a thousand times before—to indulge in repetitions which every one who thinks about music at all must feel to be stale and impertinent. This sort of tediousness is we do not wish to bestow upon our musical readers. Nor can a detailed description even of the performance of a work, which has been heard numberless times in every corner of the kingdom, afford room for any novelty of remark. To estimate the strength and quality of the orchestra and chorus—to name the principal performers, who, with their merits, are generally familiar to the public—is, for the most part, to exhaust the subject; for from these data any intelligent reader can arrive at a distinct understanding of the result. It is only when new performers appear, or when known performers appear in parts in which the public has not heard them before, that there is any real occasion for descriptive or critical detail.

On the present occasion the great novelty was the illustrious *prima donna*, though she was not altogether a novelty, even in the performance of this very oratorio. It was in it that she made her last public appearance, before she left this country six years ago, and the impression she then produced is still fresh in the minds of many who heard her. The general characteristics of her style as an oratorio singer, which we gathered from her previous performance in "The Creation," and attempted to describe in our last week's impression, were still more strongly marked in her performance of Monday last, the differences being such as arose from the great dissimilarity between the two works. In the "Elijah" there was not room for the brilliant displays of voice and execution which were afforded by the "Creation;" but there was a greater scope for her powers of dramatic and impassioned expression: while, in the one as well as the other, she was enabled to show the exquisite purity of her style, her faithful adherence to the composer's text, and her matchless gift of enchanting and moving the heart by that divine simplicity which, though seemingly artless, is in truth the consummation of art. Nothing could be more beautiful and pathetic than her performance of the scene in which she represented the Widow of Zarephth, whose child is restored to life through the prayer of the prophet. Her mournful, imploring cry, "Help me, man of God, my son is sick!"; her agitated phrases, so full of anxious suspense; and her burst of joy and thankfulness when she sees the miracle wrought, were the very language of the heart, and went to the heart of every one present. In the great air, "Hear ye, Israel,"—the most sublime passage in the Oratorio, in which an angel proclaims to the people the will of the Lord—she rose to a height of sustained grandeur which has never been reached or even approached by any other performer. It was the very perfection of vocal power and deep dramatic feeling. Among the most beautiful things in the Oratorio are the concerted pieces—trios and quartets—supposed to be the voices of angels, and full of divine purity and beauty. In all of these Jenny Lind took part (though this is not always done by the principal singer), and gave them a new charm. This was especially the case with the trio, "Lift their eyes," for three female voices, which was encored with enthusiasm.

The principal character in this Oratorio, in a dramatic point of view, is the *Prophet* himself. It is of immense difficulty, demanding the powers of a great actor as well as singer; and, consequently, seldom has an adequate representative. Since Staudigl first sang it at Birmingham, in 1846, those who have been most successful in it have been Formes and Weiss. If so young a performer as Mr. Hamilton Braham fell short of the requisite power, this was not to be wondered at. His efforts, however, had great merit. He had studied the part most carefully, and was particularly happy in the recitatives, delivering them with a clearness, propriety, and force of elocution which reminded us of the illustrious veteran his father.

The other parts of the performance demand no further remark. Everybody knows how admirably Miss Dolby and Mr. Lockey acquit themselves in this oratorio, and they never sang better or with greater success, than on the occasion. The choruses and orchestral accompaniments, under the able control of Mr. Benedict's bâton, were effectively executed, and the whole performance gave unmingled satisfaction.

THE AMATEUR MUSICAL SOCIETY gave their second concert before Christmas at the Hanover-square Rooms, on Monday evening. Notwithstanding the counter attraction of Jenny Lind at Exeter-hall, the audience was crowded and fashionable as usual. Mozart's beautiful symphony in E flat was played with a precision and steadiness worthy of a professional band. The novel feature of the evening was Sterndale Bennett's pianoforte concerto in F minor, played by the amateur young lady so well known in our musical circles under the name of "Angelina." For her extraordinary powers as a composer and performer, as well as for her amiable qualities and elegant accomplishments. An amateur choir of male and female voices, conducted by Mr. Leslie, sang several madrigals and part-songs in an admirable manner. One of them, "The Wreath," by Benedict, had an effect peculiarly charming. The whole concert was excellent, and (as it deserved) most warmly applauded.

ERRATUM.—In the Musical Review the week before last, for "W. H. Birch, Horsham, Birch," read "W. H. Birch, Amersham, Bucks."

THE WAR IN THE CRIMEA.

(From our Artist and Special Correspondent.)

CAMP BEFORE SEBASTOPOL, Dec. 1, 1855.

I HAVE used my best endeavours during the week to house myself, but was unsuccessful; two more days must elapse before that desirable end is attained. In the mean while, we have had tremendous weather, and last night the south-east wind blew a gale and knocked down the tent. The discomfort and wet are dreadful, and, notwithstanding the newly-made roads, there is much difficulty in going about; but this winter has lost its terrors for soldiers; there are really no hardships for them now. The Russians seem to have left the north, with the exception of those who man the batteries, and who render the town of Sebastopol too hot for any one. It is supposed that the evacuation of the Crimea is imminent, and that there are very few men left behind here at present. There are still large watchfires in the direction of Mackenzie's Farm, but these are thought to be for the most part blinds. The army is in capital health.

THE WAR IN ASIA.—ANOTHER TURKISH VICTORY.

We are still without particulars relating to the fall of KARS. The *Invalide Russe* announces that it surrendered to General Mouravieff on the 26th of November; and that the Muchir Waseif Pacha, eight other Pashas, General Williams, and the entire garrison, are prisoners of war.

The park of artillery at KARS when it surrendered numbered 130 field pieces, and a few heavy siege guns. The garrison is believed to have been about 16,000 strong. The defiles between Kars and Erzeroum had been held by the Russians, so that the corps of relief that left Erzeroum for Kars was unable to advance. It was said, too, that all the horses within the city of Kars had been eaten.

The Turkish army of operation counts 40,000 men; but the transport service is difficult on account of the season. The table ground of Armenia is covered with snow. It is rumoured that important dislocations of troops in the Crimea are about to be made. Three thousand troops of the Egyptian Contingent have embarked for Asia.

The letters from Constantinople received by the steamer, which arrived at Marseilles on Wednesday, announce that Omer Pacha had fought another battle, and taken the fortified town of Khoni, situated behind the river Zekeni-Khal, five and a half leagues from Kutais. He found there 12,000 pelitries. Omer Pacha is said to have marched to the banks of the Rion or Phasis, and to be preparing to attack Kutais.

THE SWEDISH ALLIANCE.—A BALTIC CAMPAIGN.

The *Moniteur* of Thursday contains a copy of the treaty just contracted between the Allied Powers and Sweden. The latter Power engages not to cede to, nor to exchange with, Russia either territory, pasturage, fishing, or other privileges. The Allied Powers, in return, will defend Sweden against Russia.

The *Borsenhalle* states that the treaty concedes to France and England the privilege of establishing depôts and hospitals on Swedish territory. In return, the Western Powers undertake to maintain the integrity of Sweden against Russia, should the latter treat the conduct of the Swedes as a breach of neutrality, and declare war.

It is believed that a treaty of offensive alliance has also been contracted, but if so its provisions will not be made public until the time for active cooperation in the spring.

Great arrangements are making in the Baltic ports on English account for victualling and providing the fleet next spring.

Contracts have also been made in Sweden for the French fleet, and, it is reported, also for an accompanying army.

The *Siècle* anticipates a future campaign in the Baltic provinces, and after having enumerated the forces possessed by Russia in these regions, which it values at 320,000 men, thus materials the armies which the Allies, in conjunction with Sweden and Denmark, could dispose of if necessary:—

Adquiting that Sweden were to furnish 70,000 men and Denmark 30,000, the Western Powers would have to furnish 100,000 men, or 70,000 French and 30,000 English. France could even increase her contingent if the military organisation of our neighbour were not to permit them to complete theirs, for our country possesses a military strength really formidable. Thus is constituted the French army:—Infantry of the line, 398 battalions; light infantry (chiefs), 30 ditto; artillery, 248 companies; siege train, 20 ditto; engineers, 54 ditto; sappers, 11 ditto—cavalry, 374 squadrons; gendarmes and firemen of Paris, 119 squadrons or companies; veterans of all arms, 17 companies. It is not a question here of an improvised force. At the advent of the Government of the 2nd December, the army was composed of 327 battalions of infantry, 313 squadrons of cavalry, and 240 companies of artillery. It has thus only been augmented by 30 battalions of infantry and 60 squadrons of cavalry. Without any offence, we may say that this great army has been moulded under the constitutional régime, and had found in Algeria the traditions of victory. "I like to hear the roar of cannon in Algeria," said Louis Philippe; "Europe does not hear it." Europe has since heard the Arabian drum, and fiends and seamen know that it flies well. A great expedition to the Baltic is therefore not impossible. England will pay her alliance in vessels, and our soldiers will find at Cronstadt another Malakoff

RUSSIAN MACHINATIONS IN NORWAY.

The *Constitutionnel* of Monday contains an article in which the insidious machinations of Russia, tending to obtain a firm footing in Norway, are revealed at length. This subject has long since attracted the attention of those of our statesmen who entertain a wakeful jealousy of the encroaching policy of Russia, and who recognise the strength and influence that would accrue to its maritime power by the possession of a portion of the Norwegian coast. These considerations are repeated by the French official organ, which says:—"The position of Russia as a maritime power would be considerably changed by the acquisition of a Norwegian port. Her ships, now enshrined for six months of the year in a prison of ice, would then obtain a continual liberty of action. In place of crews composed of a number of peasants, who may make excellent soldiers but are useless as sailors, Russia would extend her sceptre over a population essentially maritime, composed of hardy and skilful navigators, whose existence depends on the fisheries of the coast. Finmark contains 50,000 inhabitants, the male portion of which would supply valuable reinforcements to the Russian fleets. It would, moreover, be easy for the Czar to transplant whole tribes of Russian subjects from the interior of the empire to those vast and thinly-populated regions. The abundance of fish is such that a population twofold as great as the present one would find ample resources. By the second generation the Russian fleet would be able to draw from that spot crews as skilful, robust, and more sober than any other seamen in the world. It is impossible to dissimulate the danger which the formation of a similar navy at the very doors of Europe would offer. The Russian propositions for the acquisition of Finmark fell to the ground in 1847, after considerable negotiations. A former treaty established that the frontier inhabitants of the two countries might take their troops of reindeer to graze in either country. This treaty was denounced in 1852 by Russia, under the pretext that a power acquired over a province by conquest was not bound to recognise former treaties, and a military cordon was drawn by Russia along the frontier, to prevent the Norwegian Laplanders from driving their flocks on Russian territory. Necessity has, however, forced the latter to infringe on the new regulations, and to baffle the Russian authorities. This is all required by Russia to form a pretext for some future rupture with Norway, and to force that country, under the fear of an invasion, to cede the territory coveted by Russia. At some convenient moment a Menschikoff would be dispatched to Stockholm, and if he is unsuccessful in his mission, Russian troops will pass the frontier, and possess themselves of a "material guarantee." The trick is well known." The article concludes by entreating the people of Norway and Sweden to rise once more the standard of Gustavus Adolphus, and to imitate the noble example offered by Sardinia.

THE RUSSIANS IN THE PACIFIC.

(From a Correspondent.)

I SEND you a few lines relative to the proceedings of our squadron in these seas during the last summer. There are two points which may, perhaps, be interesting to the geographer, about which we are now in a position to offer some opinion. You are aware that the island of Saghalien and the strait separating it from Mandchuria have never been thoroughly surveyed. La Perouse, Broughton, and Krusenstern, have each contributed their quota of information to the general stock, but neither of them satisfactorily settled the question of the insular or peninsular character of this *incognita terra*. La Perouse was at first of the old opinion—that opposite the mouth of the great river Amûr was the Strait of Tchoka, dividing the island into two parts: the southern part he supposed to be joined to the island of Geso; the northern to be an island of itself, or connected with a chain of islands running in a north-east direction towards Kamschatka. In this, however, he found his error, for, on ascending north, up the Strait of Tartary, he discovered that the eastern land gradually converged towards the main; and, having ascended as far north as lat. 51 deg. 30 min., on receiving accounts from the Ghiliak tribes which occupy the seaboard on the Tartary side that there was no passage for any large ship, and being, moreover, afraid of detention by southerly winds, he made up his mind that the island of Saghalien was connected with the main land by a narrow and shoal belt of sand, over which it was barely possible at certain tides to drag the shallops and smaller boats of the Indians who inhabit the contiguous coast. Broughton advanced nine miles further north than La Perouse, but, finding the channel closed on all sides by low dunes, or sandhills, he also concluded that there was no passage at all through the Gulf of Tartary into the Gulf of Saghalien and the Ochotsk Sea. Krusenstern's survey was confined to the north-eastern side of the island; he, however, discovered that the great channel of the Amûr River was to the north, and thus confirmed the idea of La Perouse as to the non-existence of any southern passage.

From various premises we are now of opinion that the only practicable entrance into the great ocean-gulf of the Amûr is from the southward. We certainly have not yet arrived at positive demonstration, but, short of that, there can be little doubt on the subject. It is clear that the narrows between the main land and the island have been gradually formed by the subsidence of detritus brought down by the great river. It is probable, from the character of the northern part of the island, as well as from *a priori* reasoning, that there did formerly exist a channel into the broad waters of the Ochotsk Sea, dividing the island into two portions. This having been gradually choked, the strait has disappeared; and, after the lapse of years, the main channel, north and south, has well nigh dis appeared also. Yet that there does still exist a deep though contracted passage is nearly demonstrable; at any rate, we are tolerably sure that the Russian frigate *Pallas*, 50, and probably the *Aurora*, have escaped into the intricacies of the Amûr, through this passage, and are now riding in comparative safety beyond our reach

We were engaged at the northern entrance of the river (where we encountered the *Ochotsk* brig) for several days; and the result of the survey was that no practicable passage existed in that direction, not even for small ships, much less for those of any considerable draught.

The next fact to which I wish to call your notice is the existence of the considerable and commodious port of Aian, or Jan, on the north-western side of the Ochotsk Sea. This port is the great depôt for the Russian and American Fur Company (lat. 56 25 80, long. 138 25 E.), and is far preferable as an anchorage to that of the town of Ochotsk. It is a pretty place, containing about 300 inhabitants, a Governor, and an agent of the company. It has a Greek church, and is visited twice a year by the Archbishop of Eastern Siberia. We found the town deserted. The guns (such as they were) had disappeared, and the stores were empty, excepting a ubiquitous American trader, who had established a little independent godown of his own. The Company's agent, however, returned to the town during our stay, and proved to be a very good fellow, speaking English with facility. The harbour of Aian is difficult to recognise from sea-ward, but may be known by a very deep bay to the northward and eastward, and by some extraordinary pinnacle rocks at the eastern entrance. There is a dangerous reef on the western side of the outward harbour.

It was at this harbour that we were joined by her Majesty's ship *Barracouta*, who had captured a Bremen brig (*Greta*), conveying 270 Russian sailors, remnant of the crew of the *Diana* to Petropolski.

Except this and the destruction of the *Ochotsk* we have done nothing towards the capture of the Russians in these seas. Hereby certainly hangs a tale, but not for my pen; you will hear of it elsewhere.

We are about to sail again for the north.

Nagasaki, Sept. 29, 1855. S. B., H.M.S. *Sibylle*.

AMERICA.

The steam-ship *Canada*, which left New York on the 4th inst., arrived at Liverpool on Sunday last. Congress assembled on the 3rd inst., and adjourned after four hours of ineffectual attempts to elect a Speaker. The majority of votes was in favour of Mr. Richardson, of Illinois, a Democrat; Mr. Campbell, of Ohio, a Free-Soil Know-Nothing, being second. Mr. Marshall, of Kentucky, Democrat and Know-Nothing, was third; and Mr. Banks, jun., of Massachusetts, a Democrat and Know-Nothing, fourth. The President's Message was, therefore, not read.

The Washington correspondent of the *New York Herald*, referring to the English and American question, says:—"Despatches by the *Atlantic* represent our affairs with England as unchanged since the departure of the *Canada*. Mr. Buchanan says that Lord Clarendon and the British Cabinet are endeavouring up to this day to cut Government's communication in reference to the violation of our neutrality laws by British agents, in order, if possible, not to wound our sensitiveness, and at the same time to shield Mr. Crampton."

On the subject of the Garrill letter in the *Herald* says:—

The Secretary of the Treasury has become converted to the theories of the manufacturers of wool, and will recommend the adoption of the raw materials free of duty, including chemicals and dyestuffs in the same category. He does not propose to touch iron, but the backers of this movement in Congress intend to separate, if they can, upon the modification, a provision allowing of railroad iron to be bonded for five years.

The Governor of South Carolina, in his message to the Legislature, recommends that the law be so modified as to permit coloured seamen, the subjects of foreign nations, to remain on board their vessels, to be allowed to land whenever the duties of the vessel require it, upon their receiving a written permission to that effect from the mayor of the port; and that while on land they be subjected to the ordinary restrictions applied to the native coloured population.

A telegraphic despatch from San Louis reports the occurrence of a collision in Kansas between the Pro and Anti Slavery party. The despatch says:—

We have accounts from Independence to-day stating that three armed Free States-men had attempted to drive Mr. Coleman, a Pro-slavery settler from his claim near Hickory Point. Mr. Coleman killed one of his assailants, when a mob gathered, who drove him and other settlers off, and then burnt down their houses. The ringleader in this affair was arrested by Marshs. Jones and taken to Lecompton. Governor Shannon has called out the militia. Many citizens from Independence, Weston, and St. Joseph's, have gone to offer their services to the Governor to restore order. The people of Lawrence are in arms, and have five pieces of artillery. A number of houses have been burnt in Douglas county, and several families driven to Missouri for protection. The "law and order" people of the territory are rallying in large numbers to assist the sheriff in the execution of the laws. Sixteen houses were burnt at Hickory Point, and several of its citizens were missing.

Captain Little, of the American brig *Loango*, writes on the 13th of November from Antigua to the *New York Herald*, complaining that a few days after his arrival at the island he was boarded by the Superintendent of Police, who informed the cook that he had come on board to release him from slavery; notwithstanding the cook's protestations that he was a free man he was taken ashore. He also endeavoured to persuade the crew to leave the vessel.

Another section of upwards of 100 miles of the Canadian Grand Trunk Railway has been opened for traffic from Montreal to Brockville, at the head of the St. Lawrence.

Another steam frigate for the United States' navy had been launched at the navy-yard.

Advices from Central America state that General Corrall, after his entry into Grenada, was arrested on a charge of treason, tried by court-martial, and shot. General Valle had reinforced Grenada with 140 men. The President of Costa Rica had issued a proclamation warning Filibusters against invading the Republic.

The steam ships *Star of the West* and *George Law* had arrived at New York with mails of the 5th ult. The transit across the Isthmus of Panama occupied only twenty-seven hours. Her Majesty's ships *Arrow* and *Espiègle* were at San Juan de Nicaragua. An explosion had occurred in a distillery at San Francisco, by which a number of persons were seriously injured. The port had been visited by a very heavy gale. The Indians were as troublesome as ever. Owing to the want of rain the miners had not been very busy. Her Majesty's ship *President* was in the port. Business was light and money stringent. A banking firm, largely connected with Russian trade, had failed. The bank was agent to the Russian Government. The liabilities were estimated at 250,000 dols.

WILLS.—The will of Major-General James Bucknall Estcourt, who died in the Crimea in June, has been proved in London under £16,000. Also the wills of Rear-Admiral James Prevost, and Stephen Remnant Chapman, Captain and Brevet-Major 20th Regiment, Scarsdale, £30,000. Alexander Lumsdale, Commander, R.N., £25,000. Joseph Tuple, auctioneer, £30,000. James Young, M.D., of Wells, Norfolk, £9000. Thomas Temple Silver, of Woodbridge, ironmonger, £30,000. Stephen Winckworth Silver, of Cornhill and Carshalton, clothier and outfitter, £120,000.

Some very stormy weather has been experienced on the west coast of Wales, accompanied with heavy fogs at intervals, and from numerous pieces of wreck washed ashore it is feared that several vessels have been lost.

MACAULAY'S "HISTORY OF ENGLAND"

MR. MACAULAY'S anxiously-expected continuation of his "History of England" has at length appeared. Before entering into any criticism of a work which, whether critics praise or cavil at it, will take its place among the English classics, let us narrate, as one of the greatest literary incidents of the time, the extraordinary bustle and "pother" which it seems to have created in the bookselling trade. We learn from a daily contemporary that:—

> The public have called for some 30,000 copies—or, to put it plainly, 60,000 volumes—of a work of which previously they had not beheld a single page. Its fortunate publishers, we learn, have been embarrassed to meet this unusual demand. Their arrangements have been unprecedented. A chamber of considerable dimensions has been set apart for the packing of so many thousand volumes at a time, and several other rooms have been cleared to receive these in relays. We are unable to state the extraordinary number of carts, men, and horses required for the simultaneous delivery of so many volumes, but which have tested to the utmost the narrow capacity of Paternoster-row. These are the material incidents of the appearance of this coveted work; but its expected issue has suspended other literary ventures; it has disturbed all publishing and bookselling arrangements, and devoured for a time the promise of authorship.

After all, how small a business that of bookselling must be when the sale of thirty thousand copies of a work causes such an unusual bustle, and puts the magnates of the publishing trade to their wits to supply the portentous demand! Even the daily contemporary which tells us the circumstance as a wonder of the age, transcends the feat every day, and publishes each morning a work far more extraordinary in its character, if not quite as bulky. Sixty or seventy thousand copies of the *Times* with a double supplement, make nearly as much printed matter as the thirty thousand copies of Macaulay's "History," and are issued diurnally, as a matter of course, without exciting the astonishment of any one, or creating confusion in any department of trade or business. The issue of the ILLUSTRATED LONDON NEWS for the current week is a thing even more remarkable. With its two Christmas Supplements, it will comprise no less than *four hundred thousand sheets*, and *two hundred thousand half-sheets*; or HALF A MILLION sheets in all. What is the circulation of any book compared to this? And how small a thing is the bookselling business as compared with that of the principal journals of the metropolis!

But enough on this point. Mr. Macaulay commences his third volume with the proclamation of William and Mary, in 1689, and concludes his fourth with the signature of the Peace of Ryswick, in 1697. The two goodly volumes of 1500 pages and upwards comprise a period of not quite nine years. At this rate when will Mr. Macaulay complete the History, which he promised to bring down to a period within the remembrance of men still living? Never. The work will remain a fragment—a colossal one, it is true, but still a fragment,—and not a work of art; an attempt to do a great thing, resulting in a failure, from the miscalculation of the means to the end. To accomplish the task which Mr. Macaulay set himself, upon the scale in which he has hitherto wrought upon it, would, if he carried down his history to the French Revolution of 1789 (a period of ninety-two years from the Peace of Ryswick) demand no less than twenty-two volumes, in addition to the two which he has just published. "Art is long and life is short." Had Mr. Macaulay thirty working years yet before him, and if he were the fortunate possessor of the *mens sana in corpore sano*, for the whole of that time, he could scarcely accomplish the mighty labour. We may be positively certain, therefore, unless he have large stores in reserve—unless he have already completed a dozen or so of volumes, that the great work will stop short of its promised fulfilment; and that a History of England, worthy of the name yet remains to be written. Gibbon still sits upon the imperial throne of history—unapproached if not unapproachable—and Macaulay, who challenged him in his seat, and aspired to rival him in power, and completeness, must be contented to rank beneath him.

And yet Mr. Macaulay has ability equal to the task. He has a ready pen, an admirable style, a picturesque and glowing imagination, a creative power sufficient to revivify the dry bones of the past, and marshal them, like beings of flesh and blood, in solemn and gorgeous pageant, for the delight and instruction of living men; and he has the comprehensive mind and philosophic judgment to draw from history the lessons it ought to teach, and to mould the future by the errors, as well as by the virtues, of the past. But all these gifts have been rendered of less avail than they would have been, by one pervading fault—that of diffuseness. The temptation of a picturesque incident is too great for Mr. Macaulay to resist. The steady flow of History is continually impeded that he may toy as he goes with a flower or with a ruin by the wayside, that he may show how great a master of composition he is, and that, if he so willed it, he might be greater as poet and novelist, than he chooses to be as historian. But such is the charm of these interpolations, that the reader scarcely wishes them absent, though he has often to go back for pages to catch up the abandoned clue of the narrative, and to know where he was, before the tricksy enchanter led him from the broad highway into the flowery gardens, the branching avenues, and the perpetual mazes, that border the road, far away from the stations and landmarks of true history, to the more beautiful but less satisfactory regions of pure romance. And this is not the only fault which has led Mr. Macaulay to extend his book beyond the limits he allotted for it, and beyond the limits of a lifetime to carry to completion. He enters too largely into minutiæ, and is often as prolix as a contemporary reporter, describing in a daily or weekly newspaper the events of his own time. At the very outset of his third volume we meet the following passage, which exemplifies the fault we mean:—

> Garter King-at-arms, after making proclamation under the window of Whitehall, rode in state along the Strand to Temple Bar. He was followed by the Mayor of the two Houses, by the two Speakers, Halifax and Powle, and by a long train of coaches filled with noblemen and gentlemen. The magistrates of the City threw open their gates and joined the procession. Four regiments of militia lined the way up Ludgate-hill, round St. Paul's Cathedral, and along Cheapside. The streets, the balconies, and the very housetops were crowded with gazers. All the steeples from the Abbey to the Tower sent forth a joyous din. The proclamation was repeated, with sound of trumpet, in front of the Royal Exchange, amidst the shouts of the citizens.
>
> In the evening every window from Whitehall to Piccadilly was lighted up. The state rooms of the palace were thrown open, and were filled by a gorgeous company of courtiers desirous to kiss the hand of the King and Queen.

The passage might serve as a model for a description of the visit of the Emperor Napoleon or of the King of Sardinia to London in the year 1855, and might have appeared, with the necessary changes of name and incident, in the *Spectator* or the *Leader* of three weeks ago.

Let us, however, be thankful for what we have received, and are still likely to receive, from this great and brilliant writer. We are so pleased to have his companionship through the reigns of James II. and William and Mary, and anticipate so much delight and instruction from his pen, when we meet him, as we trust we soon shall, in the reign of Queen Anne; that we feel a disappointment when we know that we cannot reasonably expect to have the guidance of his picturesque intellect and sound judgment in the days of the Georges; and that his work must remain like the Cathedral of Cologne, unfinished and unfinishable.

(To be continued.)

OBITUARY OF EMINENT PERSONS.

LADY HOTHAM.

JANE SEYMOUR, Lady Hotham, of Dimborough Hall, Suffolk, and Hereford House, Old Brompton, was the daughter and coheiress of the late Francis Colman, Esq., of Hillerdon, co. Devon, who died in 1830, leaving three daughters only, and who was the last male representative of the ancient Devonshire families of Gornhay in Tiverton and Hillerdon in Collumpton. Lady Hotham was twice married. Her first husband, whom she wedded in 1800, was Roger Pettiward, Esq., of Great Fimborough, Suffolk. After his demise she became, on the 25th of June, 1838, the second wife of Admiral Sir William Hotham, G.C.B., who was nephew of the famous Admiral Lord Hotham, and who died the 31st May, 1846. Lady Hotham was for many years a very constant resident at Brighton, and was well known and esteemed in the fashionable circles there for her hospitality, her kind disposition, and her agreeable manners. Her Ladyship died at Western House, her marine residence at Brighton, on the 30th ult., in the 80th year of her age: she had no issue by either marriage. Lady Hotham was the elder sister of the late Lady De Trafford, to whose daughter, Mrs. Riddell, of Felton Park, some of Lady Hotham's property has been left—the greater part going, it is said, to an Irish gentleman named Shiel.

COLONEL SIBTHORP.

COLONEL CHARLES DE LAET WALDO SIBTHORP, of Canwick Hall, Lincolnshire, and Potterells, Herts, the worthy though somewhat eccentric M.P. for Lincoln, was descended from an ancient family, settled upwards of a century and a half at Canwick. Reginald de Sibthorp possessed the manor of Sibthorp, Notts, in the time of the Conqueror, and the family continued to reside in Nottinghamshire, where they held various manors, until the middle of the seventeenth century, when they removed to Lincolnshire. Many scions of the house have, from time to time, represented the city of Lincoln in Parliament. The Colonel's father, the late Humphry Waldo-Sibthorp, sat for that city during several years at the commencement of the present century. The Colonel was the second son of Col. Humphry Waldo-Sibthorp by his wife Susannah, eldest daughter of Richard Elsden, Esq., of Thorne, Yorkshire, and Sudbrooke Holme, Lincolnshire. He was born in February, 1783. In his earlier life he served for many years in the British Army—first in the Scots Greys, and afterwards in the 4th Dragoon Guards. In 1823 he succeeded to the extensive family estates on the death of his eldest brother, Col. Coningsby Waldo-Sibthorp, M.P., and he, a few years ago, inherited the mansion and lands of Potterells, Herts, formerly belonging to the Coningsby family from whom he derived. He was first elected on the high Tory interest for Lincoln in 1826, and, with the exception of the brief Parliament of 1832, chosen under the excitement consequent upon the passing of the Reform Bill, he continued to represent the place to the day of his death, notwithstanding Lord Scarnell's influence was used among the registered electors, but it did not extend so far as to be able often to secure the second seat for a Tory friend, the predilections of the constituency being rather personal towards himself than based on political grounds. Colonel Sibthorp married, in 1813, Maria, a third daughter and coheiress of the late Peasonby Tottenham, Esq., of Rose Garland, co. Wexford, M.P. for Fethard, grandson of the well-known and popular "Tottenham in his Boots," and first cousin of Charles, first Marquess of Ely. By this lady Colonel Sibthorp had issue four sons, the eldest of whom, Major Gervase Tottenham Waldo-Sibthorp, succeeds to the estates: he is married to Louisa, third daughter of Robert Cracroft (now Amcotts), Esq., of Hackthorn, Lincolnshire, and has two sons. Colonel Sibthorp's brother, the Rev. Richard Waldo-Sibthorp, late Fellow of Magdalen College, Oxford, became a Roman Catholic some few years since, but soon afterwards returned to the Church of England. Col. Sibthorp was for many years a magistrate and Deputy-Lieutenant for the county of Lincoln, and also held the Colonelcy of the South Lincolnshire Militia, in which he took great interest: it was a command that had belonged to many of his family. A high and unbending Tory, Colonel Sibthorp firmly opposed in all their stages Catholic Emancipation, the Reform Bill, and the Abolition of Jewish Disabilities, and was one of the minority of fifty-three who voted for Sir Francis Burdett's motion on the latter subject in November, 1852. The Colonel was also strenuously persevering in the expression of his distaste of the Crystal Palace and such like exhibitions. He was indefatigable in his attention to his Parliamentary duties. His manner of giving vent to his extreme Tory opinions in the House was so quaintly and humorously violent, and so good-humoured withal, that he was ever listened to by every side with much more of gratification than of anger. The honesty and consistency of his political conduct were unquestionable, and were fully allowed by his bitterest opponents. He was indeed generally loved and respected, and it was with no small sentiment of public regret that the news came of the gallant Colonel's demise. He died on the 14th inst., at his town residence, 48, Eaton-square.

JOHN COWLING, ESQ.

THE learned, laborious, and successful barrister expired on the 13th inst., at his house in Albemarle-street. His death was sudden, arising, it is supposed, from some spasmodic affection of the heart. Mr. Cowling was in his 57th year. He was born in Lancashire, and was the son, we think, of a physician there. He became at Cambridge Senior Wrangler in 1824, and he was a Fellow of St. John's College until his marriage some ten years ago. He also held a judicial office in the University. Mr. Cowling was called to the Bar by the Hon. Society of the Middle Temple on the 9th of November, 1827; he went the Northern Circuit, where he soon obtained a large practice. Mr. Cowling's knowledge of the common law was as extensive and profound as, and perhaps more so than, that of any other lawyer of his time. He stood at the very head of that branch of his profession which is composed of the erudite counsel of the outer bar, who, being complete masters of jurisprudence, strengthen and support, when points of law arise in a case, the arguments of the leading and more showy advocates of the inner bar. Mr. Cowling's professional occupation and emolument must latterly have been very great. In politics he was a Conservative, and on the last Parliamentary vacancy in the University of Cambridge he announced himself as a candidate, and received powerful support, but he withdrew in favour of Mr. Wigram. Had Mr. Cowling lived he would, no doubt before long, have been made a Judge; and, indeed, it was more than once remarked and regretted that he was not already chosen for the appointment.

THE LATE COLONEL COBBE, C.B.—A tablet has recently been erected in the church of Donabate, in the county of Dublin, to the memory of the late lamented Colonel Cobbe, C.B., of the 4th Regt., King's Own. The Colonel died of wounds received in the attack on the Redan on the 18th of June; and his services were honourably recorded in the despatches of Lord Raglan and General Simpson. No man, we believe, was ever more respected by his man or beloved by his brother officers, who have also erected a monument, recording their regret for his loss, on Cathcart's Hill, where he was buried close by his old friend Sir John Campbell. The Colonel belonged to a family who have eminently distinguished themselves in the military service of their country. His father was Lieutenant-Colonel Cobbe, of the Hon. East India Company's Service, and was actively employed by the Marquis of Hastings in important duties as Provincial Governor; and his uncle, the representative of the family, who resides at the family seat, Newbridge House, near Donabate, originally built by his ancestor, Archbishop Cobbe, is himself a surviving veteran, who served under Wellington in India in the old 19th Dragoons, and fought at Assaye and Seringapatam, and now in his old age superintends his estate, an active magistrate, and a model of Irish landlords. The Colonel leaves three surviving brothers—Lieutenant-Colonel C. A. Cobbe, of the 2nd West York Militia, formerly a Captain in the 3rd Buffs; Francis Hastings, Lieutenant of Artillery, Honourable East India Company, and Alexander Hugh Cobbe, Captain 87th Royal Irish Fusiliers, now quartered in the North of India.

ERRATUM.—In the notice of the late Captain Gillmor it should have been stated that his youngest daughter, the wife of Captain C. H. Thomas, died without issue at Cawnpore, India, in August, 1854.

COUNTRY NEWS.

SIR COLIN CAMPBELL.—A number of gentlemen, says the *Glasgow Herald*, deeming that Sir Colin Campbell might appropriately be elected for GLASGOW in the event of a dissolution, wrote on the subject to the gallant General, who replied as follows:—"I am most deeply sensible of the high honour contemplated. At the same time I would beg that, as from the age of fifteen I have devoted my best energies to the profession of a soldier, I have had no time to give to the consideration of those subjects in which the prosperity of so great a commercial city as Glasgow is concerned. I therefore feel that I could not do justice to the position which I might obtain through the good opinion of the electors, and I therefore purpose, as long as it pleases the Almighty to give me health and strength, to persevere in a profession to which I am ardently attached and devoted. Under these circumstances, I beg respectfully to decline the honour proposed."

THE INCORPORATION OF BRIGHTON.—A banquet to celebrate this event took place on Monday night at the Royal Pavilion, and passed off with great *éclat*. The Mayor, Mr. Hallett, entertained on the occasion about 130 guests, among whom were included the Duke of Richmond, Lord A. Hervey, Sir Henry Shiffner, the Lord Mayor of London, Sir James Duke, Mr. Laurence Peel, Mr. Leo Schuster, Professor Creasey, Alderman Wire, Mr. Charles Pearson, &c. The dinner was very sumptuously provided, and was served in the fine dining hall of the Pavilion, which was tastefully decorated with the flags of the Allied Powers. The "Health of Mr. Hallett, Mayor of Brighton," was proposed by Mr. Laurence Peel in highly complimentary terms, which were cordially echoed by the company. Lord A. Hervey acknowledged the toast of "The Borough Representatives," and Colonel Faucett, the late Mayor, that of "The Aldermen and Council," with which his name was associated.

THE CHRISTMAS HOLIDAYS.—It appears from the provincial newspapers that a proposal to close the shops and to keep holiday from Saturday night, the 22nd, till the morning of Wednesday, the 26th inst., has been very generally acceded to. By this arrangement hard-worked employés will secure (including the Sunday) three days' holiday for visiting their friends at Christmas.

AN ADVENTURE IN A SUBURB OF LEEDS.—Chapel-town is one of the most pleasant suburbs of Leeds; but the road after nightfall, owing to the insufficiency of the lamps, is dangerous and solitary. A little after six o'clock on Friday evening last Mr. Theodore Armistead was proceeding homewards to his residence in Cowper-street. On the road between Harehills and Cowper-street a recess in the path occurs, and whilst passing this recess he was seized from behind by three or four men, who knocked him down and kicked him severely over the head and upper part of the body. He was speedily insensible; and when he recovered, which he imagines to be about twenty minutes after the attack, he found he had been robbed of his silver watch, a gold Albert guard, and some pence.—*Manchester Guardian.*

THE DUTIES ON FRENCH WINES, SPIRITS, &c.—A society has been formed in the Potteries called the "Anglo-French Free-Trade Association." The title of the association will in some measure explain its objects, the most prominent of which is to enforce upon the attention of Government the necessity of removing the duties on French wines, spirits, &c., in order to induce the French authorities to remit, or extensively modify, the existing restriction on English earthenware. If these objects can be accomplished it is likely to give a considerable impetus to the staple trade of the immediate locality, and will, no doubt, considerably benefit the wine growers of France.—*Staffordshire Advertiser.*

RISE OF RENTS IN SCOTLAND.—Most of the farms on the estate of Lord PANMURE having just run out of lease, farmers have come forward and taken new leases at greatly-increased rentals. All the other farms in Scotland, the leases of which are running out, are being retaken at rents in some cases nearly double the figures formerly paid. The wages of farm labourers have also advanced.

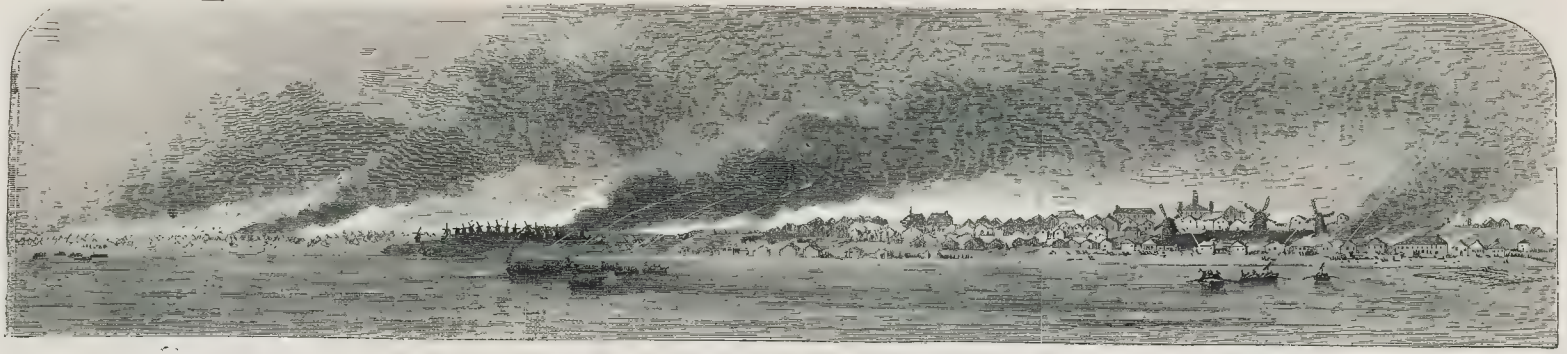
ATTEMPTED SUICIDE IN A RAILWAY CARRIAGE.—A farmer named GARRETT, who resided in the neighbourhood of Exeter, was apprehended a few days ago at Plymouth, on a charge of stealing a number of sheep from his neighbour. While in custody he made an attempt on his life by cutting his throat and stabbing himself in the side, but the injuries were not fatal. While on his way to Exeter for examination before the magistrates, and when between the Starcross and St. Thomas's stations of the South Devon Railway, he suddenly broke away from the constable, and had nearly succeeded in jumping out of the window of the railway carriage, but was fortunately caught by the legs, and held securely until the train arrived at St. Thomas's station, whence he was conveyed to the Devon County Gaol.

A FAMILY POISONED.—On Sunday last a whole family in the village of Billesdon, about nine miles east of Leicester, were poisoned by the wife having taken of at dinner. The family consisted of the father, who is a widower, named Partridge, his mother, aged seventy-nine, and his two children. The pudding, which was baked under the meat, was made by the housekeeper, a lady. Shortly after dinner the whole family were ill, and the old woman died in the course of the afternoon. It is feared that a little boy of five years will also lose his life. Hopes are entertained that the other members will recover. It is unconfirmed whether the poisoning is the result of accident or intention. Arsenic was found in the pudding which had been left. A canister of arsenic was also found on the premises of the old woman who had been accustomed to give the neighbours portions to kill rats.

MYSTERIOUS DEATH AT RUGELEY.—An inquest, extending over Wednesday, Friday, and Saturday, was held at Rugeley, last week, on the body of a gentleman named John Parsons Cook, at Rugeley. He died suddenly on the morning of the 21st ult. Mr. Cook, who had resided at Lutterworth, was a racing and betting man, and the owner of the horse Polestar. On this horse he had entered for two of the stakes at the late Shrewsbury races, on the 18th and 14th of November, when the horse won. While at Shrewsbury, after the race, Mr. Cook was taken suddenly ill. He was subsequently removed to Rugeley, where he had been staying before the races, and where he died in five days after his return. A *post-mortem* examination of the body was made on the 26th of November, by direction of Mr. Stephens, of London, the stepfather of the deceased, the stomach and intestines being sent to Dr. Taylor, Professor of Chemistry and Medical Jurisprudence at Guy's Hospital, London, at the same time for analysation. On the following Thursday evening an inquest on the body was commenced, at the Talbot Arms Hotel, before Mr. W. Ward, coroner, when the jury, having viewed the body, immediately adjourned until Wednesday week. From the evidence adduced it appeared that the deceased, immediately before the fatal illness, had been in the company of Mr. W. Palmer, surgeon, of Rugeley, and that the latter had given pills, "broth, &c., to the deceased, which caused him to vomit excessively." Dr. Taylor said:—"My belief is that he died from tetanus, and that tetanus was caused by medicine given to him shortly before his death." He proceeded to say that all the symptoms tended to show that a dose of strychnine had been administered. Taking into account the whole of the symptoms, he had not the slightest hesitation in saying that the deceased had died from the effects of strychnine contained in the pills which appeared to have been given the deceased by Mr Palmer. [About this stage of the inquiry Mr. Palmer was sent for, but the reply was that he was confined to his bed.] It was then proved that Mr. Palmer had purchased six grains of strychnine from a chemist; that on the evening after the race Mr. Palmer had pressed the deceased to drink something out of a glass, purporting to be grog, which caused the deceased to exclaim, "There's something in it—it burns my throat awfully!" or words to that effect; that he soon afterwards became sick, and expressed the belief that he had been poisoned. Other witnesses who were examined showed that various betting and bill transactions had passed between Mr. Palmer and the deceased; and that after the death the deceased's betting-book was missed. The verdict of the jury was:—"That the deceased died from poison wilfully administered to him by William Palmer." The coroner immediately made out his warrant for the committal of Mr. Palmer to the county gaol at Stafford for trial for the wilful murder of Cook. Mr. J. H. Hatton (chief constable) forthwith proceeded to Mr. Palmer's house and arrested him, but on account of his ill health it was not considered safe to remove him that night. The police officers were then stationed in his bed-room to guard the accused, and a strict examination of every article in the house was made. A local paper says:—"The proceedings connected with the above inquiry have naturally led the minds of many persons to revert to the cases of several individuals, some of them relatives of Mr. Palmer, who had died somewhat suddenly, and under circumstances of grave suspicion, the accused having effected large insurances on their lives, and in one or two instances not very long previously to their decease. An investigation is now taking place with respect to some of these cases, and it is very probable that the bodies of one or more persons, relatives of the accused, will be exhumed, in order that a chemical analysation may be made of the intestines."

THE NORTH AMERICAN MAIL-PACKETS FOR 1856.—The weekly mail service to and from North America by the British contract packets will be opened on the 1st of January next. Commencing with the packet to be dispatched from Liverpool to Boston on Saturday, the 5th of January, these packets will sail from Liverpool, as formerly, every Saturday throughout the year, proceeding alternately to New York and Boston, and calling on the voyage to the latter place at the port of Halifax, Nova Scotia. The United States' mail-packets will sail every Wednesday, alternately from Liverpool and from Southampton, proceeding on each occasion to New York. In exception to the above rule, and to enable the contractors to rearrange the service, the mails of Wednesday, the 9th of January, will be conveyed from Liverpool by a British packet, and the mails of Saturday, the 12th of January, will be conveyed from Liverpool by a United States' packet.

The Persian Ambassador, Seif-ouf-Moulk-Miri-Pindj-Abbas Koull-Khan, arrived at St. Petersburg on the 9th inst., and was received with all the honours due to his rank.



DESTRUCTION OF RUSSIAN STORES AT GHEISK, IN THE SEA OF AZOFF.

DESTRUCTION OF RUSSIAN STORES AT GHEISK.

In our last week's Supplement we gave the official despatches relating to this brilliant affair, from which it appeared that Captain Osborn had succeeded in burning a large quantity of valuable Russian stores in the Sea of Azoff, in spite of the resistance of a large body of Russian troops. The above Engraving of the transaction is from a sketch by an officer who was present, and who accompanied it with the following letter —

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

"Sea of Azoff, Nov. 17th, 1855.

"On the 5th Nov. the attack was made on the town of Gheisk and adjoining country by the boats of H.M.S. *Vesuvius, Ardent, Wasp, Curlew, Recruit,* and other small gun-boats. Of the three divisions of boats represented in the engraving, the left landed four miles from the town on the extreme left, and worked to the right, burning as they went the immense stores of corn and forage which were collected for the use of the army. They at length formed a junction with the centre division, which also worked along to the right, driving back the Russian troops opposed to them. From the rapidity with which they shifted their ground the main body of the enemy were unable to save any of their stores, the whole of which were destroyed.

"The right attack was made on the right of the storeyard. On being attacked by a large body of cavalry and infantry, which advanced upon them from the road above, they immediately gained possession of the storeyard, which they kept for three hours and a half, under the fire of the enemy, by which time they had destroyed the large collection of stores there—consisting of boats, planks, spars, timber, tar, &c.—and embarked in the boats at the same time as the other parties. The casualties of the landing parties amounted to seven wounded. There were altogether nearly 200 men landed. The force of the enemy is estimated at 3000 men."

Captain Osborn, in his despatch, says, "I despair of being able to convey to you any idea of the extraordinary quantity of corn, rye, hay, wood, and other supplies, so necessary for the existence of Russian armies, both in the Caucasus and the Crimea, which it has been our good fortune to destroy. That these vast stores should have been collected here, so close to the sea, whilst we were still in the neighbourhood, is only to be accounted for by their supposing that they could not be reached by us." Here we see the great advantage of our having a flotilla of gun-boats for important services of that kind.

As regards the number of men engaged on both sides, Captain Osborn gives a higher estimate of the Russian forces than that of our Correspondent. The latter rates them at 3000, whereas Captain Osborn says, "During these proceedings we never had more than 200 men engaged; the enemy had, from the concurrent testimony of Lieutenants Ross and Strode, and my own observation, from 3000 to 4000 men in Gheisk alone."

VILLAGE OF PETROWSKA, SEVEN MILES FROM FORT KINBURN.

PETROWSKA AND POPROVA.

THESE two Sketches represent the Tartar villages of Petrowska and Poprova, a few miles from Kinburn, to which the Allies made a grand reconnaissance a few days ago. On that occasion the Russian soldiers, who had been there an hour previous, did not think proper to wait for the arrival of the enemy. The troops of the Czar seem to be always impressed with the importance of the axiom that "discretion is the better part of valour." They never dream of doing anything of a daring or chivalrous nature.

VILLAGE OF POPROVA, FOURTEEN MILES FROM FORT KINBURN.

BIRMINGHAM POULTRY SHOW.—(SEE NEXT PAGE.)

No. 1. PIGMONS.—THE SILVER CUP, MR. HARRISON WEIR, LYNDHURST-ROAD, PECKHAM (BEARDS, OWLS, TURBITS, FANTAILS).
No. 2. SEBRIGHT BANTAM.—FIRST PRIZE, MR. EDWARD HEWITT, SPARK BROOK, BIRMINGHAM.
No. 3. SPANISH FOWLS.—SILVER CUP, J. S. HENRY, ESQ., WOODLANDS, CRUMPSHALL, MANCHESTER.
No. 4. SILVER POLISH FOWLS. [illegible] GRAPPENHALL, CHESHIRE.
No. 5. DORKING FOWLS.—SILVER CUP, MR. H. D. DAVIES, SPRING-GROVE-HOUSE, HOUNSLOW, MIDDLESEX.
No. 6. COCHIN-CHINA.—SILVER CUP, MR. HENRY DONNE, OSWESTRY.

THE BIRMINGHAM AND MIDLAND COUNTIES CATTLE AND POULTRY SHOW

THE Seventh Annual Exhibition of this Society took place in Bingley Hall, Birmingham, last week. The entries of cattle were not so numerous as in 1854; but deficiency of numbers was, according to the opinion of the best judges, more than counterbalanced by decided superiority of quality. A finer show of Herefords and Devons was seldom or never witnessed, and even disappointed competitors in this class seemed content with the decision of the judges. There were some fine specimens of shorthorns; but these, with the exception of the heifer which earned the chief prize at the exhibition, were the Devon oxen, or steers, several of which exhibited beautiful as well as useful points of breeding and feeding. That belonging to Prince Albert, and which in the 5th class obtained the first prize, was greatly admired. The exhibition of sheep was more numerous than last year, and considered, as regarded quality, to be greatly in advance of all previous shows. The Leicesters and Cotswolds were extremely good, but the Shropshire downs, in the eyes of agriculturists and breeders, were the most deserving of notice.

The Poultry Show exceeded in numbers and beauty all former exhibitions in the midland counties, if not in the kingdom. There were no fewer than 1800 pens of every description. We have selected our Illustrations from this portion of the exhibition; and have engraved upon the next page several of the Prize Pigeons and Fowls, with one of the beautiful Silver Cups, all which were manufactured by Messrs. Mapple beck and Low.

We subjoin a few notes on the Exhibition:—

The Golden-pencilled Hamburgs came first on the prize list. In this class the improvement was very striking indeed; white ear-lobes, hitherto almost the exception, were this year the almost unvarying rule. The same eulogy is equally applicable to all the various sub-varieties of Hamburgs, if, perhaps, we limit the remark somewhat as to the golden-spangled birds. The Poland family mustered very strongly, and were of most excellent quality, showing general improvement, as in the Black Polands with white crests. The Golden and the Silver Spangled Polands were very good. In the sub-varieties were buffs, whites, yellows, greys, laced, lead-coloured, and some entirely black ones, even in the crests. The Spanish were exceedingly good. The Dorkings were wonderfully improved. The competition, therefore, quite outstripped any that have preceded it. The White Dorkings were also equally improved. The Cochins were much superior to those of last year, proper attention being now bestowed by breeders rather on conformation than capriciously-coveted colour. The Bramahs and Malays are evidently declining in public estimation. The Game have never been equalled.

In the Turkeys were some unusually good birds, and some purely-bred Wild American ones. The Geese were also very good. In this class were some very interesting specimens of the Swan Goose, and also of the Canadian. The contest for the "Scorpht Bantam Cup" was unprecedented, forty-seven pens competing; and not less than nine of these had previously been winners of the like silver trophies elsewhere. The rivalry in the Golden-laced was by far the most closely disputed; the Cup being, however, finally awarded to the Silver-laced, as being the more unique and difficult to obtain. The Ducks, both Aylesbury and also Rouens, were capital. The Pigeons were unrivalled—the beau-ideal of excellence being easily recognised in almost every kind, but especially in the "toy," or fancy varieties.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 23.—4th Sunday in Advent. James II. abdicated, 1688.
MONDAY, 24.—Christmas Eve
TUESDAY, 25.—CHRISTMAS DAY. Nativity of our Saviour.
WEDNESDAY, 26.—St. Stephen. John Wilkes died, 1797.
THURSDAY, 27.—St. John the Evangelist.
FRIDAY, 28.—Innocents. Matilda died, 1834.
SATURDAY, 29.—John Wycliffe died, 1384.

LIST OF ENGRAVINGS IN THIS WEEK'S "ILLUSTRATED LONDON NEWS."

GRAND CHRISTMAS DOUBLE NUMBER.

COLOURED ENGRAVINGS:

THE ANGEL APPEARING TO THE SHEPHERDS ... ... *page* 729
LONDON: RETURNING FROM CHURCH ON CHRISTMAS MORNING ... 732
BRINGING IN THE BOAR'S HEAD 733
SINGING THE CHRISTMAS CAROL 736
"Gathering as it Goes"; or, the Monster Snowball 737
"Cold Without" 744
Children's Parties—The Shower of Toys at Christmas 745
The King and the Miller of the Dee 748
Music to Do 749
Juvenile Conjuring 752
Christmas-eve—The Cottager's Return from Market 749
The Boys in the Snow 721
Christmas-eve—Putting up the Holly and Mistletoe 721
Christmas-eve and Christmas-day 720
A Legend of Christmas 741
Christmas Cattle arriving at Tottenham Station, Eastern Counties Railway 732
Madame Goldschmidt (Jenny Lind) at Exeter-hall 713
Destruction of Russian Stores at Gheisk, in the Sea of Azoff 710
Village of Petrowska, Seven Miles from Fort Kinburn 716
Village of Peprova, Fourteen Miles from Fort Kinburn 716
Birmingham Poultry Show 717
Smithfield Club Prize Cattle Show (Two Engravings) 724
Agricultural Implements at the Smithfield Club Show 725

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 22, 1855.

We stated in a portion of our last week's impression that Austria had proposed for the consideration of the Allied Powers the bases of a pacification, and that the Allies had expressed themselves so far willing to meet the views of Austria as, without ceasing hostilities, to negotiate on the terms proposed. We set forth succinctly the "points" which Austria had drawn up, and which England and France had severally considered to be not unreasonable. These were—that the Euxine should be declared a commercial sea, from which all ships of war should be excluded; that Russia should neither rebuild Sebastopol nor construct any other fortress in the Crimea, or in any part of the littoral of the Black Sea; that the Danube should be opened up to the commerce of the world; and that a slip of Russian territory on its banks sufficient to guarantee that object should be restored to Turkey; that Russia should renounce all claim to a Protectorate over the Christian subjects of the Sultan; and that she should not construct or reconstruct on the Aland Islands any fortress whatsoever. It has been stated in some journals that Austria proposed, in addition to these terms, that Moldavia and Wallachia should be erected into independent States, under the protection of Europe, in the same manner as Switzerland and the Hanse Towns; but we believe the statement to be incorrect. Obviously the Powers who under take to preserve the integrity of the Turkish Empire would stultify themselves, as well as do injury to their unlucky protégée, if, without giving Turkey an equivalent, they consented to deprive her of one inch of territory, or one iota of her rights and privileges. It is believed that diplomatists high in the confidence of the Czar, to whom these terms were non-officially submitted, declared their own private opinion to be strong against them, and that they expressed themselves convinced that Russia would not accede to them. But officially the progress of events has not gone so far as to elicit from the Russian Government any reply to the proposition which Austria has made; and no positive answer to the despatches of which Count Esterhazy, the Austrian Ambassador to St. Petersburg, is the bearer, have been, or can be received for at least ten or fifteen days. The general belief, from all that has already transpired in the diplomatic and official circles of London, Paris, Vienna, and Berlin, is that the Czar will not accept the terms which Austria has offered for his consideration, and that the adverse opinion expressed by the Russians, in Vienna and elsewhere, is but an anticipation of that which will in due course arrive from St. Petersburg. However that may be, the course of the Allies is clear and straightforward:—To abate no jot of what justice demands, to listen to reason, but not to revenge, and to strain every nerve to take by force from the foe of Europe what his own friends cannot persuade him to yield to justice or to necessity. The Czar may be encouraged to prolong the contest by the success of General Mouravieff at Kars—but that event will by no means discourage the Allies. On the contrary, it will but nerve them, and Great Britain more especially, to renewed and more vigorous exertions. To balance in some degree, though by no means to atone for, the mistake that has been committed in leaving General Williams unsupported in Asia, favourable intelligence has been received from the far north of Europe to prove that our diplomacy has not lost sight of the extent of Russian intrigue in that quarter, nor been incompetent to defeat it. A glance at the map of Europe will show that Russia has pushed her north-western frontier far into Norway, and has actually approached within fifty miles of the Atlantic, and of the deep fiords and secure anchorages of the Norwegian coast. Russia has been in treaty with Norway for the Bay of Varanger, which never freezes in the coldest winter, which is forty miles long, and which could safely harbour the largest fleets in the world. A treaty the first result apparently of the suspicious visit of General Canrobert to the Court of Stockholm—has just been concluded between Great Britain and France on the one side, and the United Kingdoms of Norway and Sweden on the other, by which the latter bind themselves not to cede or grant to Russia, under any pretext whatsoever, any portion of territory; and by which the former undertake to guarantee the present boundaries and possessions of Norway and Sweden, including not only the mainland of those kingdoms, but all their outlying islands and dependencies, what and where soever. England and France will be true to their bond, and Norway and Sweden, for their own sakes, as well as for the sake of Europe, will be equally loyal. Thus is Russian ambition frustrated—and thus will she be prevented from securing to herself a position on the Atlantic where she might be a dangerous neighbour to Scotland and to Ireland. The result is a valuable one, and none the less so because negotiation and not the sword has secured it.

It is with no affected regret that we observe an individual, so distinguished by fortune, and so capable of making the best use of his advantages, as is the Prince Consort, permitting himself to be drawn into a false position, both as regards the highest personage in the kingdom, and as regards the nation. It will be in the recollection of our readers that this journal has never joined in the cry which from time to time has been elsewhere raised to the detriment of his Royal Highness. Believing that the Prince's conduct has been honourable and straightforward, and that certain actions which were complained of were in part misrepresented and in other part defensible, we deemed it unworthy of those who should be leaders and teachers to avail themselves of narrow prejudices, or the generalities of vague incrimination. And as frankly as heretofore we have recorded our protest in behalf of the Prince Consort must we express our unhesitating opinion that the Colonel of the Grenadier Guards has been ill advised by those who have induced him to petition the Sovereign that the act of justice done in October, 1854, may be reconsidered.

We describe that act as one of justice. But even were it otherwise, and had the Guards real cause to complain of the new arrangement as too favourable to the Line, the interference of the Prince Consort would have been ill-judged. There is no disrespect in saying what everybody in the world knows—namely, that the splendid appointment to the head of the Grenadiers was given to the Prince, not because he was a soldier, or even because he understood military matters, but because he was one whom the Sovereign—and no small part of the nation—"delighted to honour." Had *Michael Cassio* been Prince Consort, *Iago's* estimate of his military capabilities would have equally sufficed. This fact involves no blame to the Prince. It is the custom—a bad one, no doubt, but a recognised one—to allot such appointments to the favoured of fortune rather than "where War's grim favourites ride." But such gifts demand a certain amount of tact and consideration in the recipient, and it might reasonably be expected that the Royal Colonel of Grenadiers would enjoy his honours and emoluments, without availing himself of a fortuitous position to attempt to influence the system into which he found himself so adopted. We desire to say nothing of previous allegations bearing upon this matter. The Prince has now come forward and affixed his signature to a memorial requesting the Queen to make certain alterations in the regulations of the army. Were such alterations the most evidently just and right changes that could be made, it was not for Prince Albert to press them upon the Sovereign. We may be charged with indelicacy in saying that a husband so situated ought not to be the petitioner to his wife, but the indelicacy is in the conduct of those who have recommended the Prince to place himself in so objectionable a position. A just reform might safely have been left to the discernment of the Crown and the good sense of the military authorities; but it assuredly argues a weak case when an extraordinary exercise of influence is thought necessary.

But the course taken by his Royal Highness becomes still more indefensible when it is seen that the alterations which he demands are unjust and unpopular. Few people out of the Army understand with exactitude the complications which have grown up in a system in which the traditions of ancient jobbing and favouritism have had to effect a compromise with the necessities of having some real soldiers and something like order and fair play. This complication enables the military pedant to scoff with some effect at ignorant civilians; and even a "heehaw officer," who will probably indulge in various etymological eccentricities in the composition of a single *billet-doux* to the confectioner's daughter, will speak with much indignation of the impudence of newspaper fellows pretending to dictate on Army subjects. But luckily the case of Guards *versus* Line is before the public in plain black and white; and the complaint of Prince Albert and his fellow Colonels is at all events perfectly clear. The hard treatment they bewail is this, namely, that the officers of the household troops, who have long enjoyed advantages of military rank, of pay, of exemption from disagreeable work—and who have, in fact, been the Sybarites of the service, have had their way to the rank of Lieutenant-Colonel made a little longer than is that of the Line—who, without any advantages at all, do the hard and uncomfortable part of a soldier's work. The complaint itself is alleged to be in great measure unfounded; but, supposing the Guards had this "grievance," as we suppose everybody in the world, except a Guardsman, hopes that they have—what sort of an opportunity is taken to ask that the Line may be deprived of a small boon which was conceded with all reluctance, and only because it was impossible to withhold it. Just at the close of the second act of the slaughter and suffering of a terrible campaign—just when it is of vital importance to the interests of England that our army should feel how we honour it, and how resolved we are that justice shall be done to it—at this crisis a carpet Field-Marshal and a handful of aristocratic officers are petitioning the Queen to take back the little benefit which was accorded to the Line. Mere good sense would, one might think, have prevented such a step, if good feeling did not at once repudiate it.

We do not presume to anticipate the result. The Queen has, throughout the whole war, shown herself the soldier's friend, and it would be worse than disrespectful to doubt that her Majesty has well considered who it is that fight her battles, not only in the glorious arena, with a world watching every blow, but in distant and desolate coasts, where little heed is paid to the conflict and none to the individual combatants, and where nothing but a sense of duty and loyalty could keep men around her banners. Who has *not* confidence in the willingness of the Queen to do what is right and kind by her army? But the mode in which this matter has been pressed upon her—her husband and her cousin foremost in urging it—may leave the Sovereign less choice of action than her subjects would gladly see. If, behind the back of the army, which is absent and fighting for its Queen, amateur and aristocratic officers succeed in depriving it of its rights, the nation will know where to affix the blame, and may not be backward in expressing its feeling.

THE COURT.

The quiet retirement of the Court at Osborne has not been interrupted during the past week. The arrival of Major General Sir Colin Campbell on a visit to her Majesty has been almost the only incident calling for record. Yesterday (Friday) the Queen and her Court returned to Windsor Castle, where the Christmas hospitalities will be kept up with unusual éclat.

The Prince of Wales has remained at Windsor during the absence of his Royal parents in the Isle of Wight.

The Marchioness of Ely has succeeded Lady Macdonald as Lady in Waiting to her Majesty, and the Hon. Eleanor Stanley has succeeded the Hon. Beatrice Byng as Maid of Honour in Waiting.

THE QUEEN AND MISS NIGHTINGALE.—The country will experience much satisfaction, though no surprise, on learning that her Majesty, the Queen, has, in a manner as honourable to herself as it must be gratifying to her people, been pleased to mark her warm appreciation of the unparalleled self-devotion of Miss Nightingale. Her Majesty has presented that lady a jewelled ornament of great beauty, which may be worn as a decoration, and has accompanied it with an autograph letter—such a letter as Queen Victoria has ere now proved she can write—a letter not merely of graceful acknowledgment, but full of that deep feeling which springs from heart to heart, and at once ennobles the Sovereign and the subject.

His Royal Highness the Duke of Cambridge is about to pay a visit to the Right Hon. Sidney Herbert, M.P., and Mrs. Herbert, at Wilton House. The Mayor and Corporation of Wilton have voted an address, which will be presented to his Royal Highness on his arrival

His Excellency M. Due, Norwegian Minister of State at Stockholm, has arrived in London, from Paris, where his family are at present sojourning.

The Marchioness of Hastings has left Kensington Palace Gardens for Southsea, with Captain Yelverton, R.N., who has just been appointed to the command of a division of forty gun-boats. The gallant Captain is at present occupied in refitting his crack ship, the *Arrogant*.

The Countess Helene Kielmansegge has left the residence of the Hanoverian Legation, on a visit to the Earl and Countess Howe, at Gopsal.

Viscountess Palmerston "received" on Saturday evening at the residence of the Premier, on the Terrace, Piccadilly. The noble Viscount and her Ladyship left town for Broadlands yesterday (Friday) for the Christmas holidays.

The Lady Margaret De Burgh, eldest unmarried daughter of the Marquis and Marchioness of Clanricarde, is about to form a matrimonial alliance with Mr. Wentworth B. Beaumont, M.P., of Bywell-hall Northumberland.

THE POST-OFFICE AND THE ARMY IN THE EAST.—The Duke of Argyll has decided to send out immediate instructions to the officers of the Army Post-office in the East to open money-order offices, for the transmission of money to the United Kingdom, at Constantinople, Scutari, Head-quarters of the Army, and Balaclava.—*Times*.

ROBERTSON'S PHOTOGRAPHIC PICTURES OF SEBASTOPOL.—A very interesting series of photographic pictures, illustrative of Sebastopol and the neighbourhood, taken by Mr. Robertson, of Constantinople, has just been opened to public inspection at the rooms of Mr. Kilburn, in Regent-street Mr Robertson's successful treatment of General scenery has on many occasions been evidenced in engravings published in this journal; and we are happy in being able to state that the same talent has in the subjects now under notice been employed with results in every respect striking and satisfactory. The photographs before us have been taken since the fall of Sebastopol, and form a worthy and most interesting companion to the Crimean views in Mr. Fenton's collection, which have for some time past been on view in Pall-mall. These views, taken under favouring circumstances, exhibit the reality of siege operations, both of attack and defence, with an amount of accuracy of detail which must open many new ideas to those who have carelessly read of the great struggle in which our army have so long been engaged. They show the interior economy of trenches and batteries, the terrible havoc of the cannonade, and the dreary life of the picket duty, in a way which no words could realise. Full of detail and of suggestion are they, and they will be contemplated by thousands, when published (as they are intended to be), with feelings of deep interest and awe. The photographs are fifty-eight in number; amongst the most striking we notice—an interior of the Great Redan, and a view of the breach where the deadly struggle took place. Part of the Barrack Battery, showing the rope mantelets which protected the Russian gunners at the embrasures, interiors of the Seiores' Battery and of the Flagstaff Battery, both admirable for their orderly structural arrangement; Interior of the Barrack Battery, with five pivot guns commanding the ravine—a striking picture; Interior of the Mamelon Vert; Panorama of Sebastopol, taken from the Malakoff, showing the city, dockyards, buildings, and the principal forts on the northern side—a very striking panorama; and last—not least in our regard—a View of the English Burying-ground on Cathcart-hill, crowded with monuments to the memory of British heroes, some of whose names are distinctly transferred in the photographic process. England will long hang with reverence over the achievements of her sons in the Crimea; and such exhibitions as these we now notice will serve to perpetuate the glorious deeds accomplished by them.

METROPOLITAN NEWS.

IMPORTANT QUESTION.—In the Westminster Police-court, on Saturday last, Mr. Arnold gave judgment in an adjourned cab case of an interesting description. The question was as to the construction to be put upon the 16th and 17th Victoria, cap. 127, the 14th section of which says that, whenever more than two persons shall be carried in a cab, 6d. shall be paid upon the entire distance for every additional person, and that two children shall be considered as one adult person. The matter in dispute was, whether one child shall be paid for, and the law involved the point of whether luggage taken at the same time, and considered reasonable luggage, was to be carried free of charge: for, if the hirer was liable to pay for the carriage of the child as an extra person the driver would be entitled to compensation for the conveyance of the luggage, because there were more than two passengers carried. He was not willing to decide the case upon his own judgment, but determined to submit it to the consideration of the metropolitan magistracy at their quarterly meeting. His view had been that the driver was entitled to charge for the conveyance of one child, under the age of ten as one person; but there was no doubt that the words would bear another construction. The matter had been fully discussed at the quarterly meeting, and a very large majority were of opinion that the driver was not entitled to charge, and he (Mr. Arnold) felt bound to yield to the majority. He felt that it was most desirable that a uniformity of decision should prevail in a matter which might arise to the public daily, and that there should not be one law at one police-court and a different one at another. The question was one of fact, and it must be submitted for the future to be the law that a cabman was not entitled to charge for one child as an extra person. As the two cabmen who had laid the present complaint had no doubt acted from a *bond fide* belief that they were entitled, he should order the money they had paid for their summonses to be restored to them.

LONDON AND MIDDLESEX ARCHÆOLOGICAL SOCIETY.—The first general meeting of this society was held on Friday week, in the great hall of Crosby-place, Bishopsgate; the Rev. T. Hugo in the chair, when resolutions were passed in furtherance of the objects of the society, the leading aim of which is to collect and publish the best information on the Ancient Arts and Monuments of the cities of London and Westminster, and the county of Middlesex; as well as to aid in the conservation of their antiquities, &c.

CLAPHAM ATHENÆUM.—The meetings of the Clapham Athenæum for the year 1855 were brought to a close on Monday evening last by a lecture on "Lord Erskine," which was ably delivered by Alfred A Fry, Esq., Barrister-at-law, who had kindly supplied the place of Col. Rawlinson on this occasion. The learned lecturer commenced by dilating upon the eloquence and forensic abilities of the early Greek and Roman advocates, and then proceeded to advert to the servility of the members of the English Bench and Bar during the reign of the house of Stuart, and to trace the subsequent amelioration and improvement of the legal profession in this country. He gave a forcible delineation of some of the distinguishing characteristics of Lord Erskine—his impassioned eloquence, his fearless moral courage, his unbounded energy, and his legal attainments; and concluded a most interesting paper by reading some of the finest specimens of his Lordship's speeches, which showed his masterly command of language and power of thought.

CENTRAL FARMERS' CLUB.—The annual general meeting of this club took place at the York Hotel on the 12th inst. The report showed the great increase of members since the club was established in 1844. Mr. Sidney, one of the committee, called attention to the advantages which had been derived from the plan of circulating reports of the seven monthly agricultural discussions (according to the plan proposed by Mr. Ramsay last year), and he suggested that the time had arrived when the agricultural interest could afford a club-house of its own. The idea was warmly received. A special committee, consisting of Mr. J. Thomas, of Sidlington Park, Beds; Mr. G. H. Ramsay, of Newcastle-on-Tyne; Mr. Bailey Denton, and Mr. Carter, was appointed to report and confer with the standing committee on the subject. As the Central Club contains nearly 500 members, and the Royal Agricultural Society numbers nearly 4000, there is doubtless plenty of material for a good club-house between Islington-market and Mark-lane.

"SINDBAD THE SAILOR," AT THE POLYTECHNIC.—The dissolving views illustrative of Sindbad's first three voyages present great attractions for the younger visitors to the Polytechnic, who will rejoice to find the remaining voyages in the very attractive programme of Mr. Pepper's Christmas entertainment. The views are as numerous and beautiful as in the former series; the descriptive lecture, by Mr. Horne, graphic and humorous; and the music appropriate and good.

CHRISTMAS HOLIDAYS.—Messrs. Leaf and Co., of Old Change, and several other leading mercantile houses in the City, have come to the determination of giving their clerks a holiday on Monday next, so that the persons employed by these firms will have at their command from Saturday night till Wednesday morning.

THE LONDON HOSPITALS.—At the Statistical Society on Monday evening, Dr. Guy, physician to King's College Hospital, read a statistics, the main object of which was to show that the majority of the class who now receive relief from our hospitals are working men in employ, who ought to pay for the benefits they receive. Confining to the case of King's College Hospital, he stated the result of his statistics. Seizing the year as out of work all who had been obliged to strike work even for a few days, he obtained the following figures:—In work, 230; out of work, 103. So that about two-thirds of the cases presented themselves for gratuitous advice and relief at the hospital were in work at the time; and, if they assumed that of the proportion reigned among the husbands and fathers of the women and children who applied for relief, there would have a total of nearly 20,000 men in the receipt of wages obtaining charitable aid in the persons of their wives and children, at one hospital, in the course of a single year. He also made some inquiries as to the wages which the patients were in the habit of receiving in full work, and from them what wages were esteemed good in their respective trades, and found the same to vary from 18s. and 14s. a week up to 30s., and in some few cases to £3 or £4 a week. In his concluding remarks Dr. Guy argued in favour of making a moderate charge, more especially for medicines, where there was no absolute inability to pay, and observed that the enforcement of a small payment in suitable cases would increase the funds of hospitals, and thereby extend their benefits to a larger number of the most helpless and deserving persons.

THE CASE OF DR. VAUGHAN.—The indictment against the Rev. Dr. Vaughan, which stood for trial at the Central Criminal Court on Thursday, has been removed by *certiorari* into the Court of Queen's Bench, on application being made to Judge at Chambers on Monday for that purpose on behalf of Dr. Vaughan, when an order was made for the writ to issue.

COUSINS MAY LEGALLY MARRY.—A popular delusion has long prevailed amongst the lower classes that first cousins may marry and second cousins not; and an equally absurd idea seems also to exist that second cousins can marry and first cousins not. The fallacy of both opinions was declared by Mr. Ingham, at the Thames Police-court, on Saturday. A respectable woman, the wife of Mr. Sloman, a shoemaker, in Upper East Smithfield, to whom she had been long married, entered the witness-box, and was about to address the magistrate, but her agitation prevented her doing so. She remained for some time overcome, and Mr. Ingham requested her to compose herself, and she not being able to do so, begged her to walk upon him again, which she was less agitated. After a pause, Mrs. Sloman said: Pray, Sir, can first cousins marry? Mr. Ingham: That is an odd question. I have a notion they can. Mrs. Sloman said she was married to her first cousin, and her husband's brother had stepped between them and happiness, and made the marriage was not legal. Mr. Ingham: It is perfectly right and legal, be assured of that. Mrs. Sloman: My brother-in-law says my husband is not bound to support me. Mr. Ingham: He will find his match if your husband repudiates you, or turns you out of doors. You are the lawful wife of your husband, and he is bound to maintain you. Mrs. Sloman thanked the magistrate, and left the court much happier than when she entered it. A smart and interesting young woman next entered the witness-box, and, holding down her head and blushing, said: "If you please, Sir, my young man," and then stopped. Mr Ingham: Well, what of your young man? He has not been false to you, I hope? Applicant: No, sir; but, if you please, Sir, we want to be married. Mr. Ingham: What impediment is there to the marriage? Applicant: Please, Sir, we are second cousins, and people say it is not right for second cousins to marry, and that if I marry him he will not be lawful. Mr. Ingham: A marriage between second cousins of the opposite sexes is perfectly lawful. You can go and marry your second cousin as soon as you like. Applicant: Oh, thank you, Sir; I am so glad! (Laughter). The anxious fair one then hurriedly left the court, concealing a very pretty face as she best could with her handkerchief.

A "WARNING" TO THEATRICAL CRITICS.—Mdlle. Dupuis, the actress of the Vaudeville Theatre, Paris, appeared on Saturday last before the Tribunal of Correctional Police to complain that M. Jallabert, editor of the *Théâtre*, had libelled her by comparing her, in offensive terms, to a Nuremberg doll. The Tribunal decided that such a style of criticism was not allowable; and, as it appeared to have been dictated by personal animosity, it condemned Jallabert to pay 500 f. fine and 2000 f. damages; also to insert the text of the judgment in his paper, and to pay the expense of inserting it in three other papers of Paris, to be chosen by the complainant.

The Rev. Dr. Yore, a benevolent Roman Catholic clergyman in Dublin, who has devoted his energies to the support of a Deaf and Dumb Institution, has decided to dispose of his library (worth £3000) by raffle, for the benefit of the inmates.

NAVAL AND MILITARY INTELLIGENCE.

EACH of the Captains selected to command the gun-boat and mortar-boat flotillas for the ensuing year's campaign will have a line-of-battle ship armed *en flute*, as a store and depôt ship, attached to his squadron.

THE *Charger* gun-boat, launched from the yard of Messrs. Pitcher, of Northfleet, has arrived at Woolwich, and will be immediately placed under the hands of the riggers. The gun-boats *Sandfly*, *Plover*, and *Seagull* are now ready for service in the outer basin, and will shortly leave Woolwich for Sheerness.

THE 1st battalion of the Swiss Legion arrived in the *Great Britain* at Smyrna on the 2nd of December, but, as it was Sunday, they did not land; Monday was a pouring day, and so they continued on board till Tuesday. They are a fine-looking set of men, mostly German Swiss. The Colonel (Dickson) is a fine, young, active man, and familiar with all the three languages spoken by his corps—French, German, and Italian.

ORDERS have been received at Pembroke Dockyard, from the Admiralty, for the immediate construction of four more gun-boats. They are to be built with all possible dispatch, and as many men as can well be employed upon them will at once be set to work. The 1st of March has been fixed for their completion; and, in order to finish with all the three months, the mechanics have commenced working the long hours. These boats are to be 100 feet in length, 24 feet in width, and 6½ feet in depth, and about 300 tons burden, and their draught will be very slight.

THE new-plan iron mortar-boat, which lately was towed to Portsmouth from Birkenhead, has undergone a series of effective trials within the past few days at Spithead, which have developed its warlike properties. 150 rounds were fired with 20-lb. charges, and many of the rounds in rapid succession, less than three minutes intervening between each discharge. The vessel, in quite free from any injury beyond the bulwarks and some of the light framed woodwork on deck.

THE magnificent new slip, No. 7, in Chatham Dockyard, recently completed under the Director of Works Department, is to be forthwith fitted and lighted with gas, in order to facilitate the building of the floating battery destined to operate against the Russian fortresses in the ensuing spring.

THE new iron mortar-boat *Cupid*, recently built by Mr. John Laird, has proved so successful that the Government have given him an order for several more, which are being rapidly proceeded with at his yards in Liverpool and Birkenhead. These boats, when fully loaded, will only draw three feet of water, and will be painted sea-green. They will be of 100 tons measurement, 60 feet long, 20 feet broad, and 6 feet deep. The *Cupid* was built and got ready for sea in less than three weeks.

THE Grenadier Guards, who have during the last three months been stationed at the camp at Aldershott, have quitted the camp, and have been quartered at Windsor, the Tower, and at Portman street barracks. The Guards have been relieved at the camp by the 80th Regiment, 1100 strong.

THE Cunard steam-transport *Niagara* embarked the 4th Royal Lancashire Militia at Liverpool on Tuesday afternoon, for Kingstown. This regiment has for some time been stationed at Berwick, and they are intended for the camp on the Curragh. They arrived by the London and North-Western Railway, and were preceded through the principal streets of Liverpool by the brass band of the regiment.

THE huts for the Royal Sappers and Miners, which have been for some time in course of erection near the common barracks, are now completed. Each hut will accommodate twenty-two men, and as there are twenty-four erected they will provide shelter for upwards of 500 men. There are also two huts for cooking purposes. They are to be thoroughly drained, warmed, ventilated, and illuminated with gas; there is also a good supply of water laid on to each hut. A few days ago the 26th company of Royal Sappers and Miners, accompanied by the band, arrived at Chatham to occupy the huts prepared for them.

THE four gun-boats building at Messrs. W. Briggs and Co.'s yard at Sunderland—the *Mastiff*, the *Menai*, the *Alnmet*, and the *Minstrel*, the four representatives which are to be built for Sunderland next spring, will be ready long before the end of February.

THE usual arrivals at Woolwich Arsenal of numbers of Ordnance craft and barges with shot and shell from the Government contractor's foundries continue. Among the several recent arrivals are numerous mortars and heavy guns of various calibre from the Lowmoor and other works. The number of 13-inch shells have also been landed in considerable quantities. A formidable-looking piece of ordnance is standing under the wall of the long store-room, to the number of no less than forty. The ordinary proof guns and mortars daily takes place at the Royal proof-butts, and, with the exception of the present Imperial armament, there is no diminution in the warlike preparations in the Royal Arsenal which were carried on before the capture of Sebastopol.

GREAT activity now prevails in the establishment of the Mint, which is producing with as much speed as possible a new medal, to be distributed among all the soldiers or their representatives who have fought in the Crimea. The original intention was to give the medal to our own army only, and 70,000 were struck for that purpose; but the Government has recently determined upon presenting the soldiers of France, Sardinia, and Turkey, who have fought beside us, with an English tribute of regard and brotherhood, and for this purpose 800,000 more medals have been ordered. This beautiful decoration will be nearly the size of a crown or five-shilling piece, the material being virgin silver, or silver without alloy. On the reverse of the medal is executed the representation of an ancient Roman soldier in classic costume and equipments, and whose brow Fame is depicted as encircling with the victor's wreath, and the word "Crimea" is inscribed at the side. On the obverse side there is a large medallion head of Queen Victoria, the ornamental work of whose crown is delineated with the greatest artistic delicacy and finish.

THE ARMY OF OMER PACHA.—It is probable that we shall remain at Redout Kaleh during the winter, for, unfortunately, the year's campaign seems to have closed. It is not that the Sirdar or his General or troops want the necessary courage to continue it, for the men are full of enthusiasm and devotion to their chief, but the army is destitute of material, baggage-waggons pontoons, implements of labour, &c., without which it is impossible to advance. Thirty carpenters, with tools, have, it is true, been sent us, but a much greater number were required, for there is no lack of wood here. The few pontoons which Omer Pacha has at his disposal are not sufficient to enable the communications between the different corps of his army upon the little rivers which must be crossed frequently. The greater part of the boats, too, are so unwieldy and clumsy that it is extremely difficult to transport them over the land from sea. If the army does not succeed in penetrating to Kutais this winter, it can hardly do so in the spring, for at the beginning of March all the rivers overflow their banks and inundate the greater part of the low plains. We are ignorant as to whether we shall rest at Redout Kaleh. The locality is full of morasses, and consequently very unhealthy. The water, too, is bad. We Germans are obliged to attach ourselves to the Turks. The Poles, Hungarians, and Italians, who kept together very much, put us completely on one side; and as to the English, they pay no attention to any one, not even saluting the officers, always excepting a few English officers, who are very kind and polite, and proves themselves to be true cosmopolites.—*Letter from Redout Kaleh, Nov. 15.*

STORM AT BALACLAVA.—The 1st of December broke upon us with a fierce storm, which fortunately lasted only three hours. It began soon after midnight, and was highest between two and three o'clock. I was absent from the port, and slept in a hut on the hill towards Kamara. My servant had a shake-down in a tent hard by, which fell about his ears; taking refuge in a second that was also blown down, the same accident happened to him in a third. In a valley leading from the Castle Hospital to the position of the 89th Regiment and the hospital huts of the Highlanders, under the dockers Mackinnon, Rutter, and Blakeney, the storm raged more furiously than perhaps anywhere else. The wind was about south. The canteen and one of the huts of the 89th and a hospital hut of the 72nd were blown down, and every tent and the hospital huts on the same side completely shared the same fate. Cooking utensils, clothes, and all sorts of things rolled down the hill before the ascending wind, which also stripped the huts of their felt roofing. In the adjacent commissariat store (near the Artillery) an immense stack of wood was blown down with a noise resembling a very heavy cannonade. Horses that were stabled in tents were terribly frightened by the unexpected fluttering of the canvas around them, and the men rushed forth almost in a state of nudity to avoid the blows of falling tent-poles; and, half-asleep and half-awake, saw that another 14th of November (when the *Prince* was lost) was upon them.—*Letter from the Camp.*

CRIMINAL STATISTICS.—From recent returns of Irish crime it appears that in 1853 the number of offenders was 15,144; in 1854 it was only 11,783—thus showing a decrease of 3358, or at the rate of 22 per cent; in other words, Irish crime, taken as a whole, has, during the course of last year, disappeared to the extent of more than one-fifth. Under the head "Murder" there is exhibited a decrease; but there is under the head "Attempt at Murder" a large increase. Under the head "Riot and Feloniously Demolishing Buildings," an increase from 18 in 1853 to 52 in 1854. In "Killing and Maiming Cattle" there is also an increase; and also under the head "Administering Unlawful Oaths," an offence which has led to most fearful consequences. But, even with this drawback, the diminution of crime, as generally shown by the criminal tables, denotes improvement in the social state of Ireland.

COMMERCIAL STATISTICS.—The Prussian Government have entered into an arrangement with France and England to effect an exchange of the commercial statistics of each nation, and orders have been given at Berlin to the proper authorities to that effect. Much benefit to the commercial community will accrue from this arrangement, if completed.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE Nestor of our poets is no more. Samuel Rogers, "the Bard, the Beau, the Banker," died on Tuesday last, at his house in St. James's-park, overlooking the Green-park, in his ninety-fourth year—an age beyond which the laws of nature seldom suffer life to be extended. He was the living link between the era of Johnson and Goldsmith and our own. He was not much of a poet: he was a correct and pleasing writer with only one book, but that note was sweet and suggestive.

His age has been, we observe, variously stated. We remember to have been present when the late Marquis of Northampton was the cause of Mr. Rogers revealing his age at his own table. "You will recollect Mr. Gray very well?" said the somewhat talkative Marquis. "No," was the reply, somewhat sharply; for the old man would fire up impatiently. "No, I never even saw Mr. Gray. I was celebrating my eighth birthday on the day that Mr. Gray died." Now, as Gray died on the 30th July, 1771, Mr. Rogers was consequently born on the 30th July, 1763.

The only English poet who attained an age of nearly equal duration with that attained by Mr. Rogers was the poet Waller. Waller was born in 1606, two years after the death of Queen Elizabeth. He sat as a member of Parliament in the reign of James I. He was a member of the celebrated Long Parliament of Charles I. He sung the Panegyric of Oliver Cromwell, and celebrated the restoration of Charles II. He was alive at the coronation of King James II.; and, if his life had been spared barely beyond another year, would have witnessed the abdication of James and the accession of William and Mary. He was like Mr. Rogers in other respects than his poetry. He was a man of wealth, and he was a wit. Waller at eighty was still the delight of the House of Commons. Rogers at eighty-eight was still the delight of the most fashionable dinner tables in Tyburnia and Belgravia. The sayings of Waller have deservedly found a place in some of the best volumes of our *Anas*; and the repartees of Rogers are likely to find a celebrity that is equally enduring.

Two very different men appeared as poets in print for the first time in the same year—the Ayrshire Ploughman and the Lombard street Banker. In the year 1786 appeared at Kilmarnock that volume of "Poems, chiefly in the Scottish dialect," which will live as long as the English language; and in the same year appeared in London, "An Ode to Superstition," since properly included in the numerous reprints of the poems of its author. Burns published his octavo volume by subscription among the weavers of Kilmarnock, whilst Rogers took (as we have heard him relate) his poems to Cadell in the Strand and left a cheque to pay for the cost of pub lication. Very different indeed were the lives in the flesh of the two men who thus commenced together their lives in poetry. Burns has been dead sixty years. Rogers has consequently outlived the poet he commenced the race of fame with by that number of years. Nay, more: nearly seventy years have passed since he who died within this very week took his first ode and his cheque to the Murray of those days of publishing.

When Rogers made his appearance as a poet, Lord Byron was unborn—and Byron has been dead thirty-one years! When Percy Bysshe Shelley was born, Rogers was in his thirtieth year—and Shelley has been dead nearly thirty-four years! When Keats was born, "The Pleasures of Memory" was looked upon as a standard poem—and Keats has been dead thirty-five years! When the century commenced, the man who died but yesterday, and in the latter half too of the century, had already numbered as many years as Burns and Byron had numbered when they died. Mr. Rogers was born before the following English poets—Scott, Southey, Wordsworth, Coleridge, Byron, Moore, Campbell, Hogg, Bloomfield, Chantrey, Ham, Hogg, James Montgomery, Shelley, Keats, Wilson, Thomas Hood, Kirke White, Lamb, Joanna Baillie, Felicia Hemans, L. E. L., and he outlived them all. Our oldest living poets are Walter Savage Landor, born 1775; Leigh Hunt, born 1784; and Barry Cornwall, born 1790.

We have said that Mr. Rogers was famous for his conversational powers, for his short smart stories, and his sarcastic criticisms; and we now learn with pleasure that the Rev. Alexander Dyce is about to give us a volume of such gatherings from the breakfast-cloth and dinner-table at St. James's-place. Mr. Dyce was a never-failing guest at the Tuesday breakfasts, and had to endure, in common with others, incessant repetitions of the same stories from his host. He will not, however, tell the same story twice in print; and his wallet of queer and pithy stories is well stored.

Mrs. Gore, who has delighted society with so many clever novels of fashionable life, is busy preparing a work for publication to be entitled "Memoirs of the Present Century—Social, Literary, and Political." This work, we are told, was commenced with a view to posthumous publication; but a recent notorious failure in the Strand, by which Mrs. Gore is one of the most considerable losers, has, it is said, made it necessary that the work should appear as soon as it is ready. Octogenarians who delight in the writings of Mrs. Gore, are the greatest gainers by the heavy losses of this pleasing writer.

To paint the story of the Order of the Garter has long been a subject of ambition among British Artists. Benjamin West tried his feeble hand at it, and for Windsor; but what unfortunately Vandyck did not live to complete, and for the same place, was much above the powers of President West; and West's Windsor pictures now rank in art among the gods and goddesses of Verrio and Laguerre. Another English artist—and by no means a feeble one—is about to try his hand upon a scene connected with this noble Order. Mr. E. M. Ward is busy with the recent installation of the Emperor Napoleon as a Knight of the Garter and the picture he is upon is a commission from her Majesty.

Artists are very justly directing attention to the new number of "Punch's Almanack," in which John Leech is seen to the greatest advantage. The whole of the illustrations are by this admirable and versatile artist—an original in his way, as much as Hogarth himself. When Leech worked with Mr. Doyle, it seemed as if he wrought for a divided honour. Now that the task is wholly his he works with extra vigour. He certainly can draw English beauty, and understands English fun, and English follies, and English humour—yes, and, as somebody added, English horses.

There is to be a second Fine Arts *conversazione* season, at Kensington, of four nights, and under the same management as before. Mr. Purdy, the excellent Honorary Secretary in what Mr. Leigh Hunt calls the "old Court suburb," is busy catering for the four nights.

THE RUSSIAN CONDITIONS OF PEACE.—The Paris correspondent of the *Times* has some gossiping remarks upon the disappearance of a "difference" between the French and English Cabinets as to the conditions of peace, and also relates an anecdote of an interview between the Baron Werther, Prussian Minister at St. Petersburg, and M. de Nesselrode. The Baron had exhorted Russia to assent to the conditions of the Western Powers:—When Baron Werther had exhausted all his own rhetoric as well as the borrowed eloquence of his master, M. de Nesselrode replied—"Russia will not accept such conditions; Russia will never treat while there is a single foreign soldier on her territory!" Baron Werther again pressed the point, and dwelt on the danger of a change of policy among the German States of the second order; spoke feelingly of the visit of the Bavarian and Saxon Ministers to Paris; of the impression made upon them by the Emperor and his Minister of Foreign Affairs; of the effect throughout Germany of the Emperor's speech at the Paris Exhibition; in a word, he made use of every topic likely to touch the mind or heart of the Russian, but the reply was still the same, and M. de Werther confessed that the conference was unsuccessful.

THE TIBIA-PASTORAL.—The Italian journals have frequently described in terms of enthusiasm the performances of a Mint Sardinian shepherd, named Piccu, on an instrument they call the Tibia-Pastoral—to wit, a halfpenny whistle of the rudest and most primitive construction, with only three holes, and its length not exceeding that of a finger; yet upon this barbarous instrument he has performed at the San Carlos and La Scala; and the Neapolitan and other papers affirm the blind musician draws sounds as delicious those of the sweetest flute, and that his execution upon it is still more marvellous. This poor Italian minstrel has arrived at Paris, and was to perform on Sunday night at the Italian Opera.

CHRISTMAS-EVE.—THE COTTAGER'S RETURN FROM MARKET.—DRAWN BY BIRKET FOSTER.

CHRISTMAS-EVE IN THE COUNTRY.

When Tom at eve comes home from plough,
And brings the mistletoe's green bough,
With milk-white berries spotted o'er,
And shakes it the sly maids before,
Then hangs the trophy up on high,—
Then Christmas and his train are nigh.

Glad Christmas comes, and every hearth
Makes room to give him welcome now;
E'en Want will dry its tears in mirth,
And crown him with a holly bough.
Each house is swept the day before,
And windows stuck with evergreens;
The snow is besom'd from the door,
And comfort crowns the cottage scenes

THE BOYS IN THE STREET.

The boys of London were a pet study of ours years ago; and a recent consideration of their condition has convinced us that they are changed in no essential particular. They are the same lovers of gratuitous entertainments the same uncompromising critics of passing events—the same reckless enjoyers of the present as they were when we made their acquaintance in the days of our adolescence. In the summer time they are still the constant patrons of Punch and Judy—that is, they occupy the front rows at those popular performances, and, though the brotherhood do not boast a penny among them, elbow the money-giving part of the crowd into the rear as though they, the boys of the streets, were free-renters, and claimed precedence in right of their raggedness. They have heard the jokes of the wooden jester a thousand times, but they laugh louder than all the new comers put together, and so stimulate the hidden swatchelcore (as the worker of the puppets is called in the slang of his profession) to more vigorous exertions. What a philosopher is that same swatchelcove! He provokes laughter, elicits applause, earns renown for his puppets, and is the means of filling the partnership exchequer, yet consents himself to be an abnegation. Rare self denial, or rather modesty! The London boys are connoisseurs in their way, and is only a street band of some pretension that they condescend to honour with their attention. They are great lovers of music, and though somewhat indifferent to half a note sharp, or an entire note flat, they are not easily pleased or roused into an enthusiastic expression of approval, such as "Go it, you cripples!" or "Hangcore, old 'uns!". A solitary flageolet-player, an ordinary organ-grinder, or, indeed solo performers on any instruments whatever, if we except the cornet-à-pistons and key-bugle, are seldom honoured by more than a passing regard. They are very partial to conjurers, and will, to secure the best places, brave the blows of the great ball with which the familiar of the magician unceremoniously makes a magic circle. They have seen the tricks done over and over again; but such is their love of indolence that they will stand baking in the sun by the hour together in the suite of any itinerant Ramo-Samee whom they may chance to encounter. The acrobats (gentlemen in yellow-ore fleshings and spangled *et cetera*) are especial favourites with the boys in the streets; and we have noticed the same party of ragged urchins follow a troupe of athlete from "pitch" to "pitch" (which is the slang for the place of performance), and watch

THE BOYS IN THE SNOW.—DRAWN BY JOHN LEECH.

the proceedings with undiminished interest. In the parks, on the sun-dried sward, boys of the streets endeavour to emulate the evolutions of the acrobats, and sometimes with no mean success; and we verily believe that they would be only too happy to dispense with their rags altogether, in imitation of the costume of their instructors, if the police would allow them. The boys of London are luxurious in their habits, and are partial to *sleeze* under archways and shady trees, and are also prone to much bathing, without being in the least particular as to the pellucidity or purity of the water, and, like ducks, only require that it should be wet. They affect a shower-bath occasionally, and luxury at the full of a watering-cart under the spout of a pump. They luxury at the full of a watering-cart under the spout of a pump. They make it a point of honour to attend all reviews, but are inconsiderate enough to chaff the soldiery when in position, knowing enough of military discipline to be aware that then they may do so with impunity. They are great artists in waterworks, and Sir Joseph Paxton might take a hint from the variety of effects the boys of London can produce from the single jet of a street-plug. The thought of plugs reminds us of houses on fire, and, when those calamities occur, our friends of the street know no bounds in their enjoyment. They are everywhere at once, under the engines, in the gutters, over the hose, up the lamp-posts, and between everybody's legs; and if they were incendiaries, certain to receive, without question, the amount of their policies of insurance, they could not express more delight at the progress of the "devouring element," as the flames are popularly designated.

"Bad boys! bad boys!" Very true, dear Sir; but are they not so wanting better care and better teaching? And are we not all to blame that they have it not?

The boys in the street are great in the winter time. Their freedom of action is not to be controlled by any ukase of Mr. Commissioner Mayne. If there *still* be frosty weather, they *still* cut slides on the pavement, regardless of the prostration of old ladies and gentlemen, or the utterly regardless of the presence of the police. We acknowledge the wrong, but are not surprised at the perpetration of it. We do not wonder that, when the thermometer is below zero, and the garments of our young friends have a hundred inlets for the biting cold, they should endeavour to "keep the pot a boiling" by the exhilarating exercise of the slide; and often, were it not that we are somewhat too portly for such gymnastics, should be sorely tempted to join in the rush, in the hope of gaining such glowing cheeks and exuberant spirits as those street rebels display. A snow-storm is another source of delight to the boys of London; and our distinguished friend Mr. Leech (who has done more than any one else to make known the most striking characteristics of the high and low rising generation) has shown in our Illustration of to-day one way in which they improve the occasion. Nor is a fall of snow merely a source of pleasure to our denizens of the streets; but, armed with the smallest fragment of a shovel and stump of a broom, they besiege house-doors, and become clamorous for employment. Poor fellows! A penny, nay, six pennies, would be well bestowed in encouraging this dawning industry which gives promise to those who would earnestly endeavour to better the condition of these pariahs of our great city, that idleness, one of the parents of vice, is not an inherent quality of their natures. It is at this season of the year that the street-boys, sharing in a small degree in the liberality which Christmas time begets, become capitalists, and at the same time improvident. They live only for the day, having no interest in the future that they know of, and freely spend their unaccustomed gains in kidney-puddings, baked potatoes, hot whelks, and roasted apples, which they devour with a relish that turtle-soup is said to inspire in an alderman. Then there are the Pantomimes. What a fairy world must those grotesque and glittering spectacles appear to the dwellers in dismal cellars and gloomy alleys! We have our own recollections of the early impressions of those enchanted scenes, and do not blush to avow that few after-pleasures ever exceeded the delight experienced at a Pantomime; and, if we who left happy and cleanly homes could be so moved, what must be the sensations of those poor homeless boys? Poor, dirty, tattered fellows, enjoy your short-lived pleasure! Eke it out with nuts! Shout! whistle! blow catcalls! and show your claim to the name of a free-born Briton by pelting your betters in the pit with orange-peel! Who knows but the wonders you have seen may awaken some latent energy, some desire to be other than you have been, and beget a hope that there is to be found somewhere in life a brighter spot than the squalor and the wretchedness which surround you? May it be so!

We have hitherto shown only the enjoyments of the boys of the street; but there is a dark side; how dark—side to the picture. Our sensibilities have been aroused of late by more than one account of numbers of these poor outcasts huddled together in heaps about the workhouse door, deemed even the shelter of such a refuge. Ought such a state of things to continue? Can it be endured that it should do so? We build Ragged Schools, and we do much; but we are deficient in our duty in that state of life into which it has pleased God to call us. To correct and curb the evil which we have been too indolent to eradicate, we spend what is of little consequence compared to the misery we have allowed to grow and accumulate about us, though we reckon our money sacrifices by tens of thousands.

The Ragged Schools have set an example of how the work may be done. Go into them; see your fellow-beings blind with ignorance striving to get light, and do not doubt but there would be willing learners if you would set the lesson. But excellent as Ragged schools are, and as above all praise are the truthful men who have devoted themselves to the instruction of those poor scholars, the good which they can do is limited too often to the confines of their school-room. Outside there is the world to teach other lessons. Hunger, thirst, cold, filthy homes, have all to be encountered; and without the knowledge to work what can be expected but that men will not lie down and die if the means of living can be obtained—though it be by theft? We too often speak of the criminal population as persons who are vicious from the love of evil. Do not believe it. They are so because they have had no chance of being better. Born of thieves, reared by thieves, all that they know of good is to be successful in their raids upon society, and the only evil to be detected.

We would suggest a remedy. It may be impracticable, but at least it has never been tried and found to fail, like all other experiments which have been made in the same direction. Why by Juvenile Emigration? Appoint a public protector to those friendless children who now crowd our streets, and obtain a right, by Act of Parliament, to compel a transference of guardianship from those whose crimes and neglect of parental duties make them unfit trainers of the young. Separate the innocent from the guilty, send away the uncontaminated or reclaimable child from associations which will certainly consign it to a life of misery and disorder, and place it where it may be educated to the wants of its new country, and have the opportunity of gaining an honest livelihood and an honest name.

M. L.

RUSSIAN ESPIONAGE.—Every manifestation, whether for or against the State, is here a crime. No one has the right to express his joy without the permission of the police. All the employés of the Crown, to whatever Ministry they are attached, have received orders not to accept an invitation from any Ambassador, or Secretary, or attaché to an Embassy without the previous permission of his Chief or Minister. It is even not always safe for a Russian to accost, in the public walks, a stranger who may be known to him, to exchange a few words with him, to accept a cigar, &c. If the meeting takes place on the city the police is still more on its guard. No one dares to manifest the smallest sentiment of joy or pleasure, whatever be the happy event that may take place in his family, for fear the police may regard it as the proof of a conspiracy against the State.—*Letter from St. Petersburg, Dec. 6.*

RUSSIAN SYMPATHY WITH THE WESTERN POWERS.—I heard this morning an anecdote which will tell you more of the state of affairs than the Government dare hardly avow to themselves. One of the principal seigneurs of Moscow has a great number of domestics, all from his own villages, whom he transformed from slaves into servants. Among them there are three whose occupation during the winter is to keep the stoves hot; they are only occupied a few hours each day, from six to eleven in the morning, after which they go to sleep, or pass the day drinking tea and amusing themselves. About a fortnight since these three servants, through Russian peasants, believing themselves alone in the dark room where they have their beds, began to talk about the affairs of the Crimea. One of them said to his companions, "Ah, you see, brute, how curious it would be to see the French come as far as Moscow (I may add that the year of the Kremlin (the burning of Moscow); they would give us all our freedom. Look at the French who are here; they are not slaves, they have no want of passports, and they have no seigneur to beat, who has the right to punish them with stripes." "Yes," the other replied, "if they only wanted the slow of a hatchet to open to them the gates of Moscow, mine is sharp, and I should not fail to let it fall three times on the carrier to break it." These and similar remarks were overheard by the intendant, who was in an adjoining room, and who reported them to his master. He, like a good Muscovite boyard, went and made his declaration to the Chief of Police of his quarter. The three stove-warmers were arrested, and without any form of trial received each 150 stripes. The fact soon came to the knowledge of the Government, and the master, who considered that he had sufficiently punished the poor wretches, saw them taken off and sent to Siberia. I am moreover informed that a considerable number of peasants, and even of employés, have been sent to the banks of the Yenisei for having dared to give an opinion on these matters.—*Letter from St. Petersburg, Dec. 8.*

THE THEATRES.

PRINCESS'.—The pantomime at this theatre is founded on the popular subject of "The Maid and the Magpie," with a few variations, and extra seasoning, to suit the particular bill of fare expected at Christmas. We have the benevolent *Fairy Paradise*, who rules in the Highland of Birds, and her mortal enemy, the wicked magician *Hanky Panky*, who exercises sway over the Island of Beasts. The one is the protector, the other the prosecutor, of *Annette*, who is no other than our old friend, the *Maid of Palestine*. She has lost her favourite magpie, and purchases another from *Hanky Panky*, disguised as old *Benjamin*, the Jew pedlar. This malicious substitute is a deserter from the ranks of *Queen Paradisa*, for which he has been drummed out of her service, and condemned to the *Mute*; but the chosen guard who execute the sentence are bad marksmen, and suffer him to escape without injury. He then arrives in the kingdom of *Hanky Panky*, to whom he offers his aid in working vengeance on *Paradisa*'s goddchild *Annette*. The minister chief then goes on rapidly, as in the original story. The *Magpie* steals the ladle, for which theft his innocent mistress is tried, found guilty, and ordered for execution. The missing ladle is discovered at the critical moment; and the *Fairy* steps in, a good deed is always done, exactly when they are wanted, to punish the guilty, and reward the innocent. The usual prohibition of the *Harlequin* is imposed on *Annette*, her lover, and her persecutors; and all parties are finally reconciled in a fairy temple in the realms of *Queen Paradisa*. In the course of the harlequinade the interior of the Princess' Theatre is exhibited, with a juvenile version of the celebrated banquet scene in "KING HENRY VIII.," represented by a whole army of children, carefully trained under the instruction of that experienced tactician Oscar Byrn. The leading pantomimists are—*Harlequin* (Mr. Cormack), *Clown* (Mr. Huline), *Pantaloon* (Mr. Paulo), and *Columbine* (Miss Phœbe Beale).

THE HAYMARKET Pantomime is written by Mr. Buckstone, and entitled "The Butterfly's Ball and the Grasshopper's Feast; or, Harlequin and the Genius of Spring"—founded on Roscoe's popular poem:—

Come, take up your hats and away let us haste
To the Butterfly's Ball and the Grasshopper's Feast!
The trumpeter Gadfly has summoned the crew,
And the revels are now only waiting for you.

The story of the Pantomime follows the original story pretty closely, allowing for the usual dramatic variations:—*Belladonna* having supplied the rejected *Wasp* with the poison, the base plot is overheard by *Brightrays*, who repairs to the butterflies' garden, where she promises protection to *Silverwings*, and saves the butterflies from the efforts of *Master Robert* and his companions to catch them, and gives permission to *Silverwings* to meet her lover the *Grasshopper* at their trysting-place. After a severe storm by the Fairy Cooks, the *Wasp* escapes, but in the encounter he leaves his bottle of poison. The trumpeter *Gadfly* calls all the guests to the feast by a blast of his trumpet, and the Flies, and Insects, and Animals proceed in procession to the grass-green lawn, beneath a broad oak, where the revels take place. *Belladonna* appears, and demands of the *Wasp* the use he has made of the poison, immediately changing the beautiful summer landscape into a winter one, with leafless trees, frozen rivers, and falling snow. The *Genius of Spring*, however, appears, and with her warm rays revive the Flies and Insects; and, to secure them against the spite of their enemies, changes the *Grasshopper* into *Harlequin*, and the *Butterfly* into *Columbine*. The *Witch* sends the *Wasp* and the *Spider* in pursuit of them as *Clown* and *Pantaloon*; when, after many escapes and trials, the *Butterfly* and the *Grasshopper* are united, and live happy ever after. The scenery of the opening, which is peculiarly beautiful, has been painted entirely by Mr. William Callcott; the comic scenes by Messrs. Morris and O'Connor.

AT COVENT GARDEN, Mr. Anderson's long-talked of pantomime will be produced. It is entitled "Ye Harlequin Alliance; or, Harlequin and the Golden Fleece of Cloth of Gold—a legend of the meeting of the Monarchs." The various circumstances which attended the meeting of Henry VIII. and Francis I. on the Field of the Cloth of Cloth are so introduced as to bear upon similar circumstances which have occurred recently. The pantomime, which contains much military display, has been invented by Mr. A. Harris; the scenery painted by Mr. W. Beverley; the spectacular designs by M. Guerin, of Paris; and the music is by Mr. Loder. The following quotation from the chronicles of Hollinshed is adapted as the text of the story:—"It was a marvellous sweete and goodlye sighte to see those two Princes, in the flowere of their age, in the height of their strengthe, and in the dignitie of their manlye beautye, commanding two greate Nations, that had been long rivals and enemies, instead of leading hostile armies to desolate and destroye, meet in that peaceful valleye, and embrace like brothers, in the sighte of the choice nobilitie of either land." The first scene opens in the subterranean abode of the genius *Spiritus In* the midst of an opera, the exaggerated copy of the *Times* is produced, announcing by advertisement the intention of the Royal personages to take "potluck" together; while *Good Humour*, in answer to certain objections, prophesies the future union of France and England; whereupon a view is disclosed of Louis Napoleon's visit to London, and another of the Queen's visit to France. This is altogether a happy idea. Other scenes of similar national interest succeed, most of them on a magnificent scale of illustration, particularly the panorama of the Encampment on the Channel. A storm at sea is one of the most striking incidents. The *Clown* is the celebrated Flexmore. The tricks in the piece are the production of Messrs. A. Harris, Brough, and Dorrington.

ADELPHI.—The translation of "Tartuffe" was introduced to this stage on Monday with perfect success. Mr. Webster's impersonation of the hypocrite retains all its original "odour"—that of sanctity and of histrionic simulation included. The theatre has become more and more elevated in its character since Mr. Webster has been enabled to devote his exclusive attention to its management.

SADLER'S WELLS.—The season closed with the tragedy of "Othello" on Saturday last. Mr. Phelps performed *Iago*, and Mr. Marston *Othello*. The latter availed himself of the opportunity, and, in the greater scenes of the play distinguished himself by great powers and remarkable effectiveness. His *Othello* is decidedly excellent.

THE pantomime at ASTLEY'S is entitled "St. George and the Dragon." The cave of SYCORAX forms the opening scene. The enchantress *Keylaha* incrusts *St. George* with her magic wand, when he sets free his six brothers in arms, who mount their ponies, while *St. George* starts for Egypt in the *Pink* penny boat. The oracle at Memphis is consulted, and he finds the *Dragon* enjoying a pot of Barclay's best porter. The combat, after some delay, commences, and, the *Dragon* being slain, the *Fairy Queen* appears in the centre of the grand transformation scene.

THE CITY OF LONDON.—Mr. Nelson Lee, as usual, is the author of the pantomime at this theatre, which is entitled "Fox and the Grapes; or, Harlequin and the Fairy." Æsop's fable of the "Fox and the Grapes" provides him with the subject. The *Old Fox* is presented as a magician trying for the hand of *Grapina, Dame Sourcrout's* daughter, but

She is determined to prevent
With all her arts his base intent.

A vineyard in sunny Italy furnishes the scene. *Old Fox* calls to his aid *Jack Frost*, while old *Father Æsop* is applied to by the *Fairy Queen*. *Jack Frost* changes the blooming cot of *Dame Sourcrout* to frost and snow, fixing a chill on the lovers, while he sinks to Tiddypaltic-alley in the middle of the Thames. The fairy *Industry* arrives in time to save the lovers, by transforming them to pantomimic characters.

CRIMEAN MUD.—The needy knifegrinder would not be in possession of more abundant materials for anecdote had he lived out here for the last week than he was when he met Mr. Canning several years ago in the neighbourhood of Eaton. We are all ankle deep in mud. No, that would be nothing. It would be no great matter of complaint or grievance if we had to deal with the ordinary material, so familiar to us. Londoners are a few wet days, are the sanguine remove the formidable soft parapets which line the kerbstones. That can be scraped off, cleaned, rubbed away, or washed out. This nothing but long and persevering efforts, continually renewed, and combining all the former operations, can remove. It sticks in pasty clods to the shoes, and will insist on being brought into clean huts and tents to visit your friends. It has a great affection for straws, with which it forms, in working itself up into a kind of gigantic brick, somewhat underdone, in which condition it threatens to build your legs into the ground if you stand long enough in one place to give it time. It is delightfully effete horseshoe also, and sucks them off with a loud smack of relish in those little ravines between rocky hill sides in which it exercises the greatest influences. Literally and truly it is like glue half boiled and spread over the face of the earth for the depth of several feet. It is no joke for a soldier to see his sleeping-place, in hut or tent, covered with this nasty slime; but they cannot be kept clean. One step outside and you are done for. The mud is lying in wait for you, and you just carry back as much on your feet as if you walked a mile. Carts stick immovably in the ground, or the wheels and axles fly into pieces from the strain of the horses and mules, which have led a wretched existence indeed ever since this weather began. As I write the air resounds with the noise of the blows inflicted on the head, sides, and legs of the miserable quadrupeds drawing fuel and stores from the Commissariat Depôt of the Division.—*Letter from the Camp, Nov. 30.*

NOTES OF THE WEEK.

IT is announced that such a treaty has been entered into between the Western Powers and the kingdoms of Sweden and Norway as will ensure the deadly hatred of Russia for the latter. The mere subject-matter of the treaty may be of less importance than those who have effected it naturally desire it should be thought, or there may be more in the document, than is at present given to the world. But it is most satisfactory to know that Sweden and Norway have undertaken to make no cession of any part of their territories to Russia, and that the Allies have promised to guarantee them in what they already possess. The desire of Russia to obtain a fishing-station in the Bay of Varanger—a locality which must be astonished to find itself suddenly made a point in the grand game of European politics—is spoken of as evidence that she intended to avail herself of the facilities afforded by nature for the construction of a new Sebastopol in the Northern Sea. It is well to have rendered this impossible; better that in the next campaign we can hardly fail to have Sweden co-operating with us in the Baltic. The mission of General Canrobert, of course, connects itself with this arrangement; and, as we ventured to predict would be the case, his success has been all that could be desired.

We still await tidings of the surrender of Kars, the single success which Russia has to set against a long list of defeats and disgraces, beginning at Sinope, and ending, up to the present date, at the Inguor, though Omer Pacha may have added another item to the account. The noble defence of Kars, and the great importance of the service it rendered, in stopping for months the progress of the first General of Russia, can never be forgotten. Starved, not conquered, the garrison surrendered; and though the Government that defended the atrocity of Hango may have no great respect for the chivalry of Williams and his friends, the Russian Generals and officers have usually shewn themselves better than their superiors, and have behaved well to their prisoners. We can hardly doubt that, though General Mourravieff felt himself bound to impose the severest terms, when he had his enemies in his power, he will make their captivity an honourable one. Why should not the brave old Governor of Kinburn be exchanged for Colonel Williams. The Allies will waive the difference of rank, we doubt not.

The death of Colonel Sibthorp, the "eccentric" M.P. for Lincoln, deserves a record, especially at this moment. He was not a wise man, but he did one wise action, which has saved the country, up to the present time, a sum so enormous that the Colonel's memory should not go entirely unhonoured. When the Prince Consort's allowance was under discussion, Colonel Sibthorp shamed the House of Commons into diminishing the extravagant sum proposed by Government, namely, £50,000 a year, to £30,000, and this in the face of some of the professed economists of the day. For the rest, the caricaturists will chiefly miss the member for Lincoln, whose absurdities had ceased to amuse the reporters, and who was felt to do no great credit to an assembly like the House of Commons. The vacated seat is to be contested by his son, and by another candidate known to the electors.

Other poison cases, of more or less atrocious character, have followed the Wooler case; but the mysterious nature of the latter continues to invest it with interest. Censure has fallen upon the presiding Judge for having intimated that his "fancy" would have pointed out another individual than Mr. Wooler as the destroyer of the unfortunate lady. It now appears that the judge was misreported, and that he simply stated that his fancy would have imputed guilt anywhere but where the prosecution laid it. Did the allegation, however, have been well founded, we confess that it seems to us part of the conventional cant that speaks of a Judge as a mere machine, whose office is but to weigh and to record, to object that a clear-sighted man, who sees the whole case, should assist in promoting the ends of justice. The fact is that our law, like our streets, is much too narrow for the traffic that has to go through it. While our thieves and ruffians are advancing with the spirit of the age, and availing themselves of all modern improvements—mechanical, chemical, and artistic—to effect their various ends, Law adheres to her hampering costume and harmless weapons, and will only pursue the criminal in the most stately way, and chastise him, if caught, with the most extreme circumspection. If a judge ventures to help justice to one spark of light more than she can get out of the old flint and steel, the counsel, whose wits are struck together until some sort of illumination is obtained, he is attacked as an innovator. Surely the rascality of the world has chances enough in the law as it stands, and the excessive pains which magistrates take to give a culprit every opportunity of escape, or of a light sentence. Had Baron Martin used the words imputed to him he would have done perfectly right, while those who say that he ought now to indicate the person he meant, forget that his doing so would deprive that person of a fair trial. The judge having pronounced the prisoner guilty, what jaryman could approach the hearing in a fit state of mind. No, let us see whether the law, having a hint from the judge, can scent out the guilty person, after her own ardent manner.

The mantle of Sibthorp seems to have fallen upon Bright, who has been again sunning each part of the world as has not leisure to be indignant, with an harangue in honour of "cheap" newspapers, Russia, and the Americans. This kind of thing may be carried on too long for the exhibitor's comfort or credit; and Mr. Bright may take it from us, that, but for a dull time of the year, when the one or two grand topics which interest nations present few new features, and there happens to be a dearth of smaller subjects of any moment, he would find his freaks in imminent danger of being unnoticed—the worst thing that can happen to a charlatan. His said nothing that was worth reply, and his advocacy of the piratical "cheap" press, which lives by stealing the property of the respectable journals it abuses, is simply "of a piece" (Manchester will understand the phrase) with his exceedingly loose scheme of political morals. *Rem, quocunque modo, rem.*

The melancholy death of a young actress, Mdlle. Julie, whose drapery caught fire during her performance, and whose nervous system could not recover the shock, has revived the painful recollections associated with the name of poor Clara Webster. Benevolence, as usual, has been manifested, and during her sufferings Mdlle Julie experienced the kindness which has, since her death, been transferred to her family. The brutal conduct of the landlord of the house in which she lay, a fellow named Morris, who, according to the local report, sought to detain the poor girl's body, in the hope of thereby securing the payment of a demand said to be extortionate, has excited much loathing, and all readers must have been gratified with the severe lesson administered to the callous fellow by the authorities, who instantly disabused him of the idea that his disgusting method of obtaining his claim was a legal one. Various suggestions have been offered for the prevention of such accidents, and the theatrical profession has been apprised that by soaking light dresses in a chemical preparation, they will be rendered safe. But there is little probability of the preventive being generally used—the poor girls who are chiefly exposed to such danger—the *corps de ballet*, having very small means, and moreover, no great amount of knowledge as to scientific devices. They poor things, will go on dancing as heretofore, and only helping one another at time of accident or distress, with a kindness which it would be well if more fortunate people always imitated. But why a manager should not direct that an ample coarse cloak, large enough to envelop the whole person of an actress, should not hang near the prompter, to be ready in case a dress caught fire, we know not; and as the Christmas spectacles, with their troops of fairies, clad in acres of inflammable stuff, will speedily be irradiated by all the fires of the theatre, we commend the suggestion to the well-known humanity of the various directors. Such a resource would have saved both Clara Webster and Mademoiselle Julie.

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"A little chink may let in much light."—OLD PROVERB.

RARE OR UNPUBLISHED LETTERS.

AN INEDITED LETTER OF HORACE WALPOLE.

The following letter, which I send as a contribution to "Memorabilia," is addressed to Lord Glenbervie (whom Sylvester Douglas), and heralded a representation copy, beautifully bound in red morocco, of the "Mysterious Mother," both of which passed into my hands from a private source, and are in my possession. Every scrap of so celebrated an author, and so remarkable a man, is worthy of preservation; but a scrap like the present one, treating of a composition which has provoked so much contradictory criticism, is particularly to be valued. Horace Walpole has the merit of being the inventor of that species of English romance which is founded on supernatural agency, and he has the still rarer merit of having rendered not only endurable, but interesting, a revolting and improbable plot by his consummate art and graceful poetry.

GEORGE DANIEL.

Canonbury.

"Berkeley-square, Feb. 15, 1792.

"Sr,—I hope my having been out of town for three or four days, will excuse my not obeying your commands sooner—& now when I do acknowledge the receipt of them, I am at a loss to express the confusion I feel at y^r much too obliging compliments, which I am very happy to receive as marks of your kindness and partiality, but have no right to accept as due to me. A performance, in which I am conscious of so many faults, & the Subject of which is so disgusting, it is very indulgent in any reader to examine; nor can the favour of such able Judges as you Sr, and the Duc de Nivernois, reconcile me to my own Imprudence in letting it go out of my own hands—but having fallen into that slip of Vanity, It is too late now to plead modesty, & there is no less [more ?] affectation, I hope, in obeying you Both, than in troubling you with more words about a Trifle. I have therefore the honour, Sr, of offering you a correct copy, which I had printed some years ago to prevent a spurious Edition, & as I succeeded, I did not publish mine. The Edition printed in Ireland lately, is less exact; & I stopped it for sometime, it was to no purpose. Lord Choiseul-Gouffier is returning to Paris in a few days, & will carry a copy to the Duc de Nivernois. I have the honour to be with great respect, Sr, Y^r most obedient humble Serv^t, ORFORD.

DR. JOHNSON TO MRS. GARRICK.

The accompanying, found among Mrs. Garrick's papers, are now printed for the first time -

Madam,—I did not wonder that your heart failed you, when the journey to Lichfield came nearer, and, indeed, I love you the more for your tenderness and susceptibility. I am now at Lichfield a second time, and am returned to it with some improvement of my health, in the two next months, for which I shall sway, and have the delight to find both Mr. Aston and Mrs. Porter much mended on the same time. Mr. Garrick* was with me lately. Mr. Seward is very lame, and his daughter flourishes in perfect reputation. What Lichfield affords more than this I hope to tell when I wait on you in London. Please to make my compliments to dear Miss More. I am, Madam, your most humble servant,

Lichfield, Oct. 2, 1781. SAM. JOHNSON.

* The nephew of David Garrick.

PULTENEY EARL OF BATH TO MRS. GARRICK.

Madam,—Dr. Monsey tells me that you would be glad of having the secret to make my sort of small beer. I will first send you a little vessel of it, and then the secret. I hope, Madam, you will not be offended at the liberty I take, and I dare say Mr Garrick will not be alarmed at the discovery of a new lover, who has no other way of demonstrating the strength of his passion but by the poor offering of a kilderkin of very weak small beer. I am, however, dear Madam, your very great admirer, BATH.

QUERIES.

CITY POETS.—I am desirous of knowing when the office of "City Laureate" was first established, and to obtain a list of the most eminent men who have filled it. Can you or any of your readers assist me?—CIVIS, Great Broad-street.

In the reigns following the Protectorate of Cromwell there existed in the British Army, or in that portion of it stationed in Ireland, the office of "Muster-Master-General of the Forces." Can any of your readers inform me what were the duties attached to this post, and what the rank of the individual who filled it; and whether there is any office analogous to it at the present day?—M.

CAN any one inform me as to the sort of roads that were in England in Cromwell's time?—D. DUCKWORTH.

In the song of "The Man in the Moon drinks Claret" is the following:—"We scorn a mustard token." Will any one oblige me with a definition of it?—W. COLLIESON

LANDED GENTRY OF SOMERSET.—Can the Editor or any of his numerous readers inform me if any, and what, record remains of the landed gentry of Somerset in the seventeenth century?—F. R., Totnes.

NOTES.

TAYLOR, THE WATER POET, in his "Three Weeks, Three Days, and Three Hours' Observations from London to Hamburg, in Germanie," tells us, among other curious matters, that the thieves in Hamburg not hanged for theft "are chained two or three together, and they must in that sort saw or seven years draw a dung-cart, and cleanse the streets of the towne, and every one of those thieves, for as many yeares as hee is condemned to that slavery, so many bels he hath hanged at an iron above one of his shoulders, and every yeare a bel is taken off, till all are gone, and then he is a Freeman againe." Furthermore, he says:—"Dinner being done we went over a br dge in the midst whereof is a Tyun (gin, or cage), made in the likenesse of a great Lanthorne, it is hanged on a turning Gybbet like a Crane: So that it may bee turned on the bridge and over the River, as they shall please that have occasion to use it. It is big enough to hold two men, and it is for the purpose, if any one or more do rob Gardens or Orchards, or Corne fields (if they be taken), he or they are put into this same whirligig, or Kickumbob, and, the gybbet being turned, the offender hangs in this Cage from the River some 12 or 14 foot from the water, then there is a small fine made fast to the party some 2 or 6 fadome, and, with a tricke which they have, the bottome of the Cage drops out and the theefe falls sodenly into the water."

ADDISON AND GAY.—One of the charges which rests on the memory of Addison is having abstracted some favour intended for Gay. "A fortnight before Addison's death Lord Warwick came to Gay, and, with a grave manner to go and see Mr Addison, which he had not done for a great while. Gay went, and found Addison in a very weak way. He received him in the kindest manner, and told him that he had desired this visit to beg his pardon: that he had injured him greatly; but that, as he lived, he should find that he would make it up to him. Gay, on his going to Hanover, had great reason to hope for some good preferment; but all his views came to nothing. It is not impossible but that Mr. Addison might have somewhat from his thinking Gay too well with some of the great men of the former Ministry. He did not at all explain himself in what he had injured him, and Gay could not guess at anything else in which he could have injured him so considerably." ("Spence's Anecdotes." Pope *to Jarvis*). This anecdote is highly probable, nor is it discreditable to Addison, for Gay was a political opponent, and had dedicated his "Shepherd's Week" to Bolingbroke. Party spirit ran high, and in the midst of it the Queen died, the Tories were dismissed, and the Whigs were triumphant. Addison did only what every party politician has done; yet one would be glad if this story of his treatment of Gay could be disproved. It rests solely on the authority of Pope, whose character for veracity has been sorely shattered. There is one test which may be applied to it, and which we recommend to the inveterate-haunting readers of "Memorabilia." Addison died on the 17th of June, 1719. The interview with Gay is said to have taken place a fortnight before this time. Was Gay in England at the beginning of June, 1719? It appears from the "Suffolk Letters," published by Mr. Croker, that Gay was at Dijon on the 8th September, that he had been confined at Spa for a month, in consequence of a fever, and that he was travelling very leisurely, "rambling from place to place." There may be some incidental notice in the contemporary correspondence of that period which would settle the point as to the time of Gay's departure on his continental tour, and most readers would rejoice to find Pope's anecdote, like his published letters to Addison, merely a fabrication.

LORD BYRON.—In 1814 Byron revisited Cambridge, on his way north, and entered the Senate House in company with Dr. E. D. Clarke. He had only proceeded a few paces when he was recognised, and a chorus of voices repeated aloud,—

Know ye the land where the cypress and myrtle
Are emblems of deeds that are done in their clime?

"I know not what possessed us," said my informant, who was then a student of Trinity, "but it was a sort of freemasonry feeling—we could not restrain ourselves. The 'Bride of Abydos' was then in every one's hand." The anecdote is worthy of being added to the Byroniana of Moore.—L.

ANSWERS TO QUERIES.

TOADS IN THEIR TOMBS.—With reference to your request for information respecting any well-authenticated case of a toad having been found in "wood or stone," I beg to send you an account of one found about twelve weeks ago in the neighbourhood of Bewsley, not exactly in solid wood or stone, but under circumstances precluding the possibility of the accession of air or food. The toad was found at about five feet from the surface, imbedded in clay; the upper surface of the earth over the spot consists of ordinary mould, then comes a stratum of gravel, next one of fire clay, fourthly one of smuts (the commencement of coal), and, lastly, the clay in which the toad was found. The proprietor of the pottery-works on whose premises the discovery was made, and who was himself present at the time, says, that the cracks in the ground occasioned by dry weather have never, to his certain knowledge, penetrated through the fire clay, and of course, therefore, not into the smuts, through both which strata air must have passed before reaching the toad. His mouth was quite closed, and since his discovery he has necessarily taken no food, but appears notwithstanding in excellent health, and is very fat.—C. B.

In the last "Memorabilia" is an inquiry for evidence respecting live toads found in ancient beds. We have one here which was found alive in the new red sandstone. Dr. Russell of this town has all the evidence on the matter.—C. M. INGLEBY, Birmingham.

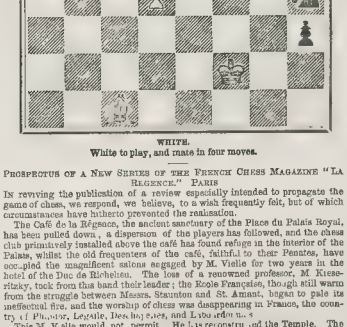
TESTON OR TESTON.—The coin of silver termed a "teston" originated in Italy, afterwards was introduced in England *temp.* Henry VII. in his nineteenth year, A.D. 1503, and thence into France *temp.* Louis XII., A.D. 1513—so named from having the King's head, *teste* or *tête*, impressed thereon. Scotland also had a coin of the same denomination, *temp.* Mary, 1553 to 1560. In England, *temp.* Henry VII., the value of the teston was about one twenty-sixth of the Tower mark fine, and that of Louis XII. about one twenty-sixth of that of Paris; but *temp.* Henry VIII. it became so reduced as to be worth (1545) not more than one-fourth of its original value of 12d. The teston had great cause to blush, in England, in 1551, from the excessive debasement it underwent; and, again, from Elizabeth, 1560. Hence, perhaps, the origin of "of read testons" mentioned in Heywood's "Epigrams," from the redness of their complexion, being composed the greater part of copper.—WEBSTER.

The teston is the original name of our shilling. Until the reign of Henry VII. there was no coin called a shilling. That term signified the twentieth of a pound weight of coined silver, no matter of what coins composed. Henry VII. issued a silver coin of higher value than any that previously existed—viz., equal to twelve silver pennies. It was then called a groat (or great coin) of twelve-pence. It subsequently was called the tester or teston, and finally the shilling. The name tester or teston was never the legal name of a coin, but was merely a term of popular use. Its derivation is very obvious. Its source is the French *tête*, anciently written *teste*. Tester or testoon means merely the coin with a head on it.—J. O. W.

CHESS.

*** Our notices to Chess Correspondents are again unavoidably postponed.

PROBLEM No. 618.
By Mr. HENRY TUNTON.
BLACK.



WHITE.

White to play, and mate in four moves.

PROSPECTUS OF A NEW SERIES OF THE FRENCH CHESS MAGAZINE "LA RÉGENCE." PARIS

IN reviving the publication of a review especially intended to propagate the game of chess, we respond, we believe, to a wish frequently felt, but of which circumstances have hitherto prevented the realisation.

The Café de la Régence, the ancient sanctuary of the Place du Palais Royal, has been pulled down, a dispersion of the players has followed, and the chess club primitively installed above the café has found refuge in the interior of the Palais, whilst the old frequenters of the café, faithful to their Pentes, have soon plied the magnificent salons engaged by M. Vielle for two years in the hotel of the Duc de Richelieu. The loss of a renowned professor, M. Kieseritzky, took from the band their leader; the Ecole Française, though still warm from the struggle between Messrs. Staunton and St. Amant, began to pale its ineffectual fire, and the worship of chess was disappearing in France, the country of Philidor, Legalle, Deschapelles, and Labourdonnais.

This M. Vielle would not permit. He has reconstructed the Temple. The Café de la Régence, admirably situated in the front of the Théâtre Français, now opens its doors to a crowd of sojourns. But while it is to him we are indebted for a permanent establishment, better placed, more spacious, and in every respect better adapted for the purposes to which it is destined, we must not be unmindful of our obligations to M. Gillet, his successor. M. Gillet, understanding how necessary it is to preserve in an establishment distinguished at all times by *bon ton* and the quality of its guests, its unrivalled fame, has made the most praiseworthy sacrifices for the due embellishment of the café. The decorations are borrowed from the game of Chess. The names of our great players shine in the centre of splendid escutcheons, and in one of the salles is to be found the table on which Napoleon the First Consul played. Already the new Café de la Régence finds all the members of the Club returning. Strong foreign players have frequented it during the days of the Exposition, the taste for the game has again declared itself, and it is a spectacle truly consolatory to all who have deplored the vicissitudes of this incomparable game to see that it has resumed its place of honour. The moment then has arrived opportunely for the reestablishment of our Chess journal.

The editors of *La Régence* will endeavour to continue the work of their predecessors worthily. They are promised, too, the assistance of the first analysts, the most ingenious composers of problems, and distinguished men of letters. Every game published will be the subject of conscientious notes; from whatever quarter communications may come they will receive the most careful attention. The editors, indeed, would scarcely beg of amateurs to lay aside all false delicacy, and not to think that before they can suggest a theory or correct an error they must stand in the category of very strong players.

It is hoped that this review may interest not alone the masters of Chess, but that it may serve for the elementary instruction of the young players also.

Instead of having to follow an interminable round of games and problems, the subscribers will successively accompany the editors in excursions beyond the fields of Chess. Their amusements will be diversified by anecdotes, stories, and sometimes by pleasing engravings. The journal will, in fact, be a chronicle of all that relates to Sports, Beaux-Arts, and the Theatre. Other games of combination—such as Whist, and Draughts, and Backgammon—will be called upon to escort the King of Games.

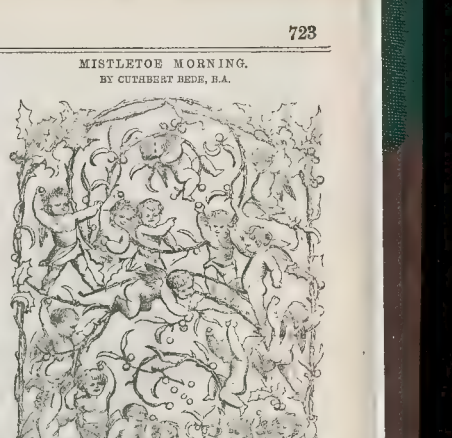
M. Alliez has promised bibliographical dissertations; a learned Englishman, Dr. Forbes, has recently published some "Observations on the Origin of Chess." These will be translated. Herr Löwenthal will serve as a correspondent in England, and engages to supply a monthly bulletin of club meetings and matches between the Channel. Herr Falkbeer will correspond from Germany. M. Delannoy will paint his elegant pen; and, lastly, Messrs Staunton, Reydebrand der Lasa, Andersen, and Jaenisch will enrich this second series of *La Régence*, which is placed, with respect, under their patronage.

Subscriptions received by M. C. Lander, 41, Rue de la Fontaine Molière; at the Café de la Régence; and at all the principal libraries of France. Price twenty francs per annum.

The First Number of *La Régence* will appear on the 15th of January, 1856.

MISTLETOE MORNING.

BY CUTHBERT BEDE, B.A.



'Twas mistletoe morning,
And chanticleer's warning
Had summoned fine folks from their beds and their blankets;
When I saw in a vision
Of Dreamland elysian,
A bevy of Cupids swarm forth for their prankets.
There was fun in their faces,
As all took their places,
And link'd themselves laughingly—mad little frolickers;
And never such laughter
Shook roof, beam, and rafter,
As shook the fat sides of these roystering rollickers.

With unfettered actions
They formed in two factions,
And, nude as old statues, selected their places;
Little rosy carousers,
Without any trousers,
And quite independent of straps and of braces.
Such tints were their limbs on,
Such hues of rich crimson,
Such roses, and lilies, wax apples, and cherries,
That they gleamed hot and sunny,
As, with frolickings funny,
They snowballed each other with mistletoe berries!

THE SMITHFIELD CLUB CATTLE SHOW.

We perform our promise of last week by giving four portraits of Prize Cattle. We have selected representatives of the breeds which principally supply our meat market. The Devon and the Scotch, which have quality without great size, command the greatest prizes; and the Short-horn and the Hereford, which supply meat for the million.

Our Devon illustration is an ox over three years old, bred on the Somerset hills, and fed near Arundel by Lady Elizabeth Reynell, an aunt of the Marquis of Waterford—a lady who at seventy-three years of age still appears to interest herself in the foundation of British agriculture, good stock. The animal was a superior beast, larger than Norfolk-bred ones.

Beside the Devon—whose skin bears witness to the effects of a mild moist climate, and whose coat does credit to careful grooming—stands in our picture a once wild, yellow, rough-haired, Angus Highlander, reared on wild hills, amid storms, on moor-grass and heather; but fattened into tameness on the succulent swedes and comfortable cake of Mr. Grove's foldyard in Wiltshire. Not less than 600 Scotch beasts were sent from Aberdeen to last Monday's Islington market. But wefind them plentifully in the boxes and yards of all our northern English counties

We have put the heads of Mr. Ambler's Short horn Cow and Mr. Bibletts Hereford Ox together, as representatives of the only two breeds that can be considered rivals. There is no cow that equals the short-horn cow for weight; but it is very difficult to beat a Hereford ox. The late Earl Spencer hesitated some time which breed he would take up, and to the last on his out-farms he kept a good number of Herefords fattening. But they are less numerous than the short-horn, because less useful as a cross for the dairy.

It is worth noting that although the Smithfield Club Show was under average in numbers, the Islington Christmas market was far above the average, both in number and quality: the cattle being over 6700, and the sheep over 22,000 the cattle being first-rate

As with respect to the live-stock show there is so little to be usefully said in the way of criticism, it may be more useful and amusing to look back to the past, and, by comparison, trace the way which brought us to our present position. We have not been able to find any records previous to 1806, when Mr. Farey succeeded Mr. Arthur Young as secretary to the Club. There is no mention of it in the first six volumes of Young's "Annals of Agriculture." Perhaps the best farmer and most able and useful of our English agricultural writers was too much occupied with his many and useful labours to keep up close minutes of the early meeting of the Little Cattle Club, supported by enthusiasts in agricultural and stock improvement.—Francis Duke of Bedford, Lord Somerville, the Duke of Manchester, Thomas Rd Astley, Robert Dyng, Elman of Glynde, Paul Giblett, butcher, and other names classical to stock owners, but exciting little interest in the general public. But from the year 1806 the records of the Club have been beautifully and exactly kept. In that year the total receipts were £84. A first prize was given to John Webster, for the mottled tallest ox: the Club has long since given up prizes for tall oxen; but the record shows how much there was to be learned fifty years ago as to the true points of an ox. In that same year the judges were three graziers and two butchers. The butchers have now lost the honour. In 1807 we find a Hereford carrying off the first prize for the best beast in the yard—no entry in class 2 for longhorned, and none in class 3 for shorthorns. And the following year, in the same class, there was only one entry, and that disqualified, for shorthorns. Now the shorthorns are far the most numerous, while longhorns are scarcely to be found, except at the Birmingham shows. In 1801 the prize for mixed breed was carried by a cross between a French cow—it does not say what breed—and a Devon bull. It is in the same year we meet with the once celebrated Sir Joseph Banks, the companion of Captain Cook, not as a naturalist, but as a Lincolnshire landlord and grazier, "moving a memorial for the enlargement of Smithfield Market." The club must have been aristocratic in those days, for the following year presents minutes of "an Adjourned Meeting held at Woburn Abbey."

In 1811 there is a letter from Francis Duke of Bedford, the great originator of the English system of Landlord and Tenant—we mean the system of selecting tenants for their intelligence and sufficient capital at moderate rents under a secure tenure, in preference to the old Irish system of rack-rented paupers, or the old English system of tenants at will at low rents from year to year. The Duke, who was also the active patron of

SMITHFIELD CLUB PRIZE CATTLE SHOW.

SCOTCH.—CLASS 13. THE PRIZE OF £10 TO MR. JOHN GROVE.

DEVONS.—CLASS 2. 1ST PRIZE OF £25, AND SILVER MEDAL, TO LADY ELIZABETH REYNELL.

the first English improved implements, and the friend and adviser of the great Coke, who also gave his country a new kingdom, writes:—

Dec. 11, 1811.

I have sent up a pair of Devon oxen and a small Scot (all grass fed), but, as it is not my intention hereafter to be a competitor for the premiums given by the Club, I request that the judges may be informed of this, in order that they may (if they should think any of my stock worthy the notice of the public) give their opinion of my beasts without reference to the premiums.

How pleased this wise friend and patron of Arthur Young would have been if he could have foreseen that within the space of another generation the dependence of the farmer on the uncertain grass and hay crop would almost cease, by the general diffusion of drill husbandry applied to roots. When Mr. Bialkie (who is still living, and at eighty-five years old, in the full enjoyment of his faculties) joined the late Lord Leicester in 1816, and commenced his improvements on the Holkham estates, there was not an acre of drilled turnips in all Norfolk. In 1850 he wrote to Mr. Hudson, of Castle Acre:—

In April, the following year, I took with me a bag of Swedish turnip-seed, and in the autumn, at Mr. Coke's sheepshearing gathering, I well remember the astonishment of the company assembled at seeing ninety acres of turnips drilled—the Swedes upon the ridge, the other varieties on the flat.

The system carried from Scotland to Norfolk by Bialkie spread over all our high lands in Beds, Lincoln, and York. But two ails were wanting—a root that would fill up the time between when the turnip failed and grass came in—that was found in mangold-wurtzel. Then, again, the root crop of England was often entirely devoured by the fly. The discovery of the value of phosphate of lime, chiefly made from bones or fossils, dissolved by sulphuric acid, suggested by Liebig in 1840, and carried out commercially by Lawes and others, revolutionised root cultivation and the system of stock-feeding, quadrupling at least the quantity of stock an arable farm could maintain.

The result is that we hear little of grass fed beasts, and are no longer compelled to keep large tracts in grass for the winter-keep of the foldyard. So universal is this change (without which meat must have been 2s. 6d. a pound) that, at the before-mentioned meeting of the Central Farmers' Club, Mr. Owen Wallis, an eminent Northamptonshire grazier, read answers to a circular from graziers and farmers in every winter-feeding county in England, in which, although some used food cooked, others uncooked, some cake, some linseed plain boiled, some barley and pea meal, some fed in yards, some in stalls or boxes, or both united, all used roots as the mainstay, and all agreed that hay could be advantageously and economically dispensed with in favour of straw-chaff mixed with the before-mentioned food. Now, this general and systematic change may be distinctly traced to the example set on the root-growing estates of the noblemen and gentlemen who founded and supported the comparison and competition of the Smithfield Fat Cattle Club.

Unless meat is to rise to a shilling a pound, the same improvement must be introduced into the breeding of foreign cattle, for our farmers cannot get enough lean stock. We regret to hear that the Council of the Royal Agricultural Society, no longer the practical, earnest, improving body that it was when the late Earl Spencer founded it, has rejected the proposition introduced and supported by Mr. Jonas Webb for an International Agricultural Exhibition by a large majority. How moved to this illiberal return for the splendid welcome they received from the French nation we cannot understand.

It is to be hoped the farmers will reverse the decision of these amateur routinists. The Council of the Royal Agricultural Society, which has done so much for British agriculture, wants a thorough reform—new leaven of more real farmers, and fewer amateurs.

SHORT-HORNS.—CLASS 12. 1ST PRIZE OF £20, WITH GOLD AND SILVER MEDALS, TO MR. HENRY AMBLER.

HEREFORDS.—CLASS 6. 1ST PRIZE OF £25, AND SILVER MEDAL, TO MR. WILLIAM HEATH.

TESTIMONIAL PRESENTED TO MR. BRANDRETH GIBBS, BY THE SMITHFIELD CATTLE-CLUB.

THE SMITHFIELD CLUB.—
TESTIMONIAL TO B. T. BRANDRETH GIBBS, ESQ.

The annual dinner of the Smithfield Club took place on Wednesday, the 12th inst., at the Freemasons' Tavern—his Grace the Duke of Richmond, K.G., in the chair. Among the company present were—Mr. Miles, M.P., Lord Berners, Lord Walsingham, Mr. C. Burnett, Mr. C. Turner, Mr. A. Hammond, Mr. H. Wilson, Mr. Raymond Barker, Mr. Brandreth Gibbs, Mr. F. Hobbs, Mr. R. Willward, Mr. R. Baker (of Colleiner), Mr. John Hudson, Mr. Farmer, Mr. Beasley, Mr. Reanney, Mr. Moore, Professor Simonds, Mr. Giblett, Mr. Odams, Mr. S. Jonas, Mr H. Jonas, Mr. Wilson (agent for Prince Albert), Mr. Hamilton Lyndsey, with many other noblemen and gentlemen interested in the advancement of agriculture. After the usual loyal and patriotic toasts had been disposed of,

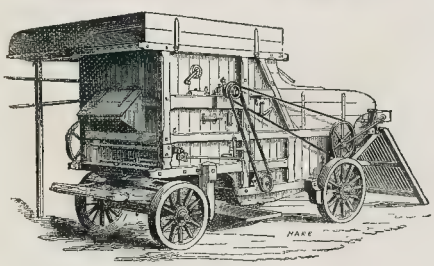
The Duke of Richmond rose for the purpose of presenting to Mr. Gibbs, the honorary secretary of the club, a testimonial from the Smithfield Club. In performing this duty his Grace remarked:—"Perhaps I might have thought that it would have been better for some other individual than myself to have undertaken this task, because I have had the satisfaction and the gratification of witnessing the exertions of Mr. Gibbs as honorary secretary of the Smithfield Cattle Club for above fifteen years Your attendance, gentlemen, on this occasion, I think, denotes your anxiety to pay honour where honour is due (Cheers). You have congregated here this evening in numbers larger than I have had the pleasure of witnessing on former occasions. I think that many of you have put yourselves to some inconvenience to come here to-day for the purpose of proving to Mr. Gibbs that you are deeply grateful for the services which he has rendered (Cheers). A club may be established upon the best and soundest principles, but it is very much like our own homesteads—it must be looked after or it will be sure to fail. I do not think that there is a man who gained a prize to-day in the show who does not well know that if, when he was absent, he could not depute to a trustworthy man to take charge of those animals, that he would have no chance of coming to the Smithfield Club to gain a prize. Mr. Gibbs has also devoted himself very much to the finances of this society; and I believe you will find, when the report is read and made public, that those finances are in a very good and sound position. He has been indefatigable in his exertions to induce gentlemen to belong to the club. He has done his utmost to take care that all should have fair play; and has always been open to every representation that has been made to him. In presenting this testimony to Mr. Gibbs, I do it as the representative of the Smithfield Cattle Club, as one not unknown to the great body of the farmers of this country, in your name, to a man who is worthy of the respect and honour of this club, as a straightforward, honest, English gentleman" (Cheers).

The testimonial consisted of a candelabrum for six lights, representing an oak-tree with spreading branches and foliage, to carry either lights or glasses. In the centre is a trellis-work frame to support a crystal bowl. Around the foot of the tree are grouped a short horned

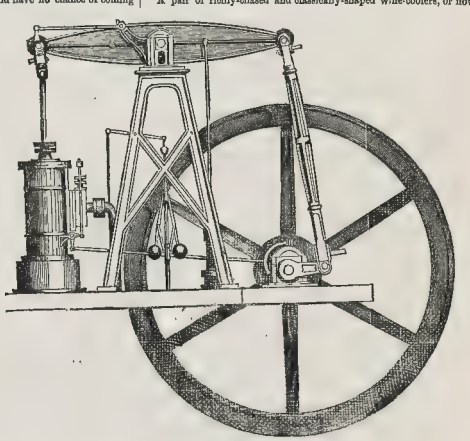
MR. BRANDRETH GIBBS, FROM A DAGUERREOTYPE BY MAYALL.

ox, a long and a short woolled sheep, a pig, and various roots, the whole carefully modelled from nature, and standing on a richly-chased tripod base with three panels. In the first compartment is a view of the Smithfield Club Cattle Show, surmounting a medallion of his Grace the Duke of Richmond, K.G., the president of the club. In the second are introduced the full arms of Mr. B. T. Brandreth Gibbs, under which, in the scroll-work of the base, are various agricultural implements. In the third panel is engraved the inscription, beneath which is a medallion of the late president, the Earl Spencer. The medallions are by Wyon, R.A.

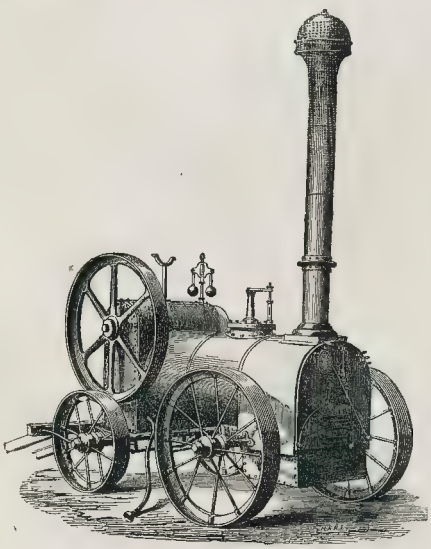
A pair of richly-chased and classically-shaped wine-coolers, or flower-



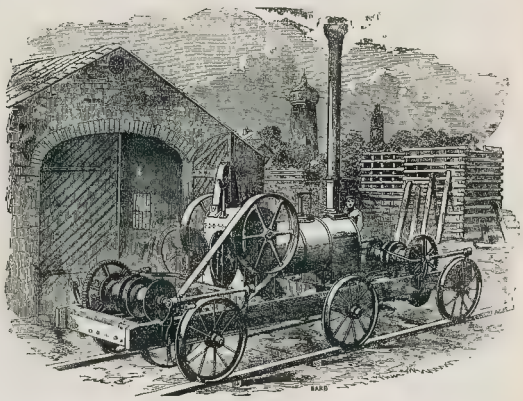
TUXFORD AND SONS' PATENT COMBINED THRASHING, SHAKING, AND DRESSING MACHINE, WITH ELEVATORS AND BARLEY AWELLER.



TUXFORD AND SONS' NON-CONDENSING EXPANSIVE STEAM-ENGINE, FOR DRAINAGE AND IRRIGATION PURPOSES, MILLS, ETC.



SIDE-VIEW OF TUXFORD AND SONS' PRIZE PORTABLE STEAM-ENGINE.



TUXFORD AND SONS' STEAM PILE-DRIVING ENGINE, WITH TWO DOUBLE-ACTING PURCHASES FOR LIFTING FOUR RAMS AT A TIME.

AGRICULTURAL IMPLEMENTS AT THE SMITHFIELD CLUB SHOW.—(SEE NEXT PAGE.)

vases, with demi-horses as handles, standing on square plinths, in the panels of which are represented various prize animals, beautifully chased in bas-relief in dead silver, with the following inscription engraved on each:—Presented to B. T. Brandreth Gibbs, Esq., by the members of, and others interested in, the Smithfield Club, in appreciation of the valuable services rendered by him to that society as its Honorary Secretary, 1855.

Mr. B. T. Brandreth Gibbs, in returning thanks for the honour done him by the noble chairman, and the noblemen and gentlemen present, and after adverting to the satisfactory position of the club in a financial point of view, congratulated the company that they were steadily progressing in their peculiar object—that of directing attention to the feeding of stock. They found a valuable co-operator in the Royal Agricultural Society of England; but their province was more peculiarly the improvement in the breeding of cattle. He thought that a system of prizes might be organised with advantage for the best sassy to accompany each animal sent in for competition. By this means a valuable mass of information would be accumulated, which, by being published each year in the form of a pamphlet, would be available for every one who felt interested in the subject. He had always felt a pleasure in promoting the interests of the club, and should regard the testimonial as a valuable souvenir of his connection with the club (Cheers).

The health of the noble Chairman having been proposed by Lord Berners, and the healths of the Judges, Stewards, and other routine toasts having been disposed of, the company separated.

MR. B. T. BRANDRETH GIBBS.

Mr. B. T. Brandreth Gibbs (whose Portrait we have engraved upon the preceding page) is the youngest son of the late Thomas Gibbs, Esq., of Ampthill, Bedfordshire, and of Brompton Lodge, Old Brompton, Middlesex, and has now been known for some years in the agricultural world as one of the most zealous promoters of this branch of national industry.

Having studied under the Rev. H. S. Pollard, M.A., and subsequently under the Rev. M. Marous, M.A., he was about to enter St. John's College, Oxford (to which College the family had a claim to founder's kin fellowship) with the intention of eventually going to the Bar, but he was suddenly induced to turn his attention to agricultural pursuits in consequence of a death in his family having opened a field of immediate action for his energies in that direction. Hence the origin of our finding him at an early period of his life actively engaged in carrying out the proceedings of the Smithfield Club, and of the annual shows of the Royal Agricultural Society of England, and more recently of the Agricultural and Horticultural department of the Great Exhibition of 1851, and Paris Universal Exhibition of 1855.

As connected with agriculture he acted as one of the stewards of the yard (in lieu of a steward who was disqualified from being an exhibitor) at the first meeting of the Royal Agricultural Society of England, held at Oxford, in 1839, and he continued to act with his brother in the management of the succeeding shows of that society up to 1844; and of the Smithfield Club up to 1843, at which periods he became the Honorary Director of the country shows of the former, and the Honorary Secretary of the latter, to which offices he was unanimously elected at the age of of the twenty-two, and which office he still continues to hold.

The readers of this journal will be aware that the annual meetings of the Royal Agricultural Society of England from 1844 to 1855 have been held in the cities and towns of Southampton, Shrewsbury, Newcastle, Northampton, York, Norwich, Exeter, Windsor, Lewes, Gloucester, Lincoln, and Carlisle—during which period the arrangements of the shows, both as regards live stock and the exhibition and trials of machinery having been conducted under his direction.

When the preliminary preparations for the Great Exhibition in 1851 were in progress the Royal Commissioners, through the late Mr. Pusey, one of their members, sought Mr. Brandreth Gibbs' assistance in the agricultural machinery department, and he undertook the office of superintendent of class 9, one of the seventeen into which the Exhibition, and consequently the Jurors, were divided in the same class.

During the preparations for the recent Paris Exhibition he was engaged for the Board of Trade in superintending the selection of British agricultural machinery intended to form part of that collection, and to which department no less than five of the much-coveted gold medals of honour were awarded.

The manner in which Mr. Brandreth Gibbs has applied himself to the advancement of the agricultural interest, has been marked by his receiving from the hands of the Duke of Richmond, the President of the Smithfield Club, the above testimonial to his valuable services, most gratifying to Mr. Gibbs and to the numerous friends he already claims in that institution and in the Royal Agricultural Society of England. In private life he is esteemed by a wide circle of acquaintance; and he is not only a good linguist, but accomplished also in music, and different branches of the fine arts.

The Illustration on the preceding page represents the Testimonial which was presented to him last week by the members of the Smithfield Club, as the inscription expresses it, "in appreciation of the valuable services rendered by him to that Society as its Honorary Secretary." Mr. Gibbs was enrolled on the list of that club as early as 1837, and was its first life-member.

IMPLEMENTS AT THE SMITHFIELD CLUB CATTLE-SHOW.

Foremost among the Agricultural Machinery exhibited at the annual gathering of the Smithfield Club is the Portable Steam-Engine of Messrs. Tuxford and Sons, of the Boston Steam Works, Lincolnshire.

Many of our countrymen will not have forgotten the unusual excitement produced by the trials of engines at the last meeting of the Royal Agricultural Society at Carlisle, when the extraordinary performance and beauty of workmanship of the engine obtained for it the Society's First Prize. This engine, our readers will remember, was Tuxford and Sons', which, with fourteen pounds of coals to the horse-power, worked fully up to its duty for three hours and forty-seven minutes, being at the rate of less than three pounds and three-quarters of coal per horse power per hour.

Messrs. Tuxford and Sons, who through their engine this year received the Society's first prize, have for some years past been a rising firm, has been a rising firm extensively manufactured the Fairyard Portable Steam engine long before a large majority of manufacturers who now exhibit at the various Agricultural Societies shows, had directed their attention to this important branch of engineering skill. More than seventy years ago the late Mr. Weston Tuxford, father to the present partner of the firm, constructed, through ideas gathered from Jethro Tull, a drill which he successfully worked, and which most probably was the first drill that operated on the fen and marsh land of the east of England. In 1850 we find the name of Mr. Weston Tuxford, one of the firm, attached to patents for improvements in portable steam-engines, thrashing machinery, and clod-crushers; and again, in 1856, for other improvements in the "combined thrashing machine." The portable steam-engine, and the portable combined thrashing machine, are essentially of Lincolnshire origin: for the former we are undoubtedly much indebted to the late Mr Wingate, of Hareby House, near Spilsby, and Mr. Morton, the manager of Earl Dudley's Whitfield experimental farm; these gentlemen having, as early as 1839, called on the Messrs. Tuxford, of Boston, and urged them to design and bring out a portable steam thrashing machine. Plans and working models were prepared, but the engine was left in abeyance until 1842, when it was subjected to existence. The cylinder of this early class of engines was on the horizontal construction; but this arrangement was abandoned for the vertical or upright cylinder, and with it the tubular boiler, which was superseded by an improved description of boiler, with flues and tubes combined. This improvement, in connection with the introduction of the engine into an iron house, and some other mechanical combinations, became the subject of a patent in the year 1850.

Next year the Messrs. Tuxford were awarded at the Great Exposition a prize medal for their portable engine. Then, also, the engineers of the French Government selected this engine for the Museum of Arts and Trades, in Paris, as did also those of the Prussian Government for the Royal Museum at Magdeburg. Since then, we are told by the patentees, it has been adopted in her Majesty's and other dockyards, for sawing, and, of purposes where steam power has been required. Recently a novel and powerful steam pile-driving engine, on traversing wheels and tram way, with rooms for working four rams at a time, has been constructed (with this engine as the impelling power) for David Thornbury, the contractor for constructing the Northumberland Docks, at North Shields, where a mile in length of piles, and eight thousand piles in number have to be driven for the formation of sea-wall. At the recent trials of thrashing-machines at the Paris Universal Exhibition, M. Tresca, the French Government engineer, employed this engine as the motive power; and at the Carlisle meeting this year, the first prize was awarded to the Portable Steam-Engine of the Messrs. Tuxford, by the Royal Agricultural Society of England.

We have Illustrated this first prize engine and other machinery exhibited at the recent Smithfield Show by Messrs Tuxford, who must be considered to have taken the lead in this important branch of agricultural machinery by the result of the trials at the great meeting of the Royal Agricultural Society in 1855.

The late Mr. Samuel Rogers became a Life-Governor of the Orphan Working School in 1792, so that, by one payment he continued on the list for sixty-three years.

NATIONAL SPORTS.

Speculation on the Derby was painfully arrested on Monday last, at Tattersall's, by the sad news that Dr. Palmer, of Rugeley, had been committed to Stafford gaol on the charge of poisoning his late betting confederate, Mr. Cooke, of Latterworth. Those who have been in the habit of attending races of late years cannot fail to call to mind the round-haired, square-built little man, who will in March next have to take his trial for a crime which has never yet sullied turf annals. Even Dan Dawson would have shrunk from it, though he had no mercy on Lord Foley's horses. The doctor was the reputed owner of Goldfinder, who won the Chester Cup for him in 1852. The Chicken also belonged to him, and he paid, we believe, 2000 guineas for Nettle, who gave Marlow such a fearful fall when she was running as first favourite in the Oaks this year. Mr. Cooke was only a man of twenty-eight, and would seem, as far as the evidence on the inquest goes, to have been very much in the leading-strings of his confederate, who trained in the same stable. The deceased had been only a short time on the turf, but his recent luck with Polestar had been considerable. Many of his animals were of Mr. C. Breton's breeding, and he had within the last few months purchased Honeydew and her foal, an own sister to Wild Hunstman, from that gentleman. This topic has been among turflies the all-absorbing one of the week, and

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

A FALL of about one-half per cent has taken place in the value of Consols this week, owing to some extensive sales of stock having been effected. They have, we understand, been chiefly confined to Savings-bank Annuities, for the purpose of enabling the Chancellor of the Exchequer to provide for the January dividends. The supply of money in the Discount Market has been smaller than for some time past, and the lowest rate for first-class sixty-days bills in Lombard-street is 5½ per cent. The last payment of ten per cent on the English Loan of £16,000,000 was made on Tuesday, and great pressure is shown by the commercial interest on the subject of future loans. Evidently the Chancellor of the Exchequer will have great difficulty in getting rid of two or three millions sterling of Exchequer Bills in the present state of the Market, and this concluded, therefore, that he will fund £5,000,000 of the Bills now out. Large quantities of paper have arrived from provincial bankers for discount, owing to the country issue of notes having reached its maximum according to the present Currency Act.

On Monday all English Stocks were dull. The Three per Cents reduced 85½ to 85¾; New Three per Cents, 86¾ ⅞; and Consols for Account, 85½ to 85¾; India Bonds, 3s. dis.; Exchequer Bills, 3s. to 5s. dis.; Ditto, Bonds, 6s. The purchases on the following day were small; but the sales increased. Bank Stock was steady. The Three per Cents Reduced marked 85⅞ 89; the New Three per Cents, 85½ to 85⅝; and Consols for Account, 85⅝ to 85⅞; Long Annuities, 1859, 8⅞; Ditto, 1885, 16 16-16 ⅞; India Bonds, 4s. dis.; Exchequer Bills, 3s. to 7s. dis.; Ditto, Bonds, 97½ ⅝. The Market on Wednesday was dull and drooping. Canada opened at 98½, and subsequently fell to 98¼. The New Three per Cents were 85½ to 86½; and the Reduced, 85⅞ ⅞. A fall of ¾s. took place in Exchequer Bills, the quotations being 10s and 8s. discount. Exchequer Bonds were steady, at 97½ ⅝.

The imports of bullion have been under £200,000; and the market from New York brought no specie, owing to the adverse nature of the exchanges, caused by the immense shipments of cotton. Trade is dull and drooping. Canada opened at 98½, and subsequently fell to 98¼. The New Three per Cents were 85½ to 86½; and the Reduced, 85⅞ ⅞. A fall of ¾s. took place in Exchequer Bills, the quotations being 10s and 8s. discount. Exchequer Bonds were steady, at 97½ ⅝.

The imports of bullion have been under £200,000; and the market from New York brought no specie, owing to the adverse nature of the exchanges, caused by the immense shipments of cotton. Trade is dull and drooping. Canada country. About £100,000 in gold has been withdrawn from the Bank of England for the Continent, and it is well understood that large additional shipments are to follow. The New Russian Loan is regarded with some uneasiness, as, no doubt, in the event of its proving successful, heavy sums in gold will be withdrawn from London to pay for it. The loan in question is offered to the public at 86; but we learn that the contractor's figure is only 83, by way of a margin of profit; at 83, the interest of 5 per cent. would be about £6 9s. per cent.

The last returns of the assets and liabilities of the Bank of England shows the following results, compared with the previous month:—

Coin and Bullion	.. ..	£18,000, decrease £1,000
[illegible]	.. ..	23¼,000, decrease 86,000
Deposits	.. ..	4,267,000, increase 81,000
Private Securities	.. ..	631,500, decrease 1,079,400

Considering the large supplies of gold drawn from this country last month, these returns show a poor result.

Mixed Foreign Bonds have been less active. In prices, however, no material change has taken place. Brazilian Five per Cents have realised 96¾; Ditto, New, 98; Buenos Ayres Six per Cents, 87 ex div.; Mexican Three per Cents, 20; Peruvian Four-and-a-half per Cents, 73; Portuguese Four per Cents, 48; Russian Four-and-a-Half per Cents, 88; Sardinian Five per Cents, 85¾ ex div.; Spanish New Deferred, 21¾; Ditto, Passive, 7¾; Turkish Six per Cents, 84; Ditto, New Scrip, 3¼ dis.; Venezuela, Six-and-a-Half per Cents, 71¾ ¼.

A full average business has been doing in Joint-stock Bank Shares, as follows:—Australasia, 62; London, 58; Commercial of London, 30¾; London Chartered of Australia, 1¾; Ditto New, 2; London and Westminster, 8¾; Oriental, 5¾; Royal Bank, 5½; Union of Australia, 74; Union of London, 30¾.

Nearly all Miscellaneous Securities have been heavy. Australian Agricultural Shares marked 28¾; Bertin Waterworks, 7; Canada Company's Bonds, 151; Ditto, Government Six per Cents, 110¾ Crystal Palace, 2¾; Ditto, Preference, 4¾; General Steam Navigation, 2¾; General Screw Steam, 15½; Netherlands Land, 1¾; Oriental Gas, 1; Peninsular and Oriental Steam, 64½; Ditto, New, 14; Royal Mail Steam, 7½; South Australian Land, 2½; St. Katharine Dock, 8½; Van Diemen's Land, 16; Victoria Dock, 10¾.

Most Railway Shares have been steady as to price; but the transactions in them have been small. The following are the leading quotations during the week:—

ORDINARY SHARES AND STOCKS.—Bristol and Exeter, 85¾; Eastern Counties, 8¾; Great North of Scotland, 68; Great Northern, 89¾; Ditto, A Stock, 75; Great Western, 69¾; Lancashire and Yorkshire, 77¾; London and Brighton, 86¾; London and North-Western, 94¾; London and South-Western, 86; Manchester, Sheffield, and Lincolnshire, 29; Newport, Abergavenny, and Hereford, 8½; North Eastern, 93¾; Ditto, Berwick, 68; Ditto, York, 53; North Staffordshire, 9¾; Scottish Central, 101½; Shropshire Union, 4¾; South-Eastern, 61½; Waterford and Limerick, 1¾.

LINE LEASED AT FIXED RENTALS.—Buckinghamshire, 92; East Lincolnshire, 134½; Midland and Bradford, 89; Royston, Hitchin, and Shepreth, 130½.

PREFERENCE SHARES.—Great Northern Five per Cent, 106; Ditto Four-and-a-Half per Cent, 10¾; Great North of Scotland, 9½; Great Western (Birmingham Stock), 67¾; South-Eastern, 32.

FOREIGN.—Dutch Rhenish, 10¾; East Indian Five per Cent, 21¾ ex New; Ditto Extra Scrip, 1 ex new; Royal Luxembourg, 3; Great Western of Canada, 24½; Ditto, New, 2; Madras, 1¾; Royal Swedish, —.

In Mining Shares very little has been done. Copper Miners of England, 24¾; United Mexican, 4¾; Tin Croft, 4¾

THE MARKETS.

CORN EXCHANGE, December 17.—The supply of wheat from Essex and Kent to this morning's market was very moderate. A few prime samples were disposed of at about last week's prices; but a fetching trade was very dull and in to-day's market the demand for foreign wheat at little business was transacted that the quotations were almost nominal. Fine malt ng barley sold slowly, at late rates; but other kinds gave way 1s. per quarter. Malt moved off slowly, at the late decline. New oats were 2d. to 3d. per quarter lower, and the best imported previous rates. Beans sold heavily, and prices gave way 1s. per quarter. Grey peas were quite as low. In the value of w[illegible] and flour no change took place.

ENGLISH.—The supplies of home-grown wheat on sale, to-day, were but moderate. The general demand, however, ruled heavy, at Monday's currency.

English: Wheat, Essex and Kent red, 80s. to 84s.; ditto white, 84s. to 94s.; Norfolk and Suffolk red, 76s. to 82s.; rye, 52s. to 56s.; grinding barley, 32s. to 36s.; malting ditto, 37s. to 39s.; malting ditto, 38s. to 44s.; Lincoln and Norfolk malt, 72s. to 80s.; brown ditto, 65s. to 70s.; Kingston and West Ware, 72s. to 80s.; Chevalier, 81s. to 82s.; Yorkshire and Lincolnshire feed oats, 22s. to 25s.; Scotch ditto, 24s. to 25s.; English and Cork, black, 23s. to 24s.; ditto, white, 25s. to 28s.; Dutch potato, 25s. to 26s.; grey peas, 42s. to 44s.; maple, 45s. to 46s.; white, 38s. to 40s.; tick beans, 40s. to 42s. per quarter. Town-made flour, 74s. to 75s.; Suffolk, 67s. to 68s.; Essex and Yorkshire, 65s. to 68s. per 280 lbs. American flour, 45s. to 47s. per barrel.

Scotch: Our market is heavy, and, to effect large transactions, lower prices must be submitted to.

Linseed, English crushing, 42s. to 43s.; Mediterranean, 39s. to 40s.; hempseed, 34s. to 36s. per quarter. Coriander, 20s. to 30s. per cwt. Brown mustard-seed, 12s. to 16s. ditto white, 8s. to 10s.; tares, 6s. 6d. to 7s. 6d. per bushel. English rapeseed, 36s. to 38s. per quarter. Linseed cakes, English, £14 5s. to £15; ditto, foreign, £13 10s. to £14 10s. Rapeseed, £9 10s. to £9 15s. Canary, 55s. to 58s. per quarter.

Imperial Weekly Averages. Wheat 79s. 11d.; barley, 34s. 3d.; oats [illegible]; rye, [illegible]; beans, [illegible]; peas, [illegible]; [illegible] Average Averages. Wheat, 81s. 5d.; barley, 34s.; oats, [illegible]; rye, [illegible]; beans, 39s. 3d.; peas, 41s. 1d.

English Corn Sold last Week.—Wheat, 117,734 qrs.; barley, 121,840; oats 16,656; rye 907; beans, 3227; peas, 3937 quarters.

Foreign.—We have an improvement to notice in the demand for most kinds, at very full prices. Common sound cones has realised 92s. [illegible]

[illegible] prices now rule from 1s. to 2s. per cwt. beneath the highest point. The inquiry for cut steaks are limited, and the finer kinds of dried goods in hand is very extensive. The quotations are nominal.

Coffee.—Most kinds move off steadily, and the quantities are well supported. Good ordinary native Ceylon has sold at from 51s. to 52s. per cwt.

Rice.—Great inactivity prevails in the demand; but we have no actual fall to notice in prices.

Provisions. The better market to hover and, in some instances, [illegible] Prices however rule [illegible] lower prices There is more doing in bacon, at fully late rates. Other provisions are a slow sale.

Tallow.—Our market is very inactive, although the stock is small. P.Y.C. on the spot has changed hands at 67s. 6d. 68s. per cwt. [illegible] 67s. 6d. to 68s. Rapeseeds, £37 10s. to £38 per ton. Orange, 55s. to 56s. per cwt.

Oils.—Linseed is dull at 42s. per cwt on the spot. In other oils only a limited business is doing. Turpentine moves off slowly, at from 39s. to 37s. per cwt.

Spirits.—The Government contract for 315,000 gallons of rum has been taken at 1s. 1¼d. to 1s. 2¼d. per gal. The value of E. I. [illegible] quotations. There is rather more doing in brandy, at late rates. Malt spirit, 1s. per gallon.

Hops and Stream.—Mondow hay, £4 5s. to £5 5s.; clover ditto, £4 5s. to £6 6s.; straw, 30s. to 36s. per load.

Coals.—Chester Main, 19s.; Holywell, 18s. 3d.; Acorn Close, 20s.; Eden, 20s.; Hetton, 20s.; Hetton, 20s.; Lambton, 20s. 6d.; Casson, 20s. 6d.; Hartlepool, 22s. 3d.; Hough Hall, 20s. 6d.; Kelloe, 20s. 6d. per ton.

Hops.—Fine hops move off steadily, at our quotations; but all other sorts are a dull sale. Weald of Kent Bags, 60s. to 130s.; Mid Kent, 60s. to 130s.; East Kent, 80s. to 98s.; Sussex, 60s. to 95s. per cwt.

Wool.—English wool is in fair request, at very full prices; but all other sorts are very dull of sale, on lower terms.

Potatoes. The supply is too good, yet the trade is active, as follows:—York Regents, 80s. to 110s.; Kent and Essex, 70s. to 80s.; Scotch, 85s. to 90s. per ton.

Metropolitan Cattle Market.—The great Christmas market has been held this week. The show of both sheep and sheep was large, and of very fine quality. Generally speaking the trade was inactive, with very little change in prices:—

Monday.—Beasts, 3,400; sheep, 23,000; calves, 300; pigs, 270. Trade very dull at 4d. to 6d. per 8lbs. Sheep, 4d. to 6d. per 8lbs. Lambs, 6d. to 8d. per 8lbs. Calves, 4s. to 5s. per score. Pigs, 4s. to 5s. per score.

Tuesday.—Beasts, 2,500; sheep, 20,000; calves, 200; pigs, 200. Trade dull at 4d. to 6d. per 8lbs. Sheep, 4d. to 6d. per 8lbs. Lambs, 6d. to 8d. per 8lbs. Calves, 4s. to 5s. per score. Pigs, 4s. to 5s. per score.

Wednesday.—Beasts, 2,500; sheep, 20,000; calves, 200; pigs, 200. Trade dull at 4d. to 6d. per 8lbs. Sheep, 4d. to 6d. per 8lbs. Lambs, 6d. to 8d. per 8lbs. Calves, 4s. to 5s. per score. Pigs, 4s. to 5s. per score.

Thursday.—Beasts, 2,500; sheep, 20,000; calves, 200; pigs, 200. Trade dull at 4d. to 6d. per 8lbs. Sheep, 4d. to 6d. per 8lbs. Lambs, 6d. to 8d. per 8lbs. Calves, 4s. to 5s. per score. Pigs, 4s. to 5s. per score.

Friday.—Beasts, 2,500; sheep, 20,000; calves, 200; pigs, 200. Trade dull at 4d. to 6d. per 8lbs. Sheep, 4d. to 6d. per 8lbs. Lambs, 6d. to 8d. per 8lbs. Calves, 4s. to 5s. per score. Pigs, 4s. to 5s. per score.

Saturday.—Beasts, 2,500; sheep, 20,000; calves, 200; pigs, 200. Trade dull at 4d. to 6d. per 8lbs. Sheep, 4d. to 6d. per 8lbs. Lambs, 6d. to 8d. per 8lbs. Calves, 4s. to 5s. per score. Pigs, 4s. to 5s. per score.

NEW BOOKS, &c.

THE NEW YEAR, 1856.—The Proprietors of THE ILLUSTRATED LONDON NEWS [illegible] Season of the Year as affording a most favourable opportunity of [illegible] Subscribers to their splendid Journal. This may be effected through the medium of any respectable Bookseller or Newsvender in any part of the United Kingdom.

A leading advantage of becoming Subscribers for the year 1856 will be the receipt of the following Supplements:—

MAGNIFICENT SUPPLEMENTS, WORKED IN COLOURS,

which can be ensured only to the regular Subscribers to the ILLUSTRATED LONDON NEWS. These Coloured Supplements will bear comparison with the finest Water-Colour Drawings of our most celebrated Artists, and can only be produced by a very large extra outlay.

The issue of the ILLUSTRATED LONDON NEWS during the year 1855 may be confidently referred to, as affording proof of what it is possible to accomplish where the resources are ample. And it is due to acknowledge that the liberality of the Proprietors has met with a response from the Public unparalleled in the history of Journalism. The ILLUSTRATED LONDON NEWS is now the most extensively circulating Journal in the world, and the present Weekly issue is nearly

TWO HUNDRED THOUSAND COPIES,

and that issue still on the increase. This signal triumph of British enterprise and industry, of genius and art combined, could only have been achieved [illegible] and by the [illegible] employment of new and greatly-improved Machinery to keep pace with the requirements of the Public.

The Proprietors are determined that, so far as they are concerned, the issue of the year 1856 shall [illegible] popularity to the ILLUSTRATED LONDON NEWS. This will be effected by improvements in the Printing; by the increased excellence of the Paper; by the additional value of the Engravings, by new and eminent Literary Contributors; and last, not least, by the Splendid Coloured Supplements. The whole rendering it the LEADING JOURNAL OF THE WORLD.

[illegible] Subscribers [illegible] Stands, [illegible] Country Booksellers, [illegible] Newsvenders, [illegible] Railway Bookstalls, [illegible] Clubs, [illegible] Reading Rooms, [illegible] Libraries, [illegible] Steamers, [illegible] Hotels, [illegible] Coffee-houses, [illegible] Taverns, [illegible] Refreshment Rooms

BERIAH DREW AND COMPANY'S
PURE COD-LIVER OIL WITH QUININE (Quinine à l'Huile de foie de Morue) combines the tonic and strengthening properties of Quinine with the well-known virtues of Pure Cod-Liver Oil. Many eminent Physicians have been satisfied as to the efficacy of this PERFECT compound. In Bottles at 2s. 9d., 4s. 6d., and 11s. each, by BERIAH DREW and Co., 244, Aldersgate-street; Barclay and Sons', London; Sanger, 150, Oxford-street; Johnson, 68, Cornhill; Newbery, 69, St. Paul's; or any Chemist in the British Empire. Wholesale agents for Glasgow, Bruce, Scott, and Gillespie.

From J. C. W. LEVER, Esq., M.D., Physician, Accoucheur, Guy's Hospital, Fellow Royal Med. Chir. Society, &c.

"I cannot have the least hesitation in bearing my testimony to the great efficacy and value of your preparation of Cod-Liver Oil with Quinine. In many cases under my treatment it has acted nobly, and have the greatest confidence in it."
13, Wellington-street, London-bridge, Oct. 11th, 1855.

"Gentlemen,—Having given a fair trial in the Diseases of Women and Children, to your preparation of Cod-Liver Oil and Quinine, I can bear testimony to its value in those complaints in which such combination is desirable. SAMUEL GRIFFITH, M.D.,
Physician Accoucheur, &c., at St Thomas's Hospital, &c. and Med. Col.
8, Wellington-street, London-bridge, June 15, 1855.

BY HER MAJESTY'S ROYAL LETTERS PATENT for a valuable and extraordinary Improvement in the most powerful and brilliant TELESCOPES, Camp, Raccourcee, Opera, and Pocket-spectacle Glasses, to know the distance. Sold by and B. SOLOMONS', Opticians, 39, Albemarle-street, Piccadilly, opposite the York Hotel. They possess such extraordinary power that some, from 3ft to 8 inches, with an extra eyepiece will show distinctly the Georgium Sidus, the six satellites, Jupiter's moons, Saturn's ring, and the double stars. With the same Telescopes can be seen a person's countenance from three and a half to six miles distant, and no object from sixteen to twenty-five miles, for the watch-pocket, and are of larger and all sizes, with increasing power. Established A.D. 1841.—Valuable very small powerful waistcoat-pocket glass, the size of a watch, by which a person can be seen and known one mile and a half distant, country scenery and ships at sea from ten to twenty-five miles. They are invaluable for theatres, races, yachting, to sportsmen, gentlemen, gentlemen, and tourists generally. Newly-invented spectacle lenses of the greatest transparent power, and light, from the new discoveries derived from this unique Patent, becoming implored is preserved and strengthened, and very aged persons are enabled to employ their sight at the most minute occupation—can see with these lenses at a much less magnifying power—and they do not require the frequent changes to the dangerous effects of further power. ASTRONOMY.

The ORGANIC VIBRATOR, an extraordinarily powerful, small, newly-invented instrument, for deafness, entirely different from all others, to surpass anything of the kind that has been, or probably ever can be, produced. Being of the same colour as the skin, it is not perceptible. It enables deaf persons to hear distinctly at church and at public assemblies. The unpleasant sensation of singing noises in the ears is entirely removed; and it affords all the assistance that could possibly be desired.—B. Albemarle-street, Piccadilly. Observe, Opticians to York Road.

NEW MUSIC, &c.

I WISH YOU a HAPPY NEW YEAR. Song, by W. H. BUNN. 2s. 6d. With a Merry Christmas Duet, "The Parade of our Home, now ready. Appropriate presents.

These notes of approval, their own evidence of veracity, are in volumes, open to the inspection of lady visitors.—236, Oxford-street, Hyde-park.

MARION'S RESILIENT BODICE and CORSELETTO DI MEDICI. Combine firmness with elasticity of body, fasten easily in front, and are adapted for every age and figure. Prospectus, illustrations, self-measurement papers, to any lady post-free. All country orders sent carriage-paid or post-free.—Moslemen MARION and MARTLAND, Pensioner, 105, Oxford-street.

Christmas Supplement

to the

Illustrated London News.

SATURDAY 1855 DECEMBER 22.

DRAWN BY J. GILBERT. ENGR'D C. LEIGHTON, RED LION SQUARE.

While shepherds watched their flocks by night, — All seated on the ground.

THE HERALD ANGEL.

(See the Illustration.)

Bright-raying through the rayless night,
Like to a sudden sun upspringing,
Down-borne on wings of heavenly light
Through Juda's land glad tidings bringing;
Before whose feet the clouds dispel,
Thy herald comes, Emmanuel!

"God is with us!"—Hark, hark the sound
Proclaiming Christ's celestial birth;
While chorus angels, hovering round,
Swell the full strain of "Peace on earth."
"God is with *us*!" Bowed down in awe,
The chosen shepherds heard and saw.

"Go, quit your flocks upon the wold;
Leave the young sheep beside its dam:
This night a child is born;—behold,
He is the Shepherd and the Lamb!
Arise, and go!" And swift as day
The choral voices died away.

Not so the Herald-Angel fled;
But vanished slow, till faint and far
Upborne where fields of ether spread,
Diminished to a single star
The heavenly guest stood, radiant-bright,
To Bethlehem's walls the guiding light!

While kingly Herod quailed with fear,
Nor saw the angel in the beam,
The Wise Men gazed, and, drawing near,
Beheld fulfilled the prophet's dream:
In yon low shed, by cattle trod,
The wondering sages owned their God.

His office done, with lessening ray
To heaven the Herald-Angel rose;
But One still points the God-ward way
In these our days, as erst in those:
From midst the starry heavens old
He calls us to his Father's fold. E. L. Hervey.

JONES UNDER TWO ASPECTS.

JONES AT HOME—AND JONES ABROAD.

It is strange how the same person may vary under different circumstances! Only look at Jones. The clown tumbling on the stage at Christmas, and the clown smoking his pipe at his own fireside, cannot be two more distinct personages than Jones at home and Jones abroad.

Now, Jones at home is a plain, simple, inoffensive person. His clothes are as neat and as regular as his other habits. Walking always in the quiet shade of life, he is happy if he escapes notice. He steps out carefully, at a slow, measured pace, measuring his time to the accuracy of half a minute. You never see him pushing his way roughly to the front ranks. He falls in with the others, and takes his place cheerfully where chance allots it to him. Should he push against any one, an instant apology comes gushing from his lips. His manners are as modest as his ways. He has always a hand ready to help any one over a dirty path; and, wherever there is a dangerous crossing, you see him affectionate almost in his attentions to old ladies and children. Self with him is the last person thought of. At dinner he would scorn being helped before his neighbour. If the last pear is his by right of rotation, he will resign it without a murmur, even though the person claiming it has had one already. At night, if it's raining, he will go outside the omnibus with pleasure "to oblige a lady." To the fair sex, generally, he is quite a Brompton Bayard of chivalry. Raleigh only threw his cloak down upon the ground for Queen Elizabeth to walk over; but Jones would fling himself, body, cloak, pantaloons, and all, and would take pride in his abject and moist position, if he only felt a lady's tiny foot tip-toeing it gently over his manly form. I would be bound he would not brush the mud off his clothes for many a day, but would look proudly on every dirty spot, as a glittering cross of knighthood that had been conferred upon him by some matchless Queen of Beauty! All his reproofs have the mildness of milk-and-water. As for a blow, it is doubtful if his hand, brave as it is, could twist itself into the formation of a fist. He uses it only to cares, as if mankind was some loved dog that he was fond of patting. He never treads on a person's prejudices; and as for sneers, sarcasms, or raillery, he would as soon commit to memory the irreverent songs that are popular at the Coalhole, as lend his lips to any such cutting inquiry of a person as whether his maternal parent was aware of his absence from home? Upright in all his commercial dealings as any of the great pillars on the Stock Exchange—as respectful in his demeanour as a tradesman who has "a little bill to make up"—with a heart, like a fire-engine, kept ready harnessed to fly instantly, upon the smallest alarm, to the assistance of distress—Jones is, with justice, one of the Court-cards in the Brompton pack, and, without a flaw, the brightest jewel of the Crescent in which he lives!

But Jones abroad is a very different person. So different is he from the other Jones at home, you would not recognise him for the same individual. The fact is, the moment he leaves England he begins picking out, one by one, all the rose-leaves that constituted the charm and bloom of his character at home, until at last there is nothing but the green stalk left; and this he parades about with as much pride as if there was still the same blushing flower on the top of it. It is strange, but, like the Christmas clown above mentioned, no sooner does Jones leave his own fireside than he begins painting his face, and disfiguring himself, and tumbling and shrieking unmeaningly, and playing all sorts of absurd antics. These are partly tolerated because people think he is mad, and excuse him upon the broad generous plea that "he is an Engl shman." The poor "furrineers" imagine, because Jones is a clown amongst them, that he is a clown always, an l that, in fact, the whole country is full of such clowns; nor can you be surprised at their having grown up in this geographical error, when they do see so many exhibitions of Grimaldi-ism on the part of our beloved countrymen. Jones for the time is labouring under some curious hallucination that, because he has gone abroad to enjoy himself, he must do everything that a rational creature ought not to do. His dress instantly undergoes a strange metamorphosis. From the plain, simple garb, of one sober uniform colour, that he wore before, he emerges all at once into a dragon-fly of the brightest colours that keep buzzing and flying in everybody's face. Nothing is too extravagant for his appearance; and, if he had ordered the tailor to make him a suit of clothes out of a patchwork counterpane, he would not have succeeded in putting on his body a mass of ill-associated tints more chaotically flung together. The effect is most grotesque, and the little children follow him under the cruel delusion that they are about to see conjuring tricks. Groups of countrymen collect round him in the market-place, and every time he opens his mouth expect to see fire issuing out of it, and make sure, whenever he puts his hand into his pocket, that he will pull out at least a glass globe with a number of goldfish swimming about in it, or at all events begin unwinding off his body an interminable cable of sausages. But when they observe that he takes his hat off without as much as a pigeon flying into the air, and that he blows his nose without so much as a pack of cards falling out of his pocket-handkerchief, they leave Jones in disgust, and drop off with the firm conviction that Jones is an impostor. When he visits a cathedral he does not think of those whose attendance is prompted by quite another feeling than that of idle curiosity. He lounges about staring, disturbing persons in their devotions; and, should anything in the service strike him as being rather strange or ridiculous, he does not scruple to give mutterance to his indignation, and, at times, I am ashamed to say, even goes so far as to laugh idiotically. I have seen him actually comb his hair during High Mass; and I have had a difficulty in believing that it could be the same exemplary Jones whose conduct at home is such a pattern for the charity children at Brompton church. I have observed with pain strangers nudge his elbow to remind him that he has forgotten to remove the cap off his head, and been shocked at his taking a sketch of some fine altarpiece before which peasants were praying on Christmas-eve. At theatres his conduct is very little better. He will talk because he cannot understand the performances himself, and laughs outright at the comical notion of people making use of such "abominable gibb.rish as that." He keeps disturbing his neighbours by continually going out and coming in again, and is astonished at the little willingness they show in making way for him. At tables d'hôte he loudly expresses his disgust. Nothing is good enough for him. The wines are downright vinegar. Why don't they have port, sherry, or marsala—something that a Christian can drink? The dishes are all filthy "kickshaws." He is not going to poison his stomach with them; and he calls for joints, carries, deviled bones, Irish-stews, bashawed lobsters, Welsh-rabbits, scalloped oysters, and the like; and great is his indignation when he hears that they have not got them. He is always boasting of the superior wealth of his country, and declaring publicly that England would "buy up the whole beggarly lot of them." He is always vaunting the mighty superiority of England in everything; and it is this eternal English standard, by which he will measure everything, that makes every enjoyment fall short of his expectations. He seems to carry it about with him as a rod for his own chastisement. He imagines that the Continent was made for Englishmen, and that, if the customs of a country are not in strict accordance with his English tastes and fancy, he has a right to visit his full contempt upon the inhabitants. Thus, he is extremely facetious with frogs, and wonderfully sarcastic over sourkrout. All police-sergeants, gendarmes, and custom-house officers, he fancies he has a vested right to oppose and abuse as much as he pleases. He resents a demand to see his passport as an insult, and pats with his keys to have his trunks examined as an unwarrantable interference with the liberty of the subject, about which he has a good mind to write to Lord Palmerston. Poor Lord Palmerston! What frightful abuse does Jones make of his name! and, if only one-half of the letters that Jones, and the whole tribe of Joneses on the Continent, threaten to write to his Lordship are ever written, we unfeignedly pity his Lordship's secretary, and hope he has a large sum allowed him for paper and sealing-wax. But Jones is the author of all his own troubles. He stirs up the water and makes it muddy, and then complains that he cannot drink it. If he would only take things as he finds them, instead of howling and running after things that are not to be got, he would be twice as happy. If he would not grumble so much, perhaps he would be able to admire something out of England. If he would not look upon every foreigner as a cheat who wants to impose upon him, perhaps he would not so often lose his temper in the course of the day, and certainly would not be a sou the poorer by the time he went to bed. And, lastly, if he would only learn to conform to the customs of a country, and to do as the inhabitants do, instead of always expecting the inhabitants to do what he, as an Englishman, imagines they ought to do, he would not make himself so objectionable, would be treated with much greater civility, would enlarge the circle of his own enjoyments, and bring back with him to his own country far pleasanter reminiscences of his travels abroad. But, to do this, Jones must get rid of the conceit, the suspicion, the vulgarity, the narrow-mindedness, the ill-temper, and, above all, that national bulldoggedness—snarling, growling, barking, attacking everybody, and opposing everything—which he fancies is always necessary to assume with different clothes the moment he lands on the Continent.

When this triumph is achieved, we shall no longer notice with sorrow the painful discrepancy there exists between Jones at Home and Jones Abroad. There will be but one Jones then, and he will carry Brompton to the Boulevards, and bring back with him in return the Boulevards to Brompton.

Horace Mayhew.

THE WINTERS.

We did not fear them once—the dull grey mornings
No cheerless burden on our spirits laid;
The long night-watches did not bring us warnings
That we were tenants of a house decayed;
The early snows like dreams to us descended;
The frost did fairy-work on pane and bough.
Beauty, and power, and wonder, have not ended—
How is it that we fear the winters now?

Their home-fires fall as bright on hearth and chamber;
Their northern starlight shines as coldly clear;
The woods still keep their holly for December;
The world a welcome yet for the new year;
And far away in old-remembered places
The snowdrop rises and the robin sings;
The sun and moon look out with loving faces—
Why have our days forgot these goodly things?

Is it that now the north wind finds us shaken
By tempests fiercer than its bitter blast,
Which fair beliefs and friendships, too, have taken
Away like summer foliage as they past,
And made life leafless in its pleasant valleys,
Waning the light of promise from our day,
Till the mists meet even in the inward palace—
A dimness not like theirs to pass away?

It was not thus when dreams of love and laurels
Gave sunshine to the winters of our youth,
Before its hopes had fallen in fortune's quarrels,
Or time had bowed them with his heavy truth—
Ere yet the twilights found us strange and lonely,
With shadows coming when the fire burns low,
To tell of distant graves and losses only—
The past that cannot change and will not go.

Alas! dear friends, the winter is within us,
Hard is the ice that grows about the heart;
For petty cares and vain regrets have won us
From life's true heritage and better part.
Seasons and skies rejoice, yea, worship rather;
But nations toil and tremble even as we,
Hoping for harvests they will never gather,
Fearing the winters which they may not see.

Frances Browne.

MY AFRICAN CHRISTMAS-DAY.

BY SHIRLEY BROOKS.

The foolish Tyrant who posters the Mediterranean—you think I am going to speak of King Bomba; but it happens to be the other nuisance, King Quarantine sentenced me to be imprisoned at Alexandria for five days. But he, like all other tyrants, is served by agents who cheat him; and, in my case, the having been in quarantine on five distinct days was enough to discharge me. I entered towards sunset on Saturday evening, and was released at daydawn on Wednesday morning. The Saturday was the 21st of December.

I had arrived at Alexandria after a tour of several months in the south of Russia, in Turkey, Asia Minor, and Syria; and I see in my diary (which one has great opportunities for keeping up during the listless hours of steam-boat travelling, quarantine, and other leisure times) that, on leaving Beyrout, where also I had to dawdle, waiting for a French steamer detained by an accident, I likened its attractions to those of Brighton. There was bathing, smoking, fishing (the victims from the Mediterranean being the prettiest little rock-fish of divers colours, which glistened like tiny rainbows), French newspapers, and horse exercise. And against the Devil's Dyke may be set the "sainted Lebanon;" and to see the sun set there is worth a pilgrimage. "Rapid," I wrote, "as this sunset is, it exhibits Lebanon and the hills below in a series of lights as quickly manifested and as various as theatrical effects. As the sun sinks, its rays fall full upon the face of the mountains, and for some minutes the whole mass of hills is swathed in a glow of rich crimson, while the Lebanon stands out whiter and brighter than ever. Then, as the crimson tints disappear from the hills, the alabaster side of the mountain takes the most delicate rose-colour, and preserves it for some time after the shadows, settling upon the minor eminences, have fused their outlines into obscurity, and after the sea, recently flashing in purple light, has become grey and sombre. Suddenly the rose tints vanish, and Lebanon is in shade until the moon-rays call out its sparkling points and edges in a different but hardly less captivating array of glitter.. g prominences." Now, this was written in quarantine, with the glorious picture fresh upon my mind; so King Quarantine's "stone walls did not a prison make."

The place had its comforts, as well as its disagreeables. When the travellers—a party of about thirty, Jews, Turks, Arabs, Greeks, an American, an Englishman (myself)—had landed on a little pier leading to the quarantine-house, and a tall handsome black man, keeping us at bay with a long stick, had indicated our way, the

American and I held an impromptu meeting, and hastily passed two resolutions with great unanimity. The American moved, and I seconded,—That the others looked rather dirty. This agreed to, I moved, and the American seconded,—That we would have a room to ourselves. This also passed; and then, without either of us waiting to propose a vote of thanks to the other for his dignified and impartial conduct on the pier, we rushed into the quarantine, ran to the furthest room, threw in our luggage, and stood sentinels. Gradually the more leisurely Orientals and Levantines came in, swarmed into the other rooms, and at length made their way to our door, looking between us, and coveting our domain. But we colonists successfully repressed this unjustifiable spirit of aggression, by shoving the invaders back as they came up; and I also enlisted a foreign legion, in the form of our black friend, with the happiest effect. A small retaining fee bought him over, and he brought his official stick to bear, more unceremoniously than I could have desired, upon the aggressionists. Finally, our territory was secured to us unviolated, and under the protectorate of the black man, to whom, next day, I presented a blue shirt as a token of homage. We prepared to sit down under our own vine and our own fig-tree. The room was empty, and whitewashed; but a letter to the Hotel de l'Orient was written, punched with holes, and fumigated (one of the Tyrant's mummeries), and then, being delivered, it brought us, in less than an hour, two capital basket-work beds, bedding, chairs, table, a looking-glass, basins and jugs, knives, forks, plates, and spoons, candlesticks, candles, goblets, salt and pepper, with the landlord's inquiry when he should send coffee and rusks, when dinner, and what wines we would have. "Holding up our glasses against the glowing light in which the beautiful Mediterranean was then glistening like emeralds, we began to think that Africa was not such a bad place after all." And I hope that an enlightened reader will instantly see the evident justice that reserved an entire room for such civilised colonists as myself and the American, while the other travellers, people who sent for no basket-beds, candles, and wine, were crowded into the other apartments.

But to reverse my phrase, the place had its disagreeables as well as its comforts, and the chief of the former was the mosquito. That fiend bit me awfully that first night. He blotched my cheeks, he tightened one eye, and he entirely varied the plan of my nose, and, with a refinement of malice, he made me his *co'laborateur*, for in my sleep I scratched myself at each of his attacks, and the looking-glass seldom reflected a more objectionable visage than I offered it in the morning. There were some rather pretty Greek girls, too, in one of the rooms, where the family had established itself with a promptitude similar to our own (the Greeks were, in old time, the best colonists in the world), and it was aggravating to be presented before their black eyes in such guise. Not, of course, that one cared about one's appearance, but one naturally desired to give foreigners a favourable idea of an Englishman. However, I accepted the situation, and not only risked the character of England by exhibiting myself to my companions in travel, but I gave those Greek young ladies (they were nieces to a saddler in Cairo, and going to settle there) a perfectly fair half of some very bad eau-de-Cologne, which I had purchased in that city of one of the "only original" manufacturers. Also, desirous, as became a traveller, to obtain all the information in my power, I inquired of the eldest, who spoke rather worse Italian than I did, whether she intended to marry a Mahometan husband; whereupon she twisted her very pretty face into such an ugly one, directing her look at a harmless Turk smoking opposite, and she made a gesture indicative of her readiness to spit in his face at the shortest notice. The fact is at the service of any statesman who, in the approaching Session, may wish to remark upon the feelings existing between the Greeks and the Turks.

Between bathing my wounds, making up my diary, smoking, slapping the mosquitoes on the wall with my slipper, as they rested, gorged with the ruddy drops that warmed my nose, ascertaining from my American friend who the softs and the hards and the loco-focoes were, and disabusing his mind of the idea that our aristocracy beat and kicked untitled people, when they came in their way in the streets, at balls, or elsewhere, the Tyrant's sentence was worked out, and, on the morning of Christmas-day, a capital omnibus—better than most of these the French company is being cheated into buying—awaited the American and myself at the door of the Quarantine, where also was the German landlord of the hotel—a most obliging and excellent fellow, who, let me say, fulfilled the idea of a host (distinct from that of a man whose business it is to get as much as he can out of you, and who never thinks of you again after his parting smirk) as well as anybody I ever knew. His guns, his books, his pipes—anything he thought would gratify me—were offered me for my voyage up the Nile; and he was more reasonable in his charges than the most uncivil Englishman could have been. We rattled off, and soon reached the fine oblong which forms the chief ornament of the Frank part of Constantinople. Christmas-day had brought out the flags from the roofs of the Consulates—English, French, Portuguese, American, and others. Later in the day the guns from the Christian vessels in the harbour fired salutes.

I am not going to insult the intelligence of the reader by supposing that in these days of books, lectures, dioramas, entertainments, and illustrated newspapers, any civilised person can need to be told anything about Alexandria. For myself, I only wish that I had read Mr. Kingsley's "Hypatia" before I went there, as it would have given a new significance to the deeply-interesting localities. The journey to Egypt will soon be one of everybody's duties. It is performed so easily: you drop down to Marseilles, and thence a capital French steamer lands you in seven or eight days at Alexandria—there is no quarantine for you, coming thus, and you will take the railroad, or, if you like, the excellent English steamer, and run up to Cairo as pleasantly as possible—*do* the Pyramids, Sphynx, petrified forest, egg-hatching, mosques, kabobs, bath, bazaar, whirling dervishes, and the rest of the routine, and be back again in your counting-house long before you have been missed, I dare say. I am only going to tell how I spent the only Christmas-day I ever passed, or am likely, I suppose (though they say every one drinks twice of the Nile), to pass, in Africa. I had a whimsical notion of trying to make the day resemble that which my friends were spending in England, but there were some difficulties in the way.

A French breakfast, with wine, omelettes, and so on, could hardly be avoided, much as I might have wished for black toast, thick bad coffee, and a raw kidney or so, London fashion. Nor could I stick up my reading-easel, with that day's *Times* upon it; for the ladies at our *table-d'hôte* seemed to think that you ought to talk to them, instead of improving your mind; besides, the nearest approach to the *Times* was a little French Alexandrian paper that did not smell half so nice as the fruit on the table. Before this I had a shampoo bath, a thing I do not usually have on Christmas-day; but very excusable after the quarantine. After breakfast, the sense of freedom made it impossible to resist a donkey-gallop, and so, with a long cigar in my mouth, a straw hat, and a blouse, I mounted a very fine jackass, with an enormously red padded pommel, and, followed by a shrieking donkey-boy, I had a capital jolt through the principal streets of the city. This, again, none of my friends, I think, can say they ever saw me do in London on Christmas-day. Coming back to the hotel, however, I found that there was one thing in which an African Christmas might be made to resemble an English one. There was a church, and thither I went. It was a small, mean-looking place, made by knocking two houses into one; the service was meagrely performed; and even the "Herald Angels," which from boyhood one indissolubly associated with the worship of that day, was wanting, for there was no music. Opposite was a Roman Catholic Church, where no such "maimed rights" were to be noted. I ought to say that a handsome edifice for the Church of England congregation was in progress, or rather its progress, which had been considerable, was arrested for want of funds—it may now be complete. However, it was something to have joined in the service which was occupying friends at home at that hour. Then my American companion and I, finding that King Quarantine had made us lose the English steamer to Cairo, and being unwilling to wait for the next, occupied our afternoon in bargaining with a variety of dragomen for transit in one of the small boats of the Nile. We reclined on cushions at the open window, and while watching the motley-coloured life of Alexandria, where nearly all costumes in the world pass under your window, we diplomatised, and meditated, and displayed much wisdom; and were finally both disappointed and cheated, as we contrived to get into Cairo, not in the six or seven days in which our captain pledged himself to be there, but in eleven, and about two hours before the next English steamer. Then we went to Pompey's Pillar, as we know we are not to call it; and my companion, who was rather an iconoclast, hammered for half an hour and knocked off a little piece, and I gave half a piaster to a plump Arab girl for a much finer piece, which, if it had not come off the pillar, looked as if it had, and, anyhow, makes a very good paper-weight. Returning, we remarked on the quays that the donkeys not used for pleasure excursions (our animals were as sleek and spirited as ponies), but for dragging up corn and the like, were very ill treated, and my companion, in a spirit of retributive justice, observed that he was very glad that their owners were, in turn, oppressed by the deceased if not lamented Abbas Pacha.

Up to this point I had not been able to carry out my English idea with any great exactitude. But the rest of the day was somewhat more like a home Christmas, for although at dinner—a very good one—no turkey smoked upon the board, no sausages sent up a noble odour, no plum-pudding crumbled, in its richness, beneath the fork, I demanded of my German host a bottle of port wine. He looked thoughtful, and rather inclined to recommend something else; but, on my persisting, he disappeared with a smile, and returned with a black bottle. I was to drink as much or as little as I liked, and "it was not going into my bill." The wine was capital, and worthy of the healths to which a good deal of it—in fact, while speaking on the subject, I may as well say all—was devoted. And, finally, the day was rendered more English still through the cordial hospitality of an American family, who were so kind as to invite me to join the only evening party much worth the trouble of dressing for—a child's party. And when I think of the solemn oath of eternal friendship sworn that night, after certain dances, between me and a darling little American fairy of six years old, with the largest of blue eyes and the smallest of white slippers, I utterly refuse to believe that Mr. Pierce's election manœuvres will ever produce a state of things that shall saw enmity between me and that young lady, or between my people and her people. The thing is impossible.

And so ended my African Christmas-day, and I am sure I am very much obliged to anybody who has been good enough to pretend to take any interest in my account of it.

A HYMN FOR CHRISTMAS MORNING.

It is the Christmas time,
And up and down 'twixt heaven and earth,
In glorious grief and solemn mirth,
The shining Angels climb.
Thus unto every thing
That lives and moves, for heaven, on earth,
And has its dole of grief or mirth,
The shining Angels sing.

"Babes, new born, undefiled,
Sleep safely through this Christmas-tide,
In lowly house or palace wide,
For Jesus was a child.
O young men, bold and free,
In peopled town or desert dim,
When ye are tempted like to Him,
'The man Christ Jesus,' see.

"Poor mothers, with your hoard
Of endless love and countless pain,
Remember all her grief, her gain—
The mother of the Lord
Mourners, half blind with woe,
Look up: One standeth in this place
And by the pity of his face
The Man of Sorrows know.

"Travellers in far countrie,
O think of Him who came, forgot,
To His own—and they received Him not—
Jesus of Galilee.
O, all ye who have trod
The wine-press of affliction, lay
Your hearts before His heart this day:
Behold the Christ of God!"

D.

RETURNING FROM CHURCH.

(See the Illustration.)

If ever a picture spoke for itself, and needed not the aid of an explanation, it is Mr. Thomas's "Returning from Church." But if one is to speak of it, one has a right to say that he has hit off the comfortable, well-to-do English family marvellously. Mamma's warm tippet, and her look in at the window, are admirable. Jim (that monkey-faced boy's name must be Jim, it can't be anything else) is staring down into the kitchen, with thoughts of the pudding; and it is to be feared that, utterly regardless of the sermon he has heard on self-denial, the vulgar and greedy little creature is about to remark "I say, aint it a big un?" The elder lad, pulling the bell, is amused with the little one—evidently the pet—who is glad to get home. The service was very long, and it's so cold. As to that burly parent of theirs, he ought to be ashamed of himself. His whole appearance bespeaks a man of business, who understands political economy, and the principles of demand and supply; and yet here he is, pulling out money—silver—to give to that begging child, instead of explaining to her that her poverty is the logical result of somebody's improvidence, and that for such cases the union is the proper resource. He hasn't a bit more sense of the right way of treating her than has the pretty little girl of her own age who is compassionately beholding her shivering and naked feet. If there is any excuse for him—and at Christmas we must be charitable—it is in the sight of his own cheerful, well-clad children, about to sit down to a capital dinner. Well, we suppose he must be let off. Perhaps he has been listening to the sermon, and has misinterpreted the admonition to be kind and helpful, and "not to turn thy face from any poor man." We should have expected more enlightenment from a man of business. He does not even matter that the police ought to keep the street clear of beggars, and seems rather pleased than not at having to give away money. Is this a true type of our heads of families? If so, they sadly want a few "guardians of the poor" to harden them into economic principles.

CHRISTMAS-DAY.

The old church-bells are ringing,
A thousand memories bringing
Of the time long past away!—
Of dear ones—ours no longer,
But who, with love made stronger,
Look down on us to-day.

Go we, and humbly praying,
Our Saviour's precept saying,
"O God! be we forgiven,
As we forgive each wronger;"
And those in love made stronger
Will hear us up in heaven.

Pray we for one another—
For Lazarus, our brother—
For Dives, our rich neighbour.
Pray that the weak grow stronger—
Pray that the strong no longer
Keep from his proper labour.

There's work in the great city
For tenderest love and pity,
To-day, to-night, to-morrow:
Neglect the work no longer,
Each hour the wrong grows stronger
In bitterness and sorrow.

Hold not the hand from giving;
Think not there's any living
Beneath thy care, O brother!
To-day, be sure the teaching
Of Christ be more than preaching—
Do good to one another!

GEORGE G. LEIGHTON, RED LION SQUARE.

LONDON:--- RETURNING FROM CHURCH, CHRISTMAS MORNING. --- BY G. THOMAS.

BRINGING IN THE BOAR'S HEAD. --- BY J. GILBERT.

BRINGING IN THE BOAR'S HEAD.

(See the Illustration.)

I owe to great admiration for the pig. Alive or dead he is with me a decided favourite. In his babyhood he is much more beautiful than the lamb in whose praise poets have exhausted their fancies, and a litter of thirteen round rosy-poky little fellows and their ponderous mamma form a much more delightful picture than a stupid-looking ewe and her one or two long-shanked spasmodic-afflicted progeny. I have often felt something akin to sorrow when looking at a delicate sucking pig—beautiful in death, reposing on its bier of bone earthenware; and indeed I know not how far I might have been committed by my sympathy, had not recollections of similar sacrifices occurred to me—visions of brown and savoury pigs at whose immolation I had assisted. I am not the only man who has been thus touched by sucking pig, for I remember finding a *gourmand* of my acquaintance so rapt in the contemplation of a picture by Morland, that it was not until I had tapped him on the shoulder that he became aware of my presence. "Fine picture," said I; "very fine. I did not know that you cared for painting." "Nor do I, generally," he replied; "but look at those little pigs! By George! how they would eat roasted!" I presume Morland would have thought that a very high compliment, and I am sure my friend did.

Imagine the sucking pig to have grown into a porker, dairy-fed. Its adolescence has increased its value without diminishing its delicacy or detracting from its beauty. Pickled, it is considered a fitting companion for the aristocratic capon—its mild oleaginousness compensating for the dryness of the fowl; but when found in companionship with the humble cabbage we are more sensible of the advantage of its association, making, as it does, a banquet for the poor man's board.

Roasted—imaginary odours float about my nostrils as I write the word—roasted loin, brown as an Egyptian beauty, the crackling seored and gaping to invite the knife, and the rich deep-coloured gravy sending up a reek that would put "an appetite beneath the ribs of death." The knife is plunged into it—a noise like breaking ice, a separation of the parts, and then the delicate muscle is revealed to us. Remembrance is hunger!

Roasted leg—so valued that it is offered up with myrrh and frankincense—that is sage and onions. If King Jamie had ever tasted—nay smelled—of that divine dish, his brutal prejudice against pork must have been removed. I have a faith which nothing shall shake out of me—that if the gods of the old mythology ever did eat animal food it was roast pork.

Our pig has come of age—bacon age. He has eaten his terms of barley-meal and peas, and is prepared to fulfil that destiny to which he was ordained. He has proved his gratitude for the care of man by growing to forty stone—life has become a burden to him, and he grunts to be "cured." Great creature! Let his wish be gratified!

And now his capacious sides roof the kitchen, and his pendent hams hang like pendants from the huge beams. From ham and flitch great cantles are cut out and are now making the ingle musical with their spluttering and fizzing, as Mary, half-blinded by the blazing fire, turns the slices on the gridiron. Now they appear garnished with what seem to be buttons of gold, but which are in reality eggs laid for the ocrus on by Dame Partlett, whose clucking I heard when I first opened my eyes in the morning. Taking would now be criminal—no noise but of knife and fork.

It is from Giles Jolter's cottage door that that self-same odour comes; for good honest Pig is no respecter of persons. He is not like my Lord Deer, who never visits any family that can't treat him with wine sauce; or like the Honourable Mrs. Southdown, who prefers to be attended by her page Currant-jelly. Honest Pig has no such fancies. A little mustard to make you look sharp, or a dash of vinegar that you may relish him the more; or, on very high days and holidays, a spoonful of apple-sauce, to induce you not to belong to a goose-club, is all honest Pig asks of his entertainers.

Unless, by-the-by, at Christmas time, when in old Halls and at College tables his head is made the head dish of the feast, why, then he thinks fit to be perfumed with rare spices and sweet herbs, to be worthy of the high company of whom he is about to become a part. Then he decks himself out with garlands of red-berried Holly, and bay and rosemary, and allows none but the Chief Cook, with his side-arms and in full uniform, to conduct him to his place of honour. The song which is sung to his glory is not altogether of common mother's English, but is seasoned, as it were, in honour of Christmas time, with good church Latin. This is the height of Pig glory; and so we will take our leave of him, while singing the old carol, sung a long time ago:—

> "The boar's head in hand bear I,
> Bedeck'd with bays and rosemary;
> And I pray you, my masters, be merry.
> Quot estis in convivio
> Caput apri defero
> Reddens laudes Domino.

[So say we, all of us. For mirth and good cheer let us be thankful always!]

> "The boar's head, as I understand,
> Is the rarest dish in all this land,

[Right, old minstrel! if it be of Shrewsbury curing.]

> Which, thus bedeck'd with a gay garland,
> Let us servire cantico
> Caput apri defero, &c.
>
> "Our steward hath provided this
> In honour of the King of Bliss,
> Which on this day to be served is
> In reginensi atrio."

And for the same reason, and in grateful acknowledgment of the good and plenty which is about us, let the poor be made partakers in the general festivity, so that the King of Bliss may be honoured in the way which he has commanded homage should be paid to him.

M. L.

CHRISTMAS IN AMERICA.

BY HOWARD PAUL.

We need not tell the reader that the general manner of celebrating Christmas-day is much the same wherever professors of the Christian faith are found; and the United States, as the great Transatlantic offshoot of Saxon principles, would be the first to conserve the traditional ceremonies handed down from time immemorial by our canonical progenitors of the East. But every nation has its idiocratic notions, minute and otherwise, and it is not strange that the Americans, as a creative people, have peculiar and varied ways of their own in keeping this, the most remarkable day in the calendar. The English, more substantial in their perpetuation of ancestral customs, respect the same usages, invest the day with the usual forms, and go on from year to year in the time-honoured footprints of the past. The Americans now and then add a supplemental form to the accepted code—characteristic of the mutable and progressive spirit of the people—though there exists the church-service, the conventional carol, the evergreen decorations, the plum-puddings, the pantomime, and a score of other "demonstrations" that never can legitimately be forgotten.

Society generally seem to apportion the day thus: church in the morning, dinner in the afternoon, and amusements in the evening. The Christmas dinners concentrate the scattered members of families, who meet together to break bread in social harmony, and exchange those home sentiments that cement the happiness of kindred. To-day the prodigal once more returns to the paternal roof; the spendthrift forsakes his boon companions; the convivialist deserts the wine-cup. The beautiful genius of domestic love has triumphed, and who can foresee the blessed results?

Parties, balls, and fêtes, with their endless routine of gaieties, are looked forward to, as pleasures are, the wide world over; and all classes, from highest to lowest, have their modes of enjoyment marked out. Preparation follows preparation in festal succession. Sorrow hides her Gorgon head; care may betake itself to any dreary recesses, for Christmas must be a gaud!

There is generally snow on the ground at this time; if Nature is amiable, there is sure to be; and a Christmas sleigh-ride is one of those American delights that defy rivalry. There is no withstanding the merry chime of the bells and a fleet passage over the snow-skirted roads. Town and country look as if they had arisen in the morning in robes of unsullied white. Every house top is spangled with the bright element; soft flakes are coquetting in the atmosphere, and a pure mantle has been spread on all sides, that fairly invites one to disport upon its gleaming surface.

We abide quietly within our pleasant home on either the eve or night of Christmas. How the sleighs glide by in rapid glee, the music of the bells and the songs of the excursionists falling on our ear in very wildness. We strive in vain to content ourself. We glance at the cheerful fire, and hearken to the genial voices around us. We philosophise, and struggle against the tokens of merriment without; but the restraint is torture. We, too, must join the revellers, and have a sleigh ride. Girls, get on your furs; wrap yourselves up warmly in the old bear skin; hunt up the old guitar; the sleigh is at the door, the moon is beaming. The bells tinkle, and away we go!

There is no such jollity on earth as a sleigh-ride. River excursions on the bluest of streams, pic-nics in the floweriest of dells, harvest-homes among the brownest of fields, days in the field, or by the brook with trout, pickerel, and all the angler's heart could hope for, are all very well, but they seem monotonous and weary when compared with a dashing old-fashioned sleighing bout. If mankind ever made up its universal mind to be agreeable, certainly it has now. Thousands of sleighs of all patterns, like full-breasted swans, antelopes, Poovah bears, and cars of Juggernaut, filled with the gayest of lads and lasses, are skimming through the feathery avenues. A myriad bells, on the fleetest of horses, ring changes that could only denote an excess of merriment. The very air is palpitating with the music-throb wildly sounding far and near. The stars, twinkling in a sky unclouded, shed a subdued light on a scene more vivid and joyous than our poor pen could hope to illustrate.

An old English legend was transplanted many years ago on the shores of America, that took root and flourished with wonderful luxuriance, considering that it was not indigenous to the country. Probably it was taken over to New York by one of the primitive Knickerbockers, or it might have clung to some of the drowsy burgomasters who had forsaken the pictorial tiles of dear old Amsterdam about the time of Peter de Laar, or Il Bamboccio, as the Italians call him, got into disgrace in Rome. However this may be, certain it is that Santa Klaus or St. Nicholas, the kind Patron-Saint of the Juveniles, makes his annual appearance on Christmas-eve, for the purpose of dispensing gifts to all good children. This festive elf is supposed to be a queer little creature, that descends the chimney, viewlessly, in the deep hours of night, laden with gifts and presents, which he bestows with no sparing hand, reserving to himself a supernatural discrimination that he seems to exercise with every satisfaction. Before going to bed, the children hang their newest stockings near the chimney, or pin them to the curtains of the bed. Midnight finds a world of hosiery waiting for favours; and the only wonder is that a single Santa Klaus can get around among them at all. The story goes that he never misses one, provided it belongs to a deserving youngster, and morning is sure to bring no reproach that the Christmas Wizard has not nobly performed his wondrous duties. We need scarcely enlighten the reader as to who the real Santa Klaus is. Every indulgent parent contributes to the pleasing deception, though the juveniles are strong in their faith of their generous holiday patron. The following favourite lines graphically describe a visit of St. Nicholas, and, being in great vogue with the young people of America, are fondly reproduced from year to year:—

> 'Twas the night before Christmas, when all through the house,
> Not a creature was stirring, not even a mouse;
> The stockings were hung by the chimney with care,
> In hope that St. Nicholas soon would be there.
> The children were nestled all snug in their beds,
> While visions of sugar-plums danced through their heads,
> And mamma in her kerchief, and I in my cap,
> Had just settled our brains for a long winter's nap,
> When out on the lawn there arose such a clatter,
> I sprang from my bed to see what was the matter.
> The way to the window I flew like a flash,
> Threw open the shutters, and threw up the sash;
> The moon on the breast of the new-fallen snow
> Gave the lustre of mid-day to objects below
> When what to my wondering eyes should appear
> But a miniature sleigh and eight tiny reindeer,
> With a little old driver, so lively and quick,
> I knew in a moment it must be St. Nick.
> More rapid than eagles his coursers they came,
> And he whistled, and shouted, and called them by name—
> "Now Dasher, now Dancer! now Prancer, now Vixen,
> On Comet! on Cupid, on Donder and Blixe
> To the top of the porch, to the top of the wall,
> Now dash away, dash away! dash away all"
> As the leaves that before the wild hurricane fly,
> When they meet with an obstacle, mount to the sky;
> So up to the house-top the coursers they flew,
> With the sleigh full of toys, and St. Nicholas too.
> And then in a twinkling I heard on the roof,
> The prancing and pawing of each little hoof.
> As I drew in my head and was turning around,
> Down the chimney St. Nicholas came with a bound.
> He was dressed all in fur from his head to his foot,
> And his clothes were all tarnished with ashes and soot.
> A bundle of toys he had flung on his back,
> And he looked like a peddler just opening his pack
> His eyes, how they twinkled! his dimples, how merry!
> His cheeks were like roses, his nose like a cherry;
> His droll little mouth was drawn up like a bow,
> And the beard of his chin was as white as the snow
> The stump of a pipe he held tight in his teeth,
> And the smoke it encircled his head like a wreath
> He had a broad face, and a little round belly
> That shook when he laughed like a bowl full of jelly.
> He was chubby and plump—a right jolly old elf:
> And I laughed when I saw him, in spite of myself.
> A wink of his eye and a twist of his head
> Soon gave me to know I had nothing to dread
> He spoke not a word, but went straight to his work,
> And filled all the stockings—then turned with a jerk,
> And laying his finger aside of his nose,
> And giving a nod, up the chimney he rose;
> He sprang to his sleigh, to his team gave a whistle,
> And away they all flew like the down of a thistle
> But I heard him exclaim, ere he drove out of sight,
> "Happy Christmas to all, and to all a good night."

A curious feature of an American Christmas is the egg-nogg and free lunch, distributed at all of the hotels and cafés. A week at least before the 25th, fanciful signs are suspended over the fountains of the bars (the hotel-keepers are quite classic in their ideas) announcing superb lunch and egg-noggs on Christmas-day. This invitation is sure to meet with a large response from the amateur epicures about town, who ever on the *qui vive* for a banquet gratis, flock to the festive standard, since it has never been found a difficult matter to give things away, from the time old Heliogabalus gastronomed in Phœnicia up to the present hour. A splendid hall in one of the principal hotels, at this moment, occurs to us. A table, the length of the apartment, is spread and furnished with twenty made dishes peculiar to the Christmas *cuisine*. There are *charodens* and *fricassees*, *ragouts* and *calipee*, of rapturous delicacy. Each dish is labelled, and attended by a black servant, who serves its contents on very small white gilt-edged plates. At the head of the table a vast bowl, ornamented with indescribable Chinese figures, contains the egg-nogg—a palatable compound of milk, eggs, brandy, and spices, nankeenish in colour, with froth enough on its surface to generate any number of Venuses, if the old Peloponnesian anecdote is worth remembering at all. Over the egg-nogg mine host usually officiates, all smiles and benignity, pouring the rich draught with miraculous dexterity into cut glass goblets, and passing it to the surrounding guests with profuse hand. On this occasion the long range of fancy drinks are forgotten. Sherry-cobblers, mint-juleps, gin-slings, and punches, are set aside in order that the sway of the Christmas draught may be supreme. Free lunches are extremely common in the United States, what are called "eleven o'clock snacks," especially; but the accompaniment of egg-nogg belongs unequivocally to the death of the year.

The presentation of "boxes" and souvenirs is the same in America as in England; the token of remembrance having an inseparable alliance with the same period. Everybody expects to give and receive. A month before the event the fancy stores are crowded all day long with old and young in search of suitable *souvenirs*, and every object is purchased, from costliest gems to the tawdriest *babiole* that may get into the market. If the weather should be fine, the principal streets are thronged with ladies shopping in sleighs; and hither and thither sleds shoot by, laden with parcels of painted toys, instruments of mock music and septuagenarian dread, from a penny trumpet to a sheepskin drum.

Christmas seems to be a popular period among the young folk for being mated, and a surprising number approach the altar this morning. Whether it is that orange-flowers and bridal gifts are admirably adapted to the time, or that a longer lease of happiness is ensured from the joyous character of the occasion, we are not sufficiently learned in hymeneal lore to announce. The Christmas week, however, is a merry one for the honeymoon, as little is thought of but mirth or gaiety until the dawning New Year soberly suggests that we should put aside our masquerade manners.

In drawing-room amusements society has a wealth of pleasing indoor pastimes. We remember the sententious Question *réunions*, the hilarious Surprise-parties, Fairy-bowl, and Hunt-the-slipper. We can never forget the vagabond Calathumpians, who employ in their bands everything inharmonious, from a fire-shovel to a stewpan, causing more din than the demons down under the sea ever dreamed of.

What, then between the sleigh-rides, the bell-melodies, old Santa Klaus and his fictions, the egg-nogg and lunches, the weddings, and the willingness to be entertained, the Americans find no difficulty in enjoying Christmas-day. Old forms and new notions come in for a share of observances; and the young country, in a glow of good humour, with one voice, exclaims, "*Le bon temps viendra!*"

THE WOMAN WHO IS BURIED ALIVE.

BY HORACE MAYHEW.

THERE is one class of women that always has my most especial pity. What they suffer no one can tell. Patient, enduring, only complaining at the last moment, and then only in tones of the softest expostulation, they take rank amongst the martyrs of society. I have known many such a martyr, and my bachelor's soft heart always bleeds for them. I know what the intensity of their secret sorrows must be; all the more intense because they are shut up, and do not come to the window, and have a good cry at once, but nurse themselves in dark corners, and weep in silence; and it is in consequence of their nun-like privacy of grief that my compassion is always given like a ready tribute, to them.

They are, in fact, the nuns of private life, and they live in convents. They roam most gloomily from cell to cell—gliding, rather than walking—and you see them growing thinner and thinner, paler and paler, every day, until it is a wonder how they live at all. What becomes of most of them it would be, perhaps, a melancholy history to inquire. Some waste away; some, it may be, are removed to another convent, to renew their sufferings elsewhere; some disappear, like the fics, you do not know how; and a few, perhaps, recover.

I am alluding to the class of much-to-be-pitied women who, it is well known, are subjected to a life of the most dreadful seclusion. To use the term these poor unfortunate creatures apply to themselves, they are women who are "buried alive."

Mrs. Flaunce Flounders belongs to this much-persecuted class. She is a short, thick person, whose waist, no longer so slim as it used to be, has puzzled many a partner in waltzing. Her colour is what may be called florid. She has already left the earliest stages of womanhood, and is now rapidly advancing towards that middle part of life's journey at which the milestones do not count after thirty-nine. Her spirits are good, and her appetite far from delicate. I have seen her at dinner, when I should say her plate was filled oftener than mine; and at supper I have envied her not less for the magical rapidity with which, not always waiting to be asked, she has taken wine with nearly everybody. She has a hand with long tapering fingers, that seem to possess a magnetic power for attracting a bottle of champagne; and I have always known where to find a bottle, when sent on a marauding expedition by some young ladies, by fixing my eyes steadily on the waving feathers of her gorgeous turban. As the *panache* of Henry IV. pointed on the battle-field the way to glory, so do the ornaments of Mrs. Flaunce Flounders' head-dress invariably indicate to me, in a supper-room, the exact spot where the champagne (and the best, too) is to be found.

It was two or three days after a rencontre like the above when, having occasion to call upon her, I was astounded, perfectly astarted, at her revelation that she was neither more nor less than "a woman buried alive." I looked round her room—a handsome drawing-room in Malmesbury-square—and could hardly believe my senses. It was a spacious apartment, luxuriously furnished; with looking-glasses that allowed you to remove the dust off your boots, and looking glasses that enabled you to compose the topmost curl of your last new wig. It had parrots, birds, flowers, gold-fish—everything to make it comfortable. There were chairs, the cushions of which sprang up like Jack-in-the-boxes the moment you touched them; there were sofas so rapturously soft that, if it were not the cruelty of the idea, you might almost imagine they were stuffed with babies! My eyes rapidly skimmed over faultless paintings from Italy and Newman-street—over priceless vases from Sevres and the Lowther Arcade—over Lyons silks, tiger hearth rugs, and carpets that had the genuine stamp of Turkey about them;—and "Really," I said to myself, "if ever I were to be interred with the breath still in me, I do not know of a prettier sepulchre that I could die with comfort in than this."

"Yes, Sir," exclaimed Mrs. Flounders, in a voice that would have brought tears into the eyes of an income-tax commissioner, "I am a woman literally, shamefully, buried alive!"

Again and again I stared. There was the same high florid complexion that one would almost say was artificial, only one's natural politeness stifles the utterance of such uncomplimentary thoughts. There was the same double chin, that looked not unlike a coach-spring, connecting, as it were, the head with the body of the carriage, which, in this instance, was as majestic and erect as ever. There was, also, the same comfortable, corporeal fulness that suggested the vulgar idea that the lining of the same carriage was Looked after daily with not less care than the painting of the outside; and the result of my curious examination was that, at all events, the interment seemed to agree remarkably well with the victim.

"Indeed!" was all I faintly uttered.

"Yes, Sir! buried alive!" she said, turning her eyes up to a beautiful ormoulu chandelier hanging from a porcelain Cupid above her. "I go nowhere! I am a perfect prisoner! I am deprived of every little amusement—have, indeed, taste for none! I do not see a single soul! Every one is out of town! You are the only person that has called upon me for the last two days—and I am sure it is very kind of you. I am sinking daily—I'm losing spirits, energy, appetite, flesh, everything! I cannot do a thing! I cannot eat—I cannot sleep—I cannot sing—I cannot read! I cannot even cry! This very morning I tried to go on to the balcony for a little fresh air, and—will you believe it?—I nearly fell over the railings into the street, I was so weak from the exertion! Would you be kind enough to hand me that vinaigrette? Thank you."

All this was muttered in a dreamy, lackadaisical voice, that I could scarcely believe it was our dear Mrs. Flounders talking—she whose rather mercurial tongue is generally heard at a theatre high above Forde's, or Paul Bedford himself. After a pause, that I was afraid to break, she continued. "Tell me, there's a good soul, tell me—for I hear absolutely nothing in this great big coffin—is it true that Lady Concertina's at Brighton? Have you heard of the grand dinners that the Epergnays are giving at Spa? And is there any truth in the report that the Blancmanges have resumed the *petits soupers* that were so popular last season at Paris? Have the Moulds gone at last up the Rhine? Do you know whether Mrs. Migraine has left Naples since that little *fracas*? And can you tell me whether those horrible Blew D'Evilles have actually gone to besiege poor dear old gouty Lord De Sceuvray in his castle in the north? Oh! I must tell you I received a terrible letter from your old friend Mrs Humdrum yesterday. She says she's buried alive at Wiesbaden—it seems there isn't a soul there this year! I'm sure it can't be worse than this London! It's too bad! Was there ever a person so buried alive as I am?"

I tried to console her with the best cooling verbal restoratives I could summon to my aid, and, after assuring her that there was a considerable number of lords and ladies, with a marquis besides, and a Royal duke into the bargain, who, to my knowledge, were all condemned to a similar kind of vital interment, she revived a little. Then I thought I could with safety leave her, the more especially as I noticed a big-calved Johnny bringing in for luncheon a heavily laden tray, that discharged, as I thought, a most savoury aroma of roasted partridges round the room. Poor woman! It was but right, if she was "sinking daily," that she should have something to cling to—even if it was only the leg of a roast partridge!

Some months later, in December, I met this same Mrs. Flaunce Flounders at Brighton. Notwithstanding the circumstances of her melancholy sepulture, she was still alive, and apparently in extremely rude health—so rude as to be almost vulgar. Her cheeks were of that glowing redness that you warmed yourself, as at a kitchen fire, merely by looking at them. And her *embonpoint* was such that I quite pitied the poor pony that was waiting for her at the door. She was in her riding-habit, and had only time to shout at me a few words of friendly greeting as she squeezed by in the narrow passage. "Just going out, you see, for a ride—should die of *ennui* if I stopped at home. No one here! Every one gone!—Am anxious to get back—am completely buried alive in this stupid, methodical, stuck-up place." And away she went to saddle the poor pony with the full weight of her burial.

From that time I made a point of studying Mrs. Flounders' complaint. I found it consisted in an unconquerable restlessness to be at a certain place where other people were, and where she was not. This restlessness led to peevishness—the peevishness led to loss of appetite—and loss of appetite would lead, there is no doubt, if only persevered in long enough, to loss of food, and that loss would end in time—there was not the smallest hesitation in coming to that conclusion—in loss of life. This is what makes the complaint so peculiarly dangerous. Therefore, directly a woman is buried alive, removal is instantly necessary. You must knock down the door of her tomb, and let her escape that very moment. If she is buried alive, because everybody is going out of town, you must let her go out of town. If she is anxious to get back to town, because the opera has opened, and the season has begun, by all means let her return. There is no other remedy that will yield the slightest relief. If you do not, her malady soon assumes an alarming form; her cries, her groans, her complaints become so truly piteous, that the house which she happens to be buried alive in quickly becomes unbearable to all those who are sharing her sepulchral captivity with her. The servants fly from her; her children approach her with dread and trembling; the nurse secretly dares to venture near her with the baby even in her arms; she is "out" to everybody; she neglects her appearance—does her hair anyhow—leaves her letters unopened—remains for hours in bed—lunches, dines, in her bed-room. At tea, perhaps, she makes her appearance, but it is in her morning wrapper. Where, indeed, is the use of her dressing in a place where she is buried alive? Hysterical fits, at last, supervene, and at regular intervals—mostly at meal-times, and invariably when a stranger is present. It is then that the disease is at its crisis—the sufferings of the poor creature have attained their awful climax. The doctor is sent for. He pays two or three visits, pockets his two or three guineas, when the lady, finding in a lucid interval that he clearly does not understand her constitution, refuses to see him any more. It is then that he confesses that the case is a very serious one; in fact, quite beyond the reach of human skill; and he recommends "change of air."

I have watched many delicate persons who are labouring under a desperate attack of premature interment. In every one I have found that it was urgently necessary to have the patient instantly removed. The ravings, which were previously of a desponding and incoherent character, at once cease, and the patient gradually becomes more composed, and at length even rational. She dresses for dinner, and in the evening is strong enough to go to see a pantomime. The attacks, however, vary very much, and delight in developing themselves when least expected. I have known Mrs. Flounders, for instance, complain of being buried alive under some very singular circumstances: once in the middle of a grand public ball, where there were at least two thousand persons in the room, and where there was every possible attraction—champagne supper included; at another time, on New-year's-day, at a charming country-house, full of delightful company, who, strange to say, did not backbite one another; and another time at Her Majesty's Theatre, where there must have been, at least, two Kings, three Queens, and an Emperor and Empress present. The last occasion, I recollect, was at an horticultural fête, where, if you were buried alive, your funeral would at all events take place in the midst of beautiful flowers, and to the sound of military music. Still you cannot account for these things! I have observed Mrs Flounders, when she has been buried alive, to be wandering, absent, depressed, feverish, snappish, and with a wild look about her, as of a person who was being suffocated; but the next moment, after she had been removed to some crowded room, where the mistletoe was hanging, she has all of a sudden breathed freely, and in a few seconds been quite a different person, telling you little bits of scandal about her friends in the most charming manner possible.

It is for the above reasons that I always deeply pity a poor sensitive woman who is buried alive. It is only another way of saying that she is not in her element—that she is inhaling some vulgar, vitiated, unfashionable atmosphere, that her refined nature has not been accustomed to. During that period she is only a corpse! Break down then, I say, the barrier that shuts her out from the world, and let her emerge from her gilded tomb and be once more a beautiful human being! Such is the paramount duty of all persons—who have incomes of not less than £2000 a year!

POSTSCRIPT.—I do not remember a case ever terminating fatally in fashionable life of a woman who was buried alive. On the contrary, it seems to agree with them. For example, take Mrs. Flounders, who, to my knowledge, has been buried alive never less than three or four times every year for the last twenty years, and see how hale and hearty she is! Her figure is as round as ever, and she still enjoys an unimpaired appetite, that, I can tell you, would be anything but welcome at a cheap boarding-house. No; it must be confessed that I do not know of one instance of a woman ever dying under such sepulchral circumstances. But, then, it should be borne in mind that matters have never been pushed to that horrible extremity. No husband has ever been ill-human enough to try the experiment. The poor victim—the dear, delicious angel who was buried alive—has, fortunately, always been liberated in time, or else there is no knowing what might have been the awful consequences!

THE CHRISTMAS CAROL.

(See the Illustration.)

THERE are some who pretend not to believe in merry Christmas, and affect not to care about it;—who will not allow that it is a happier and better time than any other in the whole year, or that their thoughts are more kindly, their sympathies more active, and their self-love less selfish at Christmas-tide than at Midsummer, or Lady-day, or Michaelmas. We think they mistake themselves; or, if they do not, we are very sorry for them. Surely it is pleasant to be remembered by those we love; and at Christmas time how many a kind wish and tender thought go forth from hearth to hearth, for which the busy work and whirl of life had left no other pause! It is pleasant to remember the times which have been; not to regret them, but to gather up all the gracious memories lying with them; perhaps to recall some of their sorrows, by which we may have been chastened and purified; and what time like Christmas-tide for such a retrospect?

It is pleasant, surely, to remember the friends and companions of our youth, and by some kindly act or word to remind them that they are not forgotten; and there is something in the great and general holiday that raises up the spirits of those we love, and makes them to be present with us. Bless the Christmas time!

As we sit in our dark and dusty chamber, made bright to-day by sprigs of holly and mistletoe (we shall increase Mrs. Scrubs our laundress' Christmas-box for her thoughtfulness), we can almost fancy that our grey hair is auburn once again, and that those rows of dusty books are the bright oak panels of our dear old country home. Our pinched-up fire expands into a capacious ingle, and that mixture of coke and slates becomes huge blocks of bituminous coal, and gnarled logs that sparkle and sputter as they are vanquished by the fire. The soot upon the dirty window-panes crystallises, and assumes a thousand shapes of beauty, as though the frost had breathed upon it, and changed it to the pure dew which rises from Cumber Vale! The hum of London streets becomes a measured harmony, and we can hear one of our country-side carols as plainly as though it were sung by the small detachment of our village choir upon which we looked the last Christmas-day we spent in the old home. Fourteen years ago, and yet we can see that group as though they stood before us in the body—Lucy Lot in one of the Squire's lady's left-off bonnets and a white boa made of lamb's tails. She has a pipe like a robin and her

> Bless you, my good gentlemen,
> May nothing you dismay,

rises clear and shrill over all competitors. [Only to think! little Lucy Lot is now the buxom wife of George Weathers, the butcher, and the proprietor of a brace of babies.]

Jenny Ryland is not half such a belle as Lucy Lot. She wears a little modest poke, as they call that rough straw bonnet. True, she has a red whittle; but her frock is a dark brown, and her gloves are of grey worsted. She sings very correctly, notwithstanding she has to shake the chorus out of her little brother Bob, who is all clothes and face. He is a very good boy, and will make a singer in time, but at present a word of three syllables chokes him. If he live to be a man—— [Why, he has lived to be a man—in his own opinion—and, though only nineteen last June, he has been seen walking with Mary Jessop, who lives fellow-servant with his sister at the Hall. Sister has a sweetheart, too—a widower—grocer, cheesemonger, and general dealer. I forgot to say that Bob is by trade a blacksmith.]

There is Charley Brown—his nose the colour of a blue bag. He hates the cold and gives promise of having a bad cold in the head in the morning. He may be saved by egg-hot or toast and ale in the evening, but at present his prospects are gruel. [He did have the egg-hot and the cold and gruel, and still entertains an objection to the weather when the glass falls below zero. He has done the best he could to keep himself warm by adopting the trade of a baker.]

Jack Bray is the tall one of the party. He is only thirteen, but he has a voice like an ophicleide—he is the awkwardest lad in the village—he don't walk, he rolls along, and it is a matter of doubt whether he affects the right-hand ditch or the left-hand ditch. His ultimate destination is certainly one of them. [And Jack Bray has been for a soldier and fought nobly at Alma and Inkerman. He was at the storming of the Redan, where he lost an arm, and has been sent home invalided. He tells stirring stories of his comrades, who, reckless of all but victory, faced dangers and death, knowing that their chances of escape were small indeed. And often, Jack says, as they sat round their scanty fires they have spoken of home and those they left behind to fight the battles of life alone, and have wondered, when the next Christmas time came round, if any would have their poor homes merry for the sake of those who were away doing their country's work. And Jack says they were hopeful—all hopeful; and he has promised to write to them when Christmas time is passed. Let him have a good story to tell countrymen.]

Where are the singers gone? Where the song? Where the old home? Gone! But we have been made happy thinking of the Christmas time.

A CHRISTMAS CAROL, --- BY PHIZ.

CHRISTMAS SUPPLEMENT TO THE ILLUSTRATED LONDON NEWS.

No. 776.] SATURDAY, DECEMBER 22, 1855. [Vol. XXVII.

"GATHERING AS IT GOES," A CHRISTMAS STORY.

Uprising from the street,
Where fall the passers' feet,
With soft and muffled tread,
Like watchers by the dead,
In the yielding snows,
Comes a childish cheer
Sharply on the ear;
As with gleeful shout and song
The snowball rolls along,
Gathering as it goes.

"Want your door scraped, cook?" cried a small voice down the area of a handsome house at the West End one cold wintry morning. I may as well be precise, and inform my readers, who will doubtless take a deep interest in all that concerns the hero I have in reserve for them—that it was Christmas morning, a right old-fashioned Christmas morning—when the snow lay thick upon the ground, and innumerable feathery flakes fell softly on the brilliant white carpet with which the streets were spread, as if in honour of the festive season.

An extraordinary stillness had descended upon the usually noisy thoroughfare; cabs and omnibuses no longer rattled over the pavement, for their wheels appeared to run on velvet, and the horses, like those of Lear's troop, seemed to be shod with felt; even the stern policeman, whose "slow and solemn tread" had an awful echo on the flags, moved like a dark phantom over the pale earth, without a sound to denote the march of his official boots. There were, however, in the absence of the din so familiar to a Londoner's ear, sounds and street-noises that in the sharp frosty air struck the ear with more than ordinary distinctness. Here a group of gossiping servant-girls and strong young fellows with water-pails and cans were assembled round a water-plug which had been set running for public accommodation by the parish turncock; there a group of urchins were lying in ambush round a corner or down a mews snowballing the passers-by and making the air ring with their provoking laughter whenever a well-aimed missile took effect on the glossy hat or well-brushed coat of a staid elderly gentleman, whose withering look of surprise and indignation only increased the boisterous merriment of the young delinquents. At another spot a juvenile party had, by their united exertions, formed a snowball which, by its extraordinary magnitude, excited the wonder of a numerous assemblage of young spectators. The butcher's apprentice stood with gaping mouth lost in admiration of its size, and wholly regardless of that sweetbread in the tray on his shoulders which Sir Twamley Tiffin had specially ordered for his breakfast; the doctor's boy, too, who had been dispatched *ventre à terre* to distribute to his master's patients their morning draughts and evening pills, paused—mercifully paused—on his way to examine and measure in his mind's eye that monstrous globe which he mentally compared to a gigantic bolus. There was, however, one amongst the crowd who gazed at the snowball with the eye of a philosopher a man of the world—I say a *man*; for, though Joe Gimber had not yet seen his twelfth birthday, he was a perfect specimen of the precocious London street boy, whose intellect had been matured by hunger and sharpened by necessity. He had obtained from "the cook" to whom his application had been made through the area railings an order to scrape and clear away the snow from the door-steps, and, having completed the job to his own satisfaction, was now, while waiting for the modest remuneration of his labour, watching, with a combination of childish interest and cool calculation, the progress of accumulation in the snowball as the boys rolled it to and fro on the snow.

"It grows bigger and bigger every turn" said the little fellow to himself, as he leant contemplatively on his broom. "That's the way to git to be a great man!"

The attitude and something in the features of the young speculator attracted the notice of Mr. Maudsley, the owner of the house, who was standing at his parlour window at the moment; and, by his order, a servant intimated to the ragged sweeper that he was to come into her master, who wished to speak to him. Somewhat surprised, but nothing daunted, Joe followed the servant into the hall, and, having carefully deposited his shovel and broom on the door-mat, marched directly into the parlour, where he was told he would find Mr Maudsley.

It would not be easy to imagine a more striking contrast than that which the poor unwashed, untended, half-naked, and nearly half-starved child offered to every object in the picture to which he was thus suddenly introduced. A tattered old fustian jacket, tied, for lack of buttons, round his waist with a piece of packthread, partially concealed an inner garment of dingy hue and dubious material; loose corduroy trousers, made originally for a full-grown person, but tucked up round the legs, to accommodate the diminutive stature of the actual wearer; a pair of thick-soled worn-out bluchers, and a shapeless roll of something like black cloth, which served ordinarily for a cap, but was now twisted up hard between his hands, completed the costume of little Joe, as he stood, digging his hobnailed boots into the Turkey carpet, in the centre of the room, facing the pleasant-looking gentleman who had sought this interview. Notwithstanding the novelty of his situation, Joe retained his self-possession, and, having by a keen glance examined the countenance of Mr. Maudsley, and being apparently satisfied by the result of his investigation, he made a rapid

"GATHERING AS IT GOES," OR, THE MONSTER SNOWBALL

but a glance at the room and its contents, commencing with the ornamental French clock on the chimney-piece, and ending with the cold roast beef and the game pie that adorned the sideboard, over which hung the portrait of the fortunate proprietor of all these good things, smiling and looking down upon them with an expression of expansive good-nature, such as at that moment diffused itself over the features of its original while surveying the odd specimen of humanity before him.

"What is your name, my little fellow?" asked Mr Maudsley, opening the proceedings in the strictly legal manner;—and this reminds me I have not yet informed my readers that he was a solicitor—an honest and, indeed, excellent man, with a heart large enough for at least a dozen ordinary attorneys.

"What is my name, my little fellow?"

"Joe Grimber, Sir."

"Who are your father?"

"Never had a father, Sir—leastways, I never heard I had one. I'm mother's chile."

"Your mother, then, where is she?"

"Gone dead three years next Easter, Sir. She had me and two sisters younger than me to keep. She worked at stitching all day and all night often, but she couldn't get a living out of it, and so she died."

"What, then, became of your sisters?"

"They was taken into the workhouse, and they told me that they died too."

"Why did not you go into the workhouse with your sisters?"

"Well, Sir, I didn't much like it; I thought I'd rather be independent," said the little fellow, with a resolute air.

"Independent!" repeated Mr. Maudsley, looking incredulously at the child. "What on earth could you do?"

"Oh! please, Sir, I could do lots o' things. First, I went into the mouse line, and delivered papers for a mouseweneer to his customers; but he paid me muffin to speak of, and I was nearly starved afore I left him; then I took to a costermonger, and sold apples, oranges, and radishes, and wedgables of all sorts; but my master was a bad lot, and knocked me about shockin' when I couldn't sell his stale stuff, so I was forced to try winkles on my own hook."

"Winkles! what are winkles?" inquired his puzzled interrogator.

"Oh! Sir, don't you know winkles?—periwinkles some people calls 'em."

"Oh! I understand—periwinkles!"

"Periwinkles and shrimps Sir, and sometimes 'am sandwidges at the doors of the theayaters; only the bobbies hunt us as if we was thieves, which I never was. Now and again, when there's a good thick fog, I makes a tidy day's work by carrying a link afore old gentlemen who's afraid of losing their ways or getting run over. Then there's money to be picked up by a street crossing; but the wooden-legged coves, and them Ingin blacks in white bedgowns, have got hold of all the good ones, and they won't give them up without a tidy bit o' money."

"And you have not yet been able to purchase one?"

"No, Sir; but I work werry hard, and when there's a fall o' snow I have plenty o' work scraping afore the doors, and git well paid for it, too."

"Since you have told me so much of yourself and your life, Joe, tell me what were you thinking of when I saw you just now watching with such a serious face the making of that large snowball in the street, for you were thinking of something more than the mere collecting of a quantity of snow?"

Joe turned his keen eye a moment upon his questioner, and appeared to hesitate; he had freely related everything respecting his way of life, his misery and his struggles he did not seek to conceal; but when for the first time, an attempt was made to penetrate his mind, to unlock the mystery of his thoughts, he felt embarrassed and surprised. His hesitation was, however, brief, and he replied, with something like a knowing twinkle of the eye—

"I was a thinkin' that a chap who wants to get on in the world ought to be like that snowball—always *gathering as he goes!*"

"True, quite true," said Mr. Maudsley smiling, "but it is not to worldly wealth alone that maxim applies; the mind should be equally diligent in the acquisition of knowledge and of virtue, without which the possession of riches adds nothing to man's happiness. If he would be truly great, he must be truly good. Patience, industry, and perseverance are his handmaids—truth, justice, and humanity lie in his path. He wise man makes these his own, and gathers peace and happiness as he goes!"

There was something in the manner in which these few words were spoken which sank into the child's heart. He uttered not a word, but Mr. Maudsley perceived that he felt what had been said, and he secretly determined to make an attempt to rescue the poor outcast from his degraded position.

The little fellow was by his direction immediately placed in the hands of the coachman's wife in the adjoining mews, who, by the application of soap and water, combs and brushes, and entire change of his costume for a suit of her eldest son's clothes, was shortly shortly transformed into a respectable looking boy. Being thus rendered presentable, he was introduced to the kitchen, where he quickly ingratiated himself with the members of the "lower house" by his obliging manners and a certain whimsical drollery, which even the "upstairs" footman, who had a "call" and regularly attended Mr. Wadley's chapel, could not resist. His stories of life amongst the wandering tribes of London were immensely relished, and his imitation of some of the street-showmen and ballad-singers were declared by the cook and housemaid to be equal to a play.

The Christmas dinner at Mr. Maudsley's was a great affair; for a large party of the relations on both sides of the house had assembled to do honour to the festival. There were the three unmarried sisters of Mrs. Maudsley, two rich maternal uncles—who, being bachelors, were looked up to with great respect by the family—a married brother of Mr. Maudsley, with his wife and five children, Mrs. Maudsley's mother, and Mr. Maudsley's aunt, to say nothing of three or four cousins who had a standing engagement for Christmas-day and Easter Sunday. I will briefly pass over the details of the dinner and dessert; but, if any of my readers imagine that the roast turkey was not of the largest and fattest that Leadenhall-market could supply, that the sirloin of beef was not the juciest and primest that ever obtained a first-class prize at the Smithfield Cattle Show, that the plum-pudding was not the richest and rarest, that the holly sprigs with which it was stuck over were not of the greenest, and the berries thereon the reddest, that the port was not the oldest and the champagne not the creamiest, that the toasts were not the most cordially proposed and the most eloquently responded to; that, in a word, the feast was not the most glorious and the company not the happiest that had ever been known, then I must take the liberty of saying that I entirely differ in opinion with them.

Later in the evening, there was a general demand for a dance amongst the young people, and one of Mr. Maudsley's sisters, who "didn't dance," undertook to sup ply the music, on the piano. Little Joe, who heard in the kitchen the beating of the merry feet overhead, expressed a strong desire to see what was going on; and one of the servants was soon engaged to hold a door open for him, Mr. Maudsley's sister-in-law, who was engaged to be married at Easter, having placed in front of the side door at the upper end of the room communicating with the conservatory. Mounted on a flower-stand, and hidden from observation by the screen, Joe Gimber peeped through the evergreens with which it was decorated, and beheld a scene that completely bewildered him. As the light and graceful forms of the children flitted before him in the dance, their cheeks glowing with health and happiness, and their eyes sparkling with enjoyment; he fancied himself transported to some fairy land: his heart beat violently, and his eyes dazzled with the light; he vainly tried to follow the waltzers in their mazy round; his head became giddy, and, forgetting for the moment where he was, he clapped his hands in uncontrollable delight; and leaning forward with too little caution to get a nearer view of a pretty little sylphide in a pale blue frock, who had more than any of the others attracted his admiration, the screen was thrown down, and Joe Grimber, falling with it, rolled suddenly into the midst of the dancers. A general scream greeted the unexpected appearance of this strange guest, who, hastily picking himself up, would have made a precipate retreat had not Mr. Maudsley come forward and called to him to remain. The matter was shortly explained, and Joe, instead of being ignominiously expelled from the room, became an object of curiosity to the company, by whom his pockets were filled with sweetmeats and fruit, intermixed with a few bits of silver, the little Sylphide who had been the cause of his mischance bestowing upon him an illustrated box of bonbons with a smile that made the offering doubly sweet. This was Joe Gimber's first introduction to polite society. That night he slept in a little bed made up for him in the harness-room by the jolly coachman and his cosy wife. While undressing he had time to admire his improved appearance, to survey his comfortable lodging, to produce his store of sweetmeats and pick out the glittering coins from a heap of raisins and burnt almonds. Full of the most agreeable reflections, he fell asleep, to dream that he was transformed into a gigantic snowball, rolled by the pretty sylphide over heaps of sixpences and sugar-plums which stuck to him on every side. Joe had made the first *roll* in life.

A few days after the events just narrated Joe was taken into the establishment of Messrs. Maudsley and Wotherspoon, solicitors, of Bedford-row, where his duties consisted in sweeping out the offices and dusting the desks before the arrival of the clerks in the morning, and in carrying messages and parcels for a few hours during the day. Mr. Maudsley did not, however, stop here with his kindness; for he permitted Joe to attend an evening school, where, true to the maxim which he had made the rule of his life, he *gathered* learning with incredible rapidity. In the house where he lodged there also resided a Frenchman, who had come to prosecute a claim for a legacy which had been left him in this country. With this person Joe formed an intimacy; and, for some acts of civility rendered to him by the boy, he undertook to teach him the French tongue. Thus was what he ardently desired, and a few months' instruction made him so proficient in the language that he could not only write it with ease, but converse fluently in it.

Three years had passed away, during which time Joe, by his assiduity and good temper, had become a prime favourite in the office; the elderly chief clerk and the heads of the establishment liked him for his punctuality and integrity, and the young men for the readiness with which he always executed their little commissions—but more, perhaps, for the confidence they had that he was neither a "spy" or "sneak," and that their harmless "larks" and venial breaches of discipline would never be brought to the ears of the "governors" through Joe Gimber's instrumentality. He was therefore pronounced by common consent "a brick," "a bean," and "a trump;" and when, at the end of three years, he was promoted to a seat at a desk in their office, he received the warm and sincere congratulations of his fellow clerks. As Joe jerked himself for the first time on to the tall stool which he was thenceforth to occupy in the office, he thought of the snowball, and felt that he was then a much greater person than the evening he *rolled* amongst the company in Mr. Maudsley's drawing-room.

It was some months after Joe's elevation that a case came into the office which required that a confidential agent should be sent to Paris; none of the second clerks, however, spoke French, and the business was on the point of being confided to a stranger, when it was recollected by the managing clerk that Joe Gimber had been seen reading a French book. He was immediately questioned, and, being found competent for the duty, he was sent to Paris, where he not only brought the affair to a satisfactory issue, but laid the foundation of a very lucrative business for the office, which was recognised by the partners giving him a considerable increase of salary and an advance in his position in the establishment. Thus, by his *roll* to Paris, Joe Gimber, true to his rule of life, gathered much and lost nothing.

He was now a person of some consequence, and, being placed at the head of one of the legal departments in the office, was invited as a guest to Mr. Maudsley's house. The little sylphide in blue had grown into a beautiful girl; and as Joe—we beg his pardon—Mr. Joseph Gimber—was by no means a bad-looking fellow, it was not surprising that Kate Maudsley should look with favourable eyes upon him. An incident which I am obliged to confess was singularly unromantic, led to want in affairs of the heart is called "an interesting discovery." It happened in this way:—Kate was one evening busily engaged at a table near a window in the drawing-room when Joseph entered. "Oh! Mr. Gimber," she cried, "I'm so glad you are come, for you can help me to string these beads: they have nearly tired me out of patience."

The young man was delighted, and immediately set about his task, but, whether from awkwardness or his thoughts being otherwise occupied, he repeatedly pricked his fingers with the needle, and at length let the box containing the beads fall on the floor. Gimber, in great confusion, begged pardon for his awkwardness, and stooped to gather the beads which rolled about the carpet at the same instant that Kate had bent forward with the same intention. I can't pretend to say how it occurred, but their cheeks accidentally touched in the attempt; both drew back, blushed, and mutually apologised; again they stooped, and again the lady's curls lightly brushed the gentleman's whiskers; this time, however, the blush was accompanied by a smile. The smile was the preface to certain disclosures which I do not feel myself at liberty to repeat. I may, however, state that, although the beads remained scattered on the carpet, Joe had succeeded in obtaining from the lips of the fair Kate the rapturous confession that he was not wholly indifferent to her. In this way did Mr. Joseph Gimber gather to himself the affections of a lovely girl.

My readers must now leap with me over several years, and imagine that we have reached the fifteenth anniversary of the Christmas on which Joe Gimber learnt his great lesson of life from the rolling snowball. It is night; but a rich, ruddy radiance streams from the crimson-curtained windows of Mr. Maudsley's house upon the cold white snow without. Let us enter, and see what changes time has wrought beneath that roof. Mr. Maudsley having run an honourable and prosperous career, has retired from active life, and transferred his interest in the business now to his son-in-law, Mr. Joseph Gimber, who is the senior partner in the firm of Wotherspoon, Gimber and Co. As this, it is true, has been for some years the case, Mr. Maudsley, of mind and body, often can still enjoy the pleasures of existence, and indulge in the festivities of Christmas, which are kept up with much genial hospitality by his children, in whom he lives again. Of my hero it is enough to say that prosperity has not rendered him unmindful of the claims of the poor; for although, as he says, the wise man gathers how the snowball as he goes, 'tis the good man who dispenses of his abundance to those who need it:—

Kind hearts can make December blithe as May,
And in each morrow find a Christmas-day.

J. Sterling Coyne.

CHRISTMAS IN THE KITCHEN.

It is Christmas-eve in the kitchen of Harkaway Hall, Herts. Twelve o'clock is striking, yet the fire still roars and crackles up the chimney as though it had only just begun to spend the evening. Round it, or, to speak accurately, half round it, sits a semicircle of about a score of persons, varying in age and size from my Lady's "buttons" of some four feet in altitude and five in circumference, to the squire's old nurse of ninety—years that is, not feet. From their exertions in dancing, flirting, romping, laughing, singing, talking, blind-man's-buffing, kissing under the mistletoe, and last—by no means least though,—eating and drinking, the company are all of them pretty well exhausted, and so, too, from the silence that prevails, would seem their stock of conversation.

"Now Mister Jeems," cries the jolly, fat-voiced butler, coming in from his pantry with a jug of hot spiced elderberry-wine, which from time immemorial the butlers of the Hall have been accustomed upon Christmas-eve to mix by way of nightcap—"Now Mister Jeems, the turn's with you t'year. You're the greatest stranger here, and you knows the rule—sing a song, tell a tale, or topple."

"Lorble see! Mr. Jorkins, Sir," returns the gentleman addressed, who looks like a Lablache stuck into plush tights, "really I'm so short o' breath I haint got no voice for singin. I minds as how sing is a'most too much for me. And as for topplin! why, a man o' my figger might as well engage hisself as tightrope dancer, or undertake to do the jumpin through them oops at Hanley's. But, though I don't pertend to be a story-teller, I thinks as I can pawsably amuse the cumpny with a bit o' reshtauhan. You recollects perhaps ladies, that perticuler friend o' mine from Lunding, as was a stayin at the All last summer?"

"What, that Mister John Thomas—him as ad them beautiful legs and whiskies?" says, or rather signs, the sentimental housemaid.

"Percisely, Miss. Ah! perhaps you mightn't think it, but my legs was as beautiful as 'is is once. But one loses in figger as one ages in 'sperience. Well, as I was agoin to re-mark, I appens to 'ave a letter in my pocket which I ad from that ere gen'elman on is return from Parris, wich you may have ard p'raps e went there on the 'casion of Er Majesty's state visit: and i'll do my endayvours to read it aloud to you."

This proposition being carried *nem. con.*, with a pause now and then to "take or each," as he expressed it, but which means in reality, to take a sip or two of the butler's mixture, the latter proceeds—or, more correctly, spells—as follows.—

"Lundino, Horgust the thutty fust, hating fifty five.

"Since leavink hof yure ouse, deer Jeems, to Parris hi ave been.
To see the sites in cumpny with Prince Halbert and the Kween:
Wich the yew'll find em drored to life in the hillustrated news,
Some sketchink by jon Tommus Lof belgravy may amews.

"Hon satterdy the hayteenth hinst from Hosbun put to see
The Halbert and Victory with er majesty and me:
For the fammily as hi lives with a beeink hot the sweet,
Hin course i ad a passidge two along of the heleet.

"We reached Bowlong at arf past wun amid the cannings rawr,
And a reggelar french roll of drums a beetink hon the shore:
Then down at wunst the Hemprur came to greet is royal mate,
Hand in token of fraternity hon both er cheeks e kist er;
So I too umbly hemulatink such a ugh eggsample,
Hupon my natral moddysty took french leave there to trample:
And the hanglo-french hallyance more closely stall to hit, O,
Hi ketched our French maid round the waste, and dewiy did the ditto!

"A startink horf hexpress we ony stopped at Hamyens, where
The Queen received a booky from the dawter of the Mare:
And, mid the hacclimashuns of a most serpisink crowd,
By arf parst hate, or so, we reached the Pallis hof Seut Cloud.
The cheers wos most wosiphrus; but I really carnt hexpaine,
Hon sich a nice fine hevening, why they called out "*We're in rain!*"

"We spent the Sundy hindors, and ad dinner *en famile*—
I mite say on the kviet, bony tuther's more genteel;
And heven in Bellgravy, I must own, I've seldom seen
A nicer spred than that from the Himperiall queezeen.
Hit's trew that in their servents' al there aint no tap o' beer,
But wen wos wun as sartingly to notice shood be brort—
The Hempress Uginny with half the bawtles hof er cort;
For tho to cumpy sewers ni seam heggstraway in my vews,
I haint a taist for french bose R'al so much as french bose Us.*

"We visited Wersails next day, an I sor the famed Grand Hos,
Wich grander O's at Scutum we shall hev they say than to see;
Then harfter to the Hopperer we went figged out in state,

---

* Mr John Thomas's orthography is at times a little puzzling. We understand him, however, to avow less admiration for the *beaux arts* of Paris than for the *beaux yeux* of the Parisiennes.—Ed.

Were I compelled for a [illegible] to select what to quote:
The [illegible]
On [illegible]

"On wendy I orf'r [illegible] I'd [illegible],
But this hannoyance daly hi soon found I wos to ave:
And hunused as I ham to sich howdayshus herly risin's,
The very I ave survived it, Jeems, is really quite serprisin'!
We sor the Xpositaun, an' I then took our brad and cheese
(In coarse hi'm speskink figgratively) at the Tweelereas;
And harfter a grand bankwet, which we'd bankwets heavy d'y,
We finished hup our hevening's work by seein hof a play.
Next nite I ad to show my calves at the hotel de Weal,
Wear the hemprur and her majjisty led horf the fust quadreel:
The rooms woz like a hoven, and hi realy thort next morning
My legs was so much thinner that my missus ud give worning.

"Hi fear I'm gettin tejus, but hive yet to tell yew ow
On fry.ly at the Hopperer Comeek we maid our bow;
Retiring rayther early, for weed spent a longish day,
Hindeed I halmost feared the work ud waste my carves away:
To the Palais hof Hindustry befaw lunch we ad been,
And harfter a slite fite on the sham de Mars ad seen.
As yew takes in the Illustrated, on satterdy yew'll sea
We finished up at Wersailis with a gorjus fete de nwee:
And ho! to see the fountings hand the fireworks as were thare,
They halmost beat the Surrey gardings and traphalger sqara;
Hand really, Jeems, such dresses scace in Regent-street one sees,
I ardly no wich looked the best, the grand o's hor grandees.

"Hour time bein hup on Mundy, we to Parris bade ajew,
And hony stopped at Boolong, wear there was a grand revew:
The troops looked scace so igh as hours, but it must be confest
Not even the milisher K at present better drest.
And so our visit hended, and i thort like that it did maw
To strengthen the halliance than 'most hennythink befaw.
Hand realy, Jeems, been now it makes my buzzum eave with pride
To think such tramps of fellers is a fitink hat our side!
Wich now that and in and they've been and took Sebasterpool,
There aint no fear hour millinktairy harder soon will cool;
Vich to ear the Roshan Haughtyorat a singink hof peccavy
Is the hardent haspersaun of Jon Tommus hof Bellgravy!"

"Brayvo!" cries the butler, waking up at the finish,—"does your friend credit. Ere's is ealth, Mister Jeems; ladies, I looks towards yer! Verry good, hindeed, and verry well read: hand now, as it's lateish we'd best get to bed."

A CHRISTMAS NIGHT'S ADVENTURE.

BY EDMUND H. YATES.

The adventure which I am about to relate is the only one that I really ever had. Some people are perpetually having adventures; they never go anywhere or do anything without being placed in most peculiar positions by wonderful combinations of circumstances. My friend Vavasour Pelham rejoices principally in amatory adventures, and his experiences are full of raven tresses, flashing eyes, exchange of love-tokens, dark nights, stolen meetings, with concluding hints of sharp poniards and yawning sacks; whereas little Griggs never returns to the Draft and Docket Office after his month's ramble on the Continent without having been crushed by avalanches in Switzerland, seized and carried away to the mountains by brigands in Italy, and, in the back slums of Paris, put into wonderful beds which sink through the floor, and deposit him in some blood-stained cellar, whence he is only rescued by his own personal valour and acquaintance with the noble art of self-defence. But to me these things have never happened: I have never seen an avalanche, except from a safe distance, never met a brigand except Mr. James Wallack, and never found anything in the beds of Paris worse than—you know what I—and yet I have had one adventure in my life, and this is how it occurred:—

A few years since (no matter how many, suffice it to say that at the time I was unacquainted with rates and taxes and the price of babies' shoes!), finding that, owing to there having been a death in the family where I usually dined on Christmas-day, our annual gathering would not take place, and being rather knocked up and over-fatigued I determined to take a holiday and spend the Christmas out of town. The resolution once made, the difficulty was to decide upon a destination, and with a blank face I looked through the list of invitations I had received. First and foremost I found the noble name of Dunsinane—his Grace the Duke of Dunsinane, who is now keeping open house at his magnificent castle, "The Haggis," Renfrewshire. I was acquainted with his Grace's younger brother, the Hon. Malcolm Macbeth, and was sure of a polite reception. Should I go down to those noble people? Should I put up with a bachelor's bed-room on the fourth story of the Castle?—a bed-room bell-less and uncomfortable, into which the wind whistles and the Scotch mist penetrates; in which I should have to climb on to the bed when there was occasion to open the door, and where the domestic rat would hold his nightly revels. Should I consort with the company there assembled, making up my mind to hear old General Banquo's blunt vulgarity, and young Captain Fleance's lisping impertinence? Could I endure Sir Hercules M'Nab's ancestry and Lady Cawdor's rheumatism? Should I, surrounded by all the Dunsinane males, and followed by all their gillies, stamp and struggle over barren moors? or should I, extended on my stomach, in the words of the lyric poet, "follow the stag from his slippery crag, and chase the bounding roe, ho, ho, ho, ho"? Finally, while this noble company was fuddling itself over claret and toddy after its hard day's sport, should I make mirth for it?—should I be funny, sharp, smart, and witty, in my usual agreeable manner?—N.B. This being expected of me, as payment for my board and lodging, I being regarded by all present as a rather superior Jack-pudding!—No! that last thought decided me—to the Haggis I would not go!

Where, then? Should I spend my Christmas with Dibal?—Tom Dibal, of the Stock Exchange, who married my cousin Barbara? Tom is a good fellow, with a nice house in Hertfordshire, good horses, pleasant grounds, and exceedent wine. There is the bed-room first rate, there could I do as I chose—eat, drink, smoke, read. No! not read; there's the rub. There was not a book in Tom's house except "M'Culloch's Commercial Dictionary" and a list of Lord Derby's foxhounds. I spent two wet days there once, and was driven nearly mad. Besides, Tom's conversation, though pleasant at first, loses after ten minutes [illegible] that the ages and prices [illegible] to him, though perhaps they possess not such attraction to the world at large, and although the rates of Consols and Shares deservedly occupy a large share of public attention; yet, when you happen to possess neither [illegible] you don't much care what they were "done at." Tom's friends are all alike, and no one dines the first time at the curate of the parish—an unwholesome young man, who wears a wonderful waistcoat and no shirt-collar; who believes in auricular confession; and who sometimes looks at Barbara in such a way that if I were Tom I should forget my respect for the cloth, and commit an assault upon his clerical person. Worse than all, Tom has inoculated Barbara with his City notions; and she bores me with such Stock-Exchange jokes, Mark-lane *on dits*, and rumours of Threadneedle-street that, at the recollection of them, I gave up Dibali's in despair, and blotted him out of my list.

Where, then? One more invitation I found, without reckoning the "Mind you come to us at Christmas, old fellow" (which never means anything beyond meals, such houses being invariably full when you arrive). "But you can have a very nice bed at the Pig and Whistle." Very nice! Bed-room situated either over the stable, where the horses champ and kick all night; or above the taproom, where convivial rustics persist in loudly explaining what may happen to be their delight on a shiny night, until the small hours in the morning. No: this was a regular specific invitation to Trumpington Hall, a glorious old specimen of Elizabethan architecture, situated in the heart of Kent, with a magnificent garden—fine lawn sloping down to the lake, fine cornfields all round, and the best shooting in the county. Inside of the house there are fine old family pictures, splendid oak panneling, queer little mullioned windows, and, above all, a right down hearty welcome. Old Sir Max Trumpington is a gentleman of the old school—open hand, warm heart; won't hear of your going away when once he gets you there. The house is always full of pleasant company—good fellows and delightful girls. Were there any drawbacks? Yes, confound it, always something! I was going for rest and health, and none but seasoned vessels could find those at Trumpington. I remembered old Sir Max being very particular that each man should take his regular allowance of wine, which regular allowance (about two bottles) it was impossible to shirk, and the "next morning" headaches was unavoidable; besides, I had a tolerably vivid recollection that the previous autumn, as Laura Ashton and I were strolling through the Home Copse, Fanny and Nelly Trumpington, who are always up to some mischief, saw me blow a fly—I repeat distinctly, blow a fly—off Laura's face. They would not believe it was a fly, chaffed me about it before the assembled company at dinner, and would infallibly recur to the subject. Being fearfully susceptible of ridicule, I dared not go to Trumpington Hall.

The sea is a good place at Christmas. Should I go to Brighton? I asked myself. No; I always hated Brighton as the strongheld of monotony. Day after day the same people. Same old gentlemen, with mouths and nostrils wide open, gasping and inhaling the sea air—same officers, with tight girths and lacquered moustache, galloping up and down, and dealing destruction to the female population—same female population nodding and riding and flirting—same valetudinarians in same Bath chairs—same tarry-trousered man shouting, "Sail, sir!" and pointing to same boat—same look-out man at the Custom-house looking through same telescope—same noise, and galloping, and driving, and flirting, and blue sky and red pavement, day after day.

No; I was utterly at a loss, and was going to give up any expedition in despair and decide upon remaining in town, when a sudden thought flashed upon me—I would go to Germany, to that old town on the banks of the Rhine where I had passed my student days, and pass the Christmas in the society of the University students and the artist who there do congregate. There I should get a cordial welcome; there I should be allowed to do as I like, and the change of language and manners would brighten me up and restore me for the winter campaign. My determination was scarcely complete when I began to act upon it, obtained a passport, and started off.

I will pass over my journey to Dusseldorp, and my reception there on Christmas morning, by my old comrades. Suffice it to say that of twenty invitations I accepted two—one to dinner at one o'clock, at a great meeting of artists and students held in the Bokhalle, their principal *kneips* or drinking-house; the other to supper at the house of an Englishman named Woodbridge, who had come to reside at Dusseldorp since my time, and to whom this was my first introduction.

"You must come to Woodbridge's supper," said O Scardon, a six-foot Irishman in the Austrian service, and an old friend of mine—"you must come to Woodbridge's supper, for of all the devils you ever saw, he tops 'em all! We can't make out what he is! He's heaps of money, but no one knows how he gets it or who he is. He collects a wonderful lot of people round him, some of the fastest and most riotous of the students here, and he's always got a Polish Count with him—a good looking, impertinent scoundrel who is so dreadfully offensive that my longing to kick him is growing into a positive disease. Woodbridge, though he has only been domesticated here a few months, has already had several rows with the police and the Government, and, as they say to-night's supper is to be the boldest thing he has yet attempted, I advise you by all means to come."

After having been talked to in this strain I need scarcely say that I looked forward to my supper at Woodbridge's with much curiosity. The remainder of the day was spent in lounging about and in a very noisy dinner with the students; and at about eight in the evening I found myself at Woodbridge's lodgings.

He occupied handsome apartments over the shop of the principal saddler of the town; and when I arrived there were some ten or a dozen young men seated about, some of whom I knew. Scarcely, however, had my name been announced before a tall, elegant-looking man of about thirty years of age stepped forward, and, addressing me, apologised for Woodbridge's temporary absence, introduced himself as Count Zintorski, and begged me to take a cigar and make myself at home. There was a frankness in the fellow's address which corresponded but badly with a look of subdued distrust and shiftiness in his eyes, and I felt I could not reciprocate his apparent warmth. Our host soon after arrived, and, the party being very shortly completed, we sat down to a game of vingt-et-un to pass the time until supper arrived. Now, hating cards with all my heart, and never playing except when politeness compels me, I happen always to enjoy wonderful luck; and according, on this occasion, when I was dealing I doubled the stakes at every hand, and won a considerable sum. My greatest opponent, and consequently the largest loser, was Count Zintorski; and, though he tried every manœuvre of which the game is susceptible, my luck still stood by me, and I rose from the table, having cleaned him out of his last *Friederich d'or*. He was perfectly calm, congratulated me on my luck, and took the foot of the supper table, opposite to Woodbridge, with the air of a man who felt himself thoroughly at home.

Reader, were you ever present at a German students' supper party? If not, you have no idea of noise—of wild, mad fun—of practical jests pushed to their utmost extent. My experience in these matters had been small, but never was I present at such a scene of riot as was enacted at Woodbridge's that night. Englishmen and Germans treated each other in noise; song followed song; the health of each member of the party was drank in rapid succession, and each member of the party was drank himself. My illness prevented me from joining to much extent in the dissipation, and I sat looking on and wondering whether I had ever found real amusement in such a pandemonium. At last, while O'Scardon was telling a wonderful story of a run with the Bally-bunnerum hounds, half in English and half in German, the landlord entered the room and declared that if the noise was persisted in he should be compelled to call in the gensdarmes. This announcement was received with yells; he was told to fetch whom he liked. Woodbridge muttered some vague sentence about "Englishman's house's cassle," and the landlord retired amidst a storm of groans. The uproar was renewed, but five minutes after we heard the heavy tramp of the gensdarmes ascending the staircase, and all of us determined to resist this invasion by force. Some seized sticks, some laid hold of pieces of furniture to hurl at the intruders, and I grasped an empty champagne bottle by the neck and slipped it into my coat-pocket, keeping my hand upon it the while. The door was flung open and the chief of the police entered, leaving two of his men outside the door.

"Gentlemen!" said he, in an authoritative voice, "in the name of his Majesty I command you to quit this house at once."

A roar of derision was the reply.

"Suppose we don't intend to go?" said a student with a long red beard, tastefully decorated with scraps of salad, shreds of tobacco, &c.

"Then I shall proceed to execute my duties and turn you at once into the street."

A second derisive roar, much louder than the first.

"By the holy Malone!" said O'Scardon, rising slowly before the astonished gendarme, and pulling himself up to his full height, "I've a mind to fling you out of this window. And I'll do it, too, before you can say 'knife.'" He made two steps forward and seemed about to execute his threat, when Zintorski interposed.

"One minute!" he said. "Gendarme, where is your permit?"

The gendarme looked astonished, but did not reply.

"Your permit?" repeated Zintorski. "You are aware that after midnight no gendarme can enter a private residence without a special permit from the burgomaster?"

"Herr Graf!" stuttered the wretched functionary, edging towards the door. "I—I regret that"——

His courage failed him, he said no more, but rushed down the stairs followed by his men, and in a minute we heard the door close behind them.

Immediately upon their departure fresh wine was brought in, and the orgies continued until about two o'clock, when the party broke up. I had secured a bed at a house where I had lodged in my student days, and it so happened that my way lay in a different direction from that of my companions; I therefore bade them good night and started off alone. It was a dull, murky night, with a sharp sleet driving from the north; the only light shed upon the wretched streets was from the oil-lamps swung at intervals across the road. On I hastened, wrapping myself up in my large coat; and meeting no one. Not a sound did I hear until, just as I was reaching the street where my lodging was situated, which turned up out of one of the principal *allees* of the town, I thought I distinguished the sound of advancing footsteps. I listened, and was convinced that my surmise was correct; but, thinking nothing of it, I proceeded up the street. I had reached my door, and was endeavouring to turn the rusty piece of German mechanism supposed to be a key, and mentally contrasting it with my own neat Chubb at home, when two men advanced towards me, followed at some distance by a third. This I could just distinguish by the light of a neighbouring lamp. As the two men came up to me, one of them said, "Good night!" "Good night!" I replied; "or rather Good morning; for it must be almost that by this time." The words had scarcely escaped my lips when the foremost man hit me a tremendous blow between the eyes, which lit up a thousand candles before me, and knocked me violently backwards. As my back dashed against the door I heard something crash! In a second I recollected myself: *it was the champagne bottle I had placed in my pocket when the gensdarmes entered!* In a second I grasped it by the neck, withdrew it from my pocket, and, whirling it in the air, brought it down with my full force on the head of my assailant. He gave one groan and fell heavily to the ground, while the blood spurted from the wound like a fountain. His companion turned and fled, while the third man, who all this time had remained at a distance, also immediately made off. My state of horror can scarcely be imagined, I knelt down by the man's side, I bathed his head with water, which I fetched from the kennel in my cap, I strove to stanch the blood which was pouring from the wound. I spoke to him—I offered him all my money if he would only look up. I was in momentary dread of the arrival of the gensdarmes, and of being conveyed to prison as a murderer. For more than an hour did I remain in this fearful state. The man never opened his eyes, but lay apparently in a lethargic stupor. No one came near me, and my excitement was at its height, when by the dawning light I perceived that are approaching. It neared me, and in it I thought I recognised the companion of the robber. Not a word was spoken, and, with my assistance, he raised his friend, twined his arms around him, and half carried, half dragged him out of sight.

I need scarcely say that I did not go to bed that night. I went in, struck a light, collected the few things I had unpacked from my carpet bag, and, needless of my friends and intended pleasure, hurried off by the first train, and returned at once to England, so apprehensive was I of the consequences.

Two years passed and I heard no more of my nocturnal adventure. I had letters from O'Scardon, and from some German friends, full of wonder at my sudden departure, but giving no hint as to its cause, and the circumstance had almost faded from my recollection. Last autumn, however, I was again in Germany, and, hearing that an old tutor of mine had become Protestant chaplain at the gaol of Verden—a place a few miles from Düsseldorp—I went over to see him. He acted as my *cicerone* round the prison, and, while going through one of the wards, I caught sight of a face that turned me faint sick. This face belonged to a convict—a short, thick-set man, who was sitting apart from the rest. I recognised him in an instant as the man whom I had nearly murdered. I approached; he raised his head, started, and then grinned calmly.

"Do you know me?" I asked.

"*Verstehts ich!*" (I believe you) he answered. "I only saw you once, as you came out of the saddler's door; but you saw me after that, and gave me *this*."

He raised his matted hair as he spoke, and showed me a red scar on his temple about three inches long. I shuddered at the recollection.

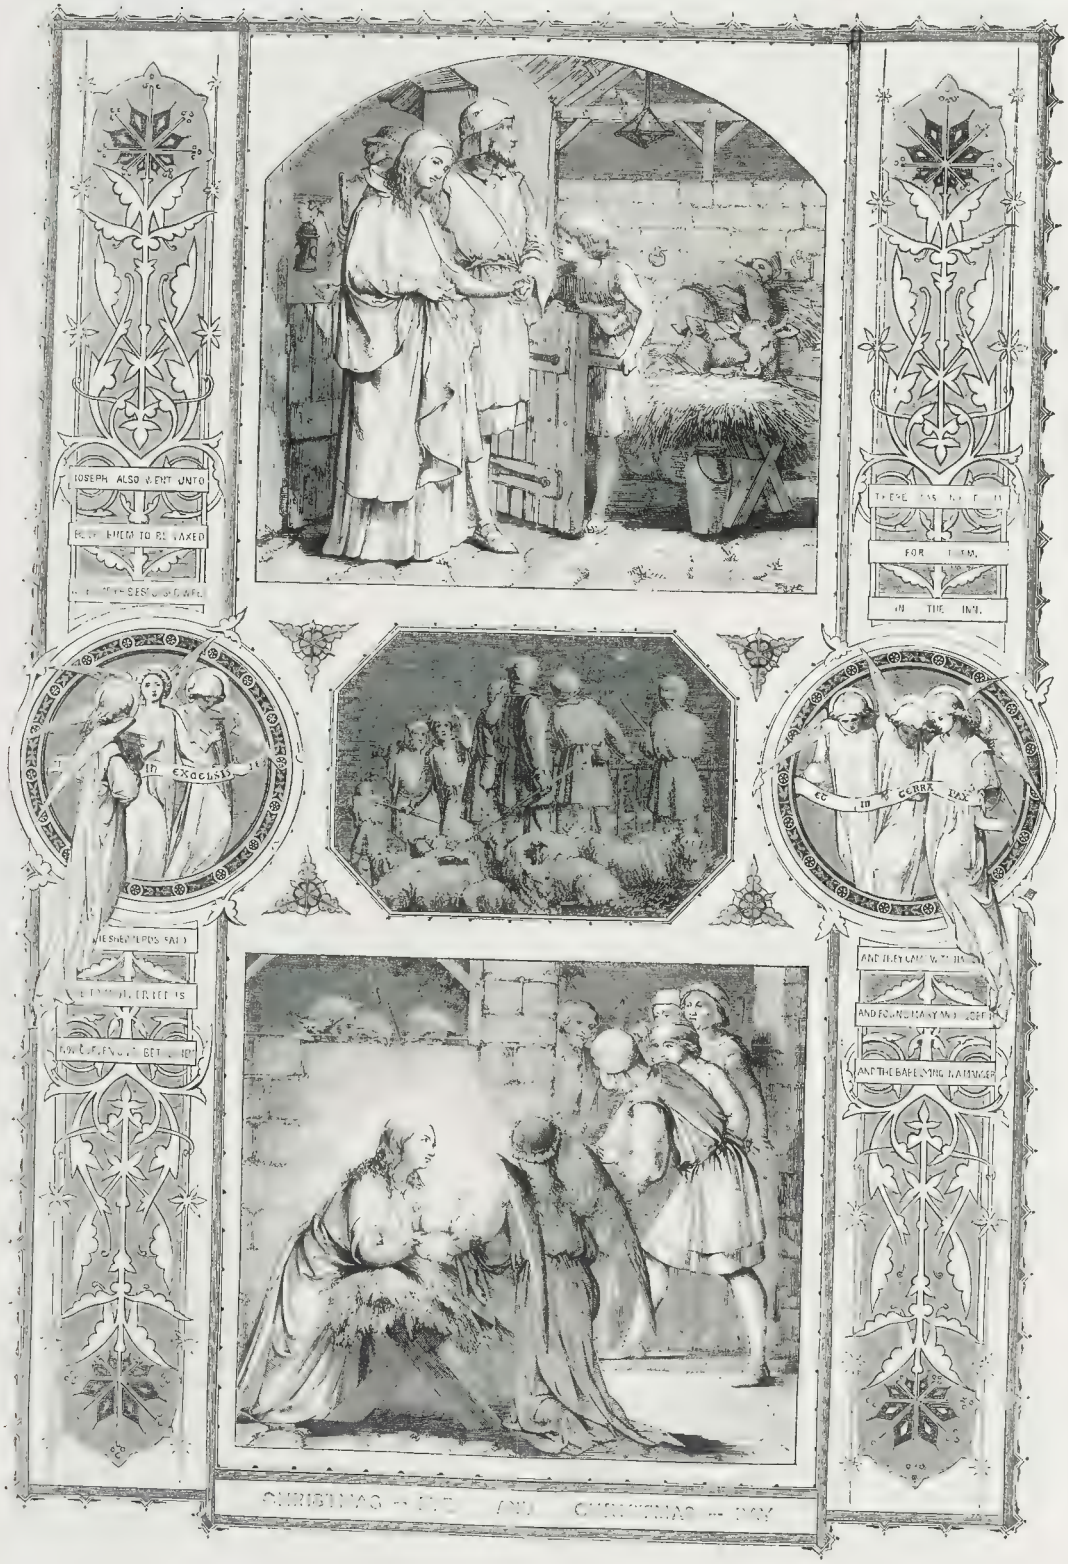
"And why did you attack me?"

"Why?" he replied; "because I was paid for it, as I had been for many more. That Polish Count was my master and partner; we were one firm all that winter, and shared alike. He pointed you out to us, told us you had won immensely at cards, and that the money about you. He was close behind us at the time, and if it hadn't been for that letter I'd rattle"——

"What the?"

"Why, if you'd given much trouble, we should have pitched you into the canal."

And this was the explanation of my Christmas Night's Adventure.



JOSEPH ALSO WENT UNTO
IN EXCELSIS
AND FOUND MARY AND JOSEPH
AND THE BABE LYING IN A MANGER

A Legend of Christmas.

SWEET is the Christmas! In our childhood pleasures,
In youth, in age, still is the matin chime
A sound that echoes from the hearts fond treasures
How well beloved is the Christmas time!

Yet midst its sunshine there is one strange story
That seems unwelcome in such hours of joy!
As though it bore away its crown of glory,
And cast a shadow of most sad alloy!

It breathes of DEATH! that still so dreaded name;
As though it sought amidst those scenes of gladness,
To still remind us of our Sin and Shame,
And cast a shade around of gloom and sadness.

Ye, may be, if we read it with true faith
Its dark cloud may be lined with light so golden,
That we may each forget its tale of death
As an unheeded legend quaint and olden.

Thus may we wreathe a mystic crown of flowers
That mourners well may wear in sorrow's time;
For, though it tell of dark and weary hours,
Peace reigneth in this legendary rhyme!

THIS is the Legend, that a mystic number
Of Angel-visitors on this our earth,
Wakes each an infant from its first sweet slumber
And bears away the gem of priceless worth!
In mystic honor of the CHILD-CHRIST JESUS,
To chant a new-born lay with harps of gold,
Of HIM whose blood from Sin and Sorrow frees us;
Of HIM who leads us to His Heavenly fold!

NOW in a homestead where the poor are dwelling
An infant sleepeth on its mother's breast:
One little spark of life! a wave once swelling
Has borne it safely to eternal rest!

For as the first soft ray steals thro' the casement,
And shines with golden light upon its head;
A bitter cry of grief and wild amazement
Tells that it shines so fair upon the dead!

And voices sweet seem dying in the distance
As swift the Angel-child is borne away!
While one scarce seen yet spirit-felt existence
Seems lingering still upon that golden ray!

And whispering of the "SIN-DESTROYED Creation
"Of Pain—and Sin—and Sorrow—all passed by!
"Of Toil and Poverty, and dread Temptation;
"O fierce tempestuous waves, and darkening sky!
"THIS FOR THE LIVING!—This each weary morrow!
"Who then shall mourn for those who find their rest!
"At once from Sin, and Shame, and earth-born sorrow
"To flee for refuge to the SAVIOUR'S breast!"

AGAIN the Angels with their heavenly mission
Are visitants of Earth with noiseless treads;
Again the radiance of the mystic vision
Shines with its golden light upon the dead!

AND yet once more, where in the lordly castle
The child of wealth & pomp first tastes of life
There, tho' unrecognized by Lord or Vassal;
They bear the Spirit from its mortal strife.

STILL in each home is left this hope celestial;
That borne from evil is each well-loved child;
That still the roars around the storm terrestial!
They are safe anchored from the treacherous wild.

YET as each mourner weeps with vain repining
They fail this glorious truth to recognize—
Three Angels clad in robes so fair and shining
Find entrance at the gates of PARADISE!

And three dark Spirits of Earthly Dread, temptation
Are thus defeated by those Angels bright!
No power to touch the ransomed of Creation,
They flee despairing to the realms of Night!

O HAPPY CHRISTMAS! If upon thy day,
Thou canst reveal to man so sweet a story,
That Spirits cast their earthly bands away,
And soar unfettered to celestial glory!
O GLORIOUS LEGEND! Tho' the infant dying
Leaveth but sorrow in the Mother's breast;
One peaceful slumber, in those fond arms lying,
And then—borne upwards to eternal rest!

THE ARABESQUE FORGET-ME NOT.

TRANSLATED FROM THE GERMAN OF GUSTAV VON FUCHS.

NEAR a fresh meadow-stream, on a soft cushion made by the mossy covering of a stone, two little sprites sat together, and looked at the waves splashing and glittering at their feet. One was a comical little man, somewhat broad-shouldered, with a short neck and stooping figure, which evil-disposed persons might have called humpbacked. What at first made him appear so strange was his slender legs, which he had carefully drawn up, fearing the contact with the water, which rose up good-naturedly towards him. His features were brown, and not at all graceful. On his head he wore a brown leather hat or cap, which hung strangely over the ugly, pale, yet benevolent face. The other spirit was an elegant slim female form. Her fair hair fell in ringlets over her shoulders and arms; her lovely but roguish face was mirrored by the glittering water in which she splashed her naked foot; and, when her neighbour was not looking, she slily spattered a little in his face. She wore a robe of flower-leaves joined together, with an auricula-blossom pressed on her curls as a hat.

"O Heinzelmann," said the amiable beauty, "are you always afraid of the water?"

"I have shoes on," replied he.

That was not false; but it was not precisely the ground of his dread of the water.

"But," continued he, to give the conversation another turn, "do not call me Heinzelmann. My great family name sounds so strange. Say, rather, Kappchen, or Kütchen, as people call me when they love me."

"Good!" said the Elfin, for such was the neighbour. "You call me Lilli, and we will be friends."

This was, at first, a bathing acquaintance, which had become a friendship, progressing at the bath, though it was only preserved during the bathing season. Afterwards, they never wrote to each other, and probably never so much as thought of one another.

This evening, they had given each other a rendezvous on the same stream as for many past years—Kappchen, hard and pedantic, to commence his water cure, which must refresh him after the dusty work on which he had spent the whole year; Lilli, for amusement, and for the sake of the acquaintances whom she found congregated at the stream, and to greet the beautiful flowers she found there—although, it is true, Kappchen showed her that she found the same species and genera in a thousand other places. Kappchen had wandered on foot, and with difficulty. Lilli had her four-in-hand of butterflies, dragon-flies, or grasshoppers (I do not know which would seem the most elegant this season) harnessed, and flew by through the air. They arrived almost at the same time. Kappchen bathed and drank his prescribed dew-drops, which he stripped from a healthy flower. Lilli paid visits, chattered and gossipped, and studied whether any other little Fairy had discovered any new fantastic fashion of sewing petals into dresses. In the evening, the friends assembled to relate the little events of the day, the occurrences of the past year, and the dreams for the future. We will watch them for once.

"You look pale, Kappchen," said the Elfin, after a pause, her roguish face assuming for the moment a sympathising expression. "Have you roam yourself out again in the close dusty atmosphere of your room?"

"There was really a great deal to do," replied the little man. "The dust has stirred again amongst the books, and between the fatal political pamphlets which it threatened to overwhelm as it rises hither and thither on fresh poetical images, or his thick on stately scientific folios. I am now the printers' Heinzelmann, and I have had much work this year. Letters and written characters came to light which had long lain dormant in their chests. Then there was a great deal of dust raised, and it fell on my breast, so the journey to the bath was very necessary."

Lilli laughed aloud. "Shall I condole with you? What do books, pamphlets, letters, signify to you, or even men?"

"You do not understand the reason, my beautiful friend. Everyone must work in that place to which he is assigned by destiny. The wasp must build her cell, the ant must drag her hill together, and if you destroy it she commences again. I must help and work like them, and that is my happiness. Do not you work?"

"No; I dance in the moonlight, I chatter with the flowers, I watch the glowworms, I live and enjoy."

"You are like a butterfly—that is your nature—enjoyment is your work. See, amongst the men with whom I so frequently come in contact there are different natures. Some are industrious, like me, and give themselves trouble; others resemble you, and live in Nature and listen to her—they are of poetical dispositions; their work is loitering, and loitering is their work. People chide the dreamer and laugh at him; what he builds up no one knows. But if he devote himself to opening this world to other men's eyes—be it through words, tones, colours or what not—then he is called a poet or artist. Your occupation is to weave the poetry of Nature, to poetise the graceful form of the universe in your heart and being. Be content with your lot, but do not jest at mine as humble."

Did the Fairy understand him? No matter, she felt herself flattered. "It is very possible you must toil," said she; "I believe it, but you, poor fellow, it is hard sometimes, very tiresome?"

"Not in the least," cried Kappchen, proudly drawing himself up "You cannot believe how satisfactory it is. There lie the black letters each arranged, according to custom, in their little dwellings. It is my business to watch over them that they do not fall together. In the next place, when I sit on the chest, I hear here and there a buzz. That is disorder. Or a poor little letter complains that he has fallen into strange company. Very soon the poor little 'A' will be laughed at and mocked. Soon a vowel will be exposed to the teasing of the consonants amongst whom he has fallen, turned upside down, for every one imagines himself somebody when apart and amongst many of the same they have to support. I arrange them all in order, and when the compositor comes in the morning he does not at all imagine what trouble I took during the night. The compositor now seizes some here and there in the chest, and throws the letters together, and who saw it would fancy it made horrible disorder; yet he forms them all after the ideas which other men dictate, and, when the letters are printed on paper, they speak so wisely and beautifully that they rejoice mankind. I read all the proofs, it is my recreation."

"Charming recreation!" scoffed Lilli.

Heinzelmann, wishing to be more earnest, cleansed his throat, as if he had taken a great resolution, and said, "We are friends, Lilli; that gives me the right to be sincere. You are clever, and have mother wit."

"Indeed!"

"Do not interrupt me. You want coolness, you despise literature and science, because you do not know them, and that is not right."

"Heinzelmann," cried little Lilli, turning suddenly away, "you are ungallant."

"That may be," said the little man, rubbing his hands together. "You know very well I do not mean any offence: you are so clever now, what would you only be if you would read! In the winter you have charming leisure for it."

"I have winter," replied the Elfin, still a little provoked, "in the winter I have just the very least time. Then, I visit my dear flowers, where they sleep in their small hard brown seed beds in the bosom of the earth. I go to them and tell them of the delights of Spring and the joy of Summer, in order that they may, in their season, willingly awake and come forth to a new life of colour and perfume. I listen to the souls of withered flowers as they hover around, and they teach the others how they must bud, blossom, and glitter."

"The souls of the flowers?" said Kappchen, inquisitively.

"Do you not know about them? Oh, the book-learned!" cried Lilli, "what should they know about flowers; what have they to do with them?"

"You must tell me," said Kappchen, trying to gain her confidence. "Formerly, in books, one read something about the souls of the deceased, but it has ceased in later time. Do tell me."

"When the flowers wither," began Lilli, "their souls rise clothed in the garb of their last perfume, for scent is properly their soul, as thought is the soul of man. Long they hang over the dead form, and then go further. Indeed, you may remark them, if you think of them, for the perfume is wafted through the air from flowers which grow far away,—from plants no one knows. The dead flower falls off—the seed grows till it sinks and falls upon the earth. Therefore they care for the souls of the flowers, and consider themselves faithful nurses around the cradle of their faithful sisters. What they experienced in the fleeting course of their lives, what they learnt from intercourse with nature and mankind, they sing in lovely cradle songs, and fold up in the heart of the slumbering germ. Thus the coming life grows and strives in the bosom of the silent earth, so the flowers forebode whether they will be loved or despised by men."

"You talk poetry," said Kappchen.

"Will you have proof?" asked Lilli, bending herself back and gathering a Forget-me-not from the wall of flowers which concealed and shadowed their seat. Look at this flower; you know what signification men give it. It is the Forget-me-not."

"*Myosotis pratensis*, or mouse-ear," corrected Kappchen.

"What does your learned name signify to me?" replied Lilli. "Man's heart and the fairies gave the name Forget-me-not, for it is the flower of friendship and truth. That it knows, when growing on its green stalk, although it is still ignorant, and mistakes the feelings. The bud will open red, clothed in the garment of love, and putting on its appearance. At the right time it thinks on what the soul of the flower predicted, and colours itself blue around a deep yellow chalice, round which the petals range themselves as a request for fidelity, as a greeting at the parting hour. How would this be possible if it did not know its name?"

Kappchen, who had studied all the botanical literature of the world, had nothing to reply in spite of all his learning.

"And, because I do not read, you reproach me," continued Lilli. "Probably you think there are no other books than those formed by your black letters. Poor Kappchen! your dumb black-printed characters appear the whole world to you. In creation there are thousands of modes of writing, only you cannot read them. I understand many. Look at this Forget-me-not. Look at the tender blue velvet, and, when I hold it up towards the sun, the tender veins now cross each other, now separate and entwine. Do you believe that they grow without design and thought; that the flowers open without reflection? Do you believe that nature writes with as little spirit as the hand of your compositor seizes the letter-box, which you keep in order? Every touch is feeling; each fibre, plan; every breath, thought. On every little leaf something is written in clear writing. I can read it, and if you were a poet instead of a printer you could read it too."

Heinzelmann wavered between curiosity and conviction at what the Elf had shown him. He would not beg for the reading, because the request might be confession that he gave credence, and yet he was anxious to know what was on the leaf. He conjectured a sort of classification of flowers, a catalogue which each would carry. He blinked slily with his eye, as if he knew the reason, and hinted at more as he asked, "But is the same on all leaves?"

"Not at all," said Lilli; "the rich power of creation never repeats itself. Because you possess understanding and a cultivated mind," added she ironically, "I will tell you the reason. I have already related how the souls of flowers relate their histories to the germ, and, when the flower grows, every leaf writes its story. For those who know how to read it, a flower is a book with many leaves. I read them in my leisure hours, and you reproach me because I do not try to form my mind by reading. What could I know of men, with whom I never hold intercourse, if the flowers did not tell me about them?"

"Do read me what is written on the Forget-me not," cried, Kütchen.

"Of course, something very simple; what can happen to a Forget-me-not?" said Lilli.

"Oh, only what stands on the five leaves which you hold in your hand. Do begin, my beautiful, witty friend."

Lilli looked long and silently on the leaves. Kappchen hoped she would not decipher anything.

"It is not like your books, in which one begins at the beginning," said Lilli; "here we seek the thread, and then the rest follows."

"In the same way as the soothsayer reads the destiny of man in the lines of his hand?"

"Exactly," answered she, "only my art is the surest. Listen then. On this first leaf is the history of a Forget-me-not's soul."

She began.

On the meadow in which I bloomed, romped and played two lovely children—a maiden with fair flowing locks, and a boy a few years older. They chased after butterflies—at least the maiden did. The boy looked more at her than at the gay butterfly: they were neighbours' children.

"Oh, dear!" cried the maiden, "it is wet here, and there is a wide ditch. The beautiful peacock's eye is flown away, and I cannot get over."

She stood sadly by the ditch, looking as if a great happiness had vanished. Who knows if she will ever possess it?

"No further," said the boy; "I will carry you over the ditch."

"No, no; you will let me fall," cried she.

But just then, the peacock's eye fluttered close on the edge of the ditch, and she could almost reach it with her net. The boy was turning away offended; but the fair child, ever looking after the butterfly, beckoned him back.

"Quickly!" exclaimed she. "Here it is again."

And the boy took her in his arms and stepped into the ditch. There, he stood with a dear lovely burden.

"What will you give me for this service?" asked he.

"Nothing; but make haste. I am too heavy."

"Nothing! Then I will remain standing."

"Naughty boy, you will sink still deeper. What will you have?"

"A kiss."

"Foolish!" said she, casting her eyes down and turning away her head.

"Oh, what beautiful Forget-me-nots!" cried she, forgetting her anger and her bearer's demand. "You must pick them for me;" and she quickly bounded from his arms to the other bank. The boy remained standing in the ditch.

"The Forget-me-nots?" asked he.

"Yes, the Forget-me-nots."

He stooped to gather them, and she clapped her hands joyously "I will put them in a cup with water, lay a stone on their stems, and place them in my mother's room: then they will grow and flower."

A little while after they both sat together on the bank. The maiden gathered up the flowers he had picked, and collected a regular little bundle in her lap. The boy looked quite happy, and had already forgotten that she had refused him a kiss.

"Give me a flower as a remembrance," he entreated.

"No; why did you try to force a kiss from me?" She took hold of both corners of her apron and skipped home. The boy frowned, and shook his fist at her. Then he went his way as if both had happened. A few days after, the frivolous little creature had forgotten the butterfly, the refused kiss, and the denied Forget-me-not. But we had grown up high, had unfolded our buds, and bent our heads together to chatter over the stone which separated us, and ask after the boy whom we had not seen so long. Then he happened to enter. He had a commission from his mother to his playfellow's mother; and, as he delivered it, his eyes fell on the cup with the Forget-me-nots. The blood mounted into his cheeks, and, as the mother turned away, he approached and picked the stem on which I bloomed, and stuck it in the button-hole of his waistcoat. "What are you doing?" asked the mother. "Nothing," replied he; but he became still redder, and held his cap before the Forget-me-not. Shortly after, I faded between the pages of his Latin grammar. I remained there a long time till it was winter, and snow lay on the ground. The boys snowballed each other for the first time in the court of the school; the books were put down hastily on a heap of wood, and therefore I fell out, and was afterwards carried away with the wood, and almost burnt in the oven of the school; and then the boy was rebuked because he had turned over the pages of his grammar for an hour without being able to say what he was seeking. I have never learnt even so much as why he blushed when he picked me out of the cup.

"That is the history of the first leaf," said Lilli, whilst she picked it off, and let it fall into the stream which carried it away. Four leaves remained standing round the chalice. Kütchen did not know what to say to the story, and sat during the whole time in painful impatience. He partly waited for the point, partly thought of a criticism which would annoy his friend as little as possible. "Very pretty," said he, "but for all that you must read my books. There is more incident in them—from them you would learn what happened afterwards, what wonderful circumstances occurred before the children became a pair; for I have always been waiting to learn this."

"I know as little about that as my Forget-me not," replied the Elf. "It is no book, only a page, and my poor Forget-me-not has no more to relate, only to observe what Fate permits. Shall I read more?"

"It will be the same end," said Kappchen, "for that is all that happens to Forget-me-nots."

"Let us see!" She held the second leaf against the light, studied it awhile, let it fall, and without interruption related what the other had told. It was this:—

I sprung up on the banks of a friendly river. The waves prevented my immediately seeing a little meadow kept moist by the drops of water which the cheerful rolling waves left behind them on the banks, and which penetrated through sand and small stones to where the soil was which bore me and many sisters. On one side I heard the river rushing, yet could not see it, perhaps because I was not grown up, and my flowers had only been unfolded one way. On the other side I saw the high mountain wall of the valley. On the mountain slopes were three ruined castles, around which the first sunset I had ever seen cast a wonderful glow. The sun had gone down, and I remained in the quiet splendour of the evening. Soon I heard a perplexing noise of many men's voices, the tramping of horses' hoofs, intermingled with the splashing of oars on the river. I turned with all my power from the castles, to which I had longingly raised my flower eyes. I felt how my curiosity increased. I thrust my head between my sisters; it was open to my eyes, and I could see what occurred on the bank. A long train of young figures galloped on horseback and rode in carriages. Then came a number of six-horsed carriages, with riders alike. A row of four-horsed followed by two-horsed coaches concluded the procession. They were ordered to halt on the bank. Two youths, with little students' caps on their waving hair, stept out of the carriages. Horses and carriages, in disordered throng, turned round and returned the same way. A boat lay by the bank, with a pennon at the mast, the colour of the scarfs and caps. It was decked with crowns, garlands, and oak-branches. Music greeted their arrival. Most entered the boat; some wandered with light steps along the bank. The boat pushed off, the band struck up the melody of a student's song. The youthful voices began:—

On the cool shores of the Neckar
Stand mountains bold and high.

It resounded through the air; the oars struck regularly on the waves; and I again turned my eyes unwillingly to the castles, which, in the sunshine, and in the glory which the song threw over them, in spite of their dark stems, looked proudly down on the festive troop. Suddenly I was torn from my wandering meditation. The students, who had gone down on the bank, had picked, on the way, a tuft of flowers, or a green branch, and stuck it in their caps. One cap wanted an ornament just as its owner stepped over me—he stooped, and with a wrench I was gathered, with many others. A thick Forget-me-not tuft decorated the cap; and I rejoiced, for I should now share in the festival, and help to ornament the students. Every one had left the boat, and dispersed themselves in small and great parties over mountain and valley, or along the shore, where they had pleasure, frolic, and adventure. I waved on the brow of my bearer up to the castle, to which I had so long looked lovingly in the distance. Through ivy and brambles I was carried to the highest battlements of the old ruined walls. I saw the wide, wide world before me, and looked down (to my shame I must confess it) almost with contempt on the little place from whence I sprung. The students who had followed us went further on: my friend climbed up the mossy tower, I was quite giddy. A yellow wallflower, which I touched in ascending, whispered to me, "What do you do up here, valley flower?" I looked at her with a proud smile; but, before I could reply, we were above. My friend sat astride on the wall; swung one arm round the trunk of a tree which had firmly fixed its roots in the moistened ruins, and looked down on the broad earth spread out beneath us. He had become warm in climbing: he took off his cap in which I waved, and placed it on a great stone by his side. After my first astonishment was over, I felt such an undefined melancholy, yet poetical frame of mind, that I longed to make a poem which the gloomy tone of the surrounding ruin had suggested. The same desire must have occurred to my student; he drew out his pocket-book, laid it on the stone; by so doing he pushed the cap aside, and wrote some

verses with his pencil. I might otherwise have read it so easily, for I was convinced that he had taken away the poem that had not been commenced, and of which I already felt proud, but both the cap and I were thrust away. The sun shone on the paper, the student wished to read it; but the space was too confined. He reflected for a short time; then he laid the cap so near the pocket-book that the shadow of the tuft was thrown on the paper, and I could read all he had written. It was not the poem I thought of. No tears for the past, no hope for the future, quite content with the joy of the present. Truly he who had produced was a student. Student! there lies the answer.

"What are you doing up there?" some one cried out.

"Nothing," answered my student, shutting up his book; and blushingly pressed his cap on his brow, and swung himself nimbly down from the bower, from whose side the mosses came rolling after him. He went quickly down the mountain to the inn by the river, where the whole joyful company was assembled in a large room. A long table was covered; bottles stood on it; at both ends were two naked rapiers, crossed. The musicians had arranged themselves in the orchestra, opposite, the student's coat of arms burnt in a variegated transparency. Lights decked the room and table; the coats were cast off lightly; the shoulder band of the corps slid from the shoulder to the breast; badges were given with the rapiers; each took his place, and the meal began. All was cheerfulness, overflowing gaiety, youthful courage, fun, and happiness. The glasses were filled and emptied over and over again; they drank to each other, then sounded again the music of some song. The rapiers rattled down on the tables. "Silentium" sounded from the president's mouth. The conversation ceased, and all joined in the solemn melody. The first song was of friendship, and I, the flower of friendship moved softly to the waving melody as it sung:—

Does not joy the beaker fill?
Does not the heart with joy o'erflow?
To every gallant quaffer still
Our brisk, with friendship true will glow.

I blinked proudly to the other flowers in the cup, to the table, the walls, as if they paid me this homage. As the song was finished all stood up and clashed their glasses together, their hands clasped; and it seemed to me as if a tear of joyful sadness welled up out of my deep chalice. I am now a sentimental flower. So it continued till late in the night. It grew ever louder and louder, and more joyous; but many cordial words were whispered. My student sometimes went out on the balcony, and slung his arm round the neck of a friend. Over us was the starry heaven in its eternal silence; at our feet the rushing Neckar; behind, darker than the dark night, the seam of mountains formed the horizon. Near us rose the clash of glasses that excited the voices. My student pressed his friend's hand; I knew what that meant, for I had read his poetry. Again the rapiers rattled down, and Silentium sounded imperiously through the room. The voices were silenced, the coats taken again, each ordered to his place. To the gay confusion followed solemn, earnest, silence. The "Fatherland" was called for, and the wonderful melody began. The first verse was sung as the first song only. Then each president arose at the ends of the table on his chair, and kept time to the melody with his sword:—

See how flashes the hand
To a blade unsullied by stain!
I pierce the hat and swear—

and, as if for an oath, they laid their fingers on the crossed swords which had bored through the caps, and sang on:—

Honour shall be my guide,
Brave youths for evermore.

The sword was handed to his neighbour, the verse repeated, one cap placed over the other on the blade, and the swords met at each end. We poor flowers were badly off; and, as our neighbour's cap pressed on the cup which bore me, I felt as if the stem bent and loosened. I had thrust myself between the edges of the cap, and could see the sword turned over the table; and now the presidents sung:—

So let it be: thy head I now will screw,
Stretch forth the blade,
Long life to our new brother!

Then they stretched over the caps and laid the naked sword on his head as if blessing him, till all stood up with covered heads. The president's representatives put on their caps; the swords rattled down; "Exist commercium inidium fidelitatis!" sounded, and through the solemn song, long-restrained rejoicing brought forth tears. How are we off? As the cap was taken off which pressed on the bouquet, all we, Forget-me-nots, fell out and were all strewn over the table, and he who had plucked me headed it not. My neighbour fell so that she remained hanging on the edge of his glass, and as he put it to his lips she kissed him, and then fell dying at his feet. I envied her. Although scattered and crushed, we did not remain unnoticed. My friend's neighbour looked down on me, and, as if seized by a sudden recollection, he took me up.

"A Forget-me-not!" whispered he; "a Forget-me-not, like the one she denied me. Now she is grown up beautiful, I wonder if she would refuse it me again? As if she had ever given it to me," said he, and threw half me between the leaves of his book, just on the side where the sword said:—

And Love shall follow him—lead him her hand,
Make him a happy home in every land:

There I breathed forth my soul. Some day, after years are passed, if the student opens the book again, the poor dried Forget-me-not will tell of the maiden at home, or of the joyous ——

Heinzelmann had listened quietly, whether from interest, resignation, or gallantry, is not known. He only said, "Men make wonderful feasts, especially when they are students."

"Our Forget-me-not's soul appears quite captivated with it," replied ——. "The feast affected her to tears."

"You," interrupted he, "at what does not a Forget-me-not weep? Are you not appears solemn."

"Poor Forget-me-nor," continued Kappchen; "and yet it is pure nonsense—so many carriages, the drunking, and piercing the caps."

"It may be. I have not to answer for my story," said Lilli, and let the two leaves fall into the brook.

As if to restore them, Kappchen stooped as if he would hold them back; but the stream had already borne them far away. "Shame!" said he. "I will write out the student's history."

"Wherefore?" asked the Elf. "There are stories on a thousand leaves more beautiful than this."

"I doubt properly how to make use of it, if a page on a printing sheet were blank," said Kappchen. "It is good enough for that. We let the book be prettily and gracefully bound, and ornamented with gilt edges and gold vignettes. The little book now supplants art, the other paintings which formerly adorned the table. People rejoice at the outside, and turn over the pages, but do not ask about the contents."

"I am all beings, men," mocked Lilli, "and that you call taste for binding."

In the meanwhile the sun had gone down, twilight lay over the plain, mist rose out of the damp ground which extended to the little place on which our pair sat. The broad damp veil increased, and waved gently in the evening breeze. Kitchen drew down the brim of his cap, the Elf gathered some of the white flowers which grew in the meadow, and spread them on her seat. Then she set about reading the third leaf of her fiveleaves.

"You will injure your eyes," said Kappchen, trying to take the flower out of her hand.

Lilli laughed. She rose up, and called with clear voices over the meadow, "You, glow-worms, wake up and shine." And over the meadow they began to shine in the dewy grass. Here and there a spark that became clearer and clearer, then the lights began to glitter and whizz hither and thither in the grey fog; first slowly, and then more lively.

"Come to me!" commanded the Elf, "and whoever keeps still and lights me well may hear what I read."

The glow-worms set themselves down on the moss which covered the stone, or hung on the flowers that overshadowed her, so that their friend sat in clear light. The water shone as the flowers were reflected which bent over the waves.

Kappchen was delighted: "How it shines, just like a ball-room!"

"I will conduct you to a ball-room," said Lilli, who had found the thread of the story written on the third leaf. She read:—

I was not born in the free air of nature. I grew up in a large hall with glass windows—it was very pretty there, but I always severely missed the fresh, blowing rain. We were a great society of flowers, come from all parts under heaven. There, waved the proud palm, the wonderful butterfly, flowers of the orchid hovered, and climbed down from the ceiling. The coquettish camellia let her flowers come out from her shining wall of leaves, while the pomegranate increased the glow. What were they called, and who may tell again the cries for home from all the parts of the world? It is true I had not been deprived of home, but listening to them confused the seasons to me; they deceived me about spring and summer. The sunbeam told me that, as it visited us, when the matting was taken away from the windows, and we could look out into the world full of ice and glittering snow, why not also on us? I often complained to a party of violets which grew near me. Why are we people, who care so little for it, by the side of these bright foreign plants? There was not a long time to think over the answer, for the gardener, our guardian and waterer, appeared one day, and cut flowers and branches from all, and carried us away together. Neat hands bound us in little bouquets, placed us in a crystal vase, and carried us together, well protected against the winter. The icy blast half-froze me. I half longed for the free blowing of the pure air, and so I considered, and occupied myself with the cold resignation with which the camelia braved the winter air, and scarcely at all with the gentle lament of the orange blossom, which sorrowfully closed, and consoled itself under the leaves vainly comforted by a hardy orris. Suddenly a warmer-scented air rushed towards us. A brilliant beam of light penetrated through the crystal vase in which we were laid; the covering was taken away. Astonished, I gazed on the never-seen wonder of a ball-room; lights streamed down from a brilliant chandelier in the centre; lights streamed from the walls. A gaily-dressed crowd were assembled; melody sounded from the orchestra, and the music and the crowd rushed thither, struck by the electric blow of the sound. It seemed to us as if the festival had come to an end; and a sprig of myrtle, which had fallen out of the bouquet of some fair lady, was thrown carelessly into the vase, and, happening to come near me, collected and explained all the wonders to me, which, charmed, I had almost turned my head. We flowers were put aside in a modest place, and people did not appear to care for us. We were placed in a window-niche behind a fluttering curtain, but so that I could overlook everything. I was at first intoxicated with the splendour of the dance-music, the glitter of the ornaments, the beauty of the forms. When I had quiet to observe, my friendly myrtle-twig was always ready to answer my questions. What wonderful goings on! how quietly the dancers step up to the fair ones; how earnestly they bow, and how formally is the presented hand the found! A few seconds after, a pair rushed past us, the eyes lit up, and the slender form of the lady trembled in the arms which surrounded her. But, when they returned to their places, the same quiet bow, the same formal greeting. A longer pause occurred. The instruments were tuned, people walked up and down the room, were placed together, then the orchestra began; the dancers led the ladies to their places, the chairs were taken away. Now the first couple presented themselves. The lady was of the most brilliant appearance—the Queen of the festival—a tall, stellar figure; both arms down to the shoulders; round her proudly-carried head flattered the purple bells of the fuschia; her eyes beamed through the room, sure of conquest and conscious of it, more brilliant than the diamonds that sparkled on her breast; the beautiful arm, with its heavy bracelet, leant lightly on her partner's.

The myrtle remarked the object of my admiration. "That is the daughter of the house, whose betrothal is now celebrating; her partner is the bridegroom; I know that, for I fell out of the bouquet she holds. Before the party, he presented both bouquet and jewels." "How happy they must be!" sighed I. An old lady and her daughter sat near the window-niche, privately looking down on the dancers, and whispered to a gentleman standing near, "The mother has caught him, and that was not difficult, for he is no great light." "The bride is my most intimate school friend," added the daughter; "she told me in confidence, eight days ago, that she found him tiresome in the highest degree. She is such a coquette, and"—"It is a brilliant party," said the gentleman." Two young officers happened to be near me. "Is she not beautiful?" asked one. "But she has no heart,' replied the other." Opposite me, by the door, stood a young man dressed in black; he did not dance, spoke little, but his dark eyes were fixed on the bright apparition who was the talk of the evening, the object of all attention. I sympathised with him, and knew not why. I believed that we poor flowers were forgotten, when some one took up the vase in which we rested and placed me on a little table in the middle of the room. One dancer after another stepped up and selected a bouquet to present to his lady—and a dance, a look, was recompense for the gift. The vase was quickly emptied, the last dancer came up, the bouquet in which I lay was once cried. I saw the young man, who, unmoved, still followed the beautiful bride with his eyes, now, for the first time, leave his place. He went firmly towards the vase: "A Forget-me-not," whispered he, seizing the bouquet which he brought to the daughter of the house. As he bent before her, his dark eyes were fixed questioningly on her features. She could not meet his glance, she looked down on the bouquet which they danced, and just as if she would conceal her emotion said, "A Forget me-not! Do you not remember the time when we were children, and gathered Forget-me-nots in the meadow?" "And later," added he, "but no recollections for to-day." He offered her the arm, and danced through the room. Some minutes afterwards I looked around me: he had not returned to his place, but vanished. The dance was ended, the company dispersed, and the hall was empty. The beautiful bride had laid aside all her bouquets, except mine, which she pressed in her hands. She left the room—streamed through the illuminated room, passed inconsiderately by all its brilliancy, carelessly treading on the flowers which lay on the ground. Her treat was sure, her eyes clear, her head lofty as before. She seized a silver lamp and entered her chamber, where her maids awaited her. The wreath was taken from her hair, the diamonds unfastened, the dress stripped from her arms. She turned to the table without further consideration. When she was undressed, and the maids had left her, she stood thoughtfully in the middle of the room. She did not turn to the bed, but to the table where the jewels lay. She held me look again with delight on the ornaments which she had got to it. No; she grasped the bouquet; her fingers trembled, she sought amongst flowers and leaves. I guessed it—she sought me. Then she drew out the drawer of her toilet taste. A costly brooch which lay before it rolled on the floor; she heeded it not; took the scissors out of the little case which stood by, and tied the bouquet together, threw the rest of the flowers aside, and drew me out. She bent down to me. I was faded, her head sank. I felt a warm tear fall in my chalice, and as I once looked up—what a change in those proud, cold features! The head was bent, tears rolled over her cheeks, her whole form heaved. "I am not happy?" I sighed my all. "Had she no heart?" She had sunk in the chair and supported her head with her hands. How long she sat thus I know not. The lights were burnt down—daylight appeared through the curtains. It seemed as if I saw a dark shadow spread over the window. She started up, took a box from the table, and pressed on the spring. A book of hair fell out. She pressed me into the box as she put it to her lips—I felt it, and died in her locks.

THE BACHELOR'S PERSONAL ECONOMIST.

BY AN EPICUREAN STOIC

CHRISTMAS is a time of much enjoyment and little bills. An almost primary object with nearly everybody is to increase enjoyment and to render little bills less. A few hints and suggestions towards the attainment of that object may not be unseasonable at this season of general festivity and disbursement.

Economy, in the primitive sense of the word, is the regulation of a household. It should not be confounded with parsimony, as it commonly is. Its object is judicious expenditure rather than saving. Personal economy is the art of spending money to the greatest advantage; that is, so as to purchase as much happiness as can be had for the amount. We are informed by divers heroes and heroines, in every melodramas, that money is not happiness. True; and more is not mutton: but no money no mutton, without sponging or stealing. Money will simply buy all the happiness that the world has to sell, and in so far as happiness is the same thing as enjoyment, the quantity of that is pretty considerable.

It is perfectly consistent with the most rigid economy to devote nearly the whole of one's income among decrepit and unabsolved paupers, if one takes pleasure in relieving them, whether from the hope of being rewarded for so doing some other day, or from the exercise of constitutional benevolence. But the great majority of economists reserve for the distribution of their money among their own ordinary and minor wants, even at Christmas.

Economy, under certain circumstances, is a pleasure employment. When one has to consider how much, out of ample means, one had better allot to house-rent, how much to hospitality, how much to carriages, how much to travelling, how much to the subscription-list, how much to the cellar, and so on, the labour of economising is one that we delight in—which physics pain. But when the question necessary to be decided is, which of these or any other good things we can least inconveniently do without, economy becomes a bore, and evil only for the sake of averting judgment and execution—a virtue. The alleviation of the economical bore is our present object. We have nothing to say about the nobler and pleasant species of economy, because we have no experience of it; having been convicted only of the baser and disagreeable.

By far the least painful economy that a man can practise is economy in dress. Stint yourself in those wants of which you can most easily divest yourself. You cannot divest yourself of the love of beef or the love of port or claret, nay, not even of the love of venison and turtle, of Johannisberg and Cham'ein. Self-denial in any of these particulars is attended with an aching void. In respect of dress you can not repudiate, nor stifle, nor subdue your wanted warmth and comfort: nor you can at least soothe and stifle, if not absolutely banish, a too anxious and concern for appearances, whereby you will effect a great saving. You can, by a resolute effort of the mind, refuse to think about the look of your clothes, or you can bring yourself to a disregard for it by exerting your reason. Reflection will show you that the only importance of other people's opinion of you lies in the confirmation which it gives to your own opinion of yourself. If you feel quite satisfied that your dress is good, that if you were sufficiently well off you would keep a tailor instead of going to a slop-shop, what signifies it to you that your acquaintance suppose that you are insensible of the difference between a good coat and a bad one?

Of course if your livelihood depends upon your costume, that is another matter. Your respectable exterior is a part of your investment. Many rational persons—medical practitioners, for instance—are unfortunately precluded from economising in apparel by the prejudices of society, which will not believe that pills and draughts can be judiciously prescribed or administered by the wearer of a shooting-coat and a pair of strong boots.

What is true of economy in dress applies, also, in a less degree, to economy in furniture. In a less degree, because your coat is not displeased by the objects surrounding you, which you can see reflecting, whereas you need not look in the looking-glass unless you please.

It is astonishing how many years a coat will wear, even a dress coat, worn at evening parties, which take place by candle-light. If the threadbare state of the garment is imperceptible. A hole, however, should be ironed out for occasions of that sort. A patch, if necessary, scoured; moreover, if the seams are visibly white, should be washed with the black and blue reviver; for you have not gone to a man's house and partake of his hospitality if you are ashamed of it: or if it gives your host annoyance, however unreasonable.

The time for which a pair of thick shoes, especially if nailed, will last, with occasional repairs, would scarcely be believed by a gentleman of the class denominated "swells." The shoes will bear four-piecing and heel-piecing several times, with intervals of many weeks between, and soles altogether for as many more, the upper leathers in the meanwhile remaining perfectly sound. Then, after the latter have begun to give way, the existence of the *chaussure* may be protracted for an indefinite period by a series of patches.

Does a sometimes obliged to dress more splendidly than one can afford by the taunts and jeers of one's friends, because they, by those remarks and observations of theirs, pester one in the same way that a little boy does at the beginning of the oyster-season, by giving one no rest, importuning one to "remember the grotto!" whist one is engaged upon more interesting, perhaps or about the essential nature of the distinguished from matter, or on things in general, then, to abstract your thought from the consideration of fit sentiments of other people entertain respecting you as long as they keep them to themselves; but when the exercise of their private judgment on the merits of your thoughts, which is very vexatious, calls for your wished that those who consider a man's dress of more moment should refrain from ridiculing it before his face.

Where you are unknown you can have no difficulty in wearing what suits your circumstances, consulting only comfort and cleanliness. Nobody will take any notice of you unless you choose to attract it; and what then, if a person, whom you neither know nor care for, and who neither knows nor cares for you, takes you for a working-man because you have a flannel jacket and a pair of corduroys? Suppose you ease him the way, and he answers you in a contemptuous tone, under the impression that you are a snob? You smile to think how greatly he is mistaken, a nd pass on.

Whenever, then, you are called upon to retrench to any amount, you will, if a sensible man, consider in what particulars you may screw that amount out of your dress. The necessity for deterioration of meals may be obviated by wearing cloth gloves instead of kid, or you wear gloves at all. A sunk hat may be economized for an old Havannah cigars for Cubas; or a reflector by a refresh of wine or grog, might be met, instead of by the ordinary conventional resistance, adopting the same means of deadening already alluded to, and substituting the strong waistcoat for patent leather boots: though these last are certainly your poverty is not subject, and you have to do it out of choice, for in goloshes with these without furnishing them, which is not the case with black dboots, and you save the bleaking into the bargain.

Apropos de bottes, it is a great pity that the bonnets of ladies could be made of leather, or some equally durable substance; which is impossible, not on account of the nature of leather, but by reason of the nature of ladies, to whom durability, even if combined with economy, would be an objectionable quality in a bonnet. As are human beings in general, a most important to the female mind, and the thought from every nail is quite so: unhappily, therefore, for economy, the principle of economy above recommended can be only by bachelors who mean to persevere in single blessedness, or by widowers who intend to persist in enduring the privation of conjugal felicity.

"COLD WITHOUT."—DRAWN BY S. READ

"COLD WITHOUT."—THE PASSER-BY.

My coat is worn threadbare and thin,
My shoes are very old,
The wind and snow alike creep in,
And bite me with their cold.
I've not a penny in my purse,
Nor friend to give,—not I;
And yet my fortunes might be worse.
Here are the reasons why.

I might have been, perhaps, fool enough
To give my heart away,
And met with coldness or rebuff,
As men do every day,
A wayward woman is a curse,
You'll find so if you try;
My state you see might still be worse,—
And there's a reason why.

I might have found a faithless friend,
To change my sweetheart's mind;
Falsehood like this you may depend
Is worse than "wintry wind."
Though to good cheer I'm not averse,
Yet I can pass it by,
And feel my state might still be worse,—
You've heard the reasons why.

M. L.

WAYFARER IN THE SNOW.

Cheerily the firelight plays
All about the little room.
How the dancing, glancing blaze
Doth from nook and corner chase
Like a ghost—the gloom!

Here the world is wan and white;
Lonely is the way I go;
Only stars with trembling light
Look down on the Christmas night,
On the Christmas snow.

So, the starlight for the fire,—
Forth I pass upon my road;
And remember, if I tire,
Earthly darkness brings us nigher
To the light of God.—M. J. J.

CHILDREN'S PARTIES: THE SHOWER OF TOYS AT CHRISTM[illegible]

CHILDREN'S PARTIES.

WITH SOME HINTS FOR GIVING THE SAME.

We [illegible]rs a pleasant custom has grown up in England—introduced, [illegible] mas-tree from Germany. I mean the practice of g[illegible] parties—not hobbledehoy balls, where [illegible]re too old to be childish, and not old enough to be manly or [illegible] as the [illegible]s, where [illegible]res for the evening [illegible], I contrive now and then to gain admission to some of those [illegible]therings, and, sitting down quietly in a corner, participate in the enjoyment of the scene, without disturbing it. [illegible]mblages there are smiling faces worth looking at, for the sunshine upon those dimpled cheeks and rosy lips a[illegible] sparkling eyes is real and honest, and not the sham that too often hid aching hearts and envious thoughts, or blighted hopes. You never doubt the truthfulness of the mirth which makes the welkin ring, nor question the existence of the innocent jollity whose exuberance escapes from the twinkling feet of the happy dancers. We sure that it cannot always be so, that change will come, and it would be a sorry sight indeed to look upon a gathering of the same beings when twenty years have passed, and to know and see all that time has done. Enough for the present to be certain that the little revellers we are now observing are innocent and happy, and to feel assured that those joyous eyes have never wept a tear which flowed from the heart, but that their "hottest drops" have been shed over the fractured nose of a wax doll, and to be comforted by the thought that those curly-headed gallants dividing plum-cake with blondes and brunettes are quite as unconscious of their powers of fascination as they will be thirty years hence, when their curly pates are bald, and their little noses are crowned with spectac[illegible]

It is wise and good to mark the season of the advent of our [illegible] our by acts of gentleness and good will, and to impre[illegible] kindness and sober cheerfulness upon the infant mind by [illegible] which will be reme[illegible] forgotten. In thoughtful G[illegible] largely considered, and our Illustration gives a representation of a pleasant hoax played off upon Christmas-eve. A fire is made of chips of the yule-log under a large chimney, and, as the smoke curl upward, in honour of St. Nicholas, a ponderous head, but merry withal, descends, and bears in a pair of huge arms "a shower of toys" t reward the happy group assembled to watch the result of th[illegible]

to. When the new apartment has been safely landed, its laughing occupants are to exult, at which bulls are thrown, and those who could enter the ponderous and pasteboard jaws are rewarded by a ticket for the Christmas-tree. There were no Christmas-trees when you and I, Mr. Fifty, were boys; but do you not remember many a joyous game of Snap-dragon, Hunt the Slipper, and Hot Cockles, that even now make some of your wrinkles look like smiles? Take my advice, Fifty; give a child's party, and make sure of passing one happy night this merry Christmas time. You should not know how to set about such a thing? Pshaw, man! it's as easy as lying, and a great deal more honest. Come with me to-night, and be instructed; for I am off to my first party this season, and will ensure you a hearty welcome: it is only next door. Can you hear those peals of laughter, ringing out into the street like the sounds of silver bells, and hesitate? No!—that's right, Fifty. And did I not tell you that your welcome should be a hearty one? We are rather late—half-past eight.

The first dance, you see, is over, and I will sit here, in this corner, while you join the desperate charge about to be made on the refreshment room.

Who can doubt that Julia Lowther thoroughly enjoys that large piece of orange which she devours with a zest that cannot be questioned? I wonder if she will, in five years' time, "mince" over an ice and a wafer.

Rosa Gould—rude, unaffected Rosa—has actually asked Charley Crowder to give her a glass of ginger-wine! If she remembers doing so when Charley shows in his ragimentals at the County Ball in 1861, and tries Mr. Stiggins to dance with him—won't she blush? O, won't she?

I am driven from my corner, having confessed myself too old to join in the *pieans*; but, nevertheless, I have consented to be the reader. You don't know the game, I dare say? It is a paraphrase of a pleasant Anne Boleyn romp called "The Family Coach;" but perhaps you are not much wiser now? As I am appointed narrator of the story, and have taken my place in the middle of the room whilst our merry little friends take possession of the roul-stools, listen!

Ladies and Gentlemen,—

We are about to play the highly-exciting and moderately-gymnastic game of the *picnic*, and, as you all have to take a part in it, be kind enough to bear in mind the characters you represent. The following are the persons and things to be embodied:—

Mr. Brown.	Pigeon-pie	Tablecloth	Water	Salt
Mr. Jones	Mrs. Brown	Knives	Hamper	Mustard
Mr. Briggs	Mrs. Jones	Lamb	Vinaigrette	Pepper
Mr. Smith	Mrs. Briggs	Salad	Forks	Cows
Mr. Briggs' Baby	Mrs. Smith	Rolls	Spoon	Wasps

Rosa Gould, you represent Mr. Brown. Eh! O, very well, Mrs. Brown, if you prefer it. Charley Crowder is Mr. Brown, Rosa Gould is Mrs. Brown, Tom Webster is Mr. Jones, Julia Lowther is Mrs. Jones, Fanny Joyes is Mr. Briggs' Baby, Jemmy Herbert is Pigeon-pie, those six little girls are Knives and Forks, Mary Turner just so. You understand now. So, Kate Diamond, divest me the rest of these characters, whilst I run over the story. Well, are the characters all given out? They are. Then, ladies and gentlemen, pay attention to me. Whenever your names are mentioned you must rise from your seats, turn round once, and sit down again; and, failing to do so, or rising when you are not named, you stand with your face to the wall until you are again mentioned; and whenever the word *picnic* is said, you all change places with your opposite neighbours. Now, then, to begin

THE PICNIC.

Why, I told you to change places whenever the *picnic* was mentioned. That's right; but don't seize the tails of my coat, or you'll leave me only a jacket. Attention!

"Nothing would give me greater pleasure," said *Mrs. Brown* (quite right, Rosa; turn once!) "I'm sure I shall be delighted," said *Mrs. Jones* "And I! and I!" said *Mr. Smith, Mr. Briggs, Mr. Jones, Mrs Smith* and *Mrs. Briggs*. "And so will Bunky," said *Mrs. Briggs* (meaning of course *Mr. Briggs' baby*); for I do so love a *picnic*." It was agreed, therefore, that on the 4th of June, in spite of the *cows* (you should *moo!*) and the *wasps* (you should buzz), which *Mrs. Jones* (Ha! Julia did not turn round. Face to the wall!) said were her many objections, *Mr.* and *Mrs. Smith, Mr.* and *Mrs Briggs, Mr.* and *Mrs Brown, Mr. Jones* and *Mrs Jones*, and *Mr Briggs' baby* should all start for Epping Forest, and regularly enjoy a *picnic*. The day was very hot; but what is a *picnic* without a little heat? It is like tea without boiling water, good for nothing. Well, they arrived safely, though *Briggs' baby* during the journey in a wasp which had been attracted by the sugar-stuck *Briggs' baby* was sucking (Fanny turned only once—face to the wall!). When they arrived at the forest, all helped to unpack the *hamper* (Hamper! Hamper! Bessie Brown, face to the wall!). *Mr. Jones* brought *pigeon-pie*, *Mr. Smith* brought *pigeon pie*, *Mr. Briggs* brought *pigeon pie* (very good, Johnny Herbert!), *Mr Brown* brought some *lamb* and a *salad* (Salad, to the wall! Too quick, am I? That's the fun of the game), besides the *hamper*.

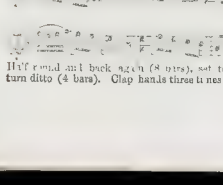
"Don't trouble me," said *Mrs. Smith*, "I was quite alarmed in case everybody else brought *pigeon-pie* to the *picnic*."

They sat down on the grass, and spread their *tablecloth*, and laid out the *knives* and *forks*, the *spoons*, and the *salt*, and the *mustard*, and the *pepper*, and the *pigeon pie*, and the *lamb*, the *rolls*, the *water*, and he *salad*, and began regularly to enjoy the *picnic*. Glass of wine, *Mr Smith*? Thank you, *Mr. Brown*. The same to you, *Mr Jones*. Trouble you for a *knife*, *Mr Smith*, and a *fork*. Ah! cried *Mrs. Briggs*, here's a *wasp* as big as the *pigeons* in the *pigeon-pie*. Up jumped *Mrs. Jones* with a *spoon*, and, trying to drive away the *wasp*, put his foot in the *salad* bowl, and tumbled over *Mr. Smith*, who declared he had never seen such a *picnic*.

When order had been restored nobody could discover what had become of *Briggs' baby*; *Mr. Jones* thought the *wasps* had carried it away; *Mrs. Brown* thought it might have tumbled into one of the *pigeon pies*; but *Mr. Briggs*, directed by his paternal instinct, found it in the *hamper*, where it was sneezing its head off, having snuffed up a quantity of loose *pepper*. As nobody can be comfortable lying upon *knives* and *forks Briggs' baby* was taken out of the *hamper* and laid on the *tablecloth* by the side of the *pigeon pie*. Poor *Mrs. Briggs* had fainted (not pleasant at a *picnic*); and *Mrs. Jones*, in her desire to revive *Mrs. Briggs*, gave *Mrs Briggs* the *mustard* to smell instead of a *vinaigrette*. To make matters worse, two fierce *cows* jumped over the hedge; and *Mrs. Smith*, having found the *tablecloth* into her bosom, sprung up and overthrew *mustard, salt, pepper, rolls, knives forks, spoons, pigeon-pies, lamb salad, Mr Briggs baby*—in short, everything they had brought for the *picnic*. The *cows* pranced about, the *wasps* buzzed. *Mr Jones, Mrs Brown, Mrs Smith, Mrs Jones, Mrs. Briggs, Mr Briggs*, and *Mr. Briggs baby*, declared they would never come again to a *picnic*.

There—and now, John, a glass of sherry! Hallo, hallo! I am nearly borne away by the rush to the refreshment-room, where the consumption of lemonade, orangeade, and negus is really quite alarming. Arthur quadrille, a polka, and then the DUNKIRK CHIMES. That is the dance for me—to look at I mean! Oh! I am to be tugleman, am I? Well, take your places, join hands and form a circle—the larger the better. You have to keep time with the tune, and obey the word of command. Now begin—

THE DUNKIRK CHIMES.



Half round and back again (8 bars), set to partners (4 bars), and turn ditto (4 bars). Clap hands three times (3 bars), stamp your left three times (3 bars), turn partners half round and back again, and repeat the figures until you are tired. Twenty minutes I decide at Capl al exercise to prepare you a l'ar supper.

What is there for supper? Bring me with a kiss and I will tell you: Cold chickens turkey, ham, cold beef, tongue, sandwiches, jellies, custards, cheese cakes, pound-cake, bon-bons, grapes, oranges, and plenty of bonbons! With proper caution you may make merry, little people, and have no fear of the doctor and his nasty draughts to morrow.

"Supper is ready, if you please."

But the party is too large to be seated altogether. Suppose some of you remain with me, and play at CUPID'S COMING. Capital game, and one which will tax your knowledge of participles.

Now, Louisa, Cupid's coming! Ask how is he coming.
How is he coming?
Acting.
Now ask Arthur. Cup id's coming!
How's he coming?
Attesting.

Now go on until you have exhausted the participles, beginning with A, and then proceed with B, whilst I go down stairs and carve the turkey.

I have the honour to be received with a salute of *bonbons*, and one gentleman in all rounders, a Mr. Chairman in embryo, has proposed my health in a glass of ginger-wine, and requested the thanks of the party for my conduct as director of the *Picnic* and the *Dunkirk Chimes*. I return thanks in an appropriate speech, very short, but remarkably expressive, as it has the effect of clearing the supper-room, and making way for the lingering detachment in the drawing-room. At last supper is at end, and the great event of the evening is about to come off. Nothing less than drawing the prizes of

THE CHRISTMAS-TREE.

I am old enough, and so are you, Mr. Fifty, to remember the days of the Christmas, when Cooper's Hall was crowded by men and women of all sorts and condition, watching with feverish anxiety the declaration of the many prizes, and the still more numerous blanks, each one envious of the other's success. Here is the same excitement without the gravy, for the prizes are all (or should be) all of equal value, and the fortunate holder of a gold watch made by Mr. Gunter, the confectioner, and jewelled with a hundred sugar-drops, is not a whit the richer than the recipient of two chocolate cigars and a box of comfits. Dear me! to think how very few shillings have purchased all this merriment, and then to remember how many pounds we guzzle and waste on dinners, which first produce dyspepsia, and then all the evil humours which go to the making of a gouty toe.

The Dunkirk Chimes once more, to assist the digestive organs after supper: Round and round, my merry lads and lasses, for Christmas comes but once a year, and not always then with its cheerfulness and kindly feelings, but it is here to-night; so welcome it heartily, and dance away till the holly flirks upon the walls as though it were conscious of the mirth, and felt it in every scarlet berry and shining leaf. Now a game at Whist? What? and Where? or some other time-honoured verbal pastime; and when you are all cool enough to go home give a kiss to the old man, and pack yourselves up in your snug furs and warm cloaks, shawls, and comforters. And as you kneel beside your beds, to address, in the words of the great founder of Christmas-tide, the Giver of all good, pray also that we may remember that there are the poor and needy to keep Christmas too.

Dear little people! if you hear some of your older and graver friends pooh-pooh this article upon children's parties, ask them to bear with it for your sakes, for it was written to give you pleasure.

M. L.

GRACE BENSON'S LITTLE PLOT.

BY JOHN SAUNDERS,
AUTHOR OF "LOVE'S MARTYRDOM."

CHAPTER I.

HOW FARMER BENSON'S HOUSE WAS HAUNTED BY A FAIRY.

I WONDER whether the Sun, that greatest of sight-seers, ever looked in upon a prettier picture than he beheld one morning in September 1854, through the flame of a quaint old fashioned window in the homestead of Farmer Benson? It was not the cluster of roses, still dripping with the morning dew of the garden, that delicate hands had arranged so exquisitely in the tall vase on the window-sill; nor the cheery fire, blazing and bubbling with a kind of glad life of its own on the wide hearth; nor the genial, healthful feast that clustered round the pleasant warmth, where the farmer, while waiting for his breakfast, had taken a couple of chubby, flaxen-haired little fellows—twins—on his knee, and felt his cares (and, alas! he had had many) smiled away, one by one, as he played with his spoiled favourites;—no, it was none of these things that made—though they might help—the picture. Look it is the sunshine, perhaps. Nay, let me rather whisper in your ear, there is a fairy in the place. There! She passed even now: a true fairy, notwithstanding her flesh-and-blood aspect; little, somewhat plump (for a fairy), but quick, agile, graceful; seen now here, now there, like a wandering sunbeam, making everything she touches laugh as it were in the joy of her presence. Lucky Farmer Benson! How his little fairy has tidied and brightened up for this morning the somewhat dingy home! What a spirit of life, like an embodied April, has she not infused into all around her, as they catch the contagion of enjoyment that is revealing in her low, sweet, silvery tones, and in the not infrequent outbursts of her irresistible laughter.

But if she be a true fairy in some respects, she is a truer woman in all. Could you stay her in her rapid flittings to and fro, and make her for one moment pause while you looked in her fair face and upon those strangely soft, as well as wondrously bright, brown eyes, whose tender darkness suggests a new shade in nature; could you then tell her some story of a neighbour's misfortune, you would see how deep and loving a woman's heart lay beneath the airy and dazzling exterior; or, should some one then narrate to her the particulars of a gallant exploit, you would startle to see those soft eyes flash out and expand as though the soul cried through them—"Ah, noble! noble! to do and to hear of such things is, indeed, *life!*"

But it must be owned our little fairy is somewhat more selfishly occupied this morning, though no one seems to know exactly what inward thought it is that so pre-engages her, and yet that makes her so full of outward manifestation. The day seems set apart as a holiday, and Grace Benson loves holidays. What then? She has certainly never welcomed any holiday as she welcomes this one. Always scrupulously neat in her person, she could not well improve that; but as to the house, she has perfectly worried the poor mother, by her incessant labours to beautify it, by calling forth from their secret keeping-places whatever remains of patrimonial wealth has been preserved through the peculiary difficulties of the family. An old silver flagon, and two or three small parcels of plate, gleam resplendently on the polished, almost black, mahogany sideboard; the circular mirror, whose gilded frame has long been tarnished, is now wreathed completely round by a long branch of the flexile trumpet honeysuckle in full and brilliant flower; richly-coloured antique covers of worsted hangings, made to wear rather than to sell, hide the seats of the chairs, and, in one or two instances, hang within the low window-seats; in short, there is a bright, cheerful, fresh air about the whole room, from the rest of the room.

A mother's eyes cannot but look inquiringly on all these signs of a new-risen presence, which, in truth, did, and for good reason, gather place. Dame Benson. She saw, and almost knowing as she noticed Grace again and again pause to look through the window across the common, now purpled over with the blossoming heath, and towards a road, the end of which alone could be seen from the farm.

"Grace!" at last exclaimed the mother, as with a sudden determination on

"Yes, mother," was the reply. Then there was an inquisitive look up; a recognition, half-fearful, half-comic, of a something in the parent face, inconvenient to deal with just now; and so, while Dame Benson planned her opening attack, she suddenly found herself clasped in those saucy arms, and a kiss upon her lips sealing them up so closely, that it seemed doubtful whether they would ever be allowed to open again,

"Nay, nay, Grace—I will speak."

"Oh, very well;" and therewith the demure maiden placed an arm-chair, then a foot-stool, took her mother's hand with an air of great ceremony, and seated her. She next sate herself down on the stool, and looked up as innocently expectant as though she had not the smallest idea what it was that was likely to be said, after so much preparation.

"Grace, when your father invited your cousin, Sergeant Cole, to spend to-day with us, I don't think he anticipated *you* would be so much interested in his visit."

"Why, is he not a hero? Nay, a hero-make? You saw by his letter what a number of recruits for the Crimea he boasted he had picked up. I admire heroes. Don't you, mother?"

"Come, be serious. I am growing anxious about you."

"About me, mother!" and the eyes opened—oh, so wide!

"What means this sudden change? To look at you now, who would think that you have of late lost all appetite—taken no interest, or very little, in our affairs—kept aloof from us all? Why, it was but the day before yesterday the tears sprang into your eyes, when I found you sitting alone in the garden, and asked you what ailed you. But instead of answering me, you ran away."

"Dear mother! you know that Phil and I had met that afternoon."

"Oh, then to meet one's lover is a good reason for being miserable!"

"Now, mother, will *you* be serious. I doubt if Phil does love me—I doubt if he can love. I don't think it is in his nature."

"I know he is one of those men who can *do*—and *lie*—and *feel*—but cannot *speak*; but I didn't think my own little Grace, who has known him so many years, would have found out that fault—if it be one—just now."

"Mother, I dare say—nay, I am sure—mine is a foolish dear and fancy; but—but it seems to me that out of the fulness of the heart of Love speech must come; and as with Phil it does not come—why—why"——

"You will give him up, and look in some other direction. Very well. As he can only, it seems, give you the substance without the show, suppose we try whether this young sergeant can be persuaded to favour us with the show, without the substance."

"Mother, can you think so meanly of me?"

"Do you love Phil Gordon?"

A roseate glow escaped as it were from the soul's innermost recesses in answer, but was suddenly drawn back, as by a stern effort, and succeeded by a marked paleness; there was then a dead pause, and the only sign of feeling or movement was the dropping of a few tears.

"Come, come; I know you love him. That is no secret. Every one knows it."

Here there was a flash from the maiden's eye that seemed to ask proudly—"Does he know it?"

"Your recent discomfort spoke too plainly; but if so, what means this sudden change yesterday and to-day, called forth, so far as I know, merely by the coming of your father's nephew—this young soldier?"

"Dear mother, ask me to-morrow."

"Well, may I guess to-day?"

The little head turned away in silence.

"You think to make Phil jealous—to rouse what you suppose to be his sluggish nature—sting him into eloquence and love. Ah, my child, these are tricks to which you should not stoop."

"Mother, I will do no wrong."

"You will *mean* none. But will you succeed? If I rightly read Phil's character, you will only thus repel him whom you should try to invite. You will wound his personal dignity, and"——

"Ah, yes—his personal dignity. He cares for that—not for me. Mother, I cannot, will not, marry him while this weight hangs upon my heart. But do not spoil my little plot, if I must own to one. It is hard work to jest and laugh when one wants to weep, and wouldn't much care to die."

"Nay, my own darling, I wish but to warn you. Have your own way. And see, here comes Phil, across the fields.

At once the conference broke up, the last tear was dashed away, and presently the little maiden might have been seen in the adjoining half-underground dairy trying the impossible task of making cleaner the milk vessels, and heard singing with a brave semblance of lightheartedness an old May-day song. Nor, as Phil follows her, does she cast one look aside in consciousness of his presence. It is her dress in fancy, plainly enough, the tall, majestic figure moving like a tower, and, it must be owned, at about as slow and methodical a pace as we might imagine a tower would move were it inclined for a walk. But it is an attractive as well as a commanding figure. A profusion of short brown curls fringe the under edge of the felt wide-awake; the face is ruddy with health, and remarkable for the placidity of its expression; the eye is gentle, yet with a certain occasional severity in it that stops at once any advances its owner may not choose to permit. He wears a tight-fitting, dark velveteen shooting coat, with long leather overalls coming high up the leg, and his hands are cased in thick leather gauntlets, which, with the sharp pruning hook in the hand, betoken the early morning's occupation—trimming the hedges of his farm.

A sudden darkness causes Grace to look up. It is Phil's head peering through the little window. And could he but know with what a tumultuous rush of the blood the maiden beheld him, notwithstanding all her self-tutoring to meet him calmly, he would perhaps have spared her and himself much sorrow. As it was, what he did know and see was the obvious indifference of her manner as she answered his frank cordial greeting. This suddenly froze him, even while, with his usual outward calmness, he passed it by, as if unnoticed, and so increased the evil.

"Who is the stranger, Grace, expected to-day?"

"Why, don't you know? My cousin, Sergeant Cole, who is recruiting in his neighbourhood for the Crimea. Why, Phil, perhaps he would take you."

"I think him can't you"

He was a neighbour of ours in our former residence, and a great favourite with us all before he enlisted; and as soon as my father heard of his coming on a visit, he invited him to spend some hours with us. We will see in the house, how busily we have been preparing to give the hero a fitting reception. Women to be pitied!"

"I hear from the kitchen you have been busy in the"

"If I do not, I do, you may be sure, from the gravity of your face as you answer me to me the a touching sort.

"Will you now hear me say a few words?"

"Never—if *he* does not call me away."

"Grace, I can bear no longer your strange treatment. I do not think I deserve it. One day a smile, the next a frown; and then the third a tone from that may be either, or both, for aught I can make out."

"Well?"

"It is not well; and you must explain to me"——

"Must!"

"Nay, you shall answer me!"

"Let me pass, Phil."

"I will not. If I am not worthy of you, say so; but if"——

"And you think I am to be forced into what you please to call love, do you? Fool! There!" So saying, the little figure gave two rapid bounds—one on to the stone table below the window, and the other through the latter on to the greensward outside, where she alighted unhurt, burst into mocking laughter, and was gone before Phil could recover from his astonishment and alarm.

All was bustle in the house ere Grace entered. The Sergeant had arrived, and was already on the best terms with every one, from the farmer himself down to the black cat at the fireside, that was already perched away on his knee, as though she had known him these twenty years. Even Phil, who having gone home to change his dress, presently followed his wayward mistress, could not resist the good-humoured frankness of the soldier's manner, which evidently sprang from a genial temperament. Though every inch a soldier, Sergeant Cole had neither the walk nor measured dignity. Slight, round, and wiry, his every gesture revealed superabundant activity, that never allowed him to be still. His mobile face, too, was full of wandering and, for the most part, pleasant expression—a very mirror, as it were, of all that was passing around. It did not require the proverbial penetration of a lover's eyes to see reflected in that face very soon a great and growing sense of the beauty and fascinations of Grace Benson; who, on her part, found an unexpected support in the young soldier's buoyant liveliness and unflagging animal spirits, and was thus enabled to play out to perfection her little comedy. While keeping within certain maidenly limits, which she would have found it as impossible to pass as a true coquette would have found it difficult to avoid passing, she managed to keep the Sergeant and herself in such close companionship through the day, that Phil could only stand by, and watch. Now some tale of *their* youth was revived; now *they* went abroad to look at the farm; as evening came on there was a dance, and *they* led off. When tired she went to rest in the bow window behind the partially looped-up curtains, and there *he* leaned over her chair, and occasionally whispered words that made her laugh; though once Phil thought they produced a different effect, and that she rose suddenly, with a heightened colour—whether of pleasure or offence he could not guess, until he saw them once more dancing together, and he doubted no longer.

But, thoroughly wearied at last, Grace announced her determination to dance no more; and while she stood by the open window, cooling her inflamed cheek, and putting back the rose that, borne in by the wind on the top of its long stalk, gently tapped against her face, glanced half sideways towards Phil, with a feeling of pleasure and expectation that the end—after a scene (she expected—nay desired—*that* to begin with)—would come soon, and reward her for her weary, false day. He had come to come towards her, for the first time for some hours, and there was in his face an expression less stern—she thought even more tender—than had been recently visible there. Oh! how handsomely she would acknowledge her misdeeds, if he but——

He came, slowly as usual, towards her, took her hand, looked in her face with a kind of earnest pity, then she felt the grasp quiver a little, heard the words "God night!" said,—was it possible? Yes, he was gone!

Some hours later, at midnight, but with one of the loveliest of autumnal moons shedding its soft radiance upon those it so soothe—her agitated face, Grace sat by the casement of her bedchamber, looking toward the adjoining farm. She saw that lights were moving about past the different windows, though usually the household were all in bed long before that time. What could the lights mean? A door opened—Phil (there was no mistaking him, even at that distance) came forth with his younger brother (and partner) in the management of the farm. They went from barn to outhouse, outhouse to stable, passing apparently the round of the whole place; but stopping every now and then, as if engaged in deep talk. A horse was brought to the door. Grace could remain quiet no longer. She hardly knew yet what she feared; still less could she interpret her own wishes and resolves if she had any. All was chaos in her mind. But she put on her bonnet, drew a shawl over her, and ran down the stairs. No one heard her. She went forth, shivering under the chill and heavy dews. Quick as she was, before she could reach the high road that led past both farms, she heard the feet of a horse clattering along past the opening into the green lane that concealed her from the rider; an instant more, and she saw the well-known riding-cloak blown outstretched towards her, as Phil, striking his spurs into the animal's sides, galloped desperately away.

And then, as Grace drooped down on the grassy slope of a hedge, and said to herself "He leaves me!" she felt all that sickness of heart, all that sense of utter desolation and hopeless misery, which comes but seldom in a lifetime to any of us, and which, when felt, never passes away to leave us what we were before.

CHAPTER II.

BEFORE SEBASTOPOL.

Before Sebastopol!—and on a day that will send a wail of sadness or a shout of exultation through half Europe, and the echoes of which will scarcely die before they have touched the farthest limits of human habitation. Before Sebastopol!—and with only a few minutes of time dividing us from the event so long worked for, and on which such stupendous issues hang—the grand assault! The cannon have done their work on the walls, as cannon never did work before. Week after week that horrible rain of shot and shell has fallen upon the devoted city almost unceasingly; to be changed during the last three days of the bombardment for a storm of the same elements so utterly beyond human experience that we need not wonder to find even official language describe it as a "fire of hell." But, nevertheless, if we glance along the lines of closely-packed men, who fill to overflowing every yard of the trenches nearest to the enemy, we may see in their set, stern, terribly-earnest faces no overweening confidence in the result of the coming battle. They have learned, by painful experience, the strength of those rude-looking irregular walls and mounds; the self-sacrificing devotion of the Russian soldiery; the skill, courage, chivalry of the Russian officers. They will do it, if it can be done—I think. Many, doubtless, add, "it *shall* be done!" and it is they who, whether they fall or survive, will be the true conquerors of Sebastopol, if the town is this day taken.

What a moment is that—when men are expecting the signal that calls them to such a battle—one that they know will be famed in the world's history! What a concentration of thought, feeling, hope, ambition, regret, aspiration is crowded into that small space—possibly the last of life! What a light is suddenly thrown inwards into the darkest recesses of one's being! How clearly—perhaps for the first time—do we know ourselves! How wonderfully the problems of individual life seem all at once to solve themselves in the calm truthfulness of such an hour! Some such thoughts has possibly crossed the mind of one of two men who are earnestly engaged in conversation together in low tones, a little in advance of the neighbouring masses of soldiery. One is an officer, the other a sergeant. But there is evidently a common understanding between them not usual to persons so divided by social rank."

"I wish, Sergeant, our men had not these two hundred yards to cross before getting to you angle of the Redan."

"They will do it, Captain."

"If there are but a score of men like you among them I know anything can and will be done. But, Sergeant, one friendly word: do not unnecessarily expose yourself. I own I suspect you of trying to defraud the Queen—God bless her!—of faithful service."

"I! Captain?"

"You! I have watched you pretty closely, and I believe you want to be killed. That is neither manly nor patriotic. Eh! Sergeant Gordon. Come, come, my good fellow; whatever your secret trouble, depend upon it you can live it down—that is, if these Russians will let you. I take an interest in you: can't spare you, except in the cause of duty. Besides, you are a man to rise—skilful, educated, calm in the most exciting hours of action; excess of bravery your only fault. I wait but for an opportunity to recommend you for a commission, and can promise you a brotherly welcome at the mess-table. We live in a place and at a time when days will do the work of ordinary years—nay, of lifetimes. Hark! By Jove! there's the signal for the French! They are off for the Malakoff." The Captain ceased—his thoughts, drawn away by the excitement of the first rush on the batteries; and so he did not notice the changes of expression that had swept over the manly face of our old friend, Phil Gordon, as he listened to the words, at once so kindly and so unexpected, that his superior had uttered; still less chance was there of the Captain's noticing the moisture that bedewed the lashes of the young and stalwart warrior's eye. As usual he could not speak, but that mattered little here; he was understood quite well without words. How could it be otherwise? Since he had carried into effect his long-meditated scheme of enlisting in the army—moved thereto by the double desire, first to escape from the presence of one whom he loved passionately, but believed to be unworthy of his love; and, secondly, to calm the despair of his soul by the thought of serving his country in what he believed to be the most glorious of wars;—since, I say, he had done what he had so long thought of, but hoped to avoid doing, he had so rapidly learned the duties of a soldier, had so decisively manifested, in a thousand ways, the superiority of his mind and character, that the private soon became the corporal, the corporal the sergeant, and the sergeant distinguished among all his brethren of the same rank by service that, while flowing without effort, showed how far he yet was below the position he was fitted to fill.

But he, too, soon turned away his thoughts from his own to his country's interests, and stood, like a gallant hound in the leash, ready to spring when the word was given. It came. The French flag—O glorious bit of bunting!—waved from the tower of the Malakoff, and off went the British towards the Redan. Ah! could little Grace Benson have seen her lover now, she would certainly have thought love for him an inadequate word to express his deserts—she must have worshipped him. Now his hand was upon one of the ladders, helping its bearers—now a word of trust, because most moving eloquence, sent on a knot of panting, half-pausing soldiers with increased speed; now he stands on the other side of the ditch, helping up one after another of his men over a difficult spot, and getting in reward a bayonet prick in his forehead, which he only discovers after the battle. And now at last he sees his men—sadly, alas! reduced in number—forming under the shelter of the parapet before they mount it and come to the bloody hand-to-hand struggle with the enemy. Impatient of delay, he yet sees the propriety of yielding for one moment to the breathless soldiers, who evidently find it necessary to brace up their nerves and strength for the great trial above. "Follow me!" again cries Sergeant Gordon. And like the waves of a blood-red ocean (when lighted by the glory of some magnificently portentous sunset) they burst over the edge, and the battle in the Redan begins. We shall not pause upon its details. It is but too well known that, through the absence of reinforcements, the gallant band were sacrificed in their hour of success, and, after a long but useless struggle, were compelled to retreat. In vain then the Captain's kindly warning. Hither and thither raged Sergeant Gordon, rarely striking but there was an enemy left dead behind; again wounded, but only enough to call forth, rather than repress, whatever there was of reckless heroism in that brave soul; and it was thus his Captain passed him—not without a thrill of admiration for the spectacle.

"Quick, Sergeant! Retreat is inevitable. Save the men as much as you can." And Phil, at once obedient and sagacious, felt his thoughts turned into a new channel, and tried to do what he was requested. But he was borne along by the mass of fugitives sheer over the edge of the parapet down towards the ditch; then as filled with serried bayonets as ever was pond with rushes, and into that he leaped, dividing with his arms the points, and so reached the bottom safely. A cry of anguish, and the movement of a limb beneath his feet, arrested the attention of Phil even at that moment and he was passing on with a sigh of pity for the wounded man he had injured in his leap, when to his astonishment he heard his name, followed by a cry for help. The crowd began to open out a little, and Phil looked eagerly round. Whom should his eyes light on but Grace Benson's relative, Sergeant Cole!

What passed in those few seconds of delay through the heart of Phil Gordon it would be difficult to learn. The sight of the man who had, however thoughtlessly, been so mixed up with the causes of his despair, brought forth whatever of evil that naturally kind nature possessed. He turned, and was passing on; half excusing himself to himself by thoughts of duty to his men in the retreat; but the poor wounded man, uncertain whether he had been recognised through all the smoke, and clamour, and excitement, again called to him. Phil could resist no longer, he turned, and, without word or gesture of recognition, took up the sufferer in his arms, and ran up the opposite slope of the ditch, slipping every instant in the gore that almost hid the natural colour of the earth, and so on, and back to quarters, where he arrived in safety. Some comrades advanced to relieve him of his burden, and spoke to him; but he was deadly white in the face—his eye glazed—and, without opening his lips, or uttering the slightest exclamation, he suddenly dropped as if shot through the heart.

CHAPTER III.

CHRISTMAS COMING, AT THE FARM.

Another holiday come! "'Tis but a week to Christmas!" cry the delighted children, who have been counting for a long while the slow steps of advancing Time. Already, in these remote country districts one begins to hear every where the stir of preparation, to note the daily-growing hum of busy and cheerful-voiced people, to witness the gathering stores heaped up for the great day's enjoyment. Already there seems everywhere experienced a foretaste of the rejoicings that do for once at least in the year spring up spontaneously in the hearts of our sober countrymen and country women at the sound of "Christmas coming!" everywhere—we should have said, but in the heart of poor Grace Benson, and in the hearts of others like her, labouring under the consciousness of a wrong committed, and misfortunes thereby brought on which no efforts now appear capable of remedying. Not a word from Phil Gordon during all those long months of anguish and depression, chequered only by an occasional gleam of hope that, somehow, a happier future might yet be opened for them. But as nothing occurred to justify even these transient glimpses of relief, the poor girl yielded more and more to the thick gloom that hung around her, and the little fairy seemed to be transformed into some wandering daylight ghost: her eyes had strangely darkened; her cheeks had lost their peach-like roundness; her voice became weak and indistinct, as though the effort of speech was a pain and difficulty.

She was sitting by the fire, looking with eyes that saw not, upon a great branch of mistletoe, that the twins had brought home in triumph, and who were now clapping their hands as they watched the farmer nail it up to the beam that projected from the ceiling; when, to the surprise of her mother, who was watching her with an aching heart, the maiden's eyes suddenly expanded and flashed in the old way. She stood erect, pale and trembling, staring on the doorway, where stood—no, dear reader, not her lover, Sergeant Gordon, but—her relative, Sergeant Cole, looking with eager interest and curiosity on the inmates, and full as ever of spirit and joyousness, notwithstanding the loss of an arm. Did Grace continue to gaze at the doorway with a vague instinct that *another* was about to enter? If she did she could only turn away and smother once more the bitter, humiliating sense of disappointment, for her lover appeared not.

All welcomed the maimed warrior; and scarcely had the first excitement of his presence subsided, than they were all listening to his story of the taking of Sebastopol; and need we say with what breathless interest his hearers hung upon the narration of his own position in the ditch of the Redan on the eventful day of the assault, of his preservation, and of the heroism of the man to whom he owed his life. Every one cried out for his name. The relater looked at Grace and was silent. But that look was enough. Her face was illumined as by a sudden flash of lightning, her breast heaved, she half rose, and then again in agitation seated herself before she could say, with some appearance of calmness—

"It was Phil Gordon!"

"It was."

Poor Grace! She could only bury her face in her hands, and run away to hide the tumult of emotion that shook her little frame, and threatened to make her heart burst with she knew not what torrents of love, remorse, shame, exultation! But, to the surprise of all, she returned in a few minutes, and expressed her wish to speak to her cousin alone. She was now perfectly quiet and collected. The mother drew away the rest of the family, and Grace found herself alone with the Sergeant.

"Tell me all about him," were her first words. "I am prepared for the worst, whatever it be. Did he recover? Does he live?"

"Yes. We nursed each other in the hospital, and no two brothers I believe, ever loved each other better than we now do. We came to England together, invalided."

"Why did he not come with you—I mean to his home?"

"I asked him, but he refused."

"Yes, I understand. That is enough. Thank you, dear cousin." And with that Grace was going, but the soldier now quietly slipped between her and the door, and said—

"Not so fast, fair cousin; I have something to say also. What if I were to tell you I loved you?"

"I should say—but no—you are incapable of mocking one so—so"—here her voice failed her for an instant, but she resumed—"one in my position."

"And yet Grace, when I last saw you on that holiday"——

"Oh, for Heaven's sake, be silent about that!" Grace cried with a shiver.

"Was I altogether deceived in thinking you paid more attention to me than to him who had been, and as I supposed falsely, called your lover?"

"No, you were not deceived. I did so."

"And why?"

"Do you wish to put me to all this torture? Forgive my fault to you. I have suffered for it, believe me."

"Still, I must ask why did you do this?"

Grace then bitterly and passionately answered him, "Oh, cousin must you force a woman to speak? Can you not guess how I loved him—how doubtful I was of his love—how pride made me demand that which I might have found was already given? In a word, I know him now; know how he loved me, by the sacrifices he has made; and, cruel that you are, I know, and you know, that he thinks me, perhaps rightly, unworthy of him. He will not forgive me?"

"No! but he asks forgiveness from you, Grace! Grace—my own—my heart's darling!"

Merciful heavens! what words are these? Who is it that has rushed suddenly forward, and now kneels before the half-incredulous maiden, who dashes her long hair aside, and gazes wildly on that beloved face—manlier than ever—full of new life, and energy, and joy—waiting at her knees, to receive from her all the happiness that earth can have in store for him. A loud hysteric cry brings in the alarmed farmer and his wife, who stare with open mouths on the group before them—Grace, weeping away her very soul as it seems, on the neck of Phil Gordon; while Sergeant Cole alternately laughs and cries at the success of his little plot—one so much wiser, he thinks, with pardonable egotism, than the little maiden's had been.

As the lovers calmed a little, Grace asked Sergeant Cole, with a reproving eye, "You said he refused to come?"

But Phil answered, "I did so, doubting your love and earnestness; but he seemed to learn so well through our long conversations in the hospital the exact state of affairs between you and me that I yielded at last to his truer and better faith. How much have you not to forgive me?"

"And you me?"

"And what do we not owe to our friend here? He has promised to join my brother in the farm (he was bred a farmer, you know) and help to take care of our affairs, while I fight my country's battles."

"What?" faintly asked the little lips, "do you not leave the army?"

"Can I, dearest? I bear her Majesty's commission. My little Grace shall have no reason to be ashamed of her husband, Ensign Gordon."

"Ah, I shall be but too proud of him."

Here Sergeant Cole suddenly broke up the dialogue: he had collected the whole household, given the word for Fun and Frolic, and now proposed to propitiate those sprites by a short walk when Grace under a certain tree that, he said, had taken the liberty to grow from the air downwards. Grace looked a moment at her cousin and her lover, took the hand of the former, and—to his surprise, which he showed whimsically enough—saluted him rather than wasting to be kissed, there imprinted upon his bronzed cheek a warm, sisterly kiss. And then, while the glow yet burned in her own face, she took the hands of both, and said—

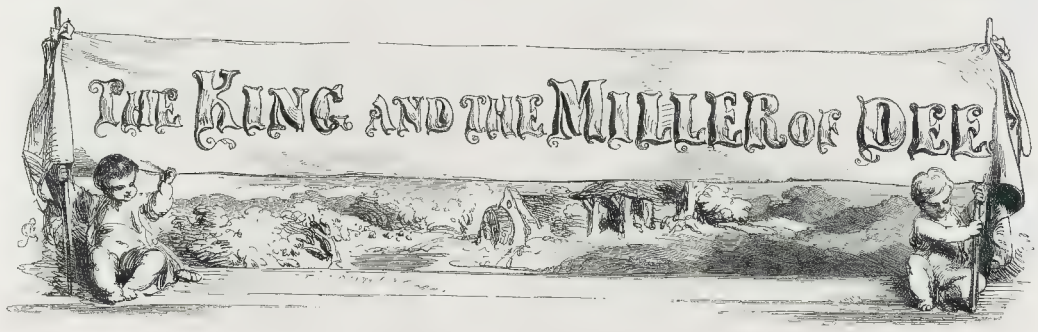
"Bear witness to Grace Benson's last act of coquetry!"

THE KING AND THE MILLER OF THE DEE.—DRAWN BY JOHN GILBERT

NOTE ON THE MELODY BY SIR H. R. BISHOP.—The fine tune, "There was a jolly Miller," which, prior to the Reformation, appears to have been used in the Cathedral Services of the Church, became popular in consequence of its introduction into the ballad-opera of "Love in a Village," with Bickerstaffe's words, in 1762. The original words to it were probably those of the old "harvest-home" song beginning—

Here's a health unto our measter,
Th' vounder o' the yeast!

and which have lately been printed, with the tune, in Mr. John Youge Akerman's "Wiltshire Tales." This song, however, besides being sung in Wiltshire, is commonly sung at "harvest homes" in Leicestershire, and, I believe, in numerous parts of the country. It will be perceived that in the present version the notation in the first bar of the tune differs from that which is printed in "Love in a Village," the seventh of the scale being *minor* instead of major. This is certainly the proper notation, according to the system on which melodies in a minor key were formerly composed: and I have no doubt of its having invariably been so sung by the country people, who, after all, seem the most *honestly* to have preserved the integrity of our old tunes. The first verse of the present song is by Bickerstaffe, with the exception of the first and last lines, which Mr Mackay has altered to suit the sentiment of the three new verses which he has so judiciously added.



Poetry by Charles Mackay.

Boldly, and in moderate time.

Air, "There was a jolly Miller."

The Symphonies and Accompaniment by Sir H. R. Bishop.

I.

There dwelt a miller hale and bold
Beside the river Dee,
He work'd and sang from morn to night,
No lark more blithe than he;
And this the burden of his song
For ever used to be,
"I envy nobody, no, not I!
And nobody envies me!"

II.

"Thou'rt wrong, my friend," said old King Hal;
"Thou'rt wrong as wrong can be;
For could my heart be light as thine,
I'd gladly change with thee.
And tell me now what makes thee sing
With voice so loud and free,
While I am sad though I'm the king,
Beside the river Dee."

III.

The miller smiled, and doff'd his cap.
"I earn my bread," quoth he;
"I love my wife, I love my friend,
I love my children three:
I owe no penny I cannot pay,
I thank the river Dee,
That turns the mill that grinds the corn.
To feed my babes and me."

IV.

"Good friend," said Hal, and sigh'd the while
"Farewell! and happy be;
But say no more, if thou'dst be true,
That no one envies thee.
Thy mealy cap is worth my crown,
Thy mill my kingdom's fee;
Such men as thou are England's boast,
O Miller of the Dee!"

A SMALL WATER-PARTY.

BY CUTHBERT BEDE, B.A.,

AUTHOR OF "VERDANT GREEN," "SYRINGALINE," ETC., ETC.

PERHAPS you don't know Norman Grange?—and if so, you've a loss, I assure you.
'T is the prettiest spot you could find in the beautiful county of Blankshire,
And of all county families there, the palm is borne off by the Mortons.

Comes the Paterfamilias first: tall, smiling, complacent, and courtly;
With his face finely colour'd with health, and perchance by some magnums of claret;
With his coat of the bluest of blue, and its buttons the brightest of brass;
And the whole of his costume, as far as his wife and the fashion allow him,
Partaking of that remote cut, assigned by unanimous counsel
To old English gentlemen, when there were pigtails, and powder, and Tories.
Well rides he up to the hounds, on one of his thorough-bred hunters,—
A study for Landseer or Grant, as he sits there compact on the pigskin,—
A model for Leech, who would masterly sketch him as nobody else could,—
Manfully facing a bullfinch, and flying o'er raspers, and five-bars,
While the woods echo back his rich voice as he cheerily yoicks his hark-forrard!
A dead shot is he with the birds, and the terror of partridge and pheasant,
Keeping up all the sports of the field, as an old English gentleman should do.
A Solon is he on the Bench—at all the Board-meetings a Draco;
Terrible, too, on the Rates, and at Quarter Sessions, tremendous!
As Commissioner, too, of the roads, an authority, great as MacAdam;
As a Magistrate, upright and stern; as a Guardian, fierce as a lion;—
But in all the relations of life, affable, frank, and good-hearted.
When he rides forth o'er his fields, or walks at foot-pace through the village,
The white-headed children rush forth, and pull at their hair for a greeting.
And the hearts of the Clodpoles are glad, when the Squire pulls up to address them.
Great is he then on the crops; learned on subsoil, and compost;
Knowing on Mechi, and Pusey; and quotes Mr. Huxtable's porkers;
Draining, and short-horns, and lime, and oil-cake, and Leicesters, and fallows,
And words to which Cockneys can't give any due agricultural notion,
(Although they once got up the "Georgics" by rote when they went to Grey Friars,)
Fly about like a juggler's brass balls, whenever he talks with his tenants,
Who respect "Squoire Morton as much—why, as dang it! the Queen, or Prince Holbut!"

Comes his good-natured better-half next, rustling in richest of satin;
With that well-preserved comeliness that's so peculiar to matrons of England,
Where the roses of beauty and health, can bloom without rouge and cosmetics.
What she was in her maidenly prime, we may judge from her fair eldest daughter,
Miss Lizzie, of "sweet seventeen," who came out to the world this last season,
And in her young rosebuds reflects the expanded full bloom of her mother.
Such a friend to "the young folks," he'er lived, as good Mrs. Morton of Blankshire!
To chaperons motherless girls—to giving of parties, and picnics,
And filling her house full of guests—no woman there ever lived like her!

Not long since she sent me a note, with a pressing and kind invitation,
That I'd come the next week to the Grange where a party would then be assembled;—
"But come on the Thursday, be sure! for then, we've a small Water-party;
We shall have a lunch-dinner at three, and afterwards go on the river."

I accepted (of course!); and next week, having sent on my bag and my baggage,
I over to Norman Grange rode, and reach'd there in time for the luncheon.
As I took the short cut through the park, it brought me out just by the stables,
And there, in the courtyard, I found a sample of each kind of carriage,
From the stately old family-coach to the stylish, but fast-looking, dog-cart;
Betok'ning our party that day was one of the largest dimensions.
And so I soon found that it was a regular county assembly,
Among whom, as the newspapers say, "we noticed the Earl of Trimorben;"
Her Ladyship too, with her sons, the little Lord Gules, and his brother;
With the Broughtons, the Dalrymples, Hayes; the Gurdons, Saint Quintins, and Wyatts;
The Darnells, and Campbells, and Thorneys; the Haslewoods, Howards and Clintons;
And all the best families round, and all the presentable Curates.
The children had also been asked—and all who had juveniles brought them;
And since many could boast that their quivers were pretty well furnish'd with arrows,
The infantile prattle and laugh were decidedly in the ascendant.

We all, until feeding-time came, wandered about in the gardens;
And a beautiful prospect it was to see all the beautiful women
In their many-hued muslins and silks, go gleaming about mid the flowers,
The loveliest bouquets of all, and where all was fair, yet the fairest,
Promenading the terrace in groups, while their children played gaily around them;
Strolling about through the park, and flashing, like wandering sunbeams,
Down the broad avenue where the elms threw their quivering shadows.

In a spacious marquee in the park, close by the Italian garden,
There was the luncheon laid out—comprising, of course, every dainty
That French cooks had ever devised, or confectioners ever invented,
A *déjeûner* ample and varied—and not like to some I could mention
That are more ornamental than useful, and made up of garnish and flowers—
But a good and substantial repast, to which a great many doomed the summons.

I was delightfully placed: On one side I'd Miss Lizzie Morton;
On the other, the fair Mrs. Hayes, with her two olive-branches near her—
Their little cheeks rosy and soft as the peaches they then were devouring.
She was one of those capital people that shine with full force when they're married;
And few can enchant us so much as a nice, little, well married woman,
Who has passed Hymen's rubicon long, and the honeymoon's billing and cooing,
And has settled down into the stern and practical duties of marriage,
With little, live, miniature shapes of her husband and self to hang round her,
And invest her with motherly cares, and the dignity too of a matron.
How delightful is she to converse with! so unreserved, easy, and piquant;
With that free confidential discourse denied to the maidens of England,
Whom the laws of "society" bind in conventional stays, and strait-waistcoats,
And, denying them freedom of speech, thus cripple their natural feelings,
Quite as much as in China their feet would be pinch'd, and distorted, by Fashion;
So that Miss on my right, may not say what Mamma, on my left, says so freely;
For Etiquette then would step in and say, "You are sinning against me,
Thus to talk with that gentleman, whom you treat as a man and a brother!
Pray remember that others might think our affections were his, for the asking!"
So, to quite put an end to these gross and very improper suspicions,
Poor Miss puckers up her sweet lips, and, to use a most vulgar expression,
Picks and looks at her words, e'er she speaks, and sinks into commonplace parlance.
Thus it is that the gushings of youth are frozen and chill'd in their fountains,
And often, it may be, choked up by "society's" heartless conventions.

But whilst Mrs. Hayes and her talk are thus my attention engrossing,
The luncheon has greatly progressed, and the champagne as greatly diminished;
And young ladies—who probably made a very good luncheon are starting—
Lean back in their seats, and declare "Not a drop more: now really I couldn't!"
But the children, who cannot as yet entertain such etherial notions,
Whilst they see all those beautiful sweets, and the tempting pineapples untasted,
Would never give over, unless their mothers cried "Hold, enough!" for them.

At length—away sail the ladies and children, the gentlemen leaving behind them
Disconsolate, as, of course, men always are when the ladies have left them;
But trying to drown their regrets, when the Squire puts in this suggestion,
"We've just a few minutes to spare before we go down to the river:
"You'll find this most capital port, but there's claret for those who prefer it."
So, when one or two hobbledehoys, who are secretly shaving for whiskers,
Look vacant, and wild in the eyes, and in language are oggy and misty,
Some one winks to the Squire, and says, "We'd better, p'raps, go to the ladies."

The Swinney, as every one knows, is the principal river of Blankshire
And flows with a beautiful sweep by the Norman-grange mansion and meadows.
The boathouse thrusts out its black nose from under a fringe of green willows,
And thither we all of us troop, and are marshalled with skill to our places.

When a young man at Oxford, the Squire was great in all matters aquatic
And, as captain, had got up his boat by degrees to the head of the river;
So that when he left College he brought the St. Vitus's boat to the country.
And there, with the four oars, it was drawn up to the steps at the landing—
An eight-oar cut down to a six, with the stern fitted up for the ladies;
No cranky and modern outrigger, but a good, patent-safety flat-bottom.

The rowers are chosen, and strip; and the boats, one by one, are in motion;
Then, a snuggy-caparisoned barge receives all the rest, and the children.

The Squire to me has been kind; of St. Vitus's boat I'm the coxswain;
And the gay tassel'd cords of the rudder I tug with a nervous excitement,
For the ten chosen belles of the party depend upon me for their safety.
T' e Squire pulls stroke, as he did in the days of his youth and his vigour;
An' the rest, though they keep not their time, nor feather "with skill and dexterity,"
Yet are passable oars on the whole, and decidedly jolly young watermen.
Charley Grey, of the Guards, who performs pretty well on the cornet-à-piston,
Has "come with his music," and lies in the bow, lest the ears of the lad as
Should be pierced with the sharp, ringing notes, which the distance will mellow to sweetness.

The St. Vitus's boat takes the lead; and we sweep, with a spurt, up the river,
And our pennon streams out in the breeze, as Grey blows a blast of defiance;
While I, who am single, and flirting with ten flirting, single young ladies,
Have lost all my presence of mind in a plessing delirium-tremens,
And steer the St. Vitus's boat slap into a bed of tall rushes!

The blast of defiance is hush'd, and mild objurgations succeed it,
And the oars are all rapidly shipp'd, while the ten bonnets duck to the rushes;
And I with the reeds and confusion am covered as though with a garment.

We drift out at length; and, of course, I promise amendment of steering;
And we soon leave the shouts of derision the four-oars and barge have sents to us;
Then, in a soft, green, floating shade, underneath the cool droop of the willows,
We lay-to awhile, and look out for the rest from our watery harbour;
And the ladies bend over the side, and pluck at the white water-lilies,
Or the more sentimental forget-me-nots, fringing the banks of the river,
With their flowery masses, that seem as though bath'd in the bright blue of heaven.
'Tis pleasant to look up the stream, as the four-oars come dropping down to us,
While the heavier barge lags behind, with its freight of mammas and their cherubs.
The breeze bears their musical laughter, the water reflects their fair figures;
The oars cleave the stream into ripples that break up the many hued shadows;
The silvery willows are fring'd with a brightness that seems like a halo;
The pastures are dappled with kine, cud-chewing, lazily lying;
The haymakers, ruddy and brown, are at work in the sweet-smelling meadow;
The bean-fields throw out their perfume, and the reeds pipe their Pandæan music;
And the sun, sinking low in the west, lights up all with his own golden splendour.

It is pleasant to see this, and float through the cool of the evening shadows
With ten pretty girls by your side, and you wishing you'd ten hearts to give them.
And p'raps it is better for me that the people who manage the office
Where I'm just now insuring my life, were not present to see, and report me.
Disease of the heart, or at least some affection in that tender quarter,
Would have surely been laid to my charge, and my bachelor's life prov'd in danger,
And the risk I was running, of course, would have raised the expense of insuring.
However, I craftily cover'd my love-germs with heaps of loose small-talk,
And, Spartan-like, never cried out while my heart was thus being devour'd.

The star of the ev'ning comes out ere we have come off from the water
And the twilight is gathering round as we turn us away from the river.
While Grey of the Guards trumpets out the air that is called "Isle of Beauty."

Then when the coffee 's been served, the tuning of harps and of fiddles
Gives the prelude to other delights, and summons us all to the ball-room;
And there, demi-toilette asserts its *negligée* charms over full dress.
Quadrilles unto waltzes succeed, and polkas are polked to distraction;
And "Pop Goes the Weasel" is tried, but condemned to be thence shelved for ever;
And "La Tempête" is danced in its stead, and seems to give great satisfaction;
And the juveniles vanish with speed, and leave the room free for their elders.

The ball-room's three windows lead out to the terraced Italian garden,
And there by the moonlight we stroll, to cool from the heat of the dances.
And some loving couples are seen extending their walk and their converse,
Down the broad avenue where the elms make a cheque-work of shadows.
Dangerous strolling, indeed!—the first figure of Pop Goes the Question.

But ethereal joys must succumb to material needs and necessities;
And, while Lubin is piping his love, his thoughts may be busy with—supper!

And great is the charm of the supper, besides the mere business of eating:
That we will leave to the gourmand! Give us the light feasting of reason,
And the flow of the soul that will spring like the champagne's own brilliant bubbles,
And burst into sparkles of wit, whose grave is the pleasures they rose from!

Dancing commences again; and the hobbledehoys, growing bolder,
No longer as wallflowers stand, nor sheepishly lurk up in doorways,
But, primed with champagne, rush to polkas, and madly e'en think of a *deux-temps*,
And flounder about on the toes of the good-natured girls who will take them.

Lady-mothers at length get to gape, and, unlike the song's "winking may-buds,
'Gin to close," not to "ope sleepy eyes," and look most unnaturally drowsy;
And, though their fair daughters protest they must throw overboard many partners,
Yet all's to no use! and the prayer, "but just one more dance," won't be heard more;
And, "you know your papa never likes for the horses so long to be waiting."

So the hens take their chickens away; and wraps are in great requisition;
And the steps and the doors of the carriages bang with a loud demonstration;
And the rattle of wheels on the gravel dies faintly away in the distance;
And the last "Sturm Marsche Galop" is whirl'd, and the last "good night" wish'd to the hostess;
And the last ringing laughter of girlhood floats lightly its heavenly music,
Till 'tis drown'd by the cornet-à-pistons on which Charley Grey is practising,
That till morning we do not go home, to end this, our SMALL WATER-PARTY.

EASTERN COUNTIES STATION.—THE MORNING BEFORE THE CHRISTMAS MARKET.

THE time is four a.m.; the scene, the great Cattle Station of the Eastern Counties Railway; a procession, apparently endless, is composed of oxen, cows, calves, sheep, and pigs—all fat—all doomed to form part of the great Christmas sacrifice to the meat-eating propensities of Britons; the scene-shifters and promptors are E. C. R. porters, badged Islington drovers, and a few natives of rural dialect and costume—the only unprofessional spectator is our artist. A lowing, a bleating, a squeaking form at once the chorus and the band of sacrificial music, loud enough for a grand military quadrille. The pigs are wheeling their knives and dressing the altars out of sight—in the distance. If an agricultural audience could be secured, the subject might become the plot of a pantomime. The opening scene—Views of the Highland mountains, the Devon hills, the Yorkshire and Herefordshire valleys, the rich grass plains of Ireland and of Holstein, where the cattle, black and dun, long-horned and polled, dappled, and pure white, short-horns, blood-red Devons, and white faced Herefords, graze peacefully in their tender youth. Then might follow the long land journeys, the tossing sea voyages, by which the future beef makers are transferred to the fairs, whence the Yorkshire, Lincolnshire, Norfolk, and Cambridge farmers draw the tenants of their fold-yards. The third change would show not the lion lying down with the lamb, but the wild Highlander and Devonian from the hills of Quantock peacefully chewing the cud of cake and roots beside the mild short-horn and sober pale-faced Hereford. In the distance ships might be sailing to the tune of "Rule Britannia," laden with bones of the Pampas or soda of Chili, or taking in cargoes of turnip producing guano shovelled out by perspiring Chinese labourers. If transformat on were the order of the day, the British farmer, in his new abandoned costume of top-boots, might appear distributing a magic powder from his waistcoat pocket, and growing turnips as the Clown used at one time to grow a deal box into a hair trunk with a dose of kalydor. Then if Harlequin would condescend to be a shepherd we might have a fine moorland scene, all gorse, broom, and sweet grass,—solitary, picturesque, and barren,—with here and there an active long-horned Norfolk sheep—a sort of pastoral Cossack. To them should come presently Harlequin Shepherd driving a regular army of grey-faced, round-bodied Southdowns, backed up by a train of agricultural artillery in iron ploughs, harrows, cultivators, drills, and guarded by Sappers and Miners, with formidable draining tools. Then should follow a grand battle: the Cossacks—Norfolk sheep—headed by the giant Prejudice, assisted by his aids-de-camp, the Sir Wisdom of our Ancestors and General Routine. Triumph of Harlequin Cultivator; and, hey, presto! the moor becomes a well-ploughed farm, dotted with sheep, a cairn of rocks, a snug farmhouse, with well-stocked folds yards. The curtain before the next scene must draw up to the tune of the "Roast Beef of Old England,' which at present includes mutton, and be strongly underlined as *departure of the stock for the Christmas market.* The farmer prepares to accompany them, and there is room for some fine dumb show when he persuades his wife by promising a new bonnet and silk gown. Clown and Pantaloon preside their goods—gallygaskins and other preparations for a long journey—but the Harlequin Farmer gives the conventional signal; and the railway train appearing receives in its capacious vans the stall-fed oxen, flock after flock of sheep, and all the turkeys, geese, ducks, and pullets that a Norfolk Columbine can supply. The procession with which we began we would make the last scene but one, extending from the Tottenham station to the New Market, Islington; while a grand close would be given to this agricultural performance in the transmutation of the market into a general Christmas banquet, with barons, sirloins, rounds of beef, saddles numberless of mutton, under the auspices of genii of British agriculture and commerce—commencing at Windsor Castle, and extending down to Whittington's Almshouses, or as far as the Artist chose to carry it. In the course of the fun a turnip might with great propriety be turned into a fat sheep, and a dry lump of oilcake into a serious bullock; smock-frocked Hedge of the flail into a fustian-garbed, smutty stoker firing up the farm steam-engine.

At least these are our notions; but we must confess we are more at home in a foldyard than among the flies of a theatre, and our notions may be quite wrong as to the possibilities of pantomime. The sober truth far exceeds any stage transformation. More than half the cargo of the Christmas live stock is fed on land that was barren moor, or poor sour grass, within the memory of farmers who are still stout enough to make their annual Christmas visit to what is no longer Smithfield market. In that time the capacity of farms to support live stock has been doubled, trebled, and quadrupled. There are among the horned and woolly passengers of the Eastern Counties some that will have made three rail journeys before finally arriving at the spit or pot. First, when carried from their early grazing-grounds to—say, for example—the Norfolk farmer, to be fatted up on roots (which, the year after the peace of Waterloo, were almost unknown as a regular crop in that county), with cake or corn. Secondly, when fat, and travelling in full blown state to the central market. Thirdly, when dead, and dispersed—the steaks, perhaps, remaining in the great metropolis; the other cheaper joints going to suitable manufacturing markets, where price is of more importance than quality.

We must not pass without notice, amid the crowd of native breeds, the utilitarian Durham and aristocratic westland Scot, the large contributions which the Eastern Counties Rail—the greatest live-stock line in the kingdom—brings, by way of Grimsby and Lowestoft, from Denmark and Holland; especially from the Holstein provinces of the former kingdom. These in four months amount to some eight thousand horned head—light and legacy at present, but destined to be soon improved up to a British-beef standard.

Yes! it is impossible any longer to conceal the fact, however mortifying to the respectable brown coated baronet school, who don't believe in superphosphate and guano; but it is true that we, descendants of the Britons of whom Cæsar wrote, *lacte et carne vivunt* (they live on milk and meat)—we, countrymen of Hogarth, who sing "The Roast Beef of Old England," are now dependent on the foreigner for beef at less than 1s. a pound; and more, if it had not been the chemical discovery of the German professor (Liebig), who taught us how to dispense with winter hay by making the root crop secure, we must have long since been put on half-rations of both beef and mutton.

Here we pause, much afraid of growing too dry and technical, and conclude by begging our jovial town friends not to conclude that because our corn and meat manufacturers are not quite so fluent or so well up in the books or news of the day as those who live within a stone's-throw of libraries and reading-rooms, that farming enterprise has lagged behind the rest of this active British world. If they will only go north and east, to where their bullocks and sheep are fattened, they will find old English hospitality not extinct, and the farming man up, alive, and doing his part to feed the nation.

S. S.

CONJURING FOR CHRISTMAS.

BY THE GREAT WIZARD OF THE NORTH.

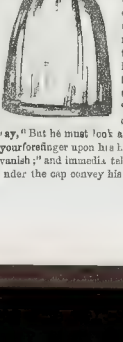
HAD it been my lot to have lived in Elizabethan days of the Tudors ago, it is very probable that I should have been burnt for a witch, or, more properly, a wizard; and that, instead of illuminating Wellington-street with the refulgence of the electric light from the summit of the Lyceum Theatre, I should have been myself illuminated by a warm but uncomfortable blaze of faggots and tar-barrels. Even within my own experience there have been places, especially those in which the Holy Inquisition has influence, where I should not much like to trust myself. The martyrs of science are quite numerous enough, I think, without the addition of a "Professor," sacrificed by popular prejudice and superstition for his addition to the "black art."

The "Black Art": Black it was, indeed, in those worst of days, for they were full of folly, ignorance, cruelty, and superstition, which we misname the "good old times." In the good old times the magician was looked upon as a being in direct connection and alliance with the Evil One. The more learned was he, the more certain was he of perdition. The scientific researches of such men as Roger Bacon, Albertus Magnus, Paracelsus, and Cornelius Agrippa, were regarded only as so many diabolical spells and infernal enchantments. The imagination pictured to itself the magician as a gloomy, long-bearded man in a robe, embroidered with grim cabalistic characters. A staff encircled by serpents was in his hand, spectacles of magic crystal perched on his nose. He sat on a tripod in the centre of a circle of zodiacal signs traced in blood. He studied out of books of weird and mysterious lore. Skulls, phials of poisons, dried toads and snakes, were on his table; hideous stuffed monsters hung from the ceiling. He was waited upon by a demon dwarf. Shrieks and groans were heard from his dwelling; hideous bats and gigantic spiders flitted about him. He passed all his time weaving maleficent spells, sticking corking-pins into wax figures of persons he wished to injure; distilling love-philters, watching the simmering of magic cauldrons, and changing men into beasts and beasts into men. He attended witches' sabbaths, whisking through the air on a broomstick; he appeared unbidden at banquets; he dropped through roofs and rose through floors; and, some day or other a gentleman in black, and on a black horse with a long tail, left his card on him, and there was a strong smell of sulphur palpable, and the magician was seen no more. The Black Art! *Tempora mutantur*; times have vastly changed since then. The professor of the black art now wears a white waistcoat, pays rates and taxes, has a wife and family; and, instead of mystic adjurations of "hocus pocus" and "abracadabra" and "mumbo jumbo," issues invitations for his friends to come and see him at a theatre or an assembly-room. And yet, believe me, the magician's art has in no way deteriorated. The marvels of magic are as feasible now as they were in the day of the Dioscuri and the magicians of King Pharaoh. Nay, more; we can do even more wonderful things now-a-days, only we are not bold or impious enough to ascribe them to supernatural agency. We are content to hail, shining on our magic works, the pure light of science, chemistry, and natural philosophy.

At this genial season of the year, at this time of merry-making and social unbending, any device that can add to the general enjoyment and amusement, especially of the "younger branches," must be hailed as a boon. I have been bold enough to add my little bag of magic lore to the Christmas-tree, and to suggest for the delectation of the juveniles a short course of parlour magic, consisting of tricks of glamour and legerdemain, simple though sufficient to set "Katterfelto's hair on end, staring at his own wonders." I have, from a pretty vast stock of such magical recipes, taken care to select only those capable of being performed by amateurs, and with no more than ordinary skill and dexterity; and, above all, tricks not requiring expensive and elaborate apparatus. Such simple magical appurtenances as are needed for the performance of the feats I am about to describe can be procured, if desired, from me. I will now proceed *à la Soyer* to give succinct descriptions of the most approved recipes for cooking magical-made dishes, necromantic roasts, and boiled and sibylistic soups.

THE VANISHING PUZZLE.

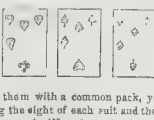
This famous and historical feat (it has been practised in all ages, and in every country under the sun), and perhaps more familiarly known as the "Doll Trick," is thus performed. You must be provided with the figure of a man made of wood, about the size of a small Dutch doll, the head of which takes off and on by means of a peg in the neck which fits into an aperture in the body. You must also have a cloth cap within for the purpose of concealing the head; but this must be very neatly constructed, in order that it may not be readily perceived. Now show your little man to the assembled company, saying, "Gentlemen, I call this my *bonus genius*." Then show the cap, saying, "This, gentlemen, is his coat." Add, "Now look as steadily at him as ever you can, yet, nevertheless, I will deceive you." Then hold the cap above your face, and take the little man in your right hand, and put his head through the hole of the cap, as represented in the engraving. Proceed to dress him the doll's virtues as eloquently as you can, saying, "Now he's a great traveller. He is ready to convey messages I like to send him to—to France, to Spain, to Constantinople, to the Crimea, or to the North or South Pole, whatever and wherever you like; but he must have some money to pay his expenses." Then pull out your right hand from under the cap, and with it the body of the doll privately, put your right hand into your pocket (as if you were feeling for money), and leave the body there. Then take your hand out of your pocket and say, "There is a shilling for you, and now be off on your travels, Sir." Then turn the head and say, "But he must look about him before he goes;" then say (letting your forefinger upon his head), "Just as I think my finger does, he will vanish;" and immediately with the assistance of your left hand put the head under the cap convey his head into the little bag that is within the cap, then turn the cap inside out, and, knocking it on the palm of your hand, say, "See, he is gone!" Take your cap and turn it again, drawing the bag out of the little bag, and say, "He's gone to London, hub," and give a whistle, at the same time thrust the head of the doll in the cap, and hold the head by the peg, and turn it about. You can thus cause the doll to appear and disappear as many times as you like, to the great amazement and bewilderment of the company.



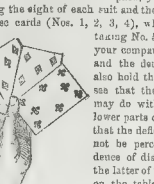
THE PER-STIDIGITORIAL METAMORPHOSIS; OR CARDS WHICH BECOME ANYTHING.

Having shuffled a pack, select the eight of each suit, and also the deuce of diamonds. Hold the four eights in the left hand, and the deuce in the right, then, having shown them to the company, take in the deuce among the four eights in the left hand, and throw out one of the eights. Give them to be blown upon, when they will be turned into four deuces. You will now exchange one of the deuces for the eight; and, giving them again to be blown upon, they will appear all black cards. Again, take in the deuce and discard the ace; blow upon them again, and they will all turn red. And now, for the last time, take in the eight and throw away a deuce, when they will be found to be four eights and a deuce, as they were at first.

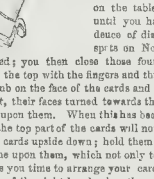
To perform this ingenious deception, you procure five plain cards the size of playing-cards, which you paint to resemble the five cards as under:—



Mixing them with a common pack, you next, under the pretext of selecting the eight of each suit and the deuce of diamonds, take out your false cards (Nos. 1, 2, 3, 4), which you hold as under; and, taking No. 5 in your right hand, you show your company that there are four eights and the deuce of diamonds; you should also hold them up to the light to let them see that they are not double, which you may do without fear of detection, as the lower parts of the cards will be so opaque that the deficiency of the pips or spots will not be perceptible. You now place the deuce of diamonds between Nos. 3 and 4, the latter of which you withdraw and throw on the table; but take care not to do so until you have first taken in No. 5 (the deuce of diamonds), else the deficiency of spots on No. 3 will cause the trick to be discovered; you then close those four cards together, and taking them by the top with the fingers and thumb of the right hand, having the thumb on the face of the cards and the fingers on the back, hold them out, their faces turned towards the floor, and desire some person to blow upon them. When this has been done give your wrist a turn, so that the top part of the cards will now be the bottoms—in fact, you turn the cards upside down; hold them up to your mouth, pretending to breathe upon them, which not only tends to mystify the company, but gives you time to arrange your cards, which you do by opening them out of the right hand, when they will appear to be four deuces in the order represented in the following figure. You may again hold them to the light to show they are single cards.



The next change, though more difficult to accomplish, is decidedly the best, for the cards are never shut up nor removed for a moment from sight. Having shown them to be four deuces, you take in the deuce of clubs and place it between Nos. 3 and 5, withdraw No. 3, and, holding it up to the light, you desire the company to observe that the cards are not double, and, while all eyes are turned to the card, turn your left hand containing the other four with its back towards the ceiling and the face of the cards towards the door, keeping them in a horizontal position; throw down the deuce of diamonds, and continue your remarks on the cards not being double—by saying, "You perceive any of them will bear examination;" at the same time take care of the card next but one to your right hand with the finger and thumb of that hand, taking care to have the thumb above and the fingers underneath the card. Take it out still keeping it in a horizontal position; and while making the above observation turn it round with the forefinger of the right hand, until you have got hold of the other end, when, before anybody has taken time to take hold of it, return it to the situation from which you took it, taking care to return it exactly to the same angle.



You now hold these cards out, with the backs upward, to be blown upon. But you have no occasion to shut them up at this change, as, if you turn them over, it will be perceived that they are all black. You now take the deuce of diamonds, as you did at the first change and discard the eight of clubs; close them up, and, taking them *by the top*, hold them out to be blown upon; give your wrist a turn as before, open them out yourself while pretending to breathe upon them, when on showing them to the company, they will all be red. You now again take in the eight of clubs, throwing out the deuce of diamonds on the table with its face downwards, and, taking hold of the card next but one to your right hand, throw it down in the same manner, saying, "Oh, I beg pardon, only one of the deuces!" at the same time take up the last card you threw out by the opposite end to that by which you formerly held it, and return it to its own place, taking particular care of the angle; let them be blown upon, when they will be found to be four eights and a deuce, as they were in the first instance.

Should any person now desire to examine the cards, tell them you can only give them one at a time; break the upon the deuce of diamonds and present it to them. When they have returned it to you, and before they have time to ask for another, hand them the eight of clubs, mentioning that perhaps they would like to look at a black card; and, being you so confident, it is not in the chapter of probabilities that they will ask to examine any more.

THE MAGIC OF TERPSICHORE; OR, HOW TO TEACH AN EGG TO DANCE.

Three eggs are brought out, and two of them are put on the table and the third in a hat; a little care is borrowed from one of the company, and it is shown about, to convince the spectators that there has been no preparation. It is then placed across the hat, the hat falls to the ground, and the egg sticks to it as though it were glued. Then ask some one to play on the pianoforte, and the egg, as though sensible of the harmony, twists about the cane from one end to the other, and

continues its gyrations till the music stops. The egg is fastened to a thread by a pin, which is put in lengthways; and the hole which has been made to introduce the pin is stopped with white wax. The other end of the thread is fastened to the breast of the person who performs the trick, with a pin bent like a hook: the thread passing under the cane near to the egg serves for it to rest upon. When the music begins the performer pushes the cane from right to left, and from left to right. It then appears as if the egg ran along the cane, which it does not: being fastened to the thread, its centre of gravity remains always at the same distance from the hook that holds it; it is the cane which, sliding along, presents its different points to the surface of the egg. To produce the illusion, and persuade the company that it is the egg that moves, the performer should turn a little on his heel. By this means the egg receives a deceptive motion.

JUVENILE CONJURING.

THE AFFECTIONATE CARD

This trick, if properly managed, will appear marvellous. Having forced a card upon one of the company, after shuffling it up with one of the pack, you will know the card by feeling. You then take a small piece of wax and place it under the thumbnail of your right hand, and by this wax you fasten one end of a hair to your thumb, and the other to the chosen card. By these means, when you spread your cards on the table, by drawing about your right hand, the chosen card will follow you all round the table, as though attracted by some magic sympathy.

THE PENETRATIVE SHILLING.

To perform this trick you must have a handkerchief with a counter the same size as the shilling, sewed up in one corner of it; take your handkerchief out of your pocket, and ask some person in company to lend you a shilling, which you must seem carefully to wrap up in the handkerchief, but at the same time keep the shilling in the palm of your hand, and in its stead wrap the corner in which the counter is sewed into the middle of the handkerchief, and bid the person who lent you the shilling feel that his money is there. Lay the handkerchief under a hat upon the table, take a glass or teacup in the hand that holds the shilling, place it under the shilling, under which knock three times, saying, "Presto! come quickly!" Then let the shilling drop from your hand into the glass. Take the handkerchief by the corner that holds the counter and shake it, and the shilling not being there it will appear to have passed through the table into the glass or teacup.

THE MAGICAL WEDDING RING.

This is a feat somewhat akin to the preceding, but far more marvellous in its seeming effects. The trick is, pass a ring from a handkerchief in which it is firmly held on to a cane, the same cane being firmly held at either end. The following is the manner in which the trick is performed.—You must provide yourself with two rings, exactly similar. One ring is suspended by a string, the other end of which is fastened inside the handkerchief. You feign to place the ring which is to appear on the cane into the handkerchief, and desire a person to feel that the ring is really there, he feeling, of course, the suspended ring. You then desire two persons to hold the cane, slipping the ring adroitly over one end of it to the middle, where you keep it clasped in your hand. You desire the two persons holding the cane to hold it as tightly as ever they can. You then hold the handkerchief over the plate, and allow the suspended ring to drop on it, the sound of its fall being distinctly audible. You then remove your grasp from the cane and flourish the handkerchief; there is nothing in the plate and apparently nothing in the handkerchief, and lo and behold the ring is found on the cane, to the utter amazement of the persons who have been holding it so tightly. The result of the trick and its effect upon the astonished juveniles is depicted in the sub-Engraving.

Space will not permit me to describe *in extenso* many other tricks of magical dexterity. Those which I have noticed may perhaps tend to pass a gay half-hour, and provoke a little wonder and much laughter. As my readers will observe, I have purposely excluded tricks requiring mechanical appliances; and the feats I have set down can be performed by the most verdant of novices.

I don't know whether it be good policy for a magician to describe his own "hankypanky," and show people what there really is inside his cups and balls; but I am satisfied that the more "parlour magic" is practised, and the more ample information is given of what simple and easy deceptions the most seemingly-marvellous tricks are, the more we shall free the rising generation from the silly and debasing superstitions too often implanted in their minds by foolish and ignorant servants. In bringing my "hocus pocus" into the nursery I am doing, I think, my best to banish "bogey," the "sweep," and the "black man" from it.

And now, wishing my readers a "Happy Christmas!" and that, among the cosmopolitan readers of the Illustrated London News, there may be found between Boxing-day and Twelfth Night a whole army of youthful wizards both of the north, south, east, and west, I take my leave, and very respectfully subscribe myself,

John Henry Anderson.

CHRISTMAS CATTLE" ARRIVING AT TOTTENHAM STATION, EASTERN COUNTIES RAILWAY. (SEE PAGE 751.)

Printed and Published at the Office, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by William Little, 198, Strand, aforesaid.—Saturday, December 22, 1855.

THE ILLUSTRATED LONDON NEWS

No. 777.—VOL. XXVII.] SATURDAY, DECEMBER 29, 1855. [WITH A SUPPLEMENT, FIVEPENCE.

THE DEPARTING YEAR.

As the heads of firms, establishments, and households balance their accounts, and review the failures and the successes, the shortcomings and the achievements, the faults and the good deeds, the reverses and the progress of the year—so it devolves on the public journalist, by a custom which we cannot but think to be a good one, to review at this particular season the great ledger and the great heart of the nation, and to strike as far as he can the balance for or against the Commonwealth. The task, if performed in a boasting or vainglorious spirit, or with a foregone conclusion to prove one's country to be right and the rest of the world to be wrong, or *vice versâ*, answers no good purpose; but, if conscientiously done, with a truthful spirit, and an ordinary amount of honest judgment, it guides public opinion, and helps to mature that wholesome moral sentiment, which, in spite of many errors of action, makes a nation great, and keeps it so.

The year 1855 opened amid difficulty and self-humiliation. An army of heroes, which had fought but seven weeks previously one of the most glorious battles recorded in history—which had driven back an overwhelming force of the Muscovites, seven times its superior in numbers, was left to perish from cold, hunger, and disease; not by an ungrateful or careless country, but in consequence of the defective administration of the army by the authorities at home—by the want of organisation—by the incompatibility of existing means to the desired ends—and by the obstinate adherence of men in office to rusty formalities and effete routine. Great Britain was shamed in her own eyes and those of her allies, and imperilled before her foes, by the disclosures which were made. They were not wanting men who maintained that the evil lay not in the state of things which was proved to exist, but in its divulgation; and who hurled their wrath, not against the blind routine which damaged our fame, and which had nearly lost us an army,—but against the fearless press that had laid bare the iniquity. Their councils, however, did not prevail. Publicity did its appointed work; and though many a reputation that once stood high was wrecked in the discussions that ensued,—though our enemy was pitilessly informed of our weaknesses and our defects—and though our friends stood aghast at the fatuity of the men who had blocked our path to victory,—the nation came out of the difficulty reinvigorated as well as wiser, and friends and foes were alike compelled to own that manly life was yet in us, and to admit the advantages of free discussion over a system that hides evil till it becomes too mighty [for a remedy, and engulfs in its fall all that surrounds it. The close of the year finds us not only in an infinitely better position as regards the condition of our army, but as regards the character of the nation in the eyes of the world. We have learned how to profit by adversity. We have turned calamity to good account. We have made error the beacon to light us to the truth, and proved to all interested that peace, if it lulled us into false security, has not made us indifferent, or taken from our hearts all remembrance of the heroism of our ancestors, or from our good right hands all power of imitating it. Though successes have attended our arms; though our enemy, smitten on every point, finds himself without a friend in Europe; though the fiery circle closes rapidly around him; though dubious friends, that would have joined him if he had proved himself the stronger, prepare to unite with that side where Right and Might have struggled and conquered together;—the universal feeling in these islands is that we have scarcely done enough for our fame, and that far more than we have accomplished ought to have been attempted. The feeling is wholesome. It augurs well for the future. It shows that the nation is sound at heart; and that it will begrudge no expense, and stop short at no sacrifice in support of the cause which it believes to be just. It shows also that the mass of the people are better informed than its rulers of the duty and dignity of the State; and that they are able to drag Governments and Administrations after them in a rightful course,—to conquer their unwillingness by the force of their honest opinion,—and to bear aloft to new triumphs, either in peace or in war, the spotless banner and the glorious name of England. Desirous of peace, but ready for war;—such is the attitude of the nation at the close of 1855. If the year 1856 do not terminate the struggle, it will not be because Great Britain is unreasonable in the one case, or unprepared in the other; or that she lacks either heart or means to complete what she has begun, and to gain greater victories, and more likely to be productive of future peace than any which have preceded them. It was a great achievement to take Sebastopol; but there is greater yet to come. The Allies that determined upon the one, and succeeded, have determined upon the other. In that they will succeed also, if Great Britain be true to herself in the approaching campaign in the Baltic. To France, aided by England, belongs the glory of Sebastopol; to England, aided by France, will belong—unless Russia accepts peace from Austria in the mean time—the equally great, if not greater, glory of Cronstadt and St. Petersburg.

While as a nation we have shown in the conduct of the war that we are not mere worshippers of Mammon, it cannot be denied, by any one who calmly reviews the history of 1855, that there are deep stains on the commercial character of large classes of our people. A lax code of commercial morality, or rather of immo-

CROATS.—FROM A PHOTOGRAPH BY MR. FENTON, IN THE CRIMEAN EXHIBITION. (SEE NEXT PAGE.)

rality, has been growing up amongst us in our forty years of peace, and has tainted the spirit both of the middle and upper classes. We live in an age of adulterators and slop-sellers when unscrupulous men, eager to grow rapidly rich, and uncontent with the honest gains of business, seek inordinate profit by deteriorating every article necessary for the health or comfort of the people. We are drugged with adulterated meats and drinks. We live in slop houses—sit and sleep in slop chairs and beds—dine off slop tables, with slop knives and forks, and with sham finery of every description—and we deluge the markets of the world with bad cutlery, with muskets that murder those who discharge them, and with cotton goods from Manchester as false as the philosophy and rotten as the patriotism of many men whom that city has delighted to honour. Fraudulent bankers, swindling merchants, reckless railway managers, dishonest contractors, corporations that are huge jobberies and sinks of corruption; and, worse evil than all these, the prevalence of secret murder by slow poison;—such are a few of the social ulcers that have been exposed to the execration of the world, by our ruthless but wholesome press, during the last few months. We are fain to believe that in these respects we are not much, if any, worse than our neighbours, either in the Old World or in the New; and that Mammon-worship, and all the social iniquities that follow in its wake, flourish in as fatal luxuriance in every other highly-civilised and over-peopled country; but, in consequence of the absence of a free press, are not divulged. It may be so. In this country there are no secrets. Our heart is on our sleeve, for daws to peck at. We tell the truth, though it shame us. Our house is of crystal, and the full daylight streams into it, and shows things which in other countries are shrouded in darkness. This may be considered either an evil or an advantage. Some look upon it in one way and some in another. For our own part we incline to the belief that publicity corrects the evil which it exposes; that a people which can be shocked by such disclosures is an honest people; that the disease, instead of being skin-deep, might attack the heart and the vitals, if there were no press and no pulpit to denounce the scandal, and to point out the remedy. It is for the teachers of the people to turn this disgrace to account, and to do, each man in his own sphere, his utmost to elevate the tone of the public sentiment around him, so that Great Britain may remain, what she has long been, at the head of Europe, and the world, in all that adorns as well as extends civilisation.

CROATS AT THE SEAT OF WAR.

THE characteristic group engraved upon the preceding page is from one of Mr. Roger Fenton's beautiful photographs in the Crimean Exhibition. One of the most striking attractions of this collection is the great variety of national character which it presents, arising from the multiplicity of people engaged in the great war. Had the contest lain between two individual nations, the impersonations or portraitures would neither have been so varied nor numerous as in the Crimean Collection, from which we have taken several illustrations.

Croats, it will be remembered, have been variously employed at the seat of war. Their aid in the Transport and Commissariat Service, at Balaclava, were vividly sketched by our Artist and special Correspondent, in his letter at page 310 of the present volume. In the photograph here engraved is a family in the trenches; where the superior Croat has "the badge of authority a stick," as mentioned in our Correspondent's letter. A picturesque Engraving of the Croats' Camp at Balaclava was also given in our Journal of Sept. 8, page 293.

(From our own Correspondent.)

PARIS, Thursday.

ALAS! the good old greetings of "Merry Christmas!" and "Happy New-Year!" sound but too often out of place this season, where so much of unessiness and anxiety mark the period. Still people do their best to greet the anniversaries especially the latter, which here is the much more important one of the two—with becoming festivities, and *dreamse* and *bonbons* are being prepared and purchased with all due activity. Nor has the war or any other depressing cause affected the inventions of the purveyors of such seasonable commodities. Giroux, Susse, Tahan, &c., display in their brilliant shops fresh wonders of taste and invention, in the way of nicknacks, articles of fancy furniture, bronzes, &c. The Grande Magasin du Louvre (probably the largest shop in Europe, certainly one of the best and cheapest), the Trois Quartiers, the Tentation, &c., produce marvels in the way of silks, velvets, gauzes, embroideries, furniture, stuffs, and innumerable and unnameable other fabrics and manufactures: Contantin and his compeers display flowers infinitely fresher—*to let Parisiennes* declare—than those produced by nature; Boissier and Bertrand have prepared *bonbons* surpassing in deliciousness all the ambrosia compounded by Elysian *confiseurs*; and Sajou, Helbrenner, Bona, and others, have specimens of embroidery and all needlework that would have put Penelope to the blush, and would have easily explained why she spent the night in undoing the labours of the day, setting aside any other motive.

After the reception of the *jour de l'an*, there is to be a set of dinners, balls, and soirées at the Tuileries, and the Senate proposes to give a magnificent entertainment. The banquet to be given to the troops on their return from the East is settled to take place on the 29th. It is arranged that every soldier of the home army shall receive from the private purse of the Emperor a sufficient sum to treat one or more of those of the returning army, according to the relative proportions of the numbers of each force.

With regard to the question of increasing the number of the Imperial Guard, one report states that the privilege of entering this chosen body will be accorded as a special recompense to the soldiers who have most distinguished themselves in the late campaign. This, however, is only one of the many rumours afloat on the subject, and must, therefore, be received with all reserve.

A magnificent cradle is now being executed for the expected heir to the Imperial throne. This costly piece of furniture is to be taken partly from the model of that of the King of Rome, now at the Louvre, which bears the figures of Victory raising the curtains, partly from a design of M. Ballard, which is said to be singularly beautiful in taste and conception.

The intense cold of the last week has happily given way to a thaw and milder weather. It was feared, a few days since, that we were about to be plunged into all the rigours of last winter. The Seine, after floating large blocks of ice, became finally frozen all over at the end of the week, and the accounts from some of the provinces speak of the severity of the season in the most lamentable terms. At Chambéry, the lutendant of the civil list of the King of Sardinia died from cold in the night at the castle, and another servant perished from the same cause, in the neighbourhood.

The will of the late Comtesse de Cayla, whose name is one of historic interest, left, at her death, the splendid château of Ecouen, near St. Omer, to the Duc de Bordeaux. The Prince, from motives of delicacy, however, declined the bequest, which, by a codicil in the will, now falls into possession of the city of Paris. It is said by some that the château will be converted into a refuge for female orphans, to be established under the patronage of the Empress; by others, that it is to be employed as a branch of the house of the Legion of Honour of St. Denis.

It is stated that the Sultan, departing for the first time from the rule hitherto observed, has consented to accept, from the hands of the Emperor, the Grand Cross of the Legion of Honour.

The idea, started some time since, of establishing the sale of horseflesh as an article of habitual consumption, daily gains ground, and finds more advocates. A company is already formed for the purpose of advancing the project: speeches and lectures have been delivered on more than one public occasion; and a few days since the director of the school at Alfort gave a dinner to some twenty persons, in which a large proportion of the dishes was composed of this novel ingredient. The guests were not warned beforehand of the nature of the feast, and many of them gave a decided preference to the dishes thus composed. But further than this, it has, it appears, ever since the establishment of the institution, been the custom of the pupils thus to utilise the flesh of all the healthy horses which have been accidentally ill or hopelessly maimed in the school.

The sellers of toys, &c., who from time immemorial have had the privilege of establishing at this season their canvas booths all along the edges of the Boulevards, are this year forbidden to erect them before the 29th inst., after the passage of the troops returning from the East. This measure has filled these itinerant merchants with consternation, which the permission to extend their stay beyond the usual period does not at all diminish,—for the reason that almost all their customers make their purchases before New-Year's-day, in order to serve as gifts for this festival. It is said that they propose to offer a petition to the Emperor for an indemnity.

The appearance of the "Saisons" at the Opéra Comique has brought about a great artistic discussion. The principal part was originally designed by the composer for Mdlle Caroline Duprez, but accorded by the manager to Mdme. Ugalde. M. Massé, asserting a privilege to which it seems he was entitled, insisted upon the rôle being restored to Mdlle. Duprez; hence a report that Mdme. Ugalde had, temporarily or otherwise, lost her voice. In order to disprove this rumour, the cantatrice insisted upon singing three of her most fatiguing parts in succession. The first trial, in *Galathée*, was quite successful; but, M. Massé still holding to his choice, Mdlle. Duprez maintains her place. The great marvel of the season is the performance of the blind Apennine shepherd on a wretched three holed pipe, from which he, utterly untaught, produces the most exquisite sounds. The thing is really miraculous.

THE PEACE PROPOSALS.

The general belief at Vienna is that Count Valentine Esterhazy has received instructions to communicate to the St. Petersburg Cabinet the conditions of peace, of which he is the bearer, as propositions coming from the Western Powers; but reliable information has been given that such is not the case. The Austrian Cabinet has learned from England and France the minimum of what will be required from Russia, but it has not been officially requested by those Powers to make known their conditions to the Russian Government. Under such circumstances, Count Esterhazy will have an extremely difficult game to play; and it is highly probable that some weeks may elapse before he is able to forward any positive information to his Government relative to the intentions of Russia. If any great hope of success had been entertained, Count Esterhazy would hardly have returned to St. Petersburg before the reply of the Porte to the communication of her allies had been received. It is possible that Russia is willing to make concessions, but the diplomatic world is by no means inclined to believe that she will at present accept such terms as those now proposed by the Western Powers.

The *Dresdener Zeitung*, the organ of the Saxon Government, states that Russia is willing to agree to the proposed neutralisation of the Black Sea, subject to certain admissible modifications required by European interests.

WHAT RUSSIA THINKS OF THE WAR.

The following private letter from St. Petersburg, dated December 12, gives some insight into the state of feeling in the Russian capital:—

"I have hitherto only spoken to you of the rumours of the city—rumours confined, it is true, but pervaded in and which show that the Russians continue still in a state of excitement. You are aware that, properly speaking, there are but three classes here—the nobility, the merchants of foreign origin, and the native Russian merchants. These last receive visits among each other, and never permit any member of the nobility to enter their houses. The foreign merchants no longer receive; the greater par are ruined, or on the point of bankrupt, by the war, the blockade of the Baltic, and the enormous imposts they have to pay. The nobility receive in company and with superior orders. The principal personages have been obliged to open their salons—if the term "salons" can be applied to apartments furnished with ostentatious luxury, the arrangement of which betrays vile parvenu. A considerable number of persons assist through these rooms, but no one dare leave himself, not though he may have lost by death a member of his family. The men gather in groups of two or four around the card-tables, but on which no longer glitter those heaps of gold exposed in other times to good or to bad chance. Since the war those heaps have grown smaller and smaller. The women chat among themselves about indifferent subjects, fashions, or the character of their absent friends. But not the slightest allusion to the war is heard, and the young men, though burning with a desire to speak or get information, dare not open their lips for praise or blame. In spite of the powers of dissimulation attributed to these people, it is easy to see that they are not at their ease.

Nothing transpires as to the frequent consultations of the Ministers with the Emperor—no more than on what takes place at the interviews which the Czar accords to certain strangers passing through, or to the members of the Diplomatic Corps. Too nobles, who imagined that after the death of Nicholas they could force his successor to modify the rigour of his Government, and give them a part in the administration of the State, find themselves gravously disappointed. They had waited for thirty years, and their patience has been in vain. Alexander II. assumed the reins of Government with more firmness than was supposed, and tolerated no more than his father that conditions or reforms should be imposed on him. In certain circles here allusion has been made to the alleged intention of the Czar to free all the serfs. This is not the first time that the report has circulated, and if the author of it could be detected he would be punished severely. You may be certain that if such a project has ever been seriously entertained this is not the moment to realise it.

I learn that the Government is uneasy about the Mussulman population belonging to the Government, both on the banks of the Volga, as also those of Kazan. Though accustomed to the iron yoke which Russia has fixed on them, they are not the less sincerely attached to their religion, and are, consequently, desirous of seeing Russia succumb in the struggle. The religious enthusiasm which has acted on the Russian people may also produce its effects on the population who profess Islamism, particularly in places where they form the majority. At Astrachan great numbers have been arrested, and have been, most of them, sent to Siberia. In this city it is said that eight Mollahs have disappeared.

Finland is in a state of feeling difficult to describe. Formerly the people of that country had been subjected to none of the onerous charges and the burdens pressing on them since the war. They can no longer dispose of their produce in Swedish, Danish, and German markets. All trade is at an end, and yet the imposts are trebled; and, moreover, they are forced to work for the State, and are obliged to lodge the Russian soldiers, who lay their hands on everything. They now feel for the first time the yoke of Russia, and are, they say, punished for having abandoned Sweden.

The sympathies of the Finlanders are turned towards Sweden and the West. A great number have flocked to the frontiers in order to pass the winter at Stockholm, and those who have efforts to transact in Germany have taken the way of Sweden in place of St. Petersburg. The Government has adopted measures which will make them many enemies in this country. It has formally prohibited, for this winter, all temporary emigration for Sweden. The Russians work without ceasing at the defence of the military roads, which a little before Wiborg are lost in the marshes and lakes. In violation of the Conventions of 1809, they have also taken all the healthy young men for the army and navy.

The Finns complain, and if the Mussulmans of the Taurida and Astrachan are agitated, it may complicate the situation of Russia, and force her to make peace, and cause a rising. Add to this danger for Russia the rumour which pervades every village and every hut of an approaching and general emancipation. It is evident to every one here that if the Allied armies could reach Ekaterinoslaff, the Government would be in great danger. And, who knows? we may one day behold Russia in the same state she was in under the Czar Schouiski.

THE WAR IN THE CRIMEA.

THE RUSSIANS REPULSED.

The only news brought by the *Cairo* steamer, which arrived at Marseilles on Tuesday, relates to the engagement with the Russians mentioned in Marshal Pelissier's telegraphic despatch received in the early part of the week. It appears that as the French have retired in the presence of winter, the enemy have thrown forward their advanced posts at Koluhz and Markul to the north-east, and from Aitodor and Ozembash to the north of Baidar. The morning of Sunday, the 9th inst., was dark and drizzly, and the previous night had been wet and stormy. The Russians, with their usual feline aptitude for surprises, crept round the little village of Baga in the dark, and just at the dawn rushed in upon the small party of French which occupied it. For a time the surprise was complete; but our gallant allies soon got together, and at the point of the bayonet, after a smart fusillade, drove out the enemy, who had many horsemen with them. In the pursuit of the Cossacks our allies managed to capture some forty horses, for the former gentry fled by a road which in old times was good enough for a run, but they were astonished to find themselves stopped by a deep scarp at a pretty spot where a wall of rock closed the road at the right-hand side, and a precipice formed the left-hand boundary, so they had nothing for it but to dismount and scramble across, leaving the horses, accoutrements, and all to their fate.

The following letter, written by a French officer, dated Sebastopol, 9th inst., gives an account of the affair:

"Yesterday morning at break of day 2500 Russians, hoping to surprise our 5th battalion of foot Chasseurs, encamped at Ourkousa, on the site we occupied previous to our last retrograde movement, descended from the positions of Kadem Otar and Kemer Tchermez into the plain. A patrol of the 4th Regiment of Chasseurs d'Afrique fortunate y perceived their movement, and lost no time in apprising the nearest corps of the approach of the enemy. In a few moments the whole of our first division was under arms and prepared to meet the Russians. The 5th battalion of foot Chasseurs, under the orders of Commander Garnier, who received five dangerous wounds at the first attack upon the Malakoff on the 18th June, assisted by a few companies of the 26th Regiment of the Line, commanded by M. Richebourg, brave y stood their ground, and 12 assaults, deceived in their expectations, precipitately retreated, leaving 200 men on the field of battle, with twenty prisoners, among whom were two officers. It is to be regretted that the nature of the ground prevented us from pursuing the enemy in his retreat. Our loss does not exceed eight'en or twenty men, and an officer of the 26th Regiment, who was so dangerously wounded that he is not expected to survive. The recent surprise of a post of eight men we had at Kaden Otar no doubt encouraged the Russians to make the attempt.

The weather was frightful, both in the Black Sea and the Mediterranean, at the time the steamer left Constantinople. Twelve merchant-vessels had been wrecked in the Sulina mouth of the Danube.

The news from Kertch and Yenikale are to the 8th instant. The new regiments given over to General Vivian are described as very superior to those he had at Constantinople, as regards both discipline and the demeanour of the superior officers, who accepted their British commanders with much cordiality, and even, it is said, with joy. A formidable line of works was in course of construction at Kertch. The hutting of the troops was nearly completed, but had been interrupted by rain. There was little sickness: out of 4000 men at Yenikale there were but twenty-seven of all ranks in hospital. So the officers were hopeful of getting through the winter without much loss, and of being ordered upon active service in early spring.

RUSSIAN PREPARATIONS FOR THE SPRING CAMPAIGN.

In the early part of the present year the Russian Government ordered that anybody who came to Finland from Sweden must remain there till the end of the summer. A new order is now promulgated, and foreigners who henceforth visit Finland must remain there till the end of the war.

The Austrian *Gazette* contains a letter from Odessa, under date Dec. 10. The writer says:—

For several days past large bodies of militia have arrived here from Kazenga, Vladimir, and Orel. The preparations for the reopening of the campaign in the spring are greater than ever. The fortifications of Nicolaeff are completed. General Todleben is here, on his return from St. Petersburg. It is said that Prince Gortschakoff is about to receive leave of absence; but nothing certain is known on the subject.

Prices continue to rise in the Crimea, as indeed they may well do, looking at the mass of military and speculators now assembled there. So great is the number of additional arrivals, that more than 80,000 persons are said to be at this moment at Simpheropol.

As the ordinary population of the town is only 12,000, it may be guessed that the price of bed and board must be at a considerable premium.

THE WAR IN ASIA.

The additional particulars received this week regarding the capitulation of Kars have caused more interest to be taken in the movements of Omer Pacha. It was on the 6th ult. that the passage of the Ingour took place, and since then he has had one successful encounter with the Russians.

In his march upon Kutais, Omer Pacha has taken the road which connects that place with Redout Kaleh, in order to keep as near the sea as possible, with a view to the commissariat. On the 19th ult. the Turkish army was within two days' march of Kutais; but, as it had halted for a day or two, the belief was that Omer Pacha and his army would not appear before the town before the 23rd or 24th of November.

The *Journal de Constantinople*, of the 13th inst., has the following explanation of the expected evacuation of Kutais by the Russians:—

According to the latest news the Ottoman army was at Siva, six leagues from Kutais. It appears that the Russians will not defend the town. They seem to follow a preconcerted plan. The garrison of Kutais evacuates the citadel and concentrates itself on Gori, at the entrance of the defile that leads into Georgia through the Imaneret mountains, a branch of the Caucasus. This passage, the only one that leads directly out of Imeritia, may be defended by a division against a whole army. It is announced that Omer Pacha will take up winter quarters at Kutais. General Mouravieff, it is said, has detached from the army of Kars a brigade which he sends to Akhaltzik, to meet Omer Pacha.

THE SPANISH MANUFACTURES AND THE NEW TARIFF.

Accounts from Madrid state that the Catalan Deputies in the Legislative Chamber are endeavouring to overthrow the project of the Minister of Finance to reform the tariffs of Spain. They have had a conference with Senor Bruil on the subject, to see if he would yield to their arguments; but in this they failed to alter the opinions of that Minister, who, in his answer to them, stated positively that he would go on with his measure of reform, against all opposition.

The Spanish Government have announced in the *Madrid Gazette* that they intend to contract certain loans with a great financial establishment at Paris and other foreign banking-houses, and that the half-yearly interest on the "Debt of the Interior" will be paid by them.

AMERICA.

The steam-ship *Atlantic*, which left New York on the 12th instant, arrived at Liverpool on Sunday. The question of the Speakership is not yet settled.

The *New York Courier and Inquirer* of the 12th reports:—

No organisation of the House yet; and the prospect is less promising than ever. Forty-five more votes are taken place, and every new trial only serves to make more difficult the attainment of the requisite majority. Meantime the President's message and the annual statements from the various departments, for which the country are looking with eagerness and anxiety, are completely withheld from the public eye, and all legislative business is at a stand-still. The people are getting wearied and impatient—they find nothing to please them in the perpetually-recurring figures which the telegraph transmits; but, on the contrary, everything to displease. It looks very much like factiousness and trifling with the interests of the country and the good repute of our institutions.

The forty-fifth ballot resulted as follows:—Richardson, 74; Banks, 106; Fuller, 27; Zollikoffer, 4; Orr, 2; Scattering, 10. Two hundred and twenty-three votes are necessary to a choice, 112 of which must be given to one candidate.

The *New York Herald* of the 12th, on the Speakership, says:—

The conferences last night are said to have been unsuccessful in securing additional votes for Mr. Banks. It is believed that after a few more trials he will be abandoned, and that the Republicans will concentrate upon Pennington; but it is also believed that neither Banks nor Fuller can command a majority of the votes of the House.

In this state of affairs the Democrats gain courage, and confidently predict the eventual success of one of their number.

A despatch from Washington, dated Dec. 6, says:—

It has just been ascertained, beyond the possibility of doubt, that a despatch

has been received from Mr. Buchanan relative to the Crampton difficulty, the tenour of which is that the British Government, in a courteous but positive manner, decline giving such explanations as have been demanded by our Government regarding the alleged violation of our neutrality laws by British agents. This aspect of affairs imposes on our Government delicate obligations, and will require all its wisdom to extricate itself from the present dilemma.

Advices from California state that the Indians in the north were continually their depredations upon the whites, while those in the south were beginning to show signs of dissatisfaction.

MUSIC.

THE musical performances at this period of the season are almost entirely of a sacred character. During the last and the present week the "Messiah" has been performed at Exeter-hall by both the Sacred Harmonic Societies and at St. Martin's Hall by Mr. Hullah; and on all these occasions has attracted immense audiences. Jenny Lind sang a second time in the "Creation" on Thursday; and, on New-year's-eve, is to sing in the "Messiah" for the first time in this country. Great expectation has been excited by the announcement of this performance.

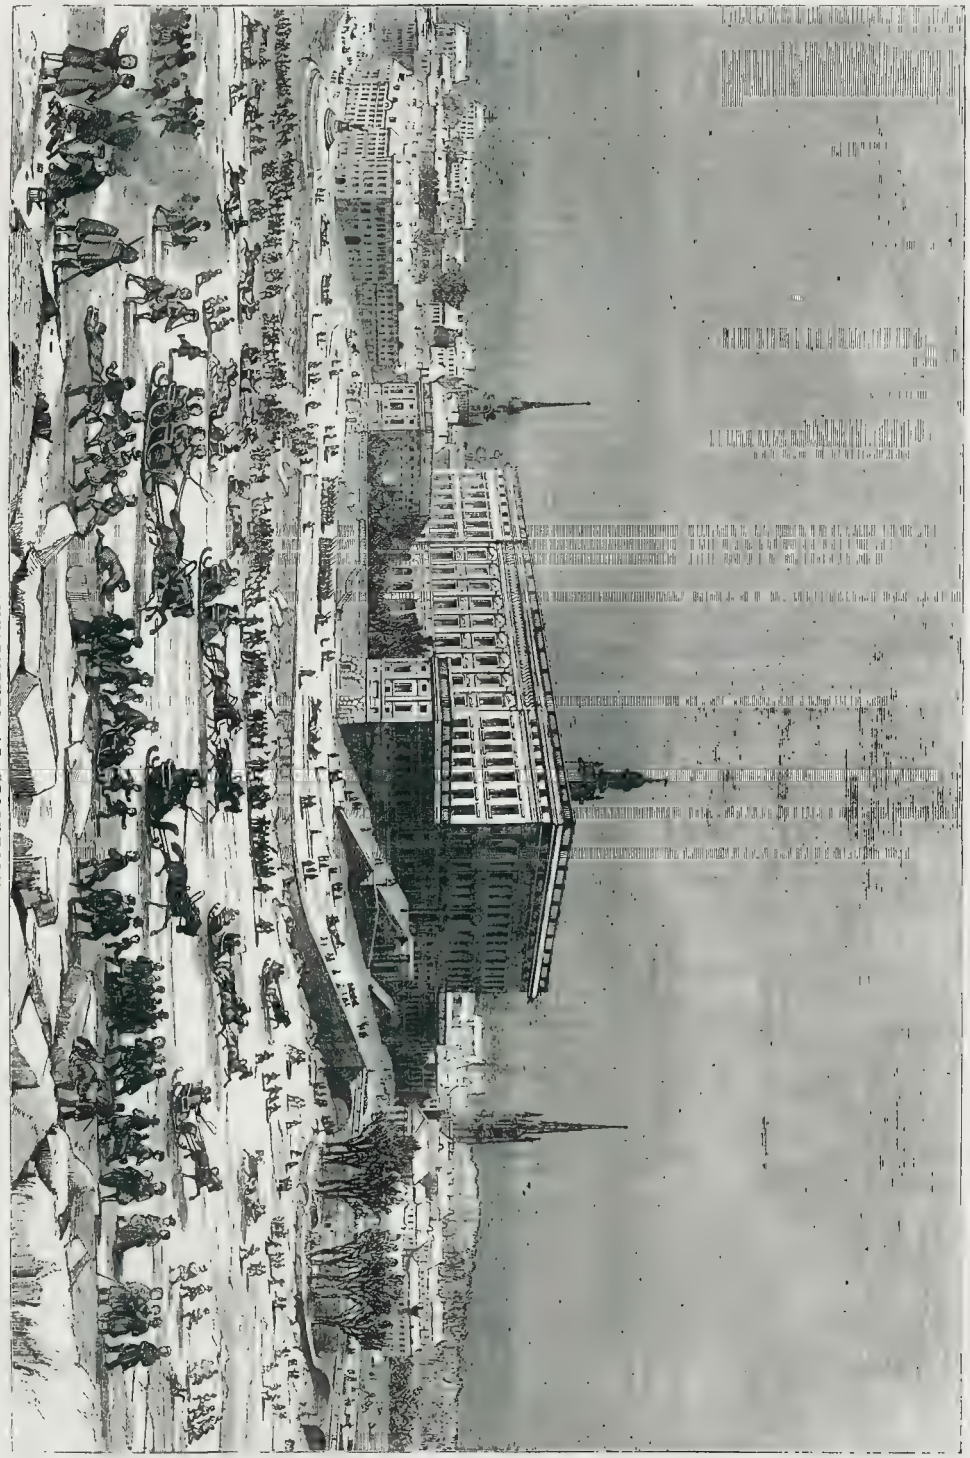
In the provinces, likewise, oratorios have been given at several of the principal towns. A Yorkshire Correspondent sends us some particulars respecting a performance of "The Messiah" on Christmas-eve, at Bradford, one of the most important and rapidly-increasing manufacturing towns in England. It took place in the newly-erected and magnificent St. George's Hall, which was crowded to the doors. The principal singer was Madame Rudersdorff, who gained fresh laurels by her powerful execution and pure Handelian style. In the two great airs, "Rejoice greatly" and "I know that my Redeemer liveth," she was enthusiastically encored. Her sister Mathilde, a young lady of fourteen, made her début in this country, and was very favourably received, especially in the pathetic air, "He was despised and rejected," which she sang with much simplicity and feeling.

Mr. Hinchliffe, of York Cathedral, was the bass. He acquitted himself admirably, and was encored in his principal air, "Why do the nations?" The chorus, as might be expected in a district which is, *par excellence*, the land of vocal harmony, was excellent—both correct and powerful; and a very efficient instrumental orchestra was ably conducted by Mr. Barton.

THE PANTOMIMES.

COVENT GARDEN.—The Great Wizard of the North has achieved a new triumph which will throw all his previous marvellous achievements into the shade. Finding, after the experience of a hundred and odd successive nights, the walls of the Lyceum Theatre too narrow to contain or accommodate his numerous patrons, he resolved to remove to Covent Garden, and to add to the attractions of his feats of "Magic and Mystery" a regular Christmas pantomime. The result has been a distinguished success, as well as a marvel of rapid organisation: for, although the stage of this theatre had only been in his possession a clear week, the "grand national historical and chivalric pantomime" of "Ye Belle Alliance; or, Harlequin Good Humour and ye Fields of ye Clothe of Golde," was produced on Wednesday evening with a gorgeousness of scenic display, and a host of materiel and physical appliances which have seldom been surpassed, amid the boisterous plaudits of an audience packed to the ceiling. The subject of this pantomime is somewhat different from the ordinary run of Christmas entertainments. It aims at a higher object, and in place of a nursery fable adopts a grand political principle as its foundation—that involved in the friendly alliance now happily existing between the two great Western Powers. Opening with "the Caverns of the Gnome *Britannicus* (Mr. J. Neville), in Subterraneasia," we are treated to a view of the first Napoleon in the invalides. We have next a very grand scene, an admirable mixture of pictorial effect. State pageant, and comicality, "The Deck of the *Great Harry*," the embarkation of Henry VIII. (a part capitally filled by Mr. Harry Pearson), accompanied by his Queen, Cardinal Wolsey, and all his Court. An impromptu hornpipe, in which the "Defender of the Faith" takes part, was a fine exhibition of artistic agility and genuine drollery. The scene of "The Field of the Cloth of Gold," with the tournament after Holbein's celebrated picture at Hampton Court, was the next grand display, occupying the whole depth of the stage, the chivalric jousts being marked with a due infusion of comicality. The next scene, being outside the Quay at Calais, and

SCENE FROM THE NEW CHRISTMAS PANTOMIME OF "YE BELLE ALLIANCE; OR, HARLEQUIN GOOD HUMOUR AND YE JEWELS OF YE CLOTHE OF GOLDE," AT COVENT-GARDEN THEATRE.—(SEE PRECEDING PAGE.)



CHRISTMAS AMUSEMENTS AT STOCKHOLM.—(SEE NEXT PAGE.)

CHRISTMAS AT STOCKHOLM.

(From a Correspondent)

STOCKHOLM, the capital of Sweden, is allowed to be one of the most beautifully-situated capitals in Europe. Venice, to which it has been sometimes compared, cannot boast of anything like so romantic a position: for Venice lies flat, intersected by sluggish canals; but Stockholm is built upon several rocky islands, with the clear waters of the Malar Lake running between them. The settled, and almost tropical, character of the climate in summer renders it a charming place of resort for the tourist; all the routes of approach, therefore, put forward their claims as possessing attractions of their own, although the passage of the Gotha Canal from Gottenburg is perhaps the best.

Our view, sketched during a scene of Christmas pastime, from the English Minister's residence, shows the Royal Palace in the centre, conspicuous for its great size and noble proportions. To the right is the Riddarholm Church, famous for its iron spire, and containing within its walls the monuments of many Kings of Sweden and remarkable heroes, and also several flags captured from the Russians. On the hill to the extreme left is the telegraph station; and immediately below are situated the "Schweitzen" and pleasure-gardens of Mose Backe—from which there is a glorious panorama of the city and surrounding country. A little to the left of the palace, and close to the water's edge, surrounded by semicircular flights of steps, stands the statue of Gustavus III. To the right, and below the Riddarholm Church, is the Norr Bro, or North Bridge, connecting the palace with the square of Gustaf Adolf. On the wooded island is a café, where in the summer the Swedes take their coffee and cigar after dinner. Beyond is seen some portion of the Malar Lake. Ample communication is provided from one part of Stockholm to another by paddle-boats, worked by Dalecarlian peasants; and from one part of Sweden to another by fleets of steamers which in summer ply up the Gulf of Bothnia as far as Torneå and Haparanda, in the Lapland region of the never-setting midsummer sun.

However delightful the place may be in summer, the Swedes maintain that winter is the time for enjoyment in Sweden. When that season does come, it is not like our winter, cold, wet, fog, and mud—a sort of compromise between autumn and winter—the cold of Russia one day, the fogs of Holland the next, and the mud of all three the next; but winter in all its severity, with frost that makes you doubt the existence of your nose every ten minutes; but the air is perfectly clear and calm.

For the first week or two the state of the ice would drive the members of our skating clubs frantic with delight. It is clear, black, and transparent as a looking-glass, and so thick after the first night or two that all fear of danger from its breaking is over. However, down comes the snow with a milder temperature for a day or two during the fall, and then all good fancy skating is over. Shaggy-coated men, with long snow-shoes and business-like ice-pattens, go lunging about as a great rate, only bent upon getting along somehow; but sleighing is now the thing, and the only sound in the streets is that of the sleigh-bells. The pavements are coated with a mass of conglomerated snow and ice, so thick and hard as to make it necessary for surface-drains to be dug or picked for the use of the houses. Gigantic icicles, several yards long and of immense thickness, fringe the fronts of the houses; and the Winter Garden in the park presents the appearance outside of being supported on columns of ice.

The whole population is now bent upon amusement. With their houses well defended from cold, and heated to an almost insufferable degree, and themselves securely wrapped in thick furs, the people of Stockholm bid defiance to any degree of frost. Sleighing parties, ice-hills, and skating out of doors, and balls, card parties, and visits of all kinds in doors, *ad infinitum*, make the winter pass away unheeded and unfelt, except as an opportunity for these interchanges of kindly feelings; for if there is one class of people who don't know how to enjoy themselves, and will do so at all events, it is the Swedes; while if any Englishman wants to pass a merry holiday among a genuine, kind-hearted, hospitable people, let him spend a Christmas in Stockholm.

The accompanying illustration of the gay scene which Stockholm presents out of doors at this season of the year is from a sketch by Mr. E. Dolby.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 30.—Royal Society established, 1660.
MONDAY, 31.—St. Sylvester.
TUESDAY, Jan. 1, 1856.—Circumcision. Union with Ireland, 1801.
WEDNESDAY, 2.—Edmund Burke born, 1730. Lavater died, 1801.
THURSDAY, 3.—General Monk died, 1670.
FRIDAY, 4.—Roger Ascham died, 1568.
SATURDAY, 5.—Duke of York died, 1827.

TIMES OF HIGH WATER AT LONDON-BRIDGE,

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 29, 1855.

IT is difficult for plain-minded people on this side of the Atlantic to know what is the real feeling of the Americans towards this country. It is almost equally difficult to define what is meant by the word American. If by American we mean a descendant of the early settlers and a man of Anglo-Saxon lineage, we may take it for granted that the Americans look with some degree of affection upon the "old country"—that they are proud of reading the same Bible, speaking the same language, enjoying the same literature, and inheriting the same history and traditions. But if by Americans we mean the modern Irish immigrants or their children—if we mean the multitudinous runaways from the laws of Europe—the hybrids—that are neither Spanish, nor French, nor Anglo-Saxon, nor German, nor "Nigger," nor Creole, nor Hibernian, but a mixture of all these—we may with equal safety come to the conclusion that such Americans do not look upon this country with favour; that they sympathise with Russia, because Russia is for the present our enemy; and that one portion of them hates us with the bitterest intensity. Unfortunately it is this hybrid population in America that makes the greatest political noise, whose opinions and prejudices are represented in the journals of the largest circulation, and to whom Presidents and statesmen whose period of office is about to expire consider it necessary to make the most earnest and most ill-judged appeals. There is always a danger when a Presidential election approaches that this section of the American nation will run the States into difficulties, and embroil it with Great Britain or some other European Power. It is this class which flatters the Czar, which bullies the King of Denmark, which openly advocates the spoliation of Spain, which seeks to fasten a quarrel upon England, either on a question of boundaries, of cod-fisheries, of foreign enlistment, of the right of search, of the protectorate of Mosquitia, or, in default of other ground of complaint, of the tone of an article in a London journal. Until Mr. Pierce is either re-elected to the Presidential chair—which it is a pity he should ever have filled; or consigned to the domestic privacy—which he is well calculated to adorn, were it not for a failing which he shares with the King of Prussia—this "bumptious" and wrangleseme spirit will continue, we are afraid, to animate the Hiberno-Americans, and all that "go-ahead" portion of the people who think that the destiny of the United States is to oversawe and bully, and finally to step into the place now occupied in the world by, Great Britain. But this violence, which the Anglo-Saxon element in America does not seem to be sufficiently powerful to restrain, runs the risk of defeating its own objects. It not only brings the sober mind of America to question the expediency of reconsidering that article of the Constitution which decrees a Presidential election every four years, but forces the Governments of Europe to assume an attitude towards the United States which may prepare the way for an anti-slavery or some other catastrophe perilous, if not fatal to the Union. If America will intermeddle in European affairs—if she will give herself airs as if she and Russia were the two greatest Powers on the earth—Powers which if in alliance would be able to give the law to all the rest of the world—the Americans must not be surprised to learn that the public opinion of Great Britain and France approves the remark of Lord Clarendon, "that the Anglo-French alliance extends to both sides of the Atlantic," and that if America plays the part of an enemy she will be treated as one. Already the aggressive spirit of President Pierce and his Cabinet with regard to the Dues, which, under the sanction of Europe, Denmark, as the custodian of the entrances of the Baltic, has levied on the entrance of the merchant vessels of all nations into that sea, has had an effect which the Americans never anticipated. It has inclined the King of Denmark to join the Anglo-French alliance, to protect himself from the danger of Russian intrigue on the one side, and of American hostility on the other. Negotiations have so far advanced that we may expect every day to hear of the conclusion of a treaty similar to that just signed by Sweden and the Western Powers, the result of which will be another and a strong link in the chain that is being tightened around Russia, and a warning to America that a quarrel with Denmark will involve a quarrel with Great Britain and France.

There is another scheme afloat to which, as far as we are aware, the Government of the United States has given no aid. The Irish—as all good Americans know—share with the slave population the dignity of being a difficulty for the Union. This difficulty, as the "Know-Nothings" were fully aware, must be dealt with either now or hereafter. It has been suspected for some time that secret societies of Irishmen in New York, aided by a few citizens of American birth, have concocted a wild project for the invasion of Ireland, with the view of distracting the attention of the British Government, and of thereby aiding the cause of the Czar. The British Government, however, has been fully informed of the plans of the conspirators; and it scarcely needed the "Address" which has just been published in the New York papers to call their attention to the scheme, and to the means of giving the buccaneers who should attempt to carry it into execution—or the traitors in Ireland, if any such there be, who should give it aid or countenance—a reception befitting foreign pirates or domestic rebels. The first step, however, if the authorities at New York be not lost to shame, ought to be taken by the United States Government. Men—whether citizens of the United States, or aliens enjoying their protection—who in public meeting resolve that the independence of Ireland "and her consequent relief from the worst government on the part of her vampire oppressor the world ever saw, would be an act worthy of the noble character of American freedom," commit an act that calls not only for the disavowal of the American Government, but for punishment. The enlistment for the British Foreign Legion, about which so much has been said in America, was harmlessness itself compared with such unblushing effrontery as this. It is for the American Government to wash its hands of the guilt, or to take the consequences.

WITH a true instead of a false story to tell, the Russian writers on the fall of Kars speak with exultation indeed, but without bombast. All who have derived amusement from the inflated and exaggerated language which the *Invalide* has employed throughout the campaign, in reference to the deeds of the Russian Generals and of their armies, had expected that, now that an important success has really been gained, the announcement of it would transcend imagination. But, whether the fact that the Russian organs are unaccustomed to record real victories has disabled the writers, or whether, as somebody says, "the respectability of truth is contagious," there is little said at St. Petersburg or before Kars with which an Englishman, allowing for the circumstances, can find fault. General Mouravieff, indeed, in congratulating his army, admits that the triumph has come to atone for events of a different character; and in declaring that the key of Armenia is in his hands, with 150 guns, and flags of various kinds which will adorn the holy temples of Russia, he acknowledges the direct superintendence of Providence, and the victory of the Cross of the Saviour. He appears to have treated his captives well; to have released a great number whose powers of eating were probably more to be apprehended than their hostility, now that the fortress has fallen; and to have at once conducted his prisoners to a repast such as the gallant fellows had not enjoyed for many a weary month of privation. Of the destination of Williams and his brother leaders no news has yet been received; and it is made matter of remark that the transmission of intelligence between St. Petersburg and Kars is exceedingly tardy, and that important missions have to be intrusted to private hands, chiefly those of Greek merchants.

Meanwhile Omer Pacha is pushing his way, and, having, it is known, twice defeated the Russians, is supposed to have Kutais within his grasp. Of the vigour and skill displayed by this General, when left to follow the dictates of his own mind, there can be no two opinions. With a suitable force he might be left to conduct the struggle in Asia, until the Government of Great Britain shall make up its mind (if it have any mind on the subject) to carry on the war in that region with the vigour which British interests demand, and the friends and foes of this country alike seem to expect. To allow Russia to be, or even to appear to be, victorious in Asia is to provoke revolt, and to "sow dragon's teeth" in India. The matter cannot be left even to Omer Pacha. It concerns Great Britain far more than it does Turkey.

COUNTRY NEWS.

REFORMATORY SCHOOL FOR SUSSEX.—A large and influential meeting of the noblemen and gentlemen connected with the county of Sussex was held last week at Brighton for the purpose of taking preliminary steps for the establishment in the county of a reformatory school for juvenile criminals. The Duke of Richmond was named as president of the institution. The cost of the buildings is not to exceed £800.

POLISH INDEPENDENCE MEETING AT LIVERPOOL.—A public meeting was held in the Concert-hall, Lord Nelson-street, on Thursday week, for the purpose of advocating the restoration of Polish independence. There were about 2500 persons present. Dr. Games occupied the chair; and letters were read from Sir Joshua Walmsley, the Earl of Harrowby, Mr. W. J. Fox, Douglas Jerrold, and Professor J. P. Nicol, LL.D., regretting their inability to attend, but expressing their approval of the object of the meeting. The meeting was addressed by Mr. G. Dawson and others, and resolutions were carried to the effect that it is the duty of England to assist Poland to rise against Russia as speedily as possible, on the ground that recognition and support of Polish nationality would establish a powerful and faithful ally within the present boundaries of Russia, and so cripple her power that she would be compelled to sue for a peace honourable alike to our arms and our nation. It was also resolved to present a memorial to her Majesty's Ministers, requesting the Governments of Great Britain and France to consider the re-establishment of Poland a necessary condition to the restoration of the equilibrium of Europe, to continue the war, and to conclude no peace until the freedom of that oppressed country is secured.

RAILWAY GAMBLERS.—On Friday last a party of gamblers left Edinburgh with the 10.15 morning train, and having enticed some sailors to play had won several sums of their money. On the arrival of the train at Polmont, the sailors found out what they were, and began to beat them, when the most active of the gamblers gave one of the sailors £5, and jumped out, followed by two of the sailors. Here he hoped to prevent them by giving them drink, and would have succeeded had not one of the railway officials told the sailors to have their money first. The gambler appeased them by giving them another £5, and induced them to go and drink with him, when the gambler made off from them through the fields; but the sailors' friend (the railway official) came to the rescue, and proved a faster runner than either. He caught the gambler, and held him until the sailors arrived, when they found he had no money, having passed it to one of his companions before leaving the carriage; and hearing a proposition to take his ring, he pulled it off his finger and swallowed it. The sailors seized his gold studs, and in the scuffle a handkerchief rolled out with a gold watch inside, which was speedily secured. The gambler was now in turn the loser, and was glad to treat with his captors to repay the money he had won from them, and also to pay the full penalty for gambling in a railway carriage.—*North British Daily Mail.*

DESTRUCTION BY FIRE OF THE LYCEUM THEATRE AT SUNDERLAND.—On Sunday morning, between five and six o'clock, a fire broke out in the Lyceum Theatre, and in a short time this beautiful little edifice was reduced to a heap of smouldering ruins. The amount of damage sustained by the proprietor is not yet known, but it is said that he lately expended nearly £300 for alterations; and to this may be added £300, the value of dresses in one small room alone.

THE SUSPECTED POISONING CASE AT RUGELEY.—Mr. Palmer, the surgeon, who is now in Stafford gaol awaiting his trial for this murder, was well known on the turf as being the owner of several rather celebrated race-horses, one of which was Goldfinder, who won the Chester Cup in 1853. Respecting the nomenclature of his horses, it is a rather singular circumstance that some years ago he had a horse called "Strychnine," who figured rather mysteriously on the turf. He was also the owner of the mare "Nettle," who was first favourite for the Derby Oaks at Epsom, and on which Marlow, Lord Eglinton's jockey, met with no serious an accident. He also bought for a very large sum of money a horse called "The Chicken," but of the money he received from the assurance on his wife's life. It is said that the deceased Mr. Cooke was a witness to the proposal paper for an assurance on the life of Bates, a groom, whom Palmer represented as a gentleman of fortune, and which assurance was subsequently refused. Some extraordinary letters have been intercepted, showing the extent of the gambling transactions between the prisoner Palmer, the deceased, and other parties. The deceased gentleman, Mr Cooke, was quite a young man, and intended quitting the turf at the end of the present season. He was bred to the law, and was universally respected in sporting circles. It was rumoured on Tuesday that Palmer had poisoned himself, but the report appears to have been false.

TICKET-OF-LEAVE CONVICTS.—The Grand Jury sitting at Winchester have presented a memorial to Baron Parke, "earnestly urging on the Government the pressing need of abstaining for the present from issuing any further tickets of leave to convicts, except in cases where the most satisfactory proofs of reformation are given, and of taking the earliest opportunity of submitting to Parliament some comprehensive plan for enforcing the punishment of all offenders sentenced to transportation or penal servitude, either by the establishment of a new penal colony, or by adult reformatory establishments within the United Kingdom."

FIRE AT A RAILWAY GOODS WAREHOUSE.—On Friday morning, about two o'clock, a fire was discovered in the extensive goods warehouse of the Lancashire and Yorkshire Railway Company, at Nova Scotia, Blackburn. By half-past six o'clock the fire was got considerably under, but up to five o'clock in the afternoon portions of the contents of the warehouse continued to smoulder, and the hose was kept in constant requisition. At the time of the outbreak of the fire there were known to be in the warehouse about £1200 worth of cotton, belonging to Messrs. Pilkington, Morrison, Constantine, and others, of Blackburn; Messrs. Harrison and Son, machinists, of Blackburn, had an extensive order for machinery, which they had completed in the building, a portion only of which was sent off on Friday. The total loss is estimated at from £10,000 to £12,000. It is at present a moot question whether the railway company is responsible for the loss.—*Manchester Examiner.*

PHENOMENON IN THE RIVER TWEED.—On the forenoon of Wednesday week the waters of the river near its confluence with the Tweed at Maxwelheugh mill, were observed gradually to subside, until at length the bed of the river became almost dry. It continued in this state for a considerable part of the forenoon, during which the mill was altogether without water. In the course of the afternoon the water again began gradually to flow, though not by any means to the depth to which it had been running in the morning.

GREAT FLOOD.—The breaking up of the late short but intense frost has been followed in some districts of the north by heavy rain and floods. In Lochbroom and neighbouring districts the waters have risen to a height unexampled even by the floods of 1829, which was then considered the highest ever remembered. Rain began to fall about three o'clock on Friday morning, before the temperature was much reduced. The ground being still hard with frost the rain was not absorbed, but swelled the burns and rivers with extraordinary rapidity. At Lochbroom the river Lael, which in former floods kept within its bank, broke through the Old-square, and cut up roads and fields. Some idea may be formed of the magnitude and impetuosity of the flood from the following incidents:—In the sheep tanks, about a hundred yards from the body of the stream, a number of trout were found after the subsidence of the flood, and a salmon of about 30 lb. weight occupied a little pool of water left close to the steading at Auchindrean. In the district between Lochcarron and Lochluichart the carcases of about forty sheep have been found, and also some belonging to Mr. Mackenzie, of Ord. Indeed, the damage inflicted on the whole of these western districts has been considerable; and, owing to the destruction of the bridges, and the cutting up of the roads, all communication by gigs or carriages is for the present suspended between Dingwall and Ullapool.—*Inverness Courier.*

THE COURT.

The guests of the Queen at Windsor Castle during the Christmas week have been confined to his Serene Highness Prince Ernest of Leiningen, Rear-Admiral the Hon. R. S. Dundas, Lord Panmure, and Major-General Sir Harry Jones. Her Royal Highness the Duchess of Kent has been a daily visitor, and on several occasions has joined the Royal dinner party.

On Saturday, before the breaking up of the frost, his Royal Highness Prince Albert, with the Prince of Wales, Prince Alfred, and Prince Ernest of Leiningen, skated on the ice in the Home Park. Her Majesty, the Princess Royal, and the Princess Alice were present.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and Princess Alice, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. Prince Ernest of Leiningen and Rear-Admiral the Hon. R. S. Dundas were also at the service.

On Monday Prince Albert, accompanied by Prince Ernest of Leiningen, went out shooting. The Queen, with the Princesses Helena and Louisa, walked on the slopes in the evening. Colonel the Hon. James Lindsay, commanding officer 1st Battalion Grenadier Guards, had the honour of joining the Royal dinner party.

On Christmas-day Divine service was performed in the private chapel of the Castle. The Queen and Prince, the Prince of Wales, Prince Alfred, Princess Royal, Princess Alice, and Princess Helena, the Duchess of Kent, and Prince Ernest of Leiningen, attended. The ladies and gentlemen of the Court and the domestic household were also at the service. The Honourable and Very Reverend the Dean of Windsor officiated, and administered the Holy Sacrament. The dinner party in the evening included her Royal Highness the Duchess of Kent, her Royal Highness the Princess Royal, his Serene Highness Prince Ernest of Leiningen, Lord Panmure, Major-General the Hon. Charles and Mrs. Grey, Colonel the Hon. C. B. and Mrs. Phipps, Colonel the Hon. N. and Lady Mary Hood, Colonel and Lady Emily Seymour, and Major-General Sir Harry Jones.

On Wednesday the Queen attended by the Hon. Beatrice Byng, took equestrian exercise in the Riding-house.

Lord Canovy and Lieut.-General Sir F. Stovin have arrived as the Lord and Groom in Waiting.

THE CHRISTMAS HOLIDAYS.—The war and other circumstances of the time have contributed to deprive the present season of much of that joyous festivity which has generally marked the Christmas recess in the homes of the english aristocracy. A generous hospitality, however, still prevails in many families unfortunately too few—where the hand of death has not fallen upon one or more of its gallant members. One gratifying feature of the season is prominent as ever—the kind and sympathising assistance rendered to their poorer dependents by the higher classes of society.

Viscount and Viscountess Palmerston have a numerous and distinguished circle at Broadlands. The party assembled on Monday.

Mr. Baron Parke is about to retire from the Bench as one of the Barons of the Court of Exchequer. His Lordship's long services have been appropriately rewarded with a Peerage by her Majesty, and the title conferred is that of Baron Ampthill.

OBITUARY OF EMINENT PERSONS.

THE EARL OF CAITHNESS

ALEXANDER CAMPBELL SINCLAIR, thirteenth Earl of Caithness and Baron Barrowdale in the Peerage of Scotland, was the second surviving son of James, the twelfth Earl, by his wife, Jane, second daughter of General Alexander Campbell, of Barcaldine, Argyleshire. He was born the 24th July, 1790, and succeeded to the family honours at the decease of his father, the 15th July, 1823. His Lordship was Lord-Lieutenant of the county of Caithness, and Admiral of its coast. He married, the 22nd Nov., 1813, Frances Harriet, youngest daughter and coheir of the Very Rev. William Leigh, of Rushall, Staffordshire, Dean of Hereford, and leaves issue two sons—the eldest of whom, James, his successor, now fourteenth Earl of Caithness, born the 16th December, 1821, married the 17th July, 1847, Louisa Georgiana, third daughter of Sir George Richard Philips, Bart., of Weston, county Warwick. Alexander, thirteenth Earl of Caithness, died on the 20th inst. at his residence in Rutland-square, Edinburgh. The house of Sinclair, or St Clare, Earls of Caithness, and formerly Earls of Orkney, is one of the oldest and most historic in Scotland.

LIEUT.-GENERAL LINDSAY.

LIEUT.-GENERAL JAMES LINDSAY, of Balcarres and Leuchars, Fife, was the eldest son of the Hon. Robert Lindsay, younger son of James, fifth Earl of Balcarres. He was born the 17th April, 1793. He entered the Grenadier Guards the 6th December, 1807; he served in the expedition to Walcheren in 1809; at the defence of Cadiz in 1811; and in the Peninsular Campaigns of 1812 and 1813. He was severely wounded and taken prisoner in the attack on Bergen op Zoom; he was on the Staff of Sir Peregrine Maitland during the army of occupation in France; and he became Major-General the 11th Nov., 1851, and Lieut.-General the 13th May, 1855.

General Lindsay represented in Parliament Wigan, 1826, and subsequently Fifeshire. He was then 27 years conversant of that county.

The General married, first, the 16th Feb., 1819, Mary-Ann, daughter of Francis Grant, Esq., of Kingston; and secondly, the 2nd April, 1823, Anne, eldest daughter of the late Sir Coutts Trotter, Bart., by whom he had the second marriage he has had issue—two daughters, the elder of whom is the present Lady Lindsay, and two sons: the elder of these, the General's successor, is Sir Coutts Lindsay, Bart., who, pursuant to the limitation in the patent, inherited the Baronetcy of his maternal grandfather, Sir Coutts Trotter. Lieut.-General Lindsay died on the 4th inst.

THE DEAN OF DOWN.

THE Very Reverend Theophilus Blakely, Dean of Down, an able preacher and a powerful writer, was one of the ultimate survivors of those leading liberal men who were so distinguished at the close of the last century in Ireland. The Dean was an earnest supporter of all measures of public improvement: he was among the first advocates for the Parliamentary Reform and Education. In the pulpit the Dean's eloquence was persuasive and fervid, and, like his countryman, the celebrated Kirwan, he was eminently successful as charity sermons. At one time he was alternate morning preacher at Berkeley and Hanover chapels. The Dean of Down's family was originally English. The Dean was educated at Trinity College, Cambridge, where he graduated there. He early in life, held a small living near Dublin; and in 1811 he was preferred to the Deanery of Connor, thence to that of Down, and finally to that of Down. He married, first Miss Catherine Ball, of Ball's-grove, county of Meath, by whom he had a son and several daughters—one, of whom, Louisa, was married to Henry Metcalfe, Esq., M.P. for Drogheda—but who all died young. The Dean married, secondly, Mary Stewart, daughter of John, the youngest brother of the late Alexander Stewart, Esq., of Ballydemond, county of Down, by whom he leaves one son, Theophilus Alexander, Major in the regular cavalry of the Turkish Contingent, formerly Captain in the Royal Artillery; and two daughters, Mary Stuart, married to Charles Chaine, the eldest of whom is married to Robert Spankie, Esq., magistrate and collector at Cawnpore. The Dean of Down died at an advanced age in Dublin on the 1st inst.

DR. CHAMBERS.

WILLIAM FREDERIC CHAMBERS, M.D., K.C.H., F.R.S., was descended of an old family long settled in the county of Durham. He was son of the late William Chambers, Esq., a political servant of the East India Company, and a distinguished Oriental scholar. By his wife Mary, one of the daughters of the late Thomas Fraser, Esq., of Balnain, in the county of Inverness. Dr. Chambers was educated at Westminster School, from which he obtained his election to a scholarship at Trinity College, Cambridge, where he graduated in 1803. He was appointed physician in ordinary to the late King William IV. shortly before his death, and attended him in his last illness. He was physician to the Queen from her accession till his resignation of the office two years since. He married his first cousin, Mary, daughter of Thomas Fraser, the younger, of Balnain, and leaves four children. Dr. Chambers was nephew to Sir Robert Chambers, some time Chief Justice of Bengal; and brother to the late Sir Charles Chambers, one of the Judges of the Supreme Court at Bombay. Dr. Chambers died on the 16th inst. at Hordle Cliff, Hants, aged sixty-nine.

WILLS.—Probate of the will of the Right Hon. John Stuart, Baron Wharncliffe, was proved in London under £14,000 personalty within the province of Canterbury.—General Sir John Brown, K.G.H., Colonel 6th Dragoons, also the wills of Colonel Richard Tyldon, Royal Engineers, Crimea, and Captain John Hutton, 97th Foot, Sebastopol.—Colonel James Abdy, R.N.C., £50,000.—Sir Richard Sutton, Bart., £100,000.—John Parsons, Esq., of Swansea, £200,000.—Joseph Watts, Esq., of Stratford-house, Gloucester, £30,000.—Miss Mary Sophia Ansell, of Louth, £40,000.—Joseph Sadler, merchant, Austin Friars, £35,000.—Roger Dawson, of Newgate-street and Tottenham, £50,000.—James Taplin, junr., £20,000.—Abraham Offin, of Hutton, Essex, farmer, £50,000.—John Baske, of Bicester, grocer, £20,000 within the province of Canterbury.

During the year ending Dec. 1, 1854, 263,827 immigrants arrived at New York; the number during the last twelve months has been only 136,798—showing a falling off in one year of 167,061, or nearly sixty per cent.

NAVAL AND MILITARY INTELLIGENCE.

ADMIRALS R. S. Dundas, Sir Michael Seymour, and Baynes, will strike the flags until the spring, when it is more than probable that all will again proceed to the Baltic, at the head of the immense armament now being prepared for that service.

To those sick and wounded officers from the Crimea, on their arrival in London, the expense of medical attendance, the Government has determined that Staff-Surgeon M'Gregor shall give them medical treatment. His office is established for the present at No. 4, Bennett-street, St. James's.

THE barracks of the Royal Sappers and Miners at Woolwich was entirely vacated last week by the corps, which has removed to Chatham, its future head quarters.

INSTRUCTIONS have been sent to Jamaica to complete to their establishment the six companies of the West India regiments on the coast of Africa, some native chiefs having shown a disposition to be troublesome to our settlements there.

CARTRIDGES will be issued on the 1st January, in which all articles will be furnished by the Commissariat Department, and a pensioner placed in each to conduct them. By this means the soldier will be sure of the value of his money.

ALTHOUGH the Land Transport Corps has been draughted off in large numbers, there are still many hundreds billeted in Bristol and quartered at the Horfield Barracks. A selected body of 300 of the best men will remain at the barracks after the others have been sent off, for the purpose of raising a large additional body of men. These men are to be dressed in high cavalry boots, glazed caps, and showy uniform; and the men so raised will be employed as drivers to the Royal Artillery, it having been determined to keep the gunners to their more immediate duties.

THE following Admiralty appointments were made last week:—Captain the Hon. Frederick Pelham, to be a Naval Aide-de-Camp to her Majesty; Captains—E. S. Sotheby, to the *Pearl*; L. G. Heath, to the *Seahorse*. The following officers have been appointed to command divisions of gun-boats:—Captains Charles Graham, C.B.; Hon. H. Keppel; R. Yelverton, C.B.; and A. Cooper Key, C.B. The officers in command of gun-boats are all to be subjected to an examination in gunnery, on board the *Excellent*, on the 1st January.

THE experiments which have been carried on for some weeks past in the Arsenal marshes at Woolwich terminated on Saturday last. These experiments were specially designed with a view of testing the durability of a commixture of metals for gun purposes. Various trials of an interesting and novel nature were made with guns cast from these mixed proportions of materials, which, without exception, stood the repeated test well. However, at the conclusion of the experiments, three 24 pounders of the same species of mixed metal, 9 feet in length, were fired with the ordinary prod charge, when each burst in succession at the first round.

THE whole of the first regiment of the Anglo-Italian Legion, consisting of 1070 men, is now at Novara, under the command of Major Pinelli, and is a fine body of men. The average age is about twenty-two, and full half of the number are made soldiers, having served their time in the Piedmontese service. They are armed with the Enfield rifle, weighing about 10 lb, with bayonet, lock, and sight and balance. The second regiment, which is now forming at Chivasso, under Colonel Crauford is to be a rifle regiment.

SIX experienced Royal Marine Artillerymen are ordered to be sent from each main of war, having detachments of that corps on board, to the Arsenal, there to be in readiness for the first vessel of that class building, after the launch of the *Orontes*, 24 Blast Furnaces to be added by Novem.

A VERY stringent order has been received by Colonel Eden, the Commandant of Chatham garrison, that in future the greatest care and caution are to be observed in removing powder from the magazine for the use of the troops. None but the most steady men are to be employed on this particular duty; and no nails, iron-hoops, or other metal articles are to be placed in the vicinity of the ammunition stores.

TWO ladies, sisters of an officer belonging to the Royal Artillery who lately fell before Sebastopol, have placed at the disposal of the regiment the sum of £1000 for any benevolent purpose that might be proposed. It is expected that a subscription will be entered into amongst the regiment to raise funds, in addition, to erect a lasting memorial of those officers and men who have so nobly fallen in the Crimea.

THE *Renown*, 90, building in Chatham Dockyard, owing to the number of hands placed on her to expedite her build, is getten very fast. all her outside work is nearly complete. She will be the largest screw war ship in the British service. The following are her dimensions:—Length between the perpendiculars, 240 feet; length keel for tonnage, 210 feet; breadth, extreme, 60 feet 4 inches—in tonnage, 54 feet 6 inches, depth in hold, 24 feet 6 inches; register tonnage, 3617 tons 76-94ths. Her engines are to be 600 feet horse power. The *Cadmus*, 23, corvette, building, is advancing very fast towards completion. She will be ready for launching by the 1st February next.

THE second regiment of Warwickshire Militia, under the command of Major Granville, is now quartered at Armagh and Newry. Since April last it has given upwards of 600 volunteers to the Line, and there is still that number of men remaining.

ANOTHER regiment of the British German Legion, the third regiment of Light Infantry, arrived at Portsmouth, by train from Shornclife on Monday last, and embarked on board the screw transport *Imperador*, alongside the dock-yard, for conveyance to Scutari. This regiment is also composed of two battalions each 800 strong.

THE *Monkey* towed two more of the new gun-boats up from the building-slip on Saturday last, named the *Cheerful* and *Dove*. The former was taken in tow by the *Pidgeon* and moored up to Deptford to receive her machinery, and the *Dove* remains at Woolwich to be fitted for sea.

THE *Coquette*, screw dispatch gun-boat is progressing with her internal fittings at Blackwall, and is expected at Woolwich about the 17th of January, to be masted, rigged, and equipped.

IT is intended by the Government to effect a further increase in the Army Works Corps. This contemplated augmentation will consist of 750 men, comprising persons of every trade, but prine pally of masons, bricklayers, carpenters, bakers, butchers, smiths, wheelwrights, collar makers, and excavators. There are at present ready for embarkation upwards of 300 men for this corps, who only wait for vessels to convey them.

THE recruiting for the Royal Artillery progresses so successfully that it is estimated upwards of sixty volunteers and recruits arrive at the head-quarters, Woolwich, weekly, notwithstanding which it is proposed to increase the bounty to £15.

A FRESH supply of books has been sent from the War-office to the Commandant of the Garrison at Chatham, for the benefit of the soldiers in barracks during the winter evenings, a great many of whom appear to appreciate them. The rooms will be well lighted, and heated by a stove, offering every inducement to the soldier. There are 3000 volumes; those recently added are principally of a military character, offering instructive as well as interesting reading.

OFFICIAL APPOINTMENTS.—Mr. Bouverie Alleyne is appointed Colonial Secretary of Grenada, Mr. Henry Sharpe is appointed Provost Marshal of Grenada. Mr. Allert Adam is appointed Colonial Secretary at Tobago, Mr. Charles Berkeley is appointed Colonial Treasurer at Tobago.

THE BOAR'S HEAD AT QUEEN'S COLLEGE, OXFORD.—The ancient custom of serving up a boar's head, "decked with bays and rosemary," and a large orange in its mouth, at the College, on Christmas-day, was duly observed on Tuesday last, and the spacious College hall was crowded with Oxonians and their town and country friends. The boar's head, which, borne on the shoulders of two servants, weighed upwards of seventy pounds, was announced by the sound of the trumpet, when the usual song was chanted; the Rev. T. Rennison taking the solo part, and choristers from Magdalen College singing the chorus, from the entrance of the Hall to the high table, where a sumptuous dinner awaited the invited guests. This, we believe, is the only place where the ancient custom of serving up a boar's head every Christmas-day, with the original chant, is still observed.

THE NEW RUSSIAN LOAN.—The report is gaining ground that considerable support has been accorded in some parts of the Continent to the New Five per Cent Russian Loan for eight millions sterling. The price at which the loan has been given to the contractors is understood to be 82 per cent. The opinion is universal, however, that the patriotic resolution of the London Stock Exchange, refusing recognition of the loan, even after the restoration of peace, will materially disturb the calculation of subscribers. It is stated that Lord Clarendon ordered the resolution adopted by the committee to be immediately forwarded for publication to every official agency of Great Britain on the Continent.

GOOD SAMARITANS. On Tuesday last a committee of gentlemen, aided by the patronage of the Marquis of Bristol, supported by the Lord Mayor and the citizens of London, distributed at the Samaritan Institution, Victoria-street, Farringdon-street, a most plentiful supply of roast beef, plum-pudding, bread, and potatoes, to upwards of 1600 persons—men, women, and children—many being permitted to take home a supply to their families.

THERE is great competition for land at present in Perthshire, and when a farm is to be let the applicants are numerous.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

SINCE we last wrote, one of the ablest and best of men has been removed from among us. Who has not seen Belgravia—who has not heard of Thomas Cubitt? The Five Fields, commemorated by Sir Richard Steele in the *Tatler;* and the Willow Walk, where Jerry Abershaw (that other Johnny Armstrong) had his secluded house (in the midst of "cuts," or reservoirs of water), Thomas Cubitt metamorphosed by his talents his influence, and his purse, into that Belgravia in which fashionable London delights to dwell. This Wren and Inigo Jones of modern London was originally (all honour to him, therefore!) a ship's carpenter. When or in what way he escaped from such a life deserves to be told. His brother, Mr. Alderman Cubitt, a most able man himself, owes much of his success to his brother Thomas. A kindlier-hearted man, or a man more unaffectedly modest and intelligent, never fell within our "ken." He was building to the last. That stately residence of Denbies, near Dorking, with its passages twelve feet wide and its wonderful "creature comforts" at every turn, was his last great work. It was his own residence, within an easy walk of his old friend (that other great builder) Mr. Grissell. What his skill, and taste, and fortune enabled him to possess, his health did not, alas! enable him to enjoy. He died in his sixty-eighth year, and will be remembered when many architects of his age are utterly forgotten.

The men were wise who collected in advance of their age. For the following apposite illustration of what we state we are indebted to one of the best-known and largest purchasers of works of art (in the Portland, Walpole, and Bernal walk) now alive. We wish we could use our friend's name, but, not having (unfortunately) asked his permission, we cannot. Here is his note, and most interesting and instructive it is:—

(To the Writer of "Town and Table Talk.")

The three most important sales of articles of *vertu* that have been disposed of by public auction in England, since the dispersion of that formed by King Charles I., and sold by order of the Commonwealth, have been those of the Duchess of Portland; of Horace Walpole, at Strawberry-hill; and of Mr. Berna., sold the year by Messrs. Christie and Manson. The Duchess of Portland's sale consisted of thirty-seven days, and brought £10,973 2s. 6d. The Strawberry-hill sale was contained in twenty-four days' sale, and brought £33,450 11s. 9d. Mr. Bernal's thirty-two days of articles of *vertu* brought £51,984 11s. 3d.; to which, if his books and prints be added (seven days), selling for £6587 2s. 6d., would make thirty-nine days, and a total of £58,571 13s 9d. By those well acquainted with each of these sales it is affirmed that the articles at Strawberry-hill produced twice what they did at the Duchess' sale; and at the Bernal sale they produced twice what they did at the Strawberry-hill sale, and this in a year of war. It surely follows that the taste for articles relative to art and mediæval history has been progressing to a great and almost unforeseen extent.

The difference in the value of money may have had some miserable share in accounting for the difference, but the wonder (with this allowance) is still the same.

The "late Mr. Rogers" (how strangely the words sound!) was fifty years in collecting seventy pictures. Other collectors (we have known them), have had the supposed good (rather the ill) luck to find seventy so-called good pictures in seven years. Of these seventy pictures Mr. Rogers has left three to the nation. Nor are we disposed (his bequest was long known) to quarrel with the selection he has made. He has given us the best small Titian in England—shall we say the world?—the far famed "Noli me Tangere." In making this bequest he has given us the picture for which he gave the most. Money, therefore, in making his bequest, never entered into his thoughts. For the "Noli me Tangere" he gave, at Mr. Champerno ane's sale, 1000 guineas, a very large sum in those times (five-and-thirty years ago) for a small *Italian* picture. For a Dutch picture, when Plancus was king and Peel and Baring were collectors, it would not have been much.

We have spoken as yet of only one of Mr. Rogers' three bequests to the nation. The Giorgione (on panel, 15 in. by 11 in.) is the portrait of a young Knight, called among critics "Gaston de Foix." Very fine indeed is this picture. Knowing men attribute it to Raphael. It is a small full length of a man in armour, with his head bare and his face seen in front. The colouring is gorgeous—the figure and expression noble. Mr. Rogers delighted to call attention to it; and Mrs. Jameson has described it with her usual accuracy and point.

Mr. Rogers' third bequest is the "Head of Our Saviour crowned with Thorns," by Guido, so exquisitely engraved in the line manner by William Sharp. Mr. Rogers obtained this picture at the sale of Benjamin West, the painter. It is a very fine sketch. West was fond of asserting (what we believe to be true) that it was painted "in one day." The impasto is so thin that the canvas is merely covered. There is no trace of retouching, and most unquestionably there is no varnish.

A lurking wish must not escape some record in this column. We could have wished that Mr. Rogers had left the nation the far-famed "Puck" of Sir Joshua Reynolds. Mr. Rogers acquired it at Boydell's Shakespeare Gallery sale for the insignificant sum of one hundred guineas—the sum, Northcote states, that Sir Joshua received for it. Nay, he might have left us the "Strawberry Girl" of the same delightful artist, for which Lord Carysfort paid Sir Joshua fifty pounds, and Mr. Rogers obtained at something like pawnbroker's interest.

But to other matters. The "last Argonaut of classic English poetry," for so Byron in his better—not in his bitter—moments delighted to call him, chose his grave in Hornsey churchyard, in the Islington environs of London. We remember Hornsey Church ere the demon of so-called improvement lessened its attractions. It was here lies the infant daughter of Thomas Moore, and there that exquisite song-writer was wont, when in London, to make periodical visits to the grave of his infant daughter, Barbara. Youth and age will lie together in the same churchyard, and, many will quit Hornsey hereafter in the mood of Collins when quitting Richmond and the grave of Thomson, breathing pathetically:—

In yonder grave a DRUID lies.

THE CONCORDAT.—Apropos of it, Giuseppe Massari tells a story in the last number of the *Cimento*, to the effect that a Prelate and Nuncio, on his return from Vienna to Rome, visited the Minister of a Prince of Central Italy, to whom he narrated the fair promises he had received from Prince Metternich. The Minister listened with patience, and replied in diplomatic monosyllables, until at last, pressed by the emphatic Nuncio to declare whether he would not do as much for Rome as the Austrian Minister had done, he replied, "I, as the Minister of a small State, have not the same power as Prince Metternich." "How so?" asked the Nuncio? "I have not the power of not keeping my word," answered the Minister. This conversation, which took place twenty years ago, might, as the writer observes, be equally applied to the present time.—*Letter from Milan, Dec 19*

PRUSSIA AND THE WESTERN ALLIANCE.—Austria is said to have communicated to Prussia the preliminaries agreed upon by the Western Powers, and to have called upon her to advocate their acceptance at St. Petersburg. The *Indépendance Belge* asserts that Prussia consents to support these propositions, and that Count Arnim has received instructions to that effect. Le *Nord* disbelieves the story.

VETERANS OF THE CHASE.

WILLIAM DAVIS—WILLIAM LONG—JAMES MORGAN.

In any proof were needed that hunting is not a dangerous or an exhausting pursuit for those who are fond of it, it would be furnished by the names whose portraits we give, all still going with hounds, in more ample possession of voice, hearing, and eyesight, besides the many other qualities required in a huntsman, than scores who have passed their lives in constitutional walks and taking care of their health

Royality every where takes precedence, otherwise we could not speak of modern staghounds in the same day or even the same page with fox-hounds; so we commence with MF DAVIS, a gentleman whom accident made a stag-hunter, his tastes and talents being those of a thorough sportsman. A finer horseman, a better judge of pace, a more complete and sound, and enthusiast in everything that relates to hunting never rode at a fence or

halloed to hound. He joined the Royal Hounds in 1801, when they were a kind of slow, southern, half-bred bloodhound; in 1813 they were superseded by a pack of foxhounds, presented to the Prince Regent by the father of the present Duke of Richmond. In 1821 Mr. Davis became huntsman, and has thus worn the Royal livery for more than half a century, during which period he has seldom missed a day with the buckhounds, and often filled up the off days with neighbouring packs of foxhounds. In fact, he was born to ride to hounds, and to show how they should be ridden to. His most celebrated horse was Hermit, a grey, painted by Francis Grant, R.A., in his picture of the "Meet at Ascot-heath," and also many times by his brother, the late R. B. Davis, who at one time was well known for his clever pictures of field sports, of hunting in modern as well as in cocked-hat and jack-boot times. Few could paint a hound better than R. B. Davis: he loved all animals, was familiar with their habits,—and they loved him.

WILLIAM, or, as he is better known, WILL LONG, has just retired from the field after fifty-four years' service, and the Badminton hounds are now hunted by the Duke in person, but we imagine this is only a temporary expedient, to spare the feelings of an old retainer who has served four Dukes of Beaufort, by not giving him an immediate successor. Last year Long was good enough to send us a sketch of his life, so here it is:—

My services commenced in the year 1803; when my father was stud groom to the fifth Duke of Beaufort. It was my duty to fetch and carry letters from the post-office. In a few years I entered the hunting stables, and, being a pretty good horseman, was appointed to prepare the young horses for hunters, which I did with satisfaction to his Grace. In the summer of 1808 I rode after the sixth Duke as pad groom; his Grace being then Colonel of the Monmouth and Brecon Militia, then quartered in Bristol, and I had to ride the young horses with the regiment. In the season of 1808 one of the whippers-in, John Wood, had a bad fall, which prevented his going again, so I was appointed to assist in his place, and did for that season. John Wood not being able to return the next season, the Duke engaged another man, as he thought me too young, and not able to stand the hard place. But this said man was not at all suitable for the place; *he had no voice*, and was discharged a few days before Christmas, 1809. I was then installed second whipper-in to Philip Payne, and after a few years was made first whip, and so continued until the summer of 1826, when Philip Payne declined hunting. I succeeded him, and here I am; and now, I thank God, quite well, and none the worse, only a set of teeth (eight) knocked out with a horse falling upon me over a stile. Many other squeezes, thumps, with mother earth I have had, but no broken bones.

In 1844 a piece of plate was raised by subscription, among gentlemen and others hunting with the Beaufort hounds not being members of the Hunt, for presentation to Will Long. The ceremony took place, after dinner, at the village of Petty France, near Badminton. A respectable lawyer, and master of harriers, took the chair, and laboured through the usual toasts, including the toast of the evening, as well as he could; but when he presented the plate, those who expected the huntsman to return thanks in a few hesitating sentences, such as we have heard, not without pain, from noble and gentlemen orators, at public dinners, were agreeably surprised, for Will Long rose, and, with one hand in his breeches pocket, spoke the following speech with a degree of ease, fluency, grace, feeling, and self-possession, that we have seldom seen excelled by the most practised orators on similar occasions:—

MR. WILLIAM DAVIS, THE ROYAL HUNTSMAN.—FROM A DRAWING BY HIS NIECE.

Gentlemen,—For the flattering toast you have just drunk I beg you to accept my warmest thanks: it has often been my pleasing duty to acknowledge a similar compliment, and, though I am not much of a hand at a speech, I should be indeed ungrateful if I did not try to raise my voice, and acknowledge the favour you have now and at all times shown me.

Gentlemen, a huntsman's life is a very pleasant but a very eventful one, and, in looking back at the past, I find I have filled my post so long that, as you perceive, I have become rather grey in the service. Thank God, however, I am still strong and sound, and never in my life felt more able or more willing than I now do to show you sport. For six-and-thirty years (it must now be seven-and-forty.—Ed.) I have been connected with the noble pack now under my management; and, thinking it might afford amusement, I have this morning made a little calculation of my past duties: and the result *is*, that during the years mentioned I have ridden upwards of a hundred thousand miles across country, but the number of leaps and hairbreadth escapes are past my calculation.

My labours, too, have not been spent in vain, as I have been in at the death of nearly three thousand foxes; and, gentlemen, I have a favourite horse, well known to you, now in his twenty-fourth year, who has carried me nobly up to the hounds for the last seventeen seasons, and in distance upwards of twelve thousand miles, and I am happy to say that, although, like me, a little the worse for wear, he is still all right, and those who even now keep up with him will not lose much of the fun. Of the hounds, gentlemen, I shall say nothing; you must form your own judgment of their performances. In former days the pace was slow, and a good fox would last two hours; now the fashion is altered; and, as everything goes by steam, we manage to pull down the best fox in a quick thirty-five minutes; thereby verifying the old adage, that "it is the pace that kills." I hope, gentlemen, that you may long live to go the pace, and that I may have the delightful pleasure of showing you the way. Gentlemen, once more I thank you for your kindness, and wish you health and happiness in this world, and may you be happy at the last, where you see no more hounds

The plate consisted of a silver claret-jug, two goblets, containing twenty-five sovereigns. The huntsman and whips of the Badminton Hunt ride in green plush—probably the same livery of the huntsman of the staghounds which were kept by the Beauforts, until, in 1772, followed the prevailing fashion, and made way for foxhounds.

The Badminton is a good country to try the qualities of a hunter: inclosures a fair size, some grass vales, and stiff hedges with ditches, with a share of stone walls help on a straight-running day to thin the field; the hounds, divided into a dog and bitch pack, are first rate; and the present noble master as courteous and kind in the field to gentle and simple, members of the hunt or strangers, as his noble father, and that is saying much. "Keep back, gentlemen, pray don't spoil your own sport," with a wave of the hand to an excited field pressing on hounds at a check, is the style, instead of the choice Billingsgate in which two noted noble M. F.'s indulge round Cheltenham and the Vale of White Horse. The gentlemen who hunt with the Badminton—chiefly from Bristol and Bath—are bold horsemen, and well mounted, but inferior as sportsmen to the men of the north, and rather given to the heavy-swell style. The uniform of the Hunt is blue single-breasted coat, lined and faced with white, and silver buttons. Caps are seldom worn; but the Duke patronizes Napoleon boots.

JAMES MORGAN, our third Portrait, is, we believe, the one other huntsman of foxhounds not riding in scarlet. He wears the "orange tawny" plush coat in which the Lord Berkeley dressed his thirty men whom, with a pack of hounds, he kept at the village of Charing in time of William Rufus.

When the Earl of Lonsdale determined to take up the Old Berkeley country in order to indulge in a foxhound as well as harrier pack he wisely engaged the veteran Jim Morgan for the difficult task. Jim Morgan, like Davis and Long, must be considerably beyond threescore years, but time has no more tamed him than them, and he can go in a way to make younger men ashamed. We saw him ride across the country last season as straight as an arrow. He is the son of a farmer, and began by being for eleven years, commencing in 1803, whipper's-in assistant to Mr. Lloyd, of Wintlehamhall, Suffolk; then whipper-in to the Suffolk Border hounds, then huntsman to the Cambridgeshire hounds one season, then kennel huntsman and whipper-in to the Tickham hounds, in Kent, for three years—Mr. Rigden being master. "I then went," he says, "to Mr. Conyers, and was with him for fifteen years in Essex, the hardest place in the world for men, horses, and hounds. I next went for three seasons to the Essex Union; and, lastly, have been four seasons in the Old Berkeley."

A friend (himself a first-rate horseman and sportsman) writes us "that when Morgan was recommended to Lord Lonsdale, his Lordship remarked, 'Like me, I am afraid, a little too old for a huntsman.' 'Try him, my Lord,' was my answer; 'I don't think you will find him a day too old.' About a year afterwards, on asking the Earl how Morgan suited him, and whether he found him too old, the answer was, 'Old? no—he's too young for my horses.' Jim's own version of the story is. 'Good master, Sir, is *my* Lord; but he does like to see his horses *so* fat; if he would only let me ride 'em a little more it 'ud be better for the hosses, Sir.' And he adds:—

"Twenty years ago it used to be a treat to see Morgan with Conyers, mounted on screws, rise on a beaten horse at the end of a hard day, over a country that requires a good horse and a good man on him to go well at any time of the day. I remember once seeing him come to a meet at Bardfield with his right arm in a sling (from a fall with a horse a top of him the week before); he had galloped his back twenty-seven miles from his farm to the meet, after a breakfast at Mr. Cutts'. We found at Hempstead Wood, and Morgan, with one hand, rode as straight over that strong bank-and-ditch country of it was mere child's play; and twenty years do not seem to have tamed him. He likes as much as ever to lark over an ugly stile with a drop into a lane, or any other little difficulty. His seat is peculiarly buoyant and corky. Take him for all in all, he is, we should think, the best man in England across a rough country—a sportsman to the backbone. He is the sire of sons who follow in his line; Goddard Morgan, an extraordinary horseman, now whips in to the old 'un—a genuine chip of the old block."

The Portrait of Davis is from a sketch by his niece, Miss Davis, of Kensington; that of Will Long is copied by permission of Messrs. Bailey, of Cornhill, from a print they published a year or two ago; Morgan's has been engraved from a photograph by Kilburn.

JAMES MORGAN, HUNTSMAN TO LORD LONSDALE.—FROM A PHOTOGRAPH BY KILBURN.

WILLIAM LONG.—FROM A LITHOGRAPH PUBLISHED BY BAILEY BROTHERS

THE ROYAL STAGS, "WOODMAN" AND "FARMER'S GLORY."

"THE HORSE FAIR," BY ROSA BONHEUR.

Rosa Bonheur's picture of the "Horse Fair," which astonished the town last year, is too well known, and its merits too well established, to render lengthened criticism necessary in this place. We are happy in being permitted to engrave a bit from this wonderful performance—a group of inimitable truth and vigour, which alone would be sufficient to establish the fame of an artist. Rosa Bonheur's chief merit consists in her fine appreciation of character, and the discrimination with which she marks it in her various subjects. In her "Horse Fair" the animals seem each to tell their own history and their breed and education, and the spheres more or less exalted in which they have been destined to move. The principal object in the group before us is a strong waggon-horse, well fed, good tempered: full of bone, muscle, and power, yet docile as a lamb in the hands of his driver. Behind him is a grey—the celebrated grey—of a higher breed than our stout friend in front, and whose mettle calls for the exertions of two grooms to manage. Great fire and life are thrown into this head. The admirable manner in which the action of the animals is shown in all cases is evidence of a deep and successful study of comparative anatomy.

SKETCH FROM "THE HORSE FAIR," PAINTED BY ROSA BONHEUR.

THE ROYAL STAGS—"WOODMAN" AND "FARMER'S GLORY."

THE casual pedestrian who perhaps once a year crosses Windsor park on his road to Ascot, and copies the freshly-dropped fawns lying for hours deserted by their dams in the cold and wet, must marvel how any "antlered monarchs" ever come to maturity. However, nature has strange laws, and the little fawn, left to nestle and to slumber the very sight of it for hours after its birth, is able, season after season, to defy the Royal pack till Mr. Davis promptly arrives to the rescue. In fact, it is but seldom that a stag is killed if he can bring the dogs to bay in a good spot; and we believe that never have five seasons successfully carried out the reverse of the first part of the adage, "he that fights and runs away may live to fight another day." The two stags engraved upon the preceding pages are among the most distinguished of the *chasses* who have of late years taken their "leap from the Royal cart" on Tuesday or Friday during the hunting season.

NATIONAL SPORTS.

THE sudden disappearance of the frost, when it seemed to have set in for at least a month, has brought the hunting-fields out in strong force after their week's rest. The Quorn sale has, however, been the most interesting event among the scarlets during the past fortnight, but as yet we do not hear that its future hunting arrangements are definitively settled. Sam Hills has had another magnificent run with the well-known fox of the Heythrop country, which escaped again, while the Pytchley have had a weary blank day at Loddington. However the Northamptonshire ones may fail, the Crimean covers seem "like to hold," as Mejr Hunter, of the Horse Artillery, has had some foxhounds sent out to him, as a Christmas-box, from his brother in Sussex.

The new year will be inaugurated at Manchester by the usual steeple-chase and hurdle races. Heaton has not opened his season for the old sort, as he was easily beaten over the hurdles at Wolverhampton, and we do not hear secret rumours of any crack horse in this line. York will, as usual, have its sales on New-year's-day, when fifteen of the late Mr. J. T. Henderson's stud (including Atherstone, Nelly Hill, Lough Bawn, &c.—will be brought to the hammer. Bolardo and Dervish, who once held the first favourite places, both in the St. Leger and Derby, have left the turf at last, the victims of leg infirmity, and are advertised to be let or sold. Long garon, the lucky sire of Coroner, has received promotion, and is to stand with Orlando next season at the Royal Paddocks. Breeders are rather grumbling that a horse who is only the sire of two winners should be thus selected, while others of greater pretensions are passed over. We think the choice is not an unwise one, as, although the horse never received anything but a 25l. forfeit in the shape of winnings, he ran among the first three for the Chester Cup, Somersaire, and Northamptonshire Stakes, one season, and always stayed a distance manfully, rather an uncommon accomplishment among modern thoroughbreds. He is a son of Lanercost, who was once at these paddocks, and his dam is the Lincolnshire mare Moonbeam, so that he combines the Tramp and Tomboy blood, which are among the very stoutest we have. As far as we can calculate, two hundred blood year rogs have been sold during the present year, at all prices, from 1800 guineas for Lord of the Hills down to 10 guineas. The average is 117 guineas, whereas last year one hundred and eighty-two averaged 137 guineas. The largest number of yearlings sold this year brought prices between 25 guineas and 30 guin as, and, oddly enough, the dam of one of the 10-guinea ones was "Baikless." Arthur Farr, junior, died last week at Newmarket in his twenty-first year. Unlike his father, who was all the rage in his day, he had very little riding, and one of his last engagements was under Fobert at Spiout lodge. There is a talk of Mr. Macenna retiring from the turf, and if so, Eckert will train entirely for Mr. Gratwicke in future. Knight of St. Georgeis said to have been all but broken down during the past season. It is very doubtful whether he will ever be seen at the post again. The four-year olds of 1854, as than expected, were all sadly unfortunate. Arcot and Bandrell "very early, than proved" a "cavalry," and the winner of the St Leger, Derby, and Oaks never even appeared. Voltigeur, Cossack, Vatican, and Midas are the principal sires whose stock will have their first effort in the coming year, and report speaks highly of the promise of the stock of the first two.

Dr. Palmer's death, from self-imposed starvation in gaol, has been rumoured; but at present the report, as far as we know, is premature. Recent discoveries seem more than ever to indicate that the deceased Mr Cooke was very deeply connected with him in betting transactions, which quite accounts for the strange fascination and influence the accused had over him, at the very time when he felt convinced who had "done" him.

The coursing meetings are not very numerous. Northumberland, Newcastle, and Durham" closes the year with one on Monday; Holt is fixed for New-year's-day; March (O) for the first week of January; Cork Southern Club (Killuddy Hill) for Wednesday; and Baldock (O) for Wednesday, Thursday, and Friday. Apropos of shooting, we hear that the feat of firing at a penny-piece was performed with great success lately near Cork, as three pellets were sent through the middle of it at the second effort. Mr. Osbaldeston once bet a friend £100 that this feat was impossible; Gisborne, Groom or Bloodsworth (we forget which was selected by the taker of the odds) succeeded in sending a bullet through the middle of the penny, which he threw over his head himself. Woodcocks are said to be scarce, owing to the very severe winter of 1854-55; and we understand that the Clyde fishers have been introducing greyling into it from the Wye, by means of a clever contrivance of Mr. Eyres, of the Derby Anglers' Club. It is well known that when fish are confined to a small volume of water the more delicate kinds very soon sicken and die, in consequence of their rapid consumption of all the air naturally contained in the water, and that then suffocation takes place This Mr. Eyres obviated by attaching a small force-pump to the side of the vessel, with a pipe to the bottom, by which simple means a constant supply of air was kept bubbling up through the water, and the necessity of a constant change of water saved. The stocking of ponds, lakes, and rivers with new varieties of fish, and improved breeds, will now be a comparatively easy matter. This was the first occasion on which the invention had been tested, and it has been very successful.

TARPORLEY HURDLE RACE.—We have just seen a whip commemorative of the above race: it is mounted in silver, richly chased, representing a master of hounds surrounded by dogs, trees, &c., &c. On a shield is the following inscription:—"Presented to Captain HARRY COTTON, who rode Rattler for the Welter Hurdle Stakes at Tarporley Meeting, 1855, which he won by T. Longford Brooke." The whip was made by Carrow and Son, of Parr-street: the silver work is an elegant specimen of chasing, and the entire piece is executed in good taste.

PILGRIMAGES IN AUSTRIA.—There is in Austria a place of pilgrimage called Maria Zell, whither, every year, at certain periods, crowds of pilgrims repair to help their contributions to the coffers. Until now, this superstition had been left to the most ignorant classes of society. It is so no longer. Amongst the 80, 00 persons who went thither this year to merit or to purchase heaven, were the following, whose names are significant enough:—The Archduchess Francis Charles and Henry, the Marquis Bombelles, the Count Wenceslas Bruyssegg, the Count Traun, the Prince Bishop of Seckau, the Count de Chorinsky, the Princess de Metternich, the Archduke John, the Bishop of Passau, and a host of Bruyssegg, several noble families, and more than 300 priests. It is remarkable to see the Count de Chambord and the Ambassador of Napoleon III. meeting together on the same road of this political-religious farce.

AN ITALIAN TRAGEDY.—A dreadful event threw the inhabitants of the Place du Jardin Public, at Nice, into alarm this morning (Dec. 11). Marguerite Ferraro, a young girl of nineteen, attached to the service of the house of Laurenti, and sister of the porter, was stabbed in eleven places with a knife by an Italian employed as coachman in the same house. The murderer stabbed himself immediately after, and died on the spot. The girl lived for three hours. The knife which was used by the man was a common table-knife, sharpened at both sides towards the point, thus showing that the crime was premeditated. He had long to mented the girl with his assiduities, and it is thought the irritation of finding himself rejected led to the commission of the crime. The murderer is Cappi ni, a native of Turin, and his age about twenty-seven. He formerly had been a soldier. A letter was found in his pocket, addressed to his victim, in which he says, "You have broken your oath and you die."—*Journal du Nice.*

THE SANDWICH ISLANDS.—Letters from reliable sources in Europe state that the United States, England, and France have made, not a treaty, but only for the term, I believe, which has been ordered as the price now to be paid for the recognition, as regards the Sandwich Islands, the great number of works in Chinese still on hand, and down with the disbanding expeditions against them The matter has been kept so quiet on this side that I should be disposed to doubt the fact, except that it comes from European authority. No doubt we shall know the full facts in the natural message. I, for one, wish it may be true; for Heaven knows we have enough to do for future troubles and expenses, of annexing islands in the ocean at 10,000 mile distance; and if the other great naval Powers will agree to let them alone, we can very properly and very safely do the same thing.—*New York Correspondent of the Washington Intelligencer.*

NOTES OF THE WEEK.

A good deal of amusement, and possibly a little disgust, has been created during the week by the republication in the daily journals of the letter of one Fal P Shafner, a Colonel in the Militia of the United States, describing his journey through Russia in Europe. The Colonel—if there be such a person, and if he be not altogether as fabulous as Baron Munchausen or Lemuel Gulliver—professes to narrate his impressions of the Russians, from the Czar down to the lowest serf, and his opinions of the strength and invincibility of the country. The Colonel—supposed by a contemporary to be Barnum himself, or, at least, his *primo bufo*—does not stick at trifles. A small lie (we may as well use the word we mean, and not the more elegant peripbrast· that might be adopted) is not suited to his genius. He is a romancer of the most daring flights, second to no one we have ever read or heard of—the immortal Munchausen alone excepted. The war is highly popular in Russia; the nobles will give their last rouble and their last serf in its support; the merchants are in high feather from the increase of their trade in consequence of it; the burden of taxation has been scarcely felt; the private resources of the Czar are alone sufficient to defray its expenses, even if it should extend into many future years; the serfs are as enthusiastic as the nobility and the merchants—they feel and know that Holy Russia will conquer; and that it is their business their duty, their pleasure, to shed their blood in the cause; the war has stopped nothing—public works go on as usual with the utmost prodigality and magnificence, the capture of Sebastopol was a trifle, for the Russians would have evacuated it for strategic reasons, if the Allies had not got possession of it; the destruction of the stores and arsenal at Sweaborg cost England 23,000,000 dollars, while it inflicted damage on the Czar to the extent of 150,000 dollars only; the bombardment did not even prevent the citizens from taking their daily walks whilst it was proceeding;—Cronstadt, formerly impregnable, has been strengthened at an immense expenditure of money, and, what is still more valuable, of engineering skill; and, to crown all, so great, so mighty, so rich is Holy Russia, "*that the very domes of some of the churches are of gold; the ornaments in the interior are of the same valuable material, and many of them studded with diamonds and other precious stones.*" Space fails us to recount the marvels of the Colonel's too vivid imagination. How is it that your veritable Yankee, your out-and-out Republican cannot resist the fascinations of the smallest piece of courtesy from your out-and out despot? The travelling Yankee affects to despise the civilities of a constitutional Sovereign—Queen Victoria for instance—but he kneels down in the slush and kisses the toes of the Czar. Is it on the principles that extremes meet?

A council of war is about to be held in Paris for the purpose of making arrangements for the approaching campaign It is stated that Marshal Pelissier strongly urged this course. The Duke of Cambridge is to attend, from England, with others in whose military sagacity it is possible that the public may be induced to place even more confidence. We have upon previous occasions intimated our own opinions and hopes as to the share which this country should take in the strife, basing our views not upon soldier speculation or newly-acquired facts, but upon considerations of national character and naval reputation; and we need say no more than that to the English navy will, we trust, be confided its own special duty, while the gallant armies of France deal with the enemy on land *Steam corps* is a good rule in war as in peace.

A long article by a Greek journalist has appeared, in which it is endeavoured to deny that the Greek sympathies are Russian The writer allows that Russia has been a great "benefactor" to Greece, which does not owe its freedo n only to France and England, but to the three Powers and, therefore, it may be permitted, he thinks, to the Greeks to remember this, and to abstain from hostilities with the two first Powers who fought at Navarino, inflict a blow upon a third Power which then helped them to strike for Greece There is no small amount of the dexterous plausibility of the modern Greek in this plea; but it will take a good many of such articles to convince Europe that the million or so of wily, greedy, shifty people who haunt the Mediterranean under pretext of being the representatives of the most glorious nation that ever flourished, are not the eager partisans and subservient tools of the Czar. The best thing they can say is that it is of such very little consequence which way Greece leans and acts in the struggle that the full-grown Powers might permit her to follow the bent of her feelings, so long as she abstains from offensively overt action.

The Wooler poison case has been succeeded by another, of even more singular character, although a case in which the feelings of compassion which were excited by the details of the gradual murder of an unoffending woman, are not aroused where the victim and the suspected criminal were but a couple of "betting men," whose loss, multiplied to any amount, society could bear exceedingly well. The accused person is a "sporting surgeon," and the deceased was his friend, and an ardent votary of the manly sport of making a book. The former appears to have been deeply in debt to the latter, and the circumstances of the poisoning, and the disappearance of the murdered man's betting-book, to say nothing of even darker imputations (to the effect that other lives had been assured, and strangely terminated under the auspices of the suspected party) leave little doubt upon the case In poor Mrs. Wooler's fate, a mineral poison, which can almost always be detected, was employed: a deadlier vegetable agent, which is rapidly absorbed by the system, was used to accomplish the last crime. While we write, it is stated, we know not how truly, that the accused has anticipated the sentence of the law. People who have a gift at finding out coincidences, liken this case to that of Thurtell and Weare, which nauseated the world some quarter of a century or more ago The only resemblance is in the fact that in both cases the parties have belonged to that sect in of life from which—if such things must be—society can spare a constituent occasionally —the "betting fraternity." In other respects the deeds are most dissimilar: Weare's murder having been a piece of brutal, vulgar ruffianism, whereas Cooke's seems to have been executed with unusual subtlety, and to have been detected chiefly from the overacting of the supposed criminal.

Before finally discussing the Wooler case until a new investigation takes place, let an act of justice be done to Mr. Baron Martin. He has been accused of forgetfulness of the duties of a judge, and has been severely censured for having, as was alleged, thrown suspicion broadcast among the group that surrounded the death bed of Mrs Wooler. We have already expressed our views as to the conventionalisms with which it is sought so sedulously to enmesh justice in days when the increased resources of crime demand that she should be proportionably unfettered. The old "bandage" is still to be kept upon her eyes, while those she has to deal with use telegraphs, railroads, and chemistry. But to pass from this, it should be said that the accusation against Baron Martin was simply unfounded. He describes himself as having been misreported, and to have really uttered the very harmless speech that his fancy would have laid the charge anywhere but where the prosecution had done so. This explanation is offered after the Judge has run the gauntlet of the formidable strictures of the metropolitan press and the reflected indignation of many provincial scribes, who wait for the morning mail to take their cue. It is hard that our legal authorities should be exposed to the double injury of being badly reported and unjustly castigated, but the occurrence is far from uncommon. While Parliamentary reporting for the London press is about as perfect a system as can be conceived, and the trash of House of Commons oratory is preserved with photographic fidelity, the far more important utterances of the heads of the law—and especially the sentiments and decisions of the poor man's oracle, the police magistrate—are far less faithfully rendered. Baron Martin's case is an illustration of one class of hardship but the law-reporter being generally a man of education and ability, he naturally does his work, if not scientifically, respectably. But the unhappy police-magistrate—every syllable of whose reported sayings is a text for some hebdomadal critic—is perpetually suffering through misrepresentation; and every one who has the honour of acquaintance with these invaluable officials can testify to the "Of *course*, I never said anything like it," which is usually their only comment upon an article of savage or polished censure.

THE REFORMATORY ESTABLISHMENT AT METTRAY.

IN our impression of last week we said a few words on the boys in the street, and ventured to suggest an idea for the improvement of their condition. Lord Leigh has written a letter to a member of a committee for carrying out an institution for the reformation of the young in Warwickshire; and, as the subject is one of deep interest for all who are anxious to better the condition of their fellow-men, whether from philanthropic or selfish motives, we call attention to the following extracts from Lord Leigh's letter, which appeared in the *Times* of Christmas day :—

The conduct of the Colonie Agricole of Mettray has the advantage of resting entirely with our admirable friend M. De Metz, who first set the institution on foot about seventeen years ago, in company with a friend, the Vicomte de Bretignières de Courteilles. It has been supported by private subscription, by his own and by his friend's benevolence, and by assistance from Government at the rate of 70c., or 7d. per head a day, with a gift of 35l. on the admission of the child into the colony, and 35l. at the close of two years more, with an annual subscription of 50,000f (£2000 English money), lately diminished to 25,000f., or £1000 The present number of children is 600, and increasing at the expense of the last mentioned. The fr. lings are in the middle of a flat open plain, remote from any town or large village, without wall or inclosure of any sort, for the purposes at least of confinement. The boys are divided into families of, in general, from thirty to forty each, to which families they remain attached during the whole period of their detention; and when they returned to visit Mettray, when out of a situation, they invariably seem to turn again to their old family. There are twelve houses (exclusive of the farmhouses) for the boys, divided into three stories each, the two upper form the sleeping and living rooms, while the ground floor is used for a workshop M de Metz started with the idea that he might exclude trades altogether, but his long experience has taught him that this did not answer; nevertheless, he makes a very great point of agricultural occupations, and something rather less than half the whole number of children are employed directly upon the farms. To return to the family division, to whose I conceive the success of Mettray to be mainly due, I am of opinion that this system alone allows of attention to every individual child, which is indispensable to the reformation of each individual character, while it produces for children who have perhaps never experienced them before the happy influences inspired by the love of home. M. De Metz is at very great pains, in introducing new boys, to place them judiciously as regards the families The family division presents great advantages on the introduction of any number of boys into the institution; for when there is an accession of bad boys—who, if turned in with ever so great a number of others, would remain a nucleus of evil, attracting all the evil round it to it—it is swelled and corrupted the while necessarily a careful watch kept, and by introducing but one or two boys into a family of improved and improving character, the spirit of evil is probably soon repressed by the preponderating good around, and no permanent injury is done.

The children have three meals a day—meat twice a week. The cost of their diet averages 4½ centimes, or 4½d. The trades the children learn are various—tailoring, shoemaking, *sabot* making, with blacksmiths', wheelwrights', and carpenters' work; and they also make agricultural implements. They take turns to assist in the domestic services of the house and kitchen Washing is done every day in an adjoining stream of laundry, and the boys wash their own clothes It is the chief object of all, to give the little rewards in money which are given to the best workmen among the whole number at the end of every three months, to the amount of a sou (½d.) for the best, with a graduated scale down to the 8th, if the industry consists of from forty to fifty boys, but only down to the 4th if it consists of from twenty to forty The *Livre de famille*, however, is kept upon the reward of the conduct of each of the boys, and has not been, as stated by Lord Carnarvon, the only one; the savings bank at Paris and, I believe, another bank are at the disposal of the chief, at the discretion of the *chef*, but the account-books are entirely in the hands of the controller of the finances of the establishment.

The strictest discipline is observed, and nothing is overlooked. Dry bread is an occasional punishment, but the chief is more frequent one Every fault whether it be called or repressed, and even the slightest deficiency of conduct book is kept, showing the behaviour of every child Most serious is the punishment, where it is inflicted upon the child himself, and a record which takes for the time being the name of *Salle de Reflexion*; he is kept there for the first hour or so, and meanwhile the *directeur* reviews his conduct-book, takes into careful consideration the previous circumstances and conduct of the boy, his general character, his advantages and disadvantages, and, having carefully weighed them and taken time to collect himself, and give the boy time to reflect upon his fault, he is in a position to pronounce, as far as human discernment goes, the exact measure of punishment deserved by the child Those confined to cells have to make from 2 to 3 decimes a day in chopping wood, or in some similar occupation.

There are six farms attached to the institution. The land amounts to a space of 260 hectares, or about 650 English acres. The farming is overlooked by a very gentlemanlike person in the pay of M. De Metz. The land appears well cultivated, and a large stock of horses, cows, and pigs is kept. It must be an excellent thing, I think, for children to have the care and tending of farm animals—"*Ennobli maires, sus a nul cose ferus.*" The farm buildings are as simple as possible—just such as the *colons* are likely to find themselves in in after-life. There is a large, rough, wooden, and thatched open outhouse put up in a field, where the children are made to break stones in wintery, rainy weather. They all do their work by the piece, so as to excite and accustom each child to industry The boys, moreover, are made to practise gymnastic exercises, and everything they do they seem to do heartily.

A ship has been put up—on dry ground, of course—for the boys to gain as much knowledge as they can of seamanship, and an old sailor is engaged to instruct them. Some of the boys, also, are formed into a fire-brigade, and have rendered at times substantial assistance in the neighbourhood, and only the other day saved the village church of Mettray from destruction by fire. It is scarcely possible without a personal visit to Mettray to form a correct idea of the amount of study and attention which is devoted to the consideration of every particular, and of every child in particular. The family division makes this easy by concentrating the attention of the several *employés* allotted to the same number of children; if assembled in an undivided mass the same amount of good could never possibly be effected, for the attention of each one would be divided by the whole number; but with the interest in each other he awakens, a kind of sympathy between the *chefs de famille* and the young people As for the *employés* themselves, who are gentlemen by station, and generally so by birth, it is quite impossible to see and converse with these intelligent, well-educated, and benevolent men without feeling how great must be the preserving influence upon the character and general tone of the boys. The two principal *employés* are in the receipt of £160 per annum each. They are of a standard of intelligence and ability which would ensure their advancement in any profession, and one can hardly devote to be the more admirable.

Lesson hours do not exceed one or two a day. I must add that the children are first received as innocent, and as having sinned without discernment, and therefore irresponsible for their actions; but when they have been once admitted to the benefit of the instructions given them in the institution they are considered to be capable of discernment, and become subject to the strictures observed in the institution.

M. De Metz and other French reformers [illegible] *superiority of the system in two over the Anglican, as they are able to receive children direct into their institutions; whereas our two wards them first to prison, and thereby disqualify them for ever for the army and navy*

THE QUEEN AND THE CRIMEAN OFFICERS.—Her Majesty the Queen is making a collection of photographic portraits of the most distinguished officers engaged in the Crimean campaign. Her Majesty's sympathy with her wounded soldiers is well known, as also is the hospitality and gracious attention shown to the officers who have returned to England on leave or otherwise and thus her Majesty has added the compliment of requesting a very large photographic portrait taken for the Royal portfolio The artist who has been intrusted with the taking of the pictures is Mr. Mayall, the well-known photographer of Regent-street.

THE VIENNA POLICE.—A physician of my acquaintance had a ball party the Saturday, which ended in a musical symposium. The company sat down to the piano and played a quadrille, and the Viennese, who never lose an opportunity of dancing, began to foot it on the light floor to the gay music. A gendarme who chanced to be passing went up to the musicians in which the amusement was going on, and, to the horror of the assembled company, ordered the whole of the dancing to cease. At Vienna the waltz is prohibited by the Archbishop of Vienna!—*Letter from Vienna.*

The last conscription in Bavaria has established the fact that only half the young men in that country possessed the physical conditions required for military service

THE LATE SAMUEL ROGERS.

SAMUEL ROGERS, author of "The Pleasures of Memory," and of other poems of a didactic and descriptive character, was the third son of Thomas Rogers, Esq., of Stoke Newington, in Middlesex, where his distinguished son, recently removed from among us, in his ninety-third year, was born on the 30th July, 1763. His father was a wealthy banker in London, and a man of eminence among the Protestant Dissenters in that land of dissent Hackney and Stoke Newington. His mother was a lineal descendant of Philip Henry. The family came originally from Worcestershire. The house in which the poet was born is the first that presents itself on Newington-green, on the west side proceeding from Ball's pond.

Old Rogers carried on his banking business at No. 8, Freeman's-court, Cornhill, under the firm of Rogers, Olding, and Rogers, from whence he removed to the present locality of the firm, No. 29, Clement's-lane, Lombard-street, long known as the banking-house of Messrs. Langston, Polhill, Towgood, and Amory. Towgood married, in 1792, a sister of the poet, and was subsequently introduced into the firm at Freeman's court. The present firm is Rogers, Towgood, Olding, and Co. The elder brother of the poet was that Mr. Henry Rogers, of Highbury, of whom it was so beautifully said by his brother that it was pleasant always to be with him, for in his eyes he never looked old. The sister was that Miss Rogers, of Hanover-terrace, in the Regent's-park, who died only last year, and who had all her brother's cultivated taste for the Fine Arts. He received his education among the Dissenters, and derived his first predilection for poetry from the hymns of Dr. Watts. Watts lived and died in the neighbourhood of Stoke Newington, and the reputation of his piety and poetry was then even greater than it is now.

Of his early life nothing has been told, nor was he very fond of alluding to it. We first hear of him as an author in print in the year 1786, when he published in quarto, with Cadell in the Strand, his "Ode to Superstition." He had left his poem at the shop of that eminent publisher with, as he told the writer of this memoir, a bank note to pay for any loss by its publication. It is easy to see that he was fresh from Gray, and that "The Bard" and "An Ode to Adversity" were then, as they were through life, favourite compositions with the youthful poet.

There was then a dearth of poets. Gray, Goldsmith, Akenside, and Churchill were dead. Johnson had died some sixteen months before. Cowper was imperfectly known by his first volume. Crabbe was still less known by his "Village," his "Library," and "Newspaper." Hayley had his circle of admirers; his "Triumphs of Temper," first published in 1781, though now forgotten, was famous in its day. Peter Pindar was commencing his run of rough but ready, and at times vigorous, satires. Burns had not yet appeared. The ladies were then prominent in verse. The names of Hannah More, Anna Seward, Lucy Aikin, and Helen Maria Williams, were better known to the then generation than the names of L. E. L. and Felicia Hemans to our own. It was a good time for the appearance of a true poet.

In the year 1732 Mr. Rogers made his second appearance as a poet, by the publication, again in a quarto shape, of "The Pleasures of Memory" —a poem in two parts, written in our English heroics, with rhyme, with great elegance of language and great correctness of thought. As a poem, it is inferior to "The Pleasures of Imagination," which preceded it, and to "The Pleasures of Hope," which followed it. The poem of Akenside is for the present; that of Campbell, for the future; and that of Rogers, for the past. "Memory" is replete with tender and graceful sentiments, but wants the poetic inspiration of the poem on "Imagination," and the earnest and buoyant feeling of the poem upon "Hope."

Useful attention was called to the poem by the publication, in the *Annual Register*, of some well-timed stanzas said to have been written on the blank leaf of the volume. These verses afford an affecting reverse of the poet's picture, and Rogers has given greater permanence to them by inserting them in a note to his poem. They were published anonymously, but were written, as Mr. Rogers tells us, by Mr. Jones, a clergyman of Trinity College, Cambridge. They might be called "The Sorrows of Memory," as the late Mr. Darley called the reverse of Campbell, "The Sorrows of Hope."

We have had occasion already to allude to Mr. Rogers' high admiration of Gray. This admiration he extended to Gray's literary executor, Mason. We have heard him relate with what anxiety he sent a copy of his new poem to Mason (whom he never saw), and with what anxiety he waited for his letter of acknowledgment. But no letter came. At length he heard through Gilpin, to whom Mason had written expressing his approval. The never-very-genial Mason was soured by many disappointments, he was then old, and was then in the mood at which Rogers himself arrived—that of reading or liking no one's verses but his own. Long-lived, however, really liked the "Pleasures of Memory," and his approval was sixty years afterwards a source of innocent delight to the satirist of St. James's-place.

It merits mentioning that Coleridge, in his first volume of verse, made a heavy accusation against Mr. Rogers as a poet. He accused him of stealing the tale of "Florio" in his poem from the "Lochleven" of Michael Bruce. Lamb, in a letter to Coleridge, denounced the charge as a most barefaced, unfounded, impudent assertion—in short, that scarce anything was common to them both. Rogers, he was assured by Dyer (the G. D. of "Elia"), was hurt by the accusation of unoriginality. In his second and enlarged edition Coleridge thus acknowledged his error:—"I did (and still do) perceive a certain likeness between the two stories; but certainly not a sufficient one to justify my assertion. I feel it my duty, therefore, to apologise to the author and to the public for this rashness; and my sense of honesty would not have been satisfied by the bare omission of the note. No one can see more clearly the *littleness* and futility of imagining plagiarisms in the works of men of genius; but *nemo omnibus horis sapit*; and my mind at the time of writing that note was sick and sore with anxiety, and weakened through much suffering. I have not the most distant knowledge of Mr. Rogers, even as a correct and elegant poet. If any of my readers should know him personally they would oblige me by informing him that I have expiated a sentence of unfounded detraction by an unsolicited and self originating apology." Mr. Rogers was satisfied; but the two poets never became intimate. They were very unlike. Both were fond of talking; but Coleridge spoke golden discourses, while Rogers restricted himself to very short stories and still shorter epigrams.

The "Pleasures of Memory" was the means of introducing him to Mr. Fox—an introduction that coloured the whole career of the poet. No one could be ten minutes in Mr. Rogers' company without hearing some friendly reference to the name of Fox. He really loved him on this side idolatry, and Mr. Fox is known to have erected a statue in regard for the poet. Mr. Fox brought him from Highbury-barn and Ball's-pond to the Court end of the town—to Conduit-street and St. James's-place. When Mr. Rogers moved to what is now his far-famed house in St. James's-place, Mr. Fox was the leading guest at the house-warming dinner; and when (1806) Mr. Fox was buried at Westminster Abbey, the poet of "Memory" gave expression to his grief in some of the best turned and most tender of his verses.

His agreement with his bookseller we find recorded in a letter of the year 1808:—"I bear," he says, "two-thirds of the expense and take two-thirds of the profit." This he thought, however, too large an allowance to the bookseller. "The plan I have adopted," he writes, "would be reasonable enough, if Cadell could be acquitted of the misdemeanor of writing a third of my poems." His agreement with Murray was the same with that which he had made with Cadell.

His third publication—and his masterpiece, as many consider it—was (1798) his "Epistle to a Friend," of which the design is to illustrate the virtue of True Taste, and to show how little she requires to secure, not only the comforts, but even the elegancies of life. True Taste, he very properly observes, is an excellent economist. She confines her choice to few objects, and delights in producing great effects by small means; while False Taste is for ever sighing after the new and the rare; and reminds us in her works of the scholar of Apelles, who, not being able to paint his Helen beautiful, determined to make her fine.

The Villa of this Epistle on True Taste differs, of course, in every essential from Timon's Villa of Pope's Epistle on False Taste. Mr. Rogers' villa, to which he invites his friend in this epistle, is a sort of "St. Ann's Hill," charmingly situated in England's scenery, with a few graceful lines and those furnished with casts from the antique, and engravings from the Italian masters. The dining-room is then described; then the library; then the cold bath. A winter walk and a summer walk succeed. The invitation is renewed, and the poem concludes with sentiments suitable to the occasion. The verse is that of Dryden and Pope; but the execution is more in the manner of Goldsmith and Parnell.

In the first edition the poet had admitted the description of an ice-house, of very inferior execution to the other parts of the poem, and somewhat out of place. That no lines of so careful a writer may be lost, we shall transcribe them from the quarto copy of the first edition now before us:—

> But hence away! you rocky cave forbear!
> A sullen captive broods in silence there.
> There through the dog star flame, condemn'd to dwell,
> In the dark centre of a frozen cell,
> Wild winter mistress his dread control,
> To cool and crystallise the nectar'd bowl!
> Has fetter'd from an awful grasp retains;
> Stern though subdued, majestic e'en in chains.

Few will recognise in this description a cartload of ice from an adjoining pond, packed for summer use in a solitary ice-house, half concealed at the end of an overgrown shrubbery.

Before he made his fourth public appearance as a poet he had obtained the friendship of Lord Byron. They met through the instrumentality of Moore. They were prepared for friendship. In his satire of 1809, Byron had described the "Pleasures of Memory," the "Pleasures of Hope," and the "Essay on Man" as "the most beautiful didactic poems in our language." The poet himself he called "melodious Rogers." Their meeting was at a reconciliation-dinner with Moore at the table of Mr. Rogers. This was in November, 1811, and only four persons were present—Mr. Rogers, the host; Lord Byron, Tom Moore, and Tom Campbell. This was Byron's first introduction to these poets, whose names will honourably survive with his own.

It was known about this time (1812) in poetic and political circles that the poet of the "Pleasures of Memory" had a new poem nearly ready for publication. Great things were promised. It was a fragment it was true, but it was a Torso. Then the name transpired. The subject was the voyage of Columbus—a noble theme and nobly treated, so his admirers affirmed. Expectation was at its height, when this last appearance, the public had become familiar with Scott, Southey, Coleridge, Campbell, and still more recently with Byron. He was now about to fulfil the promise of his former efforts. He was not one who became a poet by necessity. He had no occasion to write for money. He had wine and friends on—his subject was his own choosing. Too much was perhaps expected, and disappointment was expressed when it was found that the much-talked-about "Columbus" was "suffered to glide into public notice without any of the usual forms of introduction." It was printed at the end of a new edition of his poems, in duodecimo, to which the graceful pencil of Stothard and the spirited graver of Clennell were both called in to contribute. "Columbus" neither engaged the public nor pleased the critics.

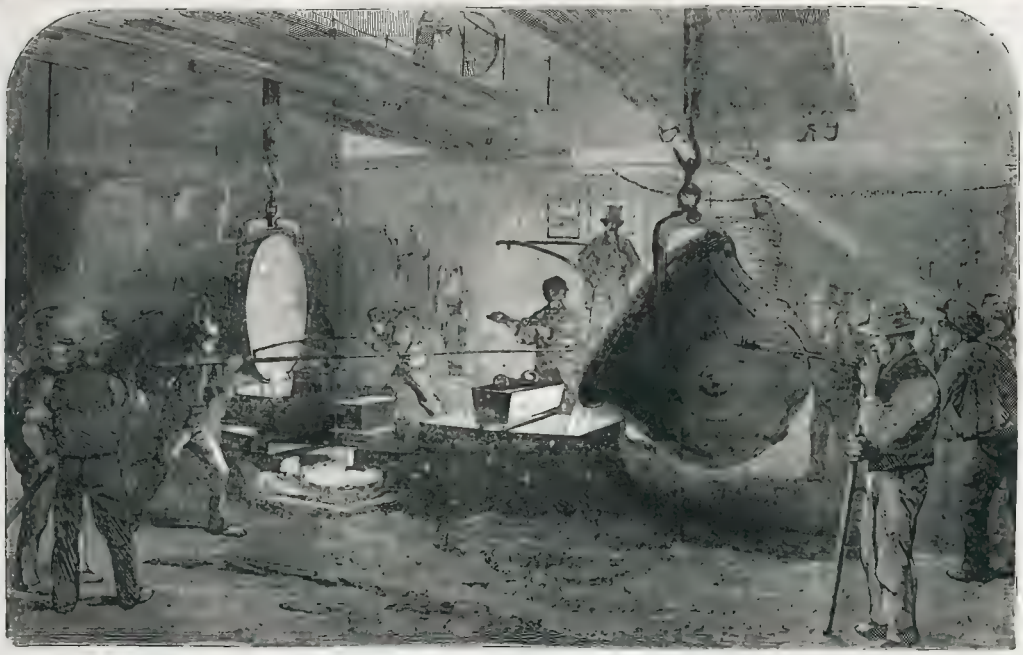
The *Quarterly Review*, then the friend of Byron and writers, was hard upon the poet. The critic was the late Lord Dudley, an accomplished scholar, and not wanting either in nicety of discernment or in literary skill. Rogers, always sensitive to adverse criticism, was greatly annoyed. His feelings are recorded by Byron in a letter to Moore:—"Rogers," he writes, "has returned to town, but not yet recovered of the *Quarterly*. What follows these reviewers are! They made you fight; and me (the mildest of men) a satirist; and will end by making Rogers madder than Ajax." Moore was anxious to ascertain the effect upon his friend:—"How does Rogers seem to bear the review of 'Columbus?' he writes to Miss Godfrey. "It is in many parts most insidiously done, and the seeming hum of *haste* is really quite impudent a humbug, when they and all the world knows so entirely to the contrary."

He had other consolation at hand. It was only the year before this hostile criticism that Byron wrote the following complimentary lines on the blank leaf of a copy of "The Pleasures of Memory":—

> Absent or present, still to thee,
> My friend, what magic spells belong:
> As all can tell who share, like me,
> In turn thy converse and thy song.
>
> But when the dreaded hour shall come,
> By friendship ever deemed too nigh,
> And "Memory" o'er her Druid's tomb
> Shall weep that night of woe can die,
>
> How fondly will she then repay
> The homage offered at her shrine,
> And bless, while Rogers still can say,
> *Her* name immortally with thine.

The volume in which these graceful lines were written was that edition of the Poems of its author in which the "Fragment of Columbus" was first given to the public. The story of their composition we have heard from Mr. Rogers' own lips:—"Byron asked me, the night of my Poems, I gave him a copy. This is it. He took it away with him, and returned it to me next day, with these verses, which I dare say you know." On one leaf is the pencilled copy in Mr. Rogers' handwriting, and on the reverse of the leaf the lines in Byron's handwriting. The copy of his poems which Mr. Rogers gave to his brother poet to supply the place of the one thus additionally enriched, is now in the possession of Mr. Murray, of Albemarle-street.

But the complimentary stanzas of Byron were not the only marks of friendship and esteem which he received to soothe him for the hostile observation of his critic that his "Columbus" "had cast a shade upon the poetical reputation of its author." Byron sent the poet newly in the hands of more readers than Mr. Rogers addressed, his "obliged and affectionate servant, Byron," for so he calls himself, inscribed to him (in May, 1813) his "Tale of the Giaour," "as a slight but most sincere token of admiration for his talents, and of regard for his personal character." One



AT THE RECENT ROYAL ACADEMY.—SEE PREVIOUS PAGE.

ROYAL ACADEMY.

On Monday, the 10th inst., the Gold and Silver Medals were distributed to the Royal Academy students for the successful Drawings and Pictures of the year. The following were the awards:—Gold Medals to Mr. J. Powell, for the best Historical Painting; and to Mr. J. Adams, for an Historical Group in Sculpture. Silver Medals to Mr. J. W. Johns, for the best Painting from the Living Draped Model: to Mr. P. R. Morris, for the best Drawing from the Life; to Mr. J. Waite, for the next best Drawing from the Life; to Mr. S. J. Carter, for the best Drawing from the Antique; to Mr. G. A. Freezor, for the next best Drawing from the Antique; to Mr. H. Burgill, for the best Model from the Antique; to Mr. S. Lunn, for the next best Model from the Antique; to Mr. G. J. Miller, for the next best Model from the Antique; to Mr. F. Sich, for a Perspective Drawing; to Mr. A. H. Parken, for a Specimen of Sciagraphy; and to Mr. J. S. Wyon, for a Medal Die.

We have engraved Mr. Powell's Historical Picture, "The Death of Alcibiades"—the composition taken from the account recited by Plutarch:—

Alcibiades at the time resided in a small village in Phrygia, having his mistress, Timandra, with him. One night he dreamed that he was attired in his mistress's habit, and that, as she held him in her arms, she dressed his head, and painted his face like a woman. Others say he dreamed that Magaeus cut off his head and burned his body: and we are told that it was but a little before his death that he had this vision. Be this as it may, those that were sent to assassinate him, not daring to enter his house, set it on fire. As soon as he perceived it, he got together large quantities of clothes and hangings, and threw them upon the fire to choke it: then having wrapped his robe about his left hand, and taking his sword in his right, he sallied through the fire, and got safe out before the stuff which he had thrown upon it could catch the flame. At sight of him the barbarians dispersed, not one of them daring to wait for him, or to encounter him hand to hand: but standing at a distance they pierced him with their darts and arrows. Thus fell Alcibiades. The barbarians retiring after he was slain, Timandra wrapped the body in her own robes, and buried it as decently and honourably as her circumstances would allow.

* * * * *

Some writers, although they agree as to the manner of Alcibiades' death, yet differ about the cause. They tell us that catastrophe is not to be imputed to Pharnabazus, or Lysander, or the Lacedæmonians; but that Alcibiades having corrupted a young woman of noble family in that country, and keeping her in his house, her brothers, incensed at the injury, set fire, in the night, to the house in which he lived, and, upon his breaking through the flames, killed him in the manner we have related.

We have only to observe that Mr. Powell has, in his composition, told the classic story so well as to merit the high Academic honour which he has received.

"THE DEATH OF ALCIBIADES," THE ROYAL ACADEMY HISTORICAL PAINTING PRIZE, BY J. POWELL.

SUPERB PORCELAIN.

Among the many ornamental objects of artistic merit which graced the Royal table at the entertainment recently given to the King of Sardinia at the Guildhall were some exquisite specimens of porcelain, which assert a high claim to notice for their pre-eminence in that class of British art-manufacture. The specimens to which we allude were manufactured for the occasion by Messrs. John Rose and Co., of Coalbrooke Dale, for Messrs. Staples, of the Albion Tavern, who were the Amphytrions of the banquet. The first of these works is a porcelain vase, three feet in height, in which, as well as the plates, the leading features of the design and ornamentation were carried out. These consist of heraldic and other devices, expressive of international concord.

PORCELAIN VASE, MANUFACTURED AT COALBROOKE DALE FOR THE ENTERTAINMENT TO THE KING OF SARDINIA, AT GUILDHALL.

The Vase is remarkably beautiful in form. In compartments on the body are the arms of the City of London, and those of the Allied nations flanked by their respective flags. They appear to advantage against a green ground—the prevailing colour of the vase. The suggestive character of the design is completed by the cre-cent and the star in silver upon the shoulder of the vase, supported by branches of oak and bay—the latter of raised gold and chased.

The Dessert Plates embody the same general features of design as those carried out upon the vase, but in greater detail—prominence being given to the Sardinian arms forming the centre of one plate, and to the arms of the respective capitals of the Allies upon another.

CAST-IRON LIGHTHOUSE, CONSTRUCTED FOR THE GREAT ISAAC ROCKS.

NEW MARKET-HOUSE, WEYMOUTH, DORSET.

This favourite resort of George III. possesses a bay and surrounding scenery unsurpassed in beauty. The esplanade for promenade and drive, which skirts the bay, is nearly a mile in length, and is admitted to be unequalled.

The markets of the town were formerly held under a building which existed on the site of the present Town-hall, but for many years they have been held in the open streets, which twice a week have been blocked up by a very unsightly and inconvenient mass of stalls, trucks, boards, &c.; and not until last year was anything done effectually to remedy the evil; when the Mayor (James Aldridge Devenish, Esq.), with the assistance of other members of the Town Council, took the steps necessary for the erection of a general Market-house and a Fish-market. The Act of Parliament was obtained, and the works were commenced in September of the same year.

The plan consists of a parallelogram of 94 feet by 80 feet, and is divided by three roofs—the centre one of 42 feet span, and the side ones of 24 feet each. These are separated by rows of five arcades of cast iron, supported by ornamental iron columns. The height of the centre roof is 48 feet from the pavement, and that of the others 32 feet. Under the centre of the building there is ample cellarage, extending the entire depth.

The arrangement, as well as the fittings of the Market-house are on an entirely novel principle, the intent being to equalise as much as possible the value of the stalls, by making them equally prominent. Two large entrances and avenues extend the entire depth, from each end of the building, and the passages and the rows of stalls, instead of being parallel to them, extend right and left from it. The best markets in the country have been examined to ensure completeness of plan in the present building.

NEW MARKET-HOUSE, AT WEYMOUTH.

The elevation of the principal front in St. Mary's-street is of the Italian style of architecture; and although a design of more than usual pretension has been adopted, still it is essentially a market-house in every feature and under every aspect. It is admitted that market-houses should be erected in the great thoroughfares; so should they be of proportionate importance and significance, and be an ornamental feature. The general Market-house and the Fish-market were erected from the designs of Mr. Talbot Bury, of Welbeck street, London, who has been generally employed on the improvements of the town. The Market-house was executed by the Messrs. Goodyear, and the Fish-market by Mr Hart.

The opening of both markets took place on Thursday morning, the 15th inst., when the stalls were taken possession of, and the public attended in very large numbers; but no inconvenience was experienced either by purchasers or sellers; and no doubt exists but that this market will be a great benefit. The Mayor and the members of the Town Council were present.

IRON LIGHTHOUSE.

The application of iron to the construction of lighthouses is yearly on the increase, and few of the instances can compete with the new Lighthouse which is now in course of execution by Messrs. Grissell, at the Regent's-Canal Iron works, by order of the Admiralty, from the designs prepared at the office of the Directors of Works. The Light is intended to be fixed on the Great Isaac Rocks, some hundred miles from Bermuda. The tower is 120 feet high from the base to the foot of the lantern, and 150 feet to the top of the lantern; it is 25 feet diameter at the base, and 14 feet diameter on the top; is composed of 155 large cast-iron plates, varying in weight from two tons to half a ton each plate. The plates are planed all round, and to a gauge, in a machine made by Messrs. Grissell for the purpose, which machine is so ingeniously constructed that two plates can be planed at the same time; and, with ordinary care, no error can take place, and the plate is sure to fit its required place in the

THE LIVERPOOL AND AUSTRALIAN STEAM NAVIGATION COMPANY'S NEW STEAM-CLIPPER "ROYAL CHARTER."—(See next page.)

building. The plates in the course of erection are securely bolted together, and horizontally the joints are what is technically termed "broken," so that, when the tower is completed, it does not depend altogether upon its bolt-rings for security; but the plates are so wedged into one another that they support each other, and form a perfect column equal in strength in all its parts.

In the interior of the tower are six iron floors, supported by girders resting on the flanges of the plates, and also upon flanges cast upon a column which is fixed in the centre of the tower. These floors are reached by wrought-iron staircases with oak treads. On the top of the tower is the lantern floor, or gallery, which is an iron balcony projecting 4 feet 6 inches all round the top, supported upon iron brackets, and protected by an iron railing, which gives the tower a finish as a sort of cap to the column. The tower is entered by an exterior staircase of iron and oak to a door 24 feet above the base. There are upwards of 6000 bolts used in the tower. It is proposed to fill the interior of the Lighthouse with concrete and masonry up to the door, which, with its fixings to the rock, will make the erection permanent. The whole of the tower is manufactured by the Messrs Grisell, at the Regent's Canal Iron Works. The light will be placed upon the top of this tower at Messrs. Grissell's, by Mr. Wilkins, of Long acre.

The following are the details of the lantern and light apparatus:—

Lantern—diameter, 9 feet; height from the floor to the top of vane, about 24 feet. The lantern is a polygon of sixteen sides, 10 feet high, constructed of gun-metal frames, glazed with very thick plate glass 10 feet high, with copper roof.

This is upon the catoptric principle, revolving, and consists of twenty one Argand lamps and silver plated reflectors, 21 inches diameter, and 9 inches deep, mounted upon a triangular frame of three faces, with seven lamps and reflectors on each face. They are revolved by a clock-work machine worked by a weight down the centre of the tower.

LIVERPOOL AND AUSTRALIAN NAVIGATION COMPANY'S CLIPPER-SHIP "ROYAL CHARTER."

On the 17th of January next the *Royal Charter* will leave Liverpool for Melbourne, and the principle of a clipper-ship with auxiliary steam power will now for the first time, be fairly tried. The Liverpool and Australian Navigation Company - having arrived at the clear conviction that it is in vain to hope that steamers relying entirely upon their engines, or sailing-vessels trusting only to their sails, can make the passage with regularity and dispatch - have determined on combining the two motive powers, and giving their vessels the benefit of both.

The advantage of this is obvious. The mere steamer is either compelled to carry coal sufficient for the whole voyage, and thus lose much valuable space—or it necessitates the establishment of coaling stations, and thereby loses still more valuable time, and increases vastly the expense.

The *Royal Charter* has been designed and built by Mr. Patterson, the builder of the *Great Britain*, and in the construction and equipment of the vessel is carried out every discovery to the advancement of navigation, so also every improvement has been taken advantage of in the model to combine speed with ease in a heavy sea. In her are united in an eminent degree the important desiderata of speed, accommodation, and economy as regards the conveyance of passengers, and ample stowage for cargo. She is 335 feet in length over all, 41 feet 6 inches beam, 26 feet 6 inches in depth of hold, 2720 tons burden, spreads 18,000 square feet of canvas; and has a pair of trunk engines, direct acting, of 200 horses, nominal power, constructed by the Messrs Penn, of Greenwich, for working an auxiliary screw, so arranged that, when not wanted, it can be completely lifted out of the water, and even (if necessary) placed on deck. The accommodations of the *Royal Charter* are excellent. The chief saloon is divided by passages (running on either side) from the first-class state cabins—an arrangement most conducive to the comfort of the passengers. This saloon, which is 100 feet long, is beautifully fitted up; and the ladies' cabin, with its large poop-windows and elegant furniture has been most carefully adapted for its purpose. There are two large bath-rooms for the accommodation of the after-saloon passengers, as well as one three times the size, for the use of the 'tween-deck passengers.

The main deck below is arranged for the second and third class passengers: the berths are very light and well ventilated; and three good messrooms will prevent the usual disagreeable arrangement of tables passing through the sleeping-places of passengers.

The *Royal Charter*, independently of her steam power, is a full-rigged ship, and is the first English vessel which has adopted the American plan of double topsails on each mast. This rig gives the ship a most formidable appearance, by having each mast five times the distance between this and the ordinary rig consists in the lower topsail-yard being secured to the cap of the topmast by a truss; and, in the absence of slings, the yard is supported in the centre from below by a crane, stepped upon the heel of the bowsprit. Thus, the lower topsail is the size of a close-reefed topsail of the old rig, and sets entirely by the sheets. By this arrangement the ship can be reduced to close-reefed topsails at any time by lowering the upper topsails.

In her trial trips she has averaged a speed of nine knots per hour with her propeller; and under canvas alone, with a light N.N.E. wind, made fourteen knots per hour. It is calculated that fully eighteen knots may yet be obtained.

We may add that the *Royal Charter* is to be well armed. She is to have eight guns—four 18 pounders, and four 24-pounders; besides a large swivel-gun in the forecastle, and a good number of Minié rifles for the saloon. She has seven water-tight compartments, and tanks to contain 40,000 gallons of water. The coal to be used on board is anthracite, from which there will be no smoke; and 22 tons in the 24 hours, to produce a speed of nine knots with 76 revolutions, is the estimated consumption. Reducing the quantity to nine tons, a speed of six knots and fifty revolutions could be had.

The *Royal Charter* has been built expressly for Messrs. Gibbs, Bright, and Co., of Liverpool; and is commanded by Captain Royce, late of the clipper-ship *Eagle*.

"NELSON" MEMORIAL.—Pontefract is about to be honoured by the possession of a valuable memorial of our great naval hero, Nelson. Mr. Cousins, A.R.A., has just presented to Mr. Ingram, M.P., as a mark of friendship, to be devoted to some public purpose at the discretion of its recipient, the original model of the "Death of Nelson," which forms one of the panels in the base of the bronze column in Trafalgar square, London. The model is about fourteen feet square, and has been offered by Mr Oliveira to the Corporation of Pontefract, to be preserved as an historical relic in the town-hall.

THE KING of Sardinia has sent to Messrs. Staples, of the Albion Hotel, through the Marquis d'Azeglio, a letter expressing his Majesty's satisfaction with the arrangements connected with their department on the occasion of his Majesty's visit to the city of London on the 5th inst., accompanied by a valuable gold watch and chain, which the King presents to them as a memorial of that event. The committee of the Corporation for conducting the arrangements have passed a unanimous vote of thanks to Messrs. Staples for the very satisfactory manner in which they furnished the entertainment at Guildhall on the 5th inst., and expressing the entire approval of the Corporation for their services.

NEW LONDON CHURCHES.—The London Diocesan Church Building Society have opened a fund for the erection of seventy new churches in and about the metropolis, and upwards of £80,000 have already been subscribed. Towards this fund the land-revenues of the Crown in London have contributed £10,000; the Duke of Bedford, £10,000; the Marquis of Westminster, £10,000; the Bishop of London, £5000; Earl Howe, £1000; Lord Southampton, £1000; Lord R. Grosvenor, M.P., £1000; Lord Cadogan, £500 Mr. J. G. Hubbard, late Governor of the Bank of England, has undertaken to erect a new church, and to provide an endowment; and Mr W. Cotton, another ex-Governor of the Bank, has undertaken to erect a new church at Lamehouse, and to provide an endowment.

THE NEW BELLS OF CANTERBURY CATHEDRAL.—After a silence of twenty-five years, these bells rang a merry peal on Monday (Christmas-eve) evening, and the life and joy which they imparted were universal. The third and sixth bells upon which the old clock struck the quarters were broken by the continued blows upon two sides (on one side by the clapper, and the other by the hammers), and these have been recast. The hanging of the pea. of bells has been rearranged and the framework strengthened, as the walls of the tower were much reduced in olden times to admit the bells. This has now been corrected. The peal, as of yore, now consists of ten, the largest one being used only for the clock and funeral.

M. Seebach, the Saxon Ambassador in Paris, and son-in-law of Count de Nesselrode, had audience of the French Emperor on Saturday, at two o'clock. He arrived at Dresden on Sunday, and it is said that he will proceed to St. Petersburg, to communicate to the Czar the result of his interview with Napoleon III.

The late Samuel Rogers has bequeathed to the nation three well-known paintings from his collection—the Titian, "Noli me Tangere;" the Giorgione, a small picture of a "Knight in Armour;" and the Guid., "Head of Christ Crowned with Thorns."

The question relative to the Kustendji canal was settled on the 20th of November. The great was made to Mr. Wilson, M. de Morny, Count Branda, a Turkish subject.

THE CURRENCY QUESTION.

THE great question of the Currency is likely to occupy public attention until the meeting of Parliament, when the renewal of the Bank Charter is to be discussed, and to participate with the War in the honour of being uppermost in the great Anglo-Saxon mind. It is said that, as a nation, we can think but of one thing at a time; but War and the Currency are two questions so intimately connected the one with the other that it is difficult to dissever them, especially when the war, as in the present instance, is a great one, that operates more or less sensibly upon all the ordinary transactions of commerce. Our own views upon the subject are before the world. For the present, we open our columns to the following communication which may help to ripen public opinion upon the subject.

THE BANK CHARTER—No. I.

PAPER PROVED TO BE THE BEST CURRENCY, BECAUSE IT IS LESS LIABLE TO FLUCTUATION IN VALUE, NOT BEING AN ARTICLE OF COMMERCE.

Scene in Railway. LORD OVERSTONE and EX-M.P.

Ex-M.P.: It is many years, my Lord, since we met, and as it appears we are likely to be alone, suppose we enter into a discussion upon the Currency Question.

Lord Overstone: Why, I really thought there had been very little to discuss, and that all intelligent persons were pretty well agreed upon that subject.

Ex-M.P.: Such, no doubt, is the opinion of yourself and your class, who derive such enormous pecuniary advantages from the present system; but inasmuch as those advantages can only arise from the misery and ruin of thousands of industrious persons, your Lordship can hardly be surprised that men of that class should be dissatisfied with the result. It is the old story of the eels, who do not see the merits of the operation of being skinned.

Lord Overstone: You surely are not commencing the discussion in a very logical mode by attributing to your opponents so dishonourable a motive as that they are careless of the misery of their fellow-creatures, because such misery may have the effect of making the rich more wealthy.

Ex-M.P.: For "may have the effect," I read, "must have the effect;" and I am so persuaded of your Lordship's candour as to leave it to yourself to say whether the years of commercial distress are not always those in which the profits of your Bank have been the largest.

Lord Overstone: Whether the fact be so or not, I do not see what bearing it can possibly have upon the Currency Question.

Ex-M.P.: Certainly not, except it can be shown by demonstration that, as surely as the same causes produce similar effects, so the closest reasoning will prove that commercial distress is enormously increased and purposely widened by our system of Currency rendering it incumbent upon the Bank of England to interfere with the natural operation of supply and demand in relation to that in which our Currency consists—namely, gold and paper.

Lord Overstone: Whether you are right or wrong, at present you must know that your statements are mere assertion, unsupported by any argument, and that it is quite sufficient for me to say, I do not believe your statements are correct.

Ex-M.P.: Granted; but I purposely began the discussion in this manner, in order to antic pate the general practice of those whom, for the sake of distinction, we will call "The Bullionists," who, as soon as they hear the word "Currency," immediately exclaim,—"Oh! are you for a little shilling?" "What! are you a rag man?"—and similar slang, with which your Lordship's ears and eyes must be pretty well acquainted. This is the way those who think with you on this subject treat those who sincerely believe that our present Currency system is alike vicious in principle and in practice, and that it was forced upon an ignorant Parliament by those who well knew it must in its operation contribute largely to their profit and advantage, at the expense of their fellow-subjects.

Lord Overstone: How is it possible that any question can be rationally discussed when parties who differ fundamentally on the subject apply to each other such epithets as the Socratic mole; and therefore I ask your Lordship what in your judgment, ought to be the first and most essential principle in a sound system of currency?

Lord Overstone. Surely no two men can differ as to the answer. The first and most essential principle, that which is the sine qua non of the whole, is that it be less liable to fluctuation in value than any other; indeed this, as you know, is our reason for selecting gold. You cannot object to my answer?

Ex-M.P.: Certainly not; and I appr-hend there will be as little difficulty in our agreeing to the answer which should be given to my second question, of supply and demand more subject to fluctuation in amount than articles which are not of a commercial quality?

Lord Overstone: Assuredly, if you can find any article which has not a commercial quality, that must be less subject to fluctuation than one which is sought for by the surrounding nations.

Ex-M.P.: I expect, from your Lordship's candour, that you will admit bank-notes are not articles of a commercial quality to the surrounding nations, unless you make them so by compelling the Bank to exchange them for gold; and therefore, bank-notes not convertible into gold would, in accordance with the principle which your Lordship admits to be correct, be a better system of currency than gold, as less liable to fluctuation in value, unless your Lordship can show some disturbing element which would or might render the amount uncertain.

Lord Overstone: And can you for one moment doubt that such disturbing element exists in the cupidity of the ruling power in every nation in the world to increase the amount, and therefore to lessen the value?

Ex-M.P: I do not for one moment doubt that such element exists in its utmost intensity in all despotisms, whether of the one or of the many, but I firmly deny that it would or could exist in this country, or that it would be possible for our rulers to vary the amount of currency, except by fraud or forgery to which the present system is equally liable.

Lord Overstone: Surely if Queen, Lords, and Commons fixed the amount of notes in 1855 at 50,000,000, they might, if they thought it would be beneficial to the country, increase that amount to 100 000,000 in 18-7.

Ex-M.P: So, having now fixed the sovereign to be of the weight of 5 dwts. 3grs., they might to-morrow pass a law fixing it at only 3 or 4 dwts. I understood, by ruling power, your Lordship meant the Minister of the day without the sanction of Parliament.

Lord Overstone: No—that would be very easily guarded against. I meant Queen, Lords, and Commons, with the assent of the people, who, seeing that their condition was improved by a paper currency not convertible into gold, of fifty millions, might fancy that such improvement would be increased by doubling the amount.

Ex-M.P.: Your Lordship is facetious. There are some things beyond the omnipotence of Parliament, and it appears to me that it would be just as wise, and just as practicable, for her Most Gracious Majesty and Parliament to issue a paper currency beyond the wants of the nation, as it would be to pass a law declaring that, after the year 1856, it would be useful, and it should be enacted that water should run up a hill. How would your Lordship suggest that this redundant currency, after it had been created, should be issued?

Lord Overstone: How? Why, in the most natural manner imaginable. What difficulty could there be? Government would lend money at low rate of interest, discount bills at one or two per cent. (and here a cold shudder over his Lordship's frame was very visible), and encourage the wildest schemes and most unprincipled adventurers.

Ex-M.P.: surely your Lordship is merely describing that which we know has repeatedly happened under the present system of currency; and you are so wedded to that system that you decline to admit its absurdities are to be imported into a more rational plan. What has Government to do with discounting bills, or lending money to unprincipled adventurers, or to enterprising men of straitened circumstances? Those are not the functions of a national bank, which is merely to receive the revenue and pay the dividends, expenses, and public servants. Confining the operations of a Government bank to these objects, how can this redundant issue of one hundred or two hundred millions, after it has been created, get out of the coffers of the Government bank into the hands of the public?

Lord Overstone: I certainly cannot answer the question at present; but you cannot doubt the fact that other countries have, on several occasions, not only created, but issued such an amount of paper money that it has become without value; and an assignat of the value of £100 would hardly purchase a loaf of bread.

Ex-M.P.: The distinction is so obvious that it can be hardly necessary to state it. A despotic State, whether monarchical or republican, may pay its army and its navy, and their supplies, with paper money to an unlimited amount, and decree death to those who refuse to take such notes at their full value. The profligate Monarch may throw his millions of paper money into the lap of his courtesans, or lavish them on his favourites. In such cases there is no difficulty in issuing a redundant paper currency, and in depreciating it to such an extent that even the courtesan and favourite decline to receive any more; but, long before such a state of things can exist in this country, it would not be worth living in.

Lord Overstone: Your argument would go to this extent: that it is of no importance whether the State should decree the creation of 50,000,000 or of 100,000,000, since no more could be issued than the public required.

Ex-M.P.: Exactly so;—try it by figures Suppose 50,000,000 of Government notes to be created, and 30,000,000 to have been paid to A, B, &c., for dividends, expenses, and salaries, and that a portion of the taxes, to the amount of £10,000,000, has been paid into the Bank in the Government paper, and another £10,000,000 in gold and silver, and that X, Y, Z, &c., want to be paid £10,000,000 for dividends, &c.,—will your Lordship suggest what possible object the Government of the day, supposing there was no war, could have in storing up the gold and issuing the paper?

Lord Overstone: Certainly there could be none; on the contrary, the gold and silver would be first paid to save the trouble of registering the notes. But you have omitted one most important feature—what standard of value would you have?

Ex-M.P.: Pardon me, I have not omitted it; we have not come to it. The standard of value has nothing whatever to do with the currency which is in use, except as a symbol of value to which the nation has agreed, to prevent the necessity of barter. If I have a quarter of wheat to dispose of, and want a piece of furniture, and there was no standard of value, it would be necessary for the upholsterer and myself to enter into a long discussion as to the terms on which the barter or exchange of our respective commodities could be arranged; but, with a standard of value, I sell my wheat to one who knows its worth in relation to such standard; whether he pays me in gold, or silver, or by bank notes, or bill of exchange, is not of the slightest importance, either to myself or any one else, provided the upholsterer will take that which I receive for the article I require, according to the same standard of value, and thus of every daily transaction between every one, from Rothschild dealing in millions to the schoolboy buying out his penny.

Lord Overstone: But you have not answered my question. What standard of value would you consider the best?

Ex-M.P.: I am content with gold, although fully aware of the objections which are brought forward against it, but have never been able to see my way clearly to the other standards which have been proposed, such as wheat, labour, &c.

Lord Overstone: But if your standard be in gold, your Government notes must also be payable in gold. I should like to see the note you would propose as the future currency of the country

Ex-M.P.: Here it is, and I shall really feel obliged to you to improve it.

STATE PAPER. (*Date*)

The Bearer is entitled to pay this note on account of all rates and taxes, or to discharge any debt or liability to any subject of these realms, at and after the rate of 5 dwts. 3 grs. of gold.

ONE POUND. (*Signature.*)

This would be the future Pound Note; larger notes of course of larger weights

Lord Overstone: At any rate your note is truthful; it does not promise to do that which events may render it impossible to do; with such a note there could be no fear of national bankruptcy, or a violation of the existing law. But do you really expect that such a note, not convertible into gold would not be depreciated?

Ex-M.P.: I find that depreciation of such a note would in this country be physically, and morally, and practically impossible. The word "convertibility" is only another instance of the abuse of terms

Lord Overstone: You observe that I did n.t use the word alone, but said "convertible into gold"?

Ex-M.P.: Exactly so; so used it has a definite meaning, but used alone its only meaning, and its only meaning ought to be, that it should be convertible into any article its possessor will bet to purchase, after the same standard of value as he had given for it. But I am only wasting time by saying that the note is not subject to depreciation. Will your Lordship be pleased to state any time the bank-note was depreciated although not convertible into gold?

Lord Overstone: Surely it was so depreciated when it required one pound-note and seven shillings to purchase one guinea, which, with one shilling, was the standard of value for a pound-note.

Ex-M.P.: I beg your Lordship's pardon, the pound-note was not depreciated, but gold had risen very much in value, and was appreciated; it was hardly procurable for the use of our armies abroad. The best proof that the note was not depreciated, but gold appreciated, consists in the fact, that to purchase it required one pound-note and seven shillings to purchase a guinea, twenty-six shillings in silver would not have purchased one; it would have required twenty-seven shillings.

Lord Overstone: I can give you encouragement for my conversion, although I shall have pleasure in resuming this conversation on other branches of this interesting subject, one which assuredly affects the welfare of every subject in these realms from the peer to the peasant.

Ex-M.P.: The pleasure will be equally great on my part. Whether our use of the words "peer or peasant" was accidental, or you meant to indicate that these, as representing the agricultural portion of the community, had been most plundered by the present system, I cannot say; but this I will engage to show at our next meeting. I should, indeed, be proud of converting our Lordship on that all-important question, but should be well content were you to say, "almost thou persuadest me to become a Christian."

THE REV. DR. VAUGHAN'S CASE.—Some days ago Mr. Baron Platt granted a writ of *certiorari*, removing the indictment against Dr. Vaughan from the Central Criminal Court to the Queen's Bench. Since that, Mr. Clarkson, on behalf of the prosecution, has appeared at chambers, before Mr. Justice Coleridge, with an application to set it aside. The learned counsel produced a number of affidavits to show that the ground upon which the writ of Baron Platt had been obtained was an entire misrepresentation of the facts of the case. He also urged that the application for the writ was made secretly and against good faith, no notice having been given to the prosecutors. Mr. G. G. Prideaux appeared on behalf of Dr. Vaughan; but was stopped in his argument by Mr Justice Crowder, who stated that he did not think it right he should interfere to set aside the decision of another Judge. Such an application ought to be made to the full Court; but, in the present case, the proper course to pursue was to remit the whole of the affidavits on both sides to Mr. Baron Platt, who could then reconsider the matter

ELECTION OF CHAIRMAN OF THE LONDON BOARD OF WORKS.—A meeting of the newly-elected members of the Metropolitan Board of Works took place on Saturday last, in Burlington-house, for the purpose of electing a chairman. There were only three of the members absent. The number of candidates for the office whose claims were finally put to the meeting was ten. They were Mr. Hawkins, Mr. Deputy Harrison, Mr. Robert Dent, M.P.; Mr. Turner, Mr. R. Webb, Mr Corrie, Mr. T. Hawes, Hon. J. Percy, M.P.; Mr. Carden, and Mr. Rose. Each of the candidates was proposed and seconded by members of the board, and the majority of the gentlemen addressed the meeting in support of their claims. In order to arrive at the opinions of the majority of the board, it was arranged that the names of each of the candidates should, in the first instance, be put from the chair; those who received the lowest number of votes to be struck out, and the process to be repeated until eight of the candidates were thus disposed of. For Messrs. Rose and Dent there were no votes, and their names were withdrawn. The Hon. Mr. Percy received 4 votes; Mr. T. Hawes, 8; Mr. Corrie, 11; Mr. Webb, 12; Mr. Turner, 12; Mr. Robuck, 13; Mr. Deputy Harrison, 13; and Mr John Thwaites, 26. On the final question, that Mr. Thwaites be chairman of the board, the number in favour of the motion was 83

REDUCTION IN THE PRICE OF MEAT, ETC.—In consequence of the large supplies of country killed meat of all descriptions that arrived in the metropolis during the past week—a very considerable portion of which sustained injury by the severe frost, was further increased through the rapid thaw—a great number of carcases were rendered unsaleable, and only fit for boiling purposes, and the remainder would, if possible, have been speedily in a similar state. In consequence of this the retail butchers in the principal markets and thoroughfares reduced the prices of their best on Wednesday 1½d in the pound, and in mutton and pork 1d. Greens, which were selling on Christmas-eve at 5s. to 9d. per bunch, could be obtained at 3d. per bunch; and other vegetables, but particularly potatoes, that were touched by the recent frost, also declined considerably in value. A very great reduction took place in the prices of poultry. Turkeys of large size that brought prices varying from 30s. to 35s. each on Monday could be obtained on Wednesday 18s. less; and geese declined in price fully 3s. There is scarcely an article necessary for human consumption, that is not now offered at prices considerably lower than on Monday last; and several bakers in the eastern districts of the metropolis have reduced the price of household bread one halfpenny, and there is a similar decline in that of country bread.

MONETARY TRANSACTIONS OF THE WEEK

(From our City Correspondent.)

COMPARED with some previous weeks an increased amount of Money-business has been transacted in most national stocks, and prices, though fluctuating, have shown a tendency to advance. At the present time the supply of stock in the hands of the leading jobbers is small; but it is likely to increase, as we understand that the Bank broker acting on behalf of the Government will be a seller for some time, in order to meet the dividend payments.

Rather large quantities of paper have been presented at the Bank for discount, and a portion of it leads us to conclude that some further large sums will shortly be withdrawn from London to meet the new Russian loan, on account of which about £400,000 has been taken away within the last ten days. That a large portion of the £3 000,000 has been subscribed for at Berlin, Amsterdam, and Hamburg is confirmed by recent advices. Money will, therefore, of necessity be dear in our market for a considerable period. The supply continues small, and the lowest rate for first-class sixty days paper is 5¾ per cent.

From a return just issued it appears that the exports of bullion this year to the East have been £948,272 in gold, and £6,409,589 in silver. In the last five years the value of gold shipped to the East was £4,836,782; of silver, £16,598 869.

Attention has been drawn to the fact that £7,500,000 of the Turkish Loan is still in the hands of the public; and it has been inferred that the whole of that amount has yet to be transmitted to Turkey in gold. We may observe, however, that that amount has been required for the special purposes of purchasing arms, ammunition, and steamers for the use of the Ottoman Government, and that the whole of it will be laid out in this country.

There was a steady market for Consols on Monday, and prices were on the advance. The Three per Cents Reduced marked 88¾ ⅞; the New Three per Cents, 89¼ ⅛; and Consols for Account, 89⅝. Exchequer Bills, 3s. to 7s. dis.; Exchequer Bonds, 97¾ ⅝. Tuesday was observed as a close holiday in the Exchange. On Wednesday the Funds were rather heavy. The Three per Cents ruled from 88¾ ex dividend down to 88¾ ⅝. Bank Stock was 209½ to 207. Red. ced Threes, 88¾ ⅝; and the New Threes per Cents, 89¼ ⅛. Exchequer Bills and India Bonds, 7s. to 4s. dis. Exchequer Bonds, 97¾ ⅝. The Market, on Thursday, was rather flat. The Reduced were done at 88¾; Consols, 89¼ ⅝ ex div; and the New Three per Cents, 89¾. Long Annuities, 1858, 16¾. India Bonds, 3s. to 7s. dis.

The imports of Bullion have been 500,000 dollars from New York, about £3000 from Portugal, and £20,000 from Australia.

The last return of the assets and liabilities of the Bank of England shows the introduction into the balance-sheet of the new issue of notes to the extent of £475,000. This issue has been made by an order in Council to fill up the void created in the circulation of country notes by the failure of provincial banking houses.

The average weekly rate circulation of the private and joint-stock banks in England and Wales during the month ending on the 24th ult. was £1,103,415—being a decrease, compared with the previous month, of £13,042. Compared with the same period last year, there is an increase of £2,152. These banks are now below their fixed issues £1,114.

The closings in nearly all Foreign Bonds have been limited to a shade without reading to any material change in the quotations. Chilian 6s per cents have realised 102. Mexican, three per Cents, 19½; Russian Four-and-a-Half per Cents, 83¾; Spanish New Deferred, 21½; Ditto, Passive, 4¾; Turkish Six per Cents, 83½; Ditto, New Scrip, 1 per cent; Dutch Four per Cents, 94; Peruvian Four-and-a-Half per Cents, 76¾; Sardinian Five per Cents, 83¾ ex int.

Joint-Stock Bank Shares have been tolerably firm. Australasia have marked 90¾; Bank of London, 55; British North American, 63; City, 30; Colonial, 61½; Commercial of London, 16¾; London Joint-Stock, 24¾; New South Wales, 40¾; Oriental, 33¾; South Australia, 40¾; Union of Australia; Ditto, New, 58; and Union of London, 30¾.

There has been a very limited business done in the Miscellaneous Securities, and many of the quotations have ruled nominal. Canada Company's Shares have sold at 140; Ditto, Government Six per Cents, 110¾; Crystal Palace, 2¾; Ditto, Preference, 14¾; Oriental Gas, 1; Peel River Land and Mineral, 2¾; Royal Mail Steam, 77; Van Diemen's Land, 16; Victoria Dock, 20; Victoria Government Six per Cents, 100.

Most Railway Shares have been far from active, yet we have very little change to notice in the general quotations. The following are the leading prices for the week —

ORDINARY SHARES AND STOCKS.—Aberdeen, 22¾; Caledonian, 55¾; Chester and Holyhead, 11; Eastern Counties, 9¾; East Lincolnshire, 60; Great Western, 83½; Lancashire and Yorkshire, 100; Ditto, Newton and Kenyon, 6¾; London and Brighton, 94¾; London and North-Western, 94. London and South-Western, 95; Midland, 64; North-Eastern, Berwick, 92; Royal Mail Steam, 77; Vale of Clare, 8¾; Ditto, Leeds, 11; North Staffordshire, 9¾; South Devon, 11¾; South-Eastern, 65¾; Vale of Neath, 19.

LEASED LEASE AT FIXED RENTALS.—Edinburgh, Perth, and Southend, 113; Manchester, Buxton, and Matlock, 21; Northern and Eastern, 5¾.

PREFERENCE SHARES.—Caledonian, 92; Great Northern, five per Cent, 114; Great Western Four per Cent, 78; Manchester, Sheffield, and Lincolnshire, 8; North British, 8¾.

FOREIGN.—Dutch Rhenish, 19¾; Eastern of France, 8⅝; Geelong and Melbourne, 19¾; Grand Trunk of Canada, A, 10¾; Ditto, 8 per Cent, 7¾; Great Luxembourg, 3; Great Western of Canada, 24¾; Ditto, New, 7¾; Ditto, Bonds payable in 1875, 103¾; Lyons and Geneva, Four-and-Three-Quarters per Cent, 83.

In Mining Shares so few sales have taken place that the quotations make ruled nominal.

THE MARKETS.

CORN EXCHANGE, Dec 26th.—The supply of English wheat in to-day's market was again liberal, and the limited sale was at rates which were more favourable to the demand, at prices barely equal to those of last week; and the inferior produce was rather neglected. In foreign wheat—the show of which was to not on the increase no fitting business was doing, that the quotations were almost nominal, whilst floating cargoes were very dull. Flour being sold at full currencies; and the supplies maintained inquiry. No change in malt. We had a moderate inquiry for oats, at last week's currency. Beans gave way 2s per quarter—a heavy demand. Peas were in good request, and fetched extreme rates.

BARLEY.—Even being a holiday, very few buyers were in attendance, and no fitting business was transacted, that prices generally were unknown or unaltered.

English—Wheat, Essex and Kent, red, 60s to 69s.; ditto, white, 63s. to 70s.; Norfolk and Suffolk, red, 60s. to 68s.; rye, 54s. to 56s.; grinding barley, 34s. to 36s.; distilling ditto, 37s. to 40s.; malting, ditto, 38s. to 42s.; Lincoln and Norfolk malt, 70s. to 80s.; brown ditto, 65s. to 70s.; Kingston and Ware, 75s. to 85s.; Chevalier, 81s. to 85s.; Yorkshire and Lincolnshire feed oats, 20s. to 28s.; potato ditto, 30s. to 32s.; Scotch and Irish ditto, 24s. to 28s.; ditto, white, 27s. to 28s.; tick beans, 42s. to 44s.; grey peas, 42s. to 44s.; maple, 44s. to 46s.; white, 44s. to 45s.; boilers, 50s. to 56s. per quarter. Town-made flour, 75s. to 77s.; Suffolk, 67s. to 69s.; households, 57s. to 59s.; Norfolk, 65s. to 67s. per 280 lbs. American sour, 42s. to 47s. per barrel.

Seeds—Our markets has been very dull this week. In prices, we have no change to notice.

Linseed, English, crushing, 78s to 80s.; Mediterranean, 78s. to 80s.; baseseed, 62s. to 66s per quarter. Coriander, 20s. to 30s per cwt. Brown mustard-seed, 12s. to 20s; white, 8s to 10s. Tares, 6s. 6d. to 7s 6d. per bushel. English rapeseed, 35s. to 36s. per quarter. Linseed cakes, English, £14 5s. to £15; foreign, £13 10s. to £14 10s.; rape cakes, £7 5s. to £8 per ton. Hempseed, 43s to 45s per quarter.

Bread—The prices of wheaten bread in the metropolis are from 11d. to 1s. 2d. of household ditto, 9d. to 10½d. per 4 lb. loaf.

Imperial Weekly Average—Wheat, 70s. 9d.; barley, 40s. 6d.; oats, 22s. 1d.; rye, 54s. 6d.; beans, 50s. 8d.; peas, 43s. 1d.

The Six Weeks' Averages.—Wheat, 69s.; barley, 41s. 2d.; oats, 22s. 1d.; rye, 55s. 8d.; beans, 51s. 1d.; peas, 43s. 1d.

English Grain Sold last Week.—Wheat, 68,151 barley, 130,121; oats, 58,740; rye, 781; beans, 9131; peas, 7367 quarters.

BUTTER.—There has been a moderate demand for most kinds at full prices. Common sound sorts are worth 92s per cwt. The show of fine qualities extends very limited.

Bacon—Owing to the holidays, no public sales have taken place this week. Privately, nearly any business has been transacted, but prices may be considered from 1os to 1os. per cwt. beneath the highest parity.

Coffee—Good and native Ceylon has been quoted at 51s to 57s. per cwt. The demand is usually inactive, but we have no change to note in the quotations.

Eggs—We have to report a very dull sale for all descriptions, and large supplies with difficulty supported.

Provisions—In the last qualities of butter are in moderate request, at former rates. Inferior kinds are very dull. The bacon market is steady, at former terms. Hams are heavy. In other kinds of provisions very little is doing.

Tallow.—P.Y.C., on the spot, is quoted 67s 6d. to 68s. per cwt., sellers' Town tallow, 61s. 6d., net cash. Rough fat, 3s. 7d. per 8lb. Coal.—Lisseel, 21s. 6d. to 22s. 6d. slowly, at 44s. 9d to 45s. 6d. per ton on the spot. Good to fine pale is quoted at 46s. to 48s., and Cowpen seconds, 42s. to 43s. 6d. Turpentine comes off slowly—rough at 40s. 6d to 41s. English spirits, 31s. to 32s. 6d.; and American, 30s. to 32s. 6d. per cwt.

Hops.—Mid-Kent.—Meadow hay, £4 5s. to £5. clover, ditto, £4 10s to £7.; straw, £1 4s to £1 10s. per load.

Coals.—Tanfield Moor, 17s. 3d.; Lawson, 16s.; Eden Main, 15s.; Lambton or Hetton, 17s. 3d.; Hetton, 17s. 3d.; South Kelloe, 20s. 3d.; Tees, 17s. per ton.

Hops.—Since our last report very little business has been transacted in any kind of hops, and prices are barely a quarter. Mid and Weald of Kent, £3 5s. to £6, Weald of Kent, £3 5s to £4 15s., Sussex, £2 15s to £4 15s. per cwt.

Wool.—All kinds are very dull in sale, and the quotations are almost nominal.

Potatoes.—The supplies are reasonably good, and a full average business is doing in them, at from 80s. to 110s. per ton

Metropolitan Cattle Market.—The arrivals of stock have been limited, and the trade has not been heavy in the extreme, at almost nominal currencies —

Beef, from 3s. 4d. to 4s. 10d.; mutton, 3s. 4d. to 5s. 0d.; veal, 3s. 8d. to 5s. 0d.; pork, 3s. 6d. to 5s. per 8lb., to sink the offals

Newgate and Leadenhall.—The demand has fallen off considerably, and prices have had a downward tendency—

Beef, from 3s. 2d. to 4s. 6d.; mutton, 3s. 2d. to 5s. 0d.; veal, 3s. 6d. to 4s. 8d.; pork, 3s. 6d. to 5s. 2d. per 8lbs. by the carcase.

ROBERT HERBERT.

N.B. A large lot of Flannels, in all colours, at 1s. 10½d. per yard. Patterns sent by post free.

SUBSCRIPTION.—The sudden death on the 18th of September last, of Mr. SAMUEL COLLINS, who was for many years on the staff of the ILLUSTRATED LONDON NEWS, as Assistant Publisher, has left a Widow, 38 years of age, in delicate health, and six children in almost unalloyed destitute of the means of support.

The family consists of four boys, aged respectively seven, nine, eleven, and thirteen years; and two girls, two and five years old the latter being a cripple.

These distressing circumstances have induced the friends of the deceased to commence a subscription for the purpose of purchasing an Annuity, or otherwise providing for the support of the bereaved family.

The following Gentlemen have most kindly consented to receive Donations:—

Mr. Ernest INGRAM, Esq., 198, Strand (who will act as Treasurer)

THOMAS N. STOKES, Esq., 13, Clement's-lane, City

Mr. FREDERICK MORE, Messrs. Smith, Elder, and Co.'s Publishing-House, 65, Charlotte-row, Mansion-House.

Messrs. VENABLES, WILSON, and PEARS, Solicitors, 3, Old Jewry-chambers, City.

BY COMMAND OF THE POSTMASTER-GENERAL

NOTICE to the PUBLIC, and INSTRUCTIONS to all POSTMASTERS.—Newspapers and other Printed Papers for France and Foreign Countries via France.

Inland Post-office, December, 1855.

In accordance with the provisions of a new Postal Convention with France and other French ports, Foreign Postage on Printed Newspapers and other Printed Papers posted in the United Kingdom addressed to France or Algeria, or to any place beyond the French Mediterranean Packets, to any of the places in Turkey Sydria, Greece, or the Ionian Islands (these regulations take effect from the 1st of JANUARY NEXT, and thenceforward, to the 1st of JANUARY in each year) will be levied upon their delivery.

Under the new arrangement many kinds of new Printed Matter, which have hitherto been liable to the letter rate of postage, will be forwarded at a greatly reduced rate of postage. Newspaps a and other period-cal literature level on delivery in France have, it has been found, been much retarded, and will now be paid in advance, a considerable reduction of postage will be made in favour of them.

The following Table shows the charges which must be paid beforehand on the Printed Papers above mentioned viz.—

	Not exceeding 1½ oz.	Above 1½ lb. but not exceeding 3 ozs.	Above 3 lb. but not exceeding 4½ ozs.	Above 4½ lb. but not exceeding 6 ozs.	Above 6 lb. but not exceeding 7½ ozs.	Above 7½ lb. but not exceeding 9 ozs.
	d.	d.	d.	d.	d.	d.
For a Packet of British Newspapers (Stamped at the Stamp Office) Post Office for Transmission	0 1	0 2	0 4	0 6	0 8	0 10
For a Packet of Printed Papers (not being British Newspapers duly Stamped at the Stamp Office) Post Office for Transmission	0 3	0 6	0 10	1 6	1 2	1 6

and so on, adding Twopence or Sixpence, as the case may be, for each additional half pound

The same rates of postage must be paid in advance upon Newspapers and other printed papers addressed to any of the following countries on a note, the correspondence for which is forwarded as a rule, through France:—Sweden, Sweden, Russia, Greece, Morocco, Tripoli in Syria, Latakia, Alexandretta, Mersine, Rhodes, Smyrna, Syria, Constantinople, Dalmatia, Gallipoli, and Constantinople.

All newspapers to be forwarded at the lower of the two rates mentioned above, must be delivered within three days from the date of publication; but newspapers of an older date may be forwarded at the rate above, or for ordinary printed papers. Many printed paper, not a newspaper, to be enclosed in the same packet with one or more newspapers, the whole will be chargeable at the higher of the two rates of postage.

Under the term "Printed Papers" are included periodical works, or those published at stated or regular intervals, books, pamphlets, sheets of music catalogues, prospectuses, announcements and advertisements, whether printed, lithographed, engraved, or in MS.

The following regulations must be strictly observed:—

1. Every packet must be open at the ends or sides, or in a cover open at the ends or sides.

2. There must be no enclosure, except newspapers or other printed papers.

3. There must be no other writing or marks upon the cover or printed papers than the name and address of the person to whom they are sent, nor anything upon the cover but the name and address, the postage paid, the date of publication, and address of the publisher or vender who sends them.

4. Any of the above regulations being disregarded or if the whole postage be not paid in advance, the packets will either be detained, or sent to the office of delivery charged double.

5. Newspapers addressed to the Mediterranean or the East Indies, and intended to be sent to the closed mails by way of Marseilles will continue liable to the existing regulations including the present rates of postage. ROWLAND HILL.

CHRISTMAS PRESENTS.—DOWN QUILTS, the warmest coverlet and carriage wrapper, in great variety, from 5s. to 4 guineas. The Royal Magnetic Page Turner, a novelty for the music of public, which turns over the leaves for the player, only 30s. 6d each. Also, a large assortment of Parisian, Opal, and Marguerite Work Tables, Jardinières, Kia gola, Cabinets, Envelopes, Bonheur de Jours, &c., &c., at extraordinarily low prices, at DRUCE and CO.'s, Upholsterers, Cabinet and Bedding Manufacturers, 89, 90, and 91, Baker-street.

On the 1st January, 1856, will be published, beautifully printed in small 8vo, bound in cloth lettered price 6s.

TORQUATO TASSO: A Drama, from the German of Goethe. and other Poems, translated and original. By M. A. H.—London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE RURAL ALMANAC and SPORTS-MAN'S ILLUSTRATED CALENDAR for 1856 is now ready, edited by CHRISTOPHER IDLE. Post free, and one stamp 13 large d awings by Ansdell Weir, and other artists. Price 1s., post-free for the Office for 13 stamps.—Field Office, 2 to 5, Tavistock-street, Strand

THE ROYAL PICTURES AT OSBORNE.

THE ART-JOURNAL for JANUARY, 1856, price 2s. 6d., contains—A Village from the Forest by W. H. Frost, A.R.A.; Bay of Naples, after W. Calcow and Gibson's bas-relief of Cupid and Psyche, in the possession of the Queen.

The principal literary contents are—Ariadne' Models, by F. W. Fairholt; Derwentwater Marbles, by R. Hunt, F.S.S.; A Few Words on Beauty; A Sonnet at the Pavilion at Brighton; the Art-Publications of H. M. Gospel; British Artists—No 11, Sir A. W. Calcott. R.A.; Illustrated Supplement—Subjects from the Ancient in Art; The Exposition General of 1855, and its Uses; the Country of Copy, by F. W. Fairholt; Illustrations—The Queen's Pictures. Osborne—The Rt. Hon. Sidney Herbert, M.P.; Mr. Gladstone—Sir Robert Peel—Lord Macaulay—Lord Clarendon—Lord Aberdeen—Lord John Russell—Lord Palmerston—Lord Derby—Lord Stanley—Mr. Disraeli—Mr. Bright—Mr. Cobden—Mr. Milner Gibson—Mr. Roebuck—Mr. Lowe—Mr. Layard—Mr. Sidney Herbert—Mr. Cardwell—Mr. Vernon Harcourt—Mr. Horsman—Mr. Bernal Osborne—Mr. Henley—Mr. Labouchere—Mr. Gladstone

THE LATE MR. ROGERS IN MIDDLE LIFE.—FROM A PAINTING BY SIR THOMAS LAWRENCE, R.A.

THE LATE MR. ROGERS, AGED 92.—FROM A PHOTOGRAPH BY MR. PAINE.

DEATH OF MR. ROGERS.

[We quote the following from the *Inverness Courier*. It is from the practised pen of Mr. Carruthers, who long enjoyed the friendship of the distinguished poet and patron of artists and men of letters.]

It is not our intention to speak of the poetry of Mr. Rogers. In noticing it some time since we characterised it generally as presenting a classic and graceful beauty; with no slovenly or obscure lines; with fine cabinet pictures of soft and mellow lustre, and occasionally with trains of thought and association that awaken or recall tender and heroic feelings. Now that personal interest in a living poet is withdrawn, and kindness and respect towards him are of no avail, it may be questioned whether Rogers's poetry will maintain any prominent place in our literature. He will always be esteemed one of the purest disciples of the old classic school of Pope and Dryden—and to turn to him from the mystic ravings, tortures, and Red Indian chants of some modern poets, is like emerging from the wards of an hospital to fresh air and sunshine; but he wants vital interest, passion, and strength, for universal popularity. He had not what Gray terms the "golden keys" that can unlock the gates of joy or horror, or open the "sacred source of sympathetic tears."

It is as a man of taste and letters, as a patron of artists and authors, and as the friend of almost every illustrious man that has graced our annals for the last half century and more, that Mr. Rogers has of late years challenged public attention. He was a link between the days of Johnson, Burke, and Reynolds, and the present time. He had rambled over St. Anne's-hill with Fox and Grattan. Sheridan addressed to him the last letter he ever wrote, begging for pecuniary assistance, that the blanket on which he was dying might not be torn from his bed by bailiffs; and Rogers answered the call with a remittance of £200. No man had so many books dedicated to him. Byron inscribed to him his "Giaour," in token of "admiration of his genius, respect for his character, and gratitude for his friendship." Moore was no less laudatory, and Moore owed substantial favours to the old poet. By his mediation his quarrel with Byron was adjusted, and when Moore fell into difficulties the liberal hand of Rogers was opened. His benefactions in this way were almost of daily occurrence. "There is a happy and enviable poet!" said Thomas Campbell one day on leaving Rogers's house; "he has some four or five thousand pounds a year, and he gives away fifteen hundred in charity." And next to relieving the distress of authors and others, it was the delight of Mr. Rogers to reconcile differences and bring together men who might otherwise never meet. At his celebrated breakfast parties persons of almost all classes and pursuits were found. He made the morning meal famous as a literary rallying point; and during the London season there was scarcely a day in which from four to six persons were not assembled at the hospitable board in St. James's place. There discussion as to books or pictures, anecdotes of the great of old, some racy sayings of Sheridan, Erskine, or Horne Tooke, some apt quotation or fine passage read aloud, some incident of foreign travel recounted—all flowed on with quiet restraint, and charmed the hours till bed-day. Byron has described the scene of these meetings:—

> Rogers is silent, and, it is said, severe
> When he does talk he talks well; and, on all
> Subjects of taste, his delicacy of expression is
> Pure as his poetry. If you enter his house,
> His drawing-room, his library, you of yourself
> say, this is not the dwelling of a common mind. There is not a gem, a coin, a book
> thrown aside on his chimneypiece, his sofa, his
> table, that does not bespeak an almost fastidious
> opulence in the possessor. But this very delicacy must be the misery of his existence. Oh, the jarrings his disposition must have encountered through life!

Byron's sensitiveness coloured all he saw with his own feeling. There was none of this misery resulting from Rogers's taste. He enjoyed life—had money, fame, honour, love, and troops of friends. His recipe for long life was "temperance, the bath, and flesh-brush, and *don't fret*." But his house was really a magazine of marvels—the museum of the Muses!—and its opening view on the garden and lawn of the Greenwork in itself a picture. Paintings by Titian, Guido, Rubens, Claude, Raphael, and English artists, covered the walls. Every school, Italian and Spanish, had its representative, and not the least prized were the native landscapes of Wilson and Gainsborough, and the "Strawberry Girl" and "Puck" of Sir Joshua Reynolds. In the hall were Greek sculptures, busts, and vases, with endless articles of virtu. The library had its rare and choice editions, a drawing by Michael Angelo, an original bust of Pope by Roubiliac, antique gems and cameos, and many precious manuscripts. Two of these he lately presented to the British Museum. Milton's agreement with his bookseller for the copyright of "Paradise Lost" (for which he gave a hundred guineas), and Dryden's contract with his publisher, Jacob Tonson. The whole arrangement of these rooms bespoke consummate taste and carelessness of cost. The chimneypiece of the drawing-room was of Carrara marble, sculptured with bas-reliefs and miniature statues by Flaxman; and the panels of a small library displayed the "Seven Ages of Man," painted by Stothard. To comprehend how so much was done by one less than a noble, we must recollect Rogers's *bonâ*, his exquisite taste, and his long life. He had written Journals of Conversations with Fox, Erskine, Horne, Tooke, and the Duke of Wellington (some of which we have seen), and these can scarcely fail to be both interesting and valuable.

The severity of remark alluded to by Byron as characteristic of his friend, was displayed in a certain quaint shrewdness and sarcasm with which his conversation abounded, though rarely taking an offensive form. He could pay compliments as pointed as his sarcasm. Moore has recorded the pleasure he derived from one of Roger's remarks.—"What a lucky fellow you are! Surely you must have been born with a rose on your lips and a nightingale singing on the top of your bed." These and many other sayings, pleasant and severe, will now be remembered. But higher associations, even apart from his genius, will be associated with the name of Samuel Rogers. His generosity and taste—his readiness to oblige and serve, or to encourage and reward the humblest labourer in the literary vineyard—his devotion to all intellectual and liberal pursuits—the jealousy with which he guarded the dignity and rights of literature—the example

RESIDENCE OF THE LATE MR. ROGERS, 22, PARK-PLACE, ST. JAMES'S—PARK FRONT.

THE POET'S SEAT, IN THE GARDENS OF HOLLAND HOUSE.

of a straight path and spotless life extended to more than ninety two years;—these are honours and distinctions which will "gather round his tomb," and outlast his monument.

We have engraved two Portraits of the poet—one by Sir Thomas Lawrence, painted many years since; and the other from a photograph taken last year by Mr. Paine, his attendant. The Park front of Mr. Rogers's house, in Park place, is the subject of the third illustration; and lastly is the arbour in the north garden-wall of Holland House, a favourite retreat of the poet, in his frequent visits to this resort of wits, painters, poets, scholars, philosophers, and statesmen. Within the arbour is inscribed this distich, by the late Lord Holland:—

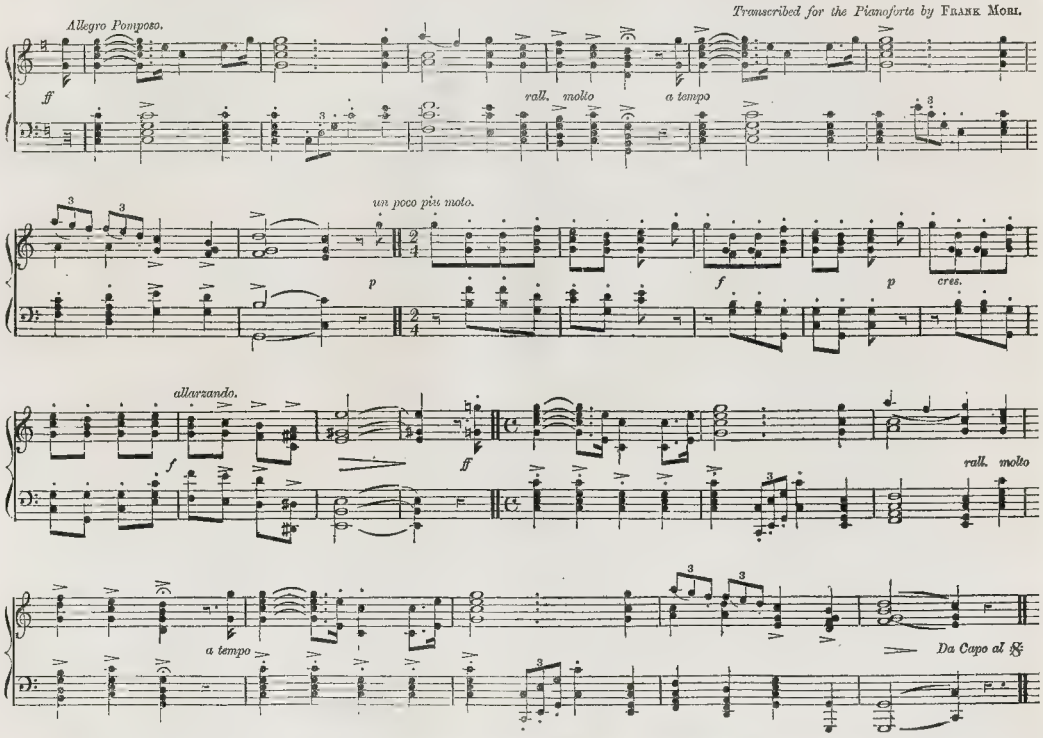
> Here Rogers sat—and here for ever dwell
> With me the tuneful "Pleasures" which he sang so well.—Vii. Hd.

Beneath are some lines added in 1818, by Henry Luttrell.

A biographical memoir of Mr. Rogers will be found in another page of the present Number.

THE SARDINIAN NATIONAL HYMN.

Transcribed for the Pianoforte by FRANK MORI.



THE KING OF SARDINIA AT THE ROMAN CATHOLIC CHAPEL, DUKE STREET, LINCOLN'S-INN-FIELDS. (SEE PAGE 774)

PICTURE OF AN INTERIOR.—REAL STATE OF RUSSIA AT PRESENT.

THE heavy veil which a jealous Government hangs between the internal condition of Russia and the gaze of her enemies, or the curiosity of indifferent spectators, is occasionally blown aside—or occasionally lifted, for a moment, by the blast of war and the fierce commotion of the times. Strange signs are then revealed. They speak for themselves at first; but they are presently forgotten by the careless observer, and *his* name is legion. This is the chief aid which the great imposture of Russian power can find towards playing out its desperate game; and therefore it will not be time lost to glance at a few—either unknown, or unremembered, or insufficiently examined—particulars, possessing real interest, though presenting of themselves to a great many minds nothing so salient as to arrest the attention which they in truth deserved from the outset. In many respects Russian power has been undervalued, after having been over-estimated in still more numerous instances. We all know that the Czar, in modern times, was the very soul of the ever-continued struggle to make special over-ride general interests; but it was a common hope that the continent of Europe, now inspired by a more enlightened and liberal spirit than formerly, would not, and could not, offer a chance of success to the autocratic principle of a comparatively new and barbarous State, barely emerging from the traditions of Asia: we need not recapitulate, in a catalogue, the too favourable impressions which, in the west, so long prevailed about continental Europe. Look at Prussia. Why, there is less reason to be dissatisfied and disappointed with Austria itself than with that State which, more than all others, excited the hopes of this land—or, at least, the hopes of our more advanced and sanguine politicians. Look at Sardinia again. Those in whom we most trusted have failed us in the hour of the great opportunity, the hour of the splendid trial. Those on whom we built no such calculations, have, on the contrary, adopted a magnificent and truly generous share in the great cause now pending. Does not all this (and more that we need not particularise) show some errors in our estimate of Russian influence, both as to its degree and as to its *direction?* May we not make similar miscalculations about the Czar's position at home, among his own subjects? Much more easily; for we have had much fewer means of judging in this last respect. Let us, then, look at some indications of the facts.

On the great patent feature we need not pass long; the Czar's empire is the sway at once of silent obedience and of ecstatic error. The character of his people is such as to make it this, or to end it. The moment it slips down a single point from this demented rapture of homage on the one side and of supposed sacredness on the other, it falls altogether. But, when we come to practical details, we find hasty conclusions everywhere. For instance, it was at first said we should contend with Russia's worst troops in the onset, but should meet her best in the end, according to the custom of Asiatic nations. We admit the custom; but it was forgotten that she had partly abandoned the principle of her own original vigour. We have already met her best troops; and they now exist not. General Bosquet declared at Lyons that there was a Russian army no longer. There is, no doubt, an insignificant exception in the case of the St. Petersburg Guards—an exception insignificant, when the extent of territory to be protected at all its extremities is borne in mind. They are a "spoilt corps;" but the Empire is no longer in "spoilt" times.

A similar hastiness was shown in judging of the financial effects which would accrue in Russia. Owing to the policy of the King of Prussia—that Prince who began by turning a promising people into a brother-in-law, and now turns them into an uncle (for such is his history, and such will be his epitaph)—owing, we say, to this man's policy, the external trade of Russia, which should have ceased, is only curtailed. But, had it altogether ceased—had even this, we say, happened—would an *immediate* paralysis have occurred internally? Certainly, the wound would have been grievous—might have been mortal; but mortal wounds, though they cause death, do not always cause it at once. For example, the first effect of the non-exportation of corn is so to glut the south of Russia with bread that the soldier not only has it everywhere for less, but has it here and there for *nothing*, to save the downright waste of the article. Doubtless, this cannot last. Still, a despot in a war is like a great gentleman at an election; he can find the money, he can fight the poll to the last, even though he have an execution in his house next day.

Again, there are the numerous conscriptions of Russia. It was confidently impressed on us that these would cause a revolution. But are the peasants so happy under the Boyards as to go mad because they are dragooned and speared out of the estates? No; they are speared, but not wholly on account of their own reluctance; it is because the Boyards prevent enlistment, wherever they dare.

But the real wounds are sufficiently deep. Russia can no longer show the wonted deliberateness and regularity of its warlike system, the boasted chastisers of its hierarchical discipline, the ancient alacrity of its fanatic people. The parade of military exactitude, the glitter of arms, the "purist" drill, the imposing superfluity of zeal are all flung to the winds. The chiefs are less themselves than of old, and they exact less from those beneath them. In place of these various qualities we behold, in all who have authority, impatience verging upon hurry. In the masses last summoned to defend the double-headed eagle we moreover discern a certain recklessness of deportment confessed and manifest in the very orders of the day issued by their dispirited superiors. These levies, in fact, listen to unusual instructions. General Lüders, for instance, gives to what we must call the *next* Russian army in the Crimea admonitions which betray all the humility of misfortune. Yesterday the realm from which his recruits have been collected was intractably aspiring; yet now the awards of conflict have imposed a new tone, and there is evidence not only of a different estimate of their opponents, but of a feverish anxiety *to save time*,—time, which the late Czar expected to prove his great ally.

In the great functionaries, firmness is not so visible as a lowering and cheerless desperation; in the men, a despondent fidelity.

If we turn to another quarter, the appeals to Heaven with which the late Czar Nicholas entered upon this war—his solemn prayers in the Kazan church, when he chanted the "Non confundar," &c.—have, to a degree which he could scarcely have anticipated, excited his people to look to results for the expression of the will of Heaven; and, in short, for a response to their ruler's invocations. With three exceptions—the butchery at Sinope, the skirmish at Petropaulovski, and the reduction of Kars by famine—all has been disaster. The charge of Balaclava was a gratuitous proceeding, not extorted by Russian arms; and, while it conveyed to Prince Gortschakoff's and General Liprandi's mind an idea of the sudden insanity of a British brigade, carried dismay and boundless astonishment into the ranks of their army. They had never included such an attack among the possibilities of martial daring. As to Sinope, they themselves now attribute to it much of their misfortunes. Petropaulovski they *know* to have been only an escape, though a creditable escape; for their fleet would not tarry on the scene of its success, or rather preservation—the forts were blown up, and the garrison was withdrawn. Everywhere else, failure, disgrace, ruin, and on the very largest scale. Add to this the sudden death of him who had been the author of the disastrous struggle, as if he were stricken down in answer to his impious prayers.

Alexander was reported to possess a mild and pacific character, and he took up his father's quarrel with more than his father's vehemence and animosity. It would not be unnatural if we ascribe the apparent anomaly to the working of some last injunctions on the filial disposition of a soft, feeble, and undiscerning person, who would, therefore, remain quite unamenable to reason and to enlightened counsels even in situations where the father himself, if alive, would reconsider his own behests and retrace his own steps. But how painfully high-strung is the nervous system of the new Czar amid the crash of the tremendous ordeal to which he has committed his dynastic heritage and his great empire! He shrinks by these irresistible fits of weeping to which he yields in the prime of manhood, and the pride of sway, before the observation of his subjects. He publicly enters Moscow, the ancient capital of his empire, and the place of his birth, to pray to the Omnipotent for suffering Russia: and as he is led by the Patriarch, the Bishops, the Archimandrites, and the clergy, under the gorgeous porch of the cathedral, he is bathed in tears, while all the people gaze in silent awe, until the solemn chant, broken with sobs, arises amid clouds of incense.

Again, at Nicolaieff—he visits the hospitals where the wounded from Sebastopol are lying. One soldier's face is covered; the Emperor removes the cloth, and beholds a man who has lost both eyes by a horrible wound. Once more the Czar bursts into a passion of bitter weeping, and takes no thought of hiding his emotion. "These are heavy days of dreadful suffering for Russia," he had publicly written at Moscow.

The conviction is not confined to the Czar. In all bosoms a similar proneness to give way to paroxysms of the profoundest grief or the wildest excitement is working. When Kinburon (so they pronounce the name in Russia) had been surrendered, its Governor, Major-General Kokonovitch, turns back with streaming eyes, and apostrophises the fortress which he could not defend:—"O Kinburon, Kinburon, glory of Suwarroff, and my shame, I abandon you!" Meanwhile, at St. Petersburg, the anxious and alarmed population flock to the churches night and day, fluttering under that solemn shelter like birds which take cover when a hawk is in the air.

But the two most singular tokens of distress at the present moment, and of misgiving about the future, are still to be mentioned. In the order to which we have alluded, published by General Lüders to his mixed and heterogeneous forces, he enjoins the veterans not to scoff at the great mass of their new comrades for their awkward or unmilitary bearing; and directs, moreover, that these recruits shall be drilled and trained only for elementary movements—inasmuch as all might be spoiled if too much were attempted in their necessarily hurried education.

The last indication which we will specify is more suggestive, if rightly considered, than all the rest put together. The Czar publishes a ukase, dated Nicolaieff, assuring the boyards and nobility that their privileges *shall* be faithfully and sacredly observed. Does the Autocrat already feel it necessary to propitiate and appease that perilous class, before whose clandestine anger none of his predecessors ever felt himself at ease on his throne or safe in his palace?

But now we hear of his anxiety to make peace, on terms honourable, just, and the rest of it. And what are these terms;—while brigands are beginning to infest the roads, and, still more (for more of them exist), the forest tracks of his Eastern European provinces—what are these terms? That, among other things, the Black Sea should be a sort of domestic lake between him and Turkey. Why, who is less *at home* there now than the Czar? Austria will no longer countenance this claim.

No, no, we know more of "the Interior;" and our present faint sketch of a part will serve to deepen the true appreciation of it by the British public.

OMER PACHA'S MARCH THROUGH MINGRELIA.—We continued our march along a magnificent road; the bridges, however, were almost universally destroyed; and, notwithstanding the activity of the Turkish artillery horses, and the excellent way in which they are managed, there is occasionally some difficulty in getting the guns across the ravines and muddy streams at the point the road is intersected. We frequently remarked tombs and shrines upon either side of the road wherever the Russians thought the position available for harassing an army, and it is not a little significant that they have not attempted to offer any opposition to our advance since the passage of the Ingour. It is a pleasant occupation after a short march to explore so beautiful a country, particularly when the principal object is to obtain provisions. With a good guide I sometimes gallop some miles away from the camp up narrow dells, where the houses nestle amid thick foliage by the side of some brawling stream, or over the level country, where there is no underwood to impede my rapid progress, and beach and oak trees are only now beginning to drop their yellow leaves. As we get near a village we see children and pigs tasking in the meadow, and pull up at the door of the largest house, considerably to the alarm of its inhabitants. This, however, is speedily dispelled by my companion, who tells them that I am a Christian, and will be delighted to prove it, by sharing their breakfast of pig's face, &c. After this and a glass of wine too sour to have much taste in it, they open their hearts in proportion as I do my pocket, and tell me they hate Russians and abhor Turks, but love English and French; in proof of which they open the whole to return for three sixpences, and I return triumphantly to camp with my prize—the envy of the whole army—swinging from my saddle-bow.—*Letter from the Turkish Camp, Nov.* 15.

THE AUSTRIANS IN THE PRINCIPALITIES.—Ismail Pacha, General-in-Chief of the army of the Danube, has received orders from the Government to come to Constantinople. He has made some very bitter complaints of the conduct of the Austrians towards the Ottoman authorities in the Principalities. The summons of Ismail Pacha has been called for by a very serious fact, the authenticity of which I can guarantee. The Austrians established a battery of sixty guns at Giurgevo, a town the strategical importance of which is well known, it being opposite Rustchuk and in the neighbourhood of Silistria. It is not known with what object they did this, as they certainly are not in a conquered country. The matter requires explanation from the Austrian Cabinet. What the Porte will do is not known, but Ismail Pacha protested so energetically against what was being done that the Austrians have thought right to suspend their works.—*Letter from Pera, Dec.* 10.

THE GRAND DUKE NICHOLAS OF RUSSIA.—"I have already sent you an account of the betrothal of the Grand Duke Nicholas. He was born on the 8th of August, 1831; and the Princess Alexandra, daughter of Prince Peter of Oldenburg, to whom he is affianced, on the 12th of June, 1838. The *trousseau* of the future Grand Duchess is exhibited at the Oldenburg Palace, on the Neva Quay, and is visited by crowds. The Emperor has paid for it from his privy purse, owing to the comparatively small fortune of Prince Peter, and the number of children he has to establish. When princes and princesses of the Imperial house of Russia are affianced, it is the custom to place at their disposal a special residence, and to create for their service what is called a court—that is, to designate the principal officers and functionaries of their household. The usage, however, has not been fully followed in the case of the Grand Duke Nicholas, and this has given credit to the report which has been current for some time, that his Imperial Highness will soon be called to the throne of Poland, it being intended to declare the Grand Duchy of Warsaw independent immediately after the death of Marshal Paskewitsch. The Queen Dowager of the Netherlands, Anna Pawlona, aunt of the Emperor, has, since her arrival, been residing in the Palace of Anichkoff. I am told that she has succeeded in establishing a sort of harmony between Alexander II. and the Grand Duke Constantine. The Emperor is generally beloved on account of his mild character; but the Grand Duke is heartily detested; he is likewise dreaded, his violence of character being such that he too often passes the bounds of ordinary brutality. This fault, which is generally so rare in a young man, is strikingly developed in the Grand Duke Constantine, who resembles in all respects his two uncles Constantine and Michael, of deplorable memory. The Grand Duke, who is sincerely to be pitied, falls at times into paroxysms of terrible fury; and these attacks are followed by a sort of physical and moral prostration. Do not, therefore, believe the newsmongers, who announce that the Crown of Poland will be given to the Grand Duke Constantine; the Emperor knows him too well, and the excesses to which the violence of his passions may carry him, ever to confide to him the task of directing either the whole or part of the empire."—*Letter from St. Petersburg, Dec* 11.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Lady H. Seymour had the honour of being presented to her Majesty the Empress Eugénie at Arenberg, on the 17th inst.

The diplomatic soirée, which took place at Count Buol's on Saturday week was attended by the Ambassadors of France, England, Austria, Wurtemburg, Saxony, and others.

M. de Persigny, the French Ambassador, arrived in Paris on Monday, and, after a long conference with the Emperor, left immediately for London.

A "Te Deum" was celebrated at the Russian Embassy, Berlin, on Sunday last, for the fall of Kars, at which a very numerous assemblage was present. M. de Manteuffel, the President of the Council of Ministers, officiated there.

The freedom of the city of Glasgow is to be conferred upon the Earl of Elgin and Kincardine in the City Hall, on Friday, the 4th January.

His Majesty King Louis of Bavaria has forwarded a valuable present to the Empress of Austria, consisting of a picture, representing full-sized portraits of all the brothers and sisters of his Majesty, painted by M. Stieler, the Court painter.

A friend of M. Gérard's lately said to him, while he was preparing the picture, "Mais, mon cher, vous me faites Monsieur, pour qui me prenez-vous?"

Mr. Gibson's statue of the Queen, which arrived in England from Rome a few weeks ago, is now uncased and set up.

The rumour that the Sultan is coming to Paris has been revived. There is no reason to suppose that anything definite has been arranged on the head, but it seems to be certain that his Highness, having successfully established usages in Turkey, has accepted the Grand Cross of the Legion of Honour.

Lord Lyttelton, the first President of the Birmingham Institute, has expressed his willingness to deliver a lecture on Shakspeare to the members and friends of the Institute. The lecture will be delivered on the 14th of January, the day of the annual meeting.

The Archbishop of Paris has ordered the Curés of every parish in the diocese to open a depôt for the reception of old clothes, and of worn-out furniture, and broken victuals for the use of the poor.

The Marchioness Dowager of Londonderry has presented 100*l.* towards the restoration of Seaham Church, which was burnt down during the late gale from which we suffered.

Chevalier Josef Ortiz de la Torre, Archbishop of Vienna, was proclaimed Cardinal at a Privy Council held at the Vatican on the 17th inst.

On Saturday last Mr. William Keogh was sworn Irish assistant of the Home Office Council, on that gentleman's appointment as Judge of the Landed Estates Court in the room of Mr. Serjeant Shee, resigned.

Gregory Ghika, Hospodar of Moldavia, has proclaimed the entire abolition of serfdom in his Principality. This important act was carried into execution on November 25.

The Earl of Clarendon has transmitted to the Royal Agricultural Society of England, through Lord Wodehouse, an account of the progress of his Majesty's Minister at Berlin, reporting that the ravages from Polish rats have broken out in the eastern provinces of Prussia, where it is making considerable ravages.

During his stay at New Strelitz, the King of Prussia was present at the nuptials between a lady of the Grand Duchess of Mecklenburg's Court and Lieutenant Seeler, and conducted the young bride to the altar.

Prince George of Kantakuzeno was married to the Princess Blesco in Vienna on Sunday last.

An Imperial decree promotes Sir Joseph Olliffe to the rank of officer in the Legion of Honour, and nominates Mr. Taylor a Knight of the same order—both having been members of the jury of the Universal Exhibition.

The Madrid journals state that the Cortes has granted M. Olozaga, on his own demand, permission to return to his post at Paris as Ambassador.

Mr. Torrens M'Cullagh addressed a meeting of the electors of Yarmouth, on the 21st instant, with reference to the late election, which was favourably received. A resolution to support him was carried unanimously.

A subscription has been set on foot by the Polish Society of Paris, for the benefit of the six orphans of the Polish poet Mickiewicz, whose death at Constantinople has been mentioned. In three days 1030*l.* had been collected.

Mr. Seely, who has been managing the election of Lincoln, has announced his intention of withdrawing from the contest, believing that the chance of success offers any person else.

Captain Simmons, who so gallantly led the advanced column of the Turkish force at the passage of the Lanyon, and who was formerly one of the Inspectors of Militia, has died of cholera.

Colonel Turr has been transferred from the Piedmontese to the military patron. It is not thought likely that he will be employed against Austria.

The New York papers indulge in very enthusiastic descriptions of the manner in which Mdlle. Ingresino and Mdme. Arthur Didier sang *Stradella* and *Arsace*, in Russian is celebrated opera.

All the jurors in the case of Strahan, Paul, and Bates have signed a memorial to the Queen, stating that if the facts all stated in the memorial had been proved before them, they would have found a verdict of guilty.

M. Thalberg has left Rio for Buenos Ayres, where his performances have been attended with brilliant success. A benefit concert upon the great pianist are equal to any that could be had in the city, even from any foreign Star.

The reading of his "Christmas Carol," by Mr. C. Dickens, at the Peterborough Corn Exchange, on Tuesday week, was attended by a large and brilliant audience. About 250 was received for tickets.

At Athens "Il Trovatore" has been produced at the Italian Opera; its success was immense.

The family of Mdlle. Rachal have received a letter from the celebrated *tragedienne*, stating that she is obliged, by the state of her health, to discontinue her representations in America, and that she is about to return to Europe, intending to reside at once.

The Rev. Rowland Williams, of King's College, author of "Rational Godliness," was examining chaplain to the Bishop of Llandaff, who has recently relieved him from that office.

Mdlle. Alboni has appeared with great success at the Theatre Royal, Brussels, in "La Favorita."

The Rev. W. Wheeler, for many years Vicar of Old and New Shoreham, in the county of Sussex, has left the Church of England and become a member of the Church of Rome.

A move is being made in the West Riding in favour of the Right Hon. Mr. T. Baines, member for Leeds, as the Liberal candidate.

The *Moniteur* contains several decrees announcing nominations in the Legion of Honour, promotions in different regiments, and conferring thirty-six military medals.

The execution of Abraham Baker for the murder of his fellow-servant, Naomi Kingswell, at Southampton, is fixed to take place at Winchester on the 8th of January.

Several of the French provincial journals say that a grand council of war, composed of the Generals recalled or returned from the Crimea, is shortly to be assembled in Paris.

A notice of a recent steam-boat explosion ends as follows:—"The captain swam ashore; so did the chambermaid. She was insured for 15,000 dollars, and loaded with iron."

The war budget of the kingdom of Sardinia, just presented to the Piedmontese Chambers, fixes the expenses of the Eastern war during 1855 and 1856 at 74,350,849 francs, including 11,378,491 f. for the navy.

The town of Montmartre, which now possesses a population of between 20,000 and 25,000 souls, is about to borrow 400,000 fr. for the formation of a circular boulevard on the top of the hill on which it is situated.

The demand for shipwrights at the present time in the West of England is very great. Six months' certain employment is guaranteed, and the rate of wages offered is generally 6*s.* per day, with almost unlimited work as overtime.

The prison of Baden, in the canton of Berne, has been destroyed by fire. Out of 73 prisoners 15 are missing, most of whom it is supposed have perished in the flames.

From Monday next two provisions in the Metropolis Water Act will take effect. Water is not to be brought within the metropolis in open aqueducts, and every company is effectually to filter all water supplied by them within the metropolis for domestic use.

A theatrical company, destined for the Kamiesch theatre, sailed on Monday from Marseilles, in the *Euphrate*.

At the last sitting of the Academy of Sciences, M. Flourens, speaking on the subject of chloroform, remarked that its use in the field hospitals of the army doubled the strength and power of the surgeons. In the campaign in the Crimea chloroform was employed, he stated, more than 25,000 times, and always with success.

FRANCE.

(From our own Correspondent.)

PARIS, December 24th.

THE principal interest of the moment, after the reports *pro* and *con.* the peace question, is the entry of the troops, and the preparations made for their reception. It seems that certain difficulties of detail respecting the banquet to be given them in the Palais d'Industrie render it likely that this fête may be postponed.

It is decided that the balls and other Court receptions of the season will be given at the Tuileries—an arrangement which it was reported the position of the Empress might interfere with. Her Majesty continues to enjoy excellent health, and the approaching event is anticipated with every prospect of a happy termination. She continues, when the weather permits, to walk on the terrace in the Jardins des Tuileries set apart for her, generally accompanied by the Emperor.

A large number of medals are being struck at the Monnaie in celebration of the Exposition Universelle. The members of the Imperial commission have the great gold medal; the Presidents of the Juries each four large and small medals—two in gold, two in silver; and each member of the Juries two silver medals. The report that the Building of the Exhibition is to be utilised as a hippodrome gains ground considerably. It is supposed that it will be employed for public equestrian performances on certain days, and on the intervening ones, in winter, as a military riding school.

The façade of the new Louvre looking on the Place du Carrousel, now cleared from the scaffolding which surrounded it, presents a highly-imposing effect, notwithstanding that the difference it presents to the rest of the building is in questionable taste. The avenue conducting from the Place du Carrousel to the Cour du Louvre is 125 mètres in width, and receives the name of the Place Louis Napoleon. To the Court of the Louvre has been brought the colossal equestrian statue of François I. by Cavelier, after a journey of nine days from the atelier. For this statue the Emperor allowed the sum of 10 000 francs, to meet the preliminary expenses. It is in bronze, but yet covered with plaster, which will not be removed for some days. The same artist has just terminated a statue of Bernard Palissy, which is to be placed in the foyer of the Porte St. Martin theatre.

Among the various consequences of the dearness of meat, has arisen a singular one, viz., the foundation of a society in Paris for the introduction of horseflesh into the market! It is also a positive fact that M. Isidore Geoffroy St. Hilaire has made this point the subject of one of his recent discourses in the *Cours Publics d'Instruction*, and that it was very well received. If the question of the economy of the measure can be proved (a circumstance which we greatly doubt), we really cannot see anything revolting or unreasonable in the project, nor any impossibility in carrying it out.

A variety of rumours respecting the appointment of a new batch of Senators among the ranks of art and letters, are afloat: Messrs. Delacroix, Auber, and the Comte Alfred de Vigny, are some of the names mentioned for the next peerage.

The pictures, statues and drawings of Camille Roqueplan has, we are happy to say, not entirely disappointed the expectations formed as to its result. A number of unfinished pictures, sketches and outlines, alone averaged 1,000 francs, the completed works fetched very considerable prices, and the sum realised will form a comfortable provision for the widow and daughter of the artist.

The theatrical world has been in a state of very great ferment and excitement respecting the piece at the Odéon, "La Florentine," mentioned in one of our preceding letters. A variety of reports—some stating that the work was the production of a certain Imperial Highness, others that it was in consequence of orders issuing from the Palais Royal that the piece had been accepted at the theatre—called the attention of the not very favourably disposed sets—those of the Faubourg St. Germain, and Messieurs les Etudiens of the Quartier Latin to it. Hence a cabal, the demonstrations of which have on one or two occasions called for the interference of the police, has done its best to put down the work, which, however, continues, perhaps the more for this reason, to command a considerable success.

Madame George Sand's new piece has been received by a majority of votes at the Théâtre Français, where it will ere long be represented. This celebrated writer is about, in connexion with M. Paulin Limayrac, to publish a singular work of considerable extent. The first portion, containing two volumes, is to be entitled "Les Amants Célèbres:" "Adam et Eve." Then follow in succession the histories, real or fabulous, of all the remarkable lovers of history, sacred and profane, of legend and of modern times Such a field affords unlimited scope for the exercise of Mdme. Sand's genius; and the work cannot fail to be one of the most singular and interesting of modern productions.

The new work, "Les Saisons," which was to have made its appearance at the Opéra Comique ere this, has been delayed in consequence of an accident occurring to the voice of Mdme. Ugalde, to whom the principal rôle had been confié.

In the last monthly meeting of the Académie, called in order that the members might communicate to the Assembly the various productions of the different members, M. Viennet read a Tartar tragedy, in one act, entitled "Zelim." The scene is laid in the Crimea, if not at Sebastopol itself.

The Théâtre Français is about shortly to produce the work of a young amateur dramatist, M. Armand Durantin, son of a counsellor of the Cour Impériale. This piece, a proverb, entitled "Il ne faut pas courir deux lièvres à la fois," has already been privately performed among a circle of the high magistracy, and is said to possess great merit.

The theatre in the house of the Comte de Castellane is preparing to open. The whole of this fantastically magnificent abode is being arranged and decorated for the winter campaign, with yet greater expense and originality than it already displayed.

The Variétés and the Palais Royal theatres have each brought out a *revue* of the events of the year—a custom somewhat resembling that of our Christmas pantomimes Both are sufficiently amusing: in that of the latter house, the name and general outline are taken from the popular song of the moment, "Le Sire de Framboisy." It is extremely well played by the elite of that most amusing company, and is highly popular. At the Italien Opéra the new work, "Florian," is moderately successful, notwithstanding the wretched feebleness of the libretto. This theatre is preparing for the season "Leonora," "Il Matrimonio Segreto," "Don Bucefale," "Beatrice di Tenda," "Don Pasquale," "Don Giovanni," "Semiramide," and——we must cry, "hold—enough!" surely.

La Grande—in common parlance Mdlle. Rachel Félix—has given a fresh proof of her immortality in the contradiction of the report of her demise, which, *du reste*, nobody, we believe credited for an instant.

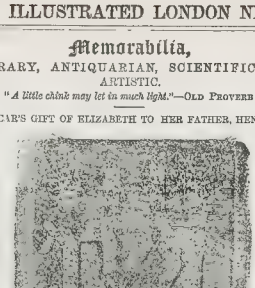
THE PEON, THE RAT, AND THE SNAKE.—One of those singular escapes occurred a few days back for narrating of which old Indians get accused of having the most formidable long-bows, when they settle down on their pensions in that portion of the metropolis dedicated to their retirement under the appropriate name of Asia Minor. This, however, is a fact, as doubtless in many a similar story which has made people stare and shake their heads. A peon in the Tamarind near the College Bridge observed a rat run across the floor. He stooped to look after it, having his turban off and his back bare loose. While in this position he suddenly felt as though some one were tugging him back by his hair. He put his hand up, and to his horror found there was a large cobra on his back, struggling to free its teeth from his hair, in which they had got entangled. Probably the reptile had also observed the rat, and had dropped from the roof, imbued with as keen a love of hunting as the peon himself. Be that as it may, the snake ultimately succeeded in getting loose, and escaped to a hole without inflicting any injury on the man. By the orders of the chief magistrate the place was pulled down the next day, and there, sure enough, was the snake, with the rat in his stomach half digested.—*Delhi Gazette*

Memorabilia,

LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

"A little chink may let in much light."—OLD PROVERB

NEW YEAR'S GIFT OF ELIZABETH TO HER FATHER, HENRY VIII.



Among the literary treasures displayed for the instruction and amusement of visitors to the MSS department of the British Museum, is a small, unpretending-looking little volume, in the handwriting of Queen Elizabeth, when Princess, the embroidered cover of which forms the subject of our present Engraving. This interesting relic is about 5¼ inches long by 4 broad, and contains 104 pages of writing in the bold printing character so well known to have been used by Elizabeth in her younger days, before the cares of State sat heavily upon her. The subject of the manuscript is a collection of Prayers and Meditations in English, made by Queen Catherine Parr, and translated by Elizabeth into three languages Latin, French, and Italian. From the dedication it appears that the volume was intended as a New Year's gift to Henry VIII., and that at the period of its execution the Princess could not have been more than twelve years of age.

On folio 1 is the following title:—"Precationes aut meditationes quibus mens conversæ ad deum perturbationes hujus vitæ gaudentes tristitias, et varias ac insuperabiles hujus mundi contemnendam, et ad eternam felicitatem adhortationes expectendam. Ex quibusdam pijs scriptoribus per nobilissimam principem D. Catharinam Anglie, Francie, Hiberneq, reginam collecte, et per Elizabetham ex Anglico converse."

The dedication follows on folio 2, beginning—"Illustrissimo ac potentissimo Regi, Henrico Octavo, Anglie, Francie, Hiberniæ, regi, fidei defensori, et supremum Christum ecclesie Anglicanæ et Hibernice supremo capiti, Elizabeta, M. reg. S. humillima filia, omnem felicitatem precatur, et beneficentiæ suæ duplex petit," &c., &c.

This address occupies about seven pages of the manuscript, and ends thus "Ita rex regum cujus nam. corda regum sunt, ita gubernet animum tuum et totum tuentur, ut in vera pietate ac religione diu sub majestatis tue imperio vivamus. Hartford. m. 30 die Decembris. 1545."

The covers of the volume are formed of strong threads of crimson silk, knit together with gold. In the centre of each is the letter "Katherine" in form of a monogram, while above and below is the letter "H," and at each corner a rose.

An exact facsimile of the manuscript appears to have been executed for King George III., and forms No. 10 of his collection, also in the British Museum. The binding is likewise made in imitation, with monograms embroidered in gold, but one is different, and possibly contains the name of the transcriber; viz., "P. P." above, "F. G. W. A." in the middle, and "B" at the bottom.

The MS. now under notice became the property of the nation at the transfer of the Royal Collection in 1757, and is numbered 7 D. 8.

The following line, taken from the fourth page of the Dedication, will convey an idea of the beauty of Elizabeth's writing at that tender age:

eique magna industria Regine

SHAKSPEARE READINGS.

No. III.

Amid the many valuable suggestions to be found in Mr. Staunton's MS. are some curious examples of the facility and indisputable correctness with which some corrupt passages in our bard may be restored by a simple transposition of words. Of these I select one specimen, which is too convincing to require comment:—

They know your grace hath cause, and means, and might,
So hath your Highness *Henry V.*, act i., s. 2.

By a simple transposition of the words "grace" and "cause," Mr. Staunton restores the true reading:—

They know your cause hath grace, and means, and might,
So hath your Highness.

No. IV.

The next emendation I shall select is one of the most beautiful and conclusive in the collection:

Every fairy take his gait,
And each several chamber bless
Through this palace with sweet peace,
Ever shall in safety rest,
And the owner of it blest.
A Midsummer-Night's Dream, act v.

The Perkins' folio alters "in safety" to *it safely*, reading the penultimate line—

Ever shall it safely rest,

where "it," as also in the last line, refers to "palace."

This emendation is plausible and ingenious, but it is not to be entertained for a moment in comparison with that proposed by Mr. Staunton. He says that the *s* in the second word of the penultimate line is a misprint for *s y*, which in the MS. was probably mistaken for a tailed *s*. Accordingly he restores the line thus:—

Every hall in safety rest,
And the owner of it blest.

This reading is well supported by the following extract from Chaucer:—

Blessing halles, chamberes, kitchenes, and boures.

As likewise the following:—

Rushes * * * be good to strew in halles, chamberes, and galleries.
Bullaine's Bulwarke of Defence (1579).

No. V.

For what is inward between us let it pass. I do beseech thee remember thy courtesy. I beseech thee, apparel thy head. *Love's Labour's Lost*, act v., s. 1.

On this passage Mr. Dyce observes—"Nothing can be more evident than that Shakspeare wrote, 'remember not thy courtesy.' Holofernes had taken off his hat. Armado could scarcely say, 'Don't stand on courtesy, apparel thy head.' Most people, no doubt, are of Mr. Dyce's opinion, but both he and they will think differently after reading the following extracts, which Mr. Staunton cites in support of the original text:—

I pray you be remembered, and cover your head.
Ancient Morality of Lusty Juventus.

Then I pray remember your courtesy.
Fulwell's Like Will to Like.

Pray remember your courtesie * * * Nay, pray be covered.
Every Man in his Humour, act i., s. 2

C. MANSFIELD INGLEBY

QUERIES.

BALAAM'S ASSE.—In the public library at Cambridge, there is a manuscript pamphlet, on long paper, of forty-eight pages, entitled "Balaam's Asse, or a free discourse touching the murmurs and fearful distractions of the time: directed to his Majesty K. J. by way of humble Advertisement." After the word "Advertisement," another hand has added "before his going into Scotland." There is no date to be found. On the first page is the following marginal note:—"The Author one Williams, an Inner of the Court, Gent., who, as I was informed by Mr. Terril, was afterwards, hanged." Can any of your readers answer the following questions? Was the pamph et of "Balaam's Asse" ever printed and published? Was the reputed author of it—"Williams"—hanged? And if so, why?—REDBEY.

INTONING THE CHURCH SERVICE.—Will you kindly inform me if there are any ecclesiastical records which speak of intoning the Church Service in the principal churches? The Rubric orders the service to be "said or sung," but it does not specify that it is to be *intoned* in one note, as in the present day.—M. STONEHOUSE.

SIDE SADDLES.—Perhaps some one can inform me what bold female it was who invented the present beautiful but somewhat perilous seat of ladies on horseback. Unquestionably, in olden time, ladies sat on horseback as gentlemen now do, for in Chaucer's "Canterbury Pilgrims" the fair equestrian of the party is described by the poet as having

A paire of spurres sharpe.

At present, though the position is far more graceful and becoming for a lady, no fair rider can aspire to more than one spur. When and by whom was this change effected?—X Y Z.

NOTES.

ROYAL AND NOBLE NEWSPAPER WRITERS.—There is a curious fact in the history of newspapers worth remembering, viz., that the celebrated Card nal Richelieu was a frequent correspondent of the *Mercurie Français*, and that the King himself, LOUIS XIII., often contributed to its columns. D'Israeli the elder, who gives us this information, adds, "Many articles in the Royal handwriting, and corrected by the Royal hand, are still in preservation."—EDWARD F. RIMBAULT.

NOVEL DERIVATION OF THE TERM "SLOUTH" HOUND.—In the account of Olympian Matters concerning the Realms of Scotland, composed together," 1600, I find the following derivation of the word "Slouth"-hound. After a tolerably correct description of the hound, and his peculiar qualifications under the term of "Sleth"-hound, the account proceeds thus:—"But now, of late, he is called by a new popular name, the Slouth-hound. Because, when as the people doe live in slouth and idleasse, and neither by themselves, or by the office of a good herd, or by the strength of a good house, they doe preserve their goods from the incursion of theeves and robbers, then they are rewarded to the Dog, for the reparation of these slouth." RUSTICUS.

IT is apparent, on an examination of the map of England, that places whose names end in "by" are common in the north and north-east, but extremely rare in other parts. It is said that not a single instance of such a term nation to the name of a place exists south of Warwick. Appleby, Grimsby, Whitby, Selby, &c., are instances of such names. Few general readers are probably acquainted with the explanation of this circumstance, which is of some historical interest, and is as follows. The north-eastern coast of England was occupied chiefly by the Angles, the Saxons and Jutes settling in the south and west. In the language of the Angles the word "by" was a civic institution, and may be taken in the sense of town or city, and it was, therefore, a frequent terminative to their names of places. As they gave their name to the district of East Anglia, so we find, in the same district, places named Angle-by and Ingle-by, no doubt being two forms of the same word, meaning the "by" or town of the Angles. From this term "by" is derived the legal expression a by-law, which literally means a town law, and is defined by Blackstone ("Commentaries," i., 475), as the law which corporations have the right of making for their own government, so long as it does not interfere with the general law of the land. A by-road, by-street, by-play, &c., are also of similar origin, conveying, in their respective meanings, the same sense of secondary importance which a by-law has in comparison to a Royal statute.—BERN.

FELTON, THE ASSASSIN OF THE DUKE OF BUCKINGHAM.—The following note at page xx. of Mr Fairholt's introduction to "Poems and Songs relating to George Villiers, Duke of Buckingham," edited by him for the Percy Society, will doubtless be acceptable to your correspondent, Mr Yates, who asks where the paper found in Felton's hat is preserved: "At this (Mr. Upcott's) death this paper was not found, and what has become of it is not now known for a certainty. A very exact facsimile was first published by him in his privately printed catalogue of autographs; and afterwards in Smith's Facsimiles of Historical and Literary Curiosities,' from whence we obtain the copy of Felton's autograph here given." * * * The contents of this paper ran thus:—"That man is cowardly base and deserveth not the name of a gentleman or Souldier that is not willinge to sacrifice his life for the honor of his God and his Kinge and his Countrie. Lest noe man commend me for doinge of it, but rather discommend themselves as the cause of it, for if God be I not taken away or harts tor or sinnes he would not have gone so longe unpunished. Jo: Felton."—J. K. R. W.

ANSWERS TO QUERIES.

TOADS.—I beg to inform you that I was present at the King's ARMS, Gilderson-street, near Adwalton, Yorkshire, kept by Mr. J. Holiday, Dec. 1854, when on a piece of hard stone-coal being broken, a *living* toad, of large size was found imbedded in the centre of it; and, after being exposed to the air a short time it died. The piece of coal can be seen at the house (King's Arms) any time, with the toad still in it, but quite hard and dry.—RICHARD TESKER.

ANALYTICS OF ARISTOTLE.—In the Organon, or Logical Treatises of Aristotle, by Owen (vol. i. p. 80—366, Bohn's ed.), the Prior and Posterior Analytics are translated, and I have found this information, and the notes, most valuable aid in penetrating into the mind of the great Stagirite. The prior of both volumes is but 7s., and the second volume contains an analysis of great utility, and, to some persons, indispensable. Many thanks are due to Mr. Bohn for so spirited an undertaking, especially by poor scholars.—T. J. BUCKTON, Lichfield.

"THE TALL PINTA."—There was no vessel whatever named the "Pinta" in the Spanish Armada. Macaulay has simply used a poet's license in adopting such a name as suited his rhyme. The word itself signified a *mark*, *spot*, or *drop* of any kind; also a *liquid pint*.—H. J. R., Lambert, Hants.

TEN COMMANDMENTS IN TWO TABLES.—The following statement, extracted from Rosenmüller on Exodus xx, 1—17, the original being too long for quotation here, replies to "R. W.'s" queries (ILLUSTRATED LONDON NEWS, 10th Nov., 1855, p 585). Moses himself calls these the ten commandments in Exodus xxxiv. 28, Deut iv, 13: x, 4: the Greeks, *Δεκάλογοι κατ ῥήματα*. From the division of Origen, which the Reformed Church follows, the *first* table comprises the four precepts of love to God; the first commandment is in the third verse; the second, in the fourth and fifth verses; the third, in the seventh: and the fourth, in the eighth verse. The *second* table, of duties to man, comprising six precepts, follows to the tenth commandment in the seventeenth verse. Augustine's division, followed chiefly by the Lutheran Church,* differs from Origen's: according to this division, the first table contains six of three precepts, and the second of seven; so that verses three to five form one commandment, and the seventeenth verse forms two commandments, of which the first forbids coveting another's house. "Ad summam causae nil refert, utra divisio eligenda sit," concludes Rosenmüller.—P. J. BUCKTON, Lichfield.

THE SILVER TASSEL AT OXFORD.—All Colleges at Oxford (not only the four mentioned by B.A.) which contributed their plate for the use of the Royal Mint have, I believe, the privilege of wearing the silver tassel in their caps.—H. S

OLD CLEM'S DAY.—In reply to "R. H.," I beg to say that "Old Clem's Day" is observed with all honours at Freshwater, Isle of Wight. St. Clement is the patron of the "cunning workmen in iron," and on the evening of his day the blacksmiths mute and celebrate the festive with shouting, singing, and firing of cannon. "R. H." will find a very interesting account of the customs on this day in HONE'S "Every Day Book."—H. M. W.

TO CORRESPONDENTS.

SIR F. MADDEN'S article on the Battles of Hastings, Mons, Newbury, and Naseby, shall be given in our next, if possible.

"THE BISHOP'S HOUSE."—The Correspondent who writes on this subject has sent neither name nor address.

"YANKEE DOODLE."—It is the tune, not the origin of the phrase, our Correspondent inquires for

VERITAS.—While the space allotted for "Memorabilia" is so limited, there is no remedy but patience

* The distinction between the Lutheran and Reformed Churches is well known in Germany, but less understood in England.

THE KING OF SARDINIA RECEIVING THE ADDRESS OF

CORPORATION OF LONDON, IN THE GUILDHALL.—[illegible]

VISIT OF THE KING OF SARDINIA.

WE this week complete our illustrations of the recent visit of the King of Sardinia, with a view of the interior of the Royal Sardinian Chapel, Duke-street, Lincoln's-inn-fields, and his Majesty's attendance at Divine service on Sunday, the 2nd inst. The reception of the King, and the address of Cardinal Wiseman on the occasion, were given in our Journal of Dec 8.

His Majesty was then conducted by the Cardinal and clergy in procession to the throne erected for him in the chapel. The altar and sanctuary were as handsomely decorated as the very limited time allowed. The King stood or knelt during the service, and the congregation were struck with his unostentatious piety, and dignified, soldierlike bearing.

The mass was Beethoven's in C, and was admirably played and sung by the numerous choir. The organ was lately built by Bishop, and is of extraordinary richness and beauty of tone.

The celebrant was the Rev. William O'Connor, Senior Chaplain, assisted by the Rev. Edward Price, as Deacon, and Rev. John Doherty, as Subdeacon. The Rev. Dr. Fau di Bruno, and the Rev. Sebastian Faenza, as assistant priests.

A large body of police were in attendance, who kept excellent order among the dense crowd assembled in front of the chapel to welcome his Majesty.

The large Illustration in the opening pages shows the interesting ceremony of the presentation of the Corporation Address to the King of Sardinia, in the Guildhall of the City of London. The fittings of the Hall were minutely described in the ILLUSTRATED LONDON NEWS for December 8th. The throne erected for his Majesty was of beautiful design; indeed, we rarely remember to have seen such elegance in the taste of civic decoration.

We give a few additional details of the reception from the *Morning Chronicle*:

The Lord Mayor having attended his Royal guest into the Guildhall, the whole company rose at once to receive the King; and for some minutes the cheering and waving of hats, handkerchiefs, &c., was tremendous. His Majesty seemed hardly prepared for the brilliancy of the spectacle; he certainly expected to meet with a cold reception. After a hurried glance around him, and then recovering himself he proceeded and ascended the steps leading to the throne. He did not seat himself, however, but stood in front of the dais and bowed to the assembly, when the cheering was renewed. His Majesty is somewhat under the middle size, but of a compact and vigorous frame. There is not much of the Italian in his complexion; his appearance would rather denote him one of German extraction. His hair and moustache (his Majesty wears very long) are of a dark brown; he has a broad open brow; and under bushy eyebrows peer out two dark piercing eyes. His bearing is altogether of a military character, and indicative of great firmness of purpose; and it was not difficult to fancy, as he stood with his arms folded, his feet firmly planted, and his whole attitude expressing self reliance, that he was formed by nature to think for himself, resolutely to pursue his own purposes, and manfully to confront every obstacle that might be thrown in his way. His numerous suite, among whom the Marquis d'Azeglio and Count Cavour formed the principal personages, took their places behind the throne.

The Address was then presented in due form, as described in our Journal of Dec 8.

His Majesty read his reply in a firm, loud voice; and the reading was more than once interrupted by the cheers of the assemblage.

When the reply was finished the Lord Mayor introduced to his Majesty Aldermen and Sheriff Kennard and Mr. Deputy Taylor, the mover and seconder of the address; after which all the Aldermen present had the honour to be introduced to his Majesty. The Foreign Ministers and their ladies then passed down in front of the throne, bowing to his Majesty; and the Duke of Cambridge, whose arrival with the King had passed unheeded in the excitement of the moment, now came forward to converse with his Majesty, when he was at once recognised and greeted with general and vociferous applause. Soon afterwards the Duke of Cambridge, followed by their suite, passed down to the Council-chamber, when the assembly again rose and followed him with enthusiastic cheers. The public ceremony of the day was now over.

WINTER IN THE CRIMEA.

(From a Correspondent.)

THIS morning (Dec. 3rd) the Camp presents a scene of almost indescribable misery and desolation. The rain has been falling in torrents, with hail intermixed, for seven days—such rain, such a season of it, as you never saw in England. Not a glimpse of sky, not even a cloud is visible, but a dismal grey mist stretching over head, and almost touching the earth. Mountains surround us, yet not one is to be seen. The Camp is knee deep in mire: clay so stiff that it is almost impossible to cut it from one's boots, even with a knife. Looking over the whole Camp, not a single human being is to be seen. The road from the Camp to Balaclava, usually covered with strings of camels, mules, and bullocks, is utterly deserted. A few poor horses and bat mules are standing in the Camp with their heads down and tails touching the earth, whilst the rain streams in rivulets from their faces. There is also another animal within view, making the scene even more miserable—an enormous pet gander brought by Captain —— from Kertch. He (the gander) waddles with great difficulty through the stiff clay, croaking like a monster toad. In half an hour he will be more in his element, for heavy as he is, he will have water enough to swim about in at pleasure. Every now and then a hurricane sweeps the whole Encampment, and we expect to see tent-poles smashed and canvas torn from the ground.

Of course you all imagine in England that there is abundance of hunting and winter clothing provided for your soldiers in the Crimea. The reports in your daily newspapers are calculated altogether to mislead the public. They represent that the Camp now consists almost entirely of comfortable huts and houses. Undoubtedly the writers of these articles *are* very comfortable. They have houses with windows, chimneys, and stoves, and they need fear neither wet nor cold. Life in the Crimea is not to such very great advantage here if we may judge from the comfort of the officials, the corps is scarcely deemed worthy of recognition as a department of the army. The information I received was from one of the surgeons attached to the Transport Service, who has given me full permission to send you his name and address. I found him in his tent, sitting on his camp bedstead, a thin mackintosh over his shoulders, and very light summer boots on his feet, which were resting in a puddle of mire; indeed, the entire encampment was pitched in a swamp. Having presented my introduction, I expressed my regret that I did not find him more comfortably housed. I also remarked that I had understood every hospital in camp had been transferred to warm huts for the winter. He laughed with much bitterness at my observation. "I have never had a chance of getting into a hut," he said, "though I have urged my necessities a hundred times. Everything in the Crimea is dear, except human life. A hut costs the Government £1 or £2. Although the War-office says I am fully competent to be intrusted with the sole charge of the lives of a hundred sick soldiers, I am not by any means worth a hut. I have had a half-dozen of my best of real either under my feet or over my head. I am not worth a fragment of fire, though the thermometer stands below zero!" I expressed my surprise at seeing him on so bitter a day in such light clothing. "Of course," he replied, "you must think me insane. Listen to the circumstances. When I left England last summer, I was told that I need not take winter outfit, as I could purchase all such necessaries at the Government stores in the Crimea. Now mark this still accursed system of routine. On the 1st or 2nd day of November a clause appeared in general orders informing officers that they might purchase all winter clothing from their Quartermasters—fur coats, caps, gloves, boots—the price £7 7s. The next day I went to purchase, and was laughed at. It was necessary that I should present a requisition signed by my commanding officer. So I got at once a requisition signed by Major Cox, who informed me that I could undoubtedly get my warm clothing on the following day. On [illegible] my requisition to Quartermaster Jones, he was of opinion that the document must be sent to General Airey, as the front, and we could not act in it," my informant continued, "our complaints are as nothing compared with the miseries of the poor creatures in our hospital marquees. More than [illegible] patients at the two wings of the corps are shivering and moaning. All these patients are afflicted either with fever, cholera, diarrhœa, dysentery, or rheumatism. The floor of their tents is made deep with mud, and the rain streams through the canvas roof, saturating [illegible] Last night (December 1st) a violent storm swept over us. The marquees were blown over the patients' heads; and at three o'clock in the morning, many are denying themselves comforts to provide us, as they imagine, with necessaries. They would scarcely believe the statement I have made to you. Let the authorities deny it if they dare." Such, as nearly as possible verbatim, was the extraordinary information conveyed to me by one of the surgeons of the Land Transport Corps. At the same time he referred me to his colleagues, and they, without hesitation, confirmed the preceding statement in every particular.

CHESS.

TO CORRESPONDENTS.

C. R. B., Liverpool.—We mean that the mate cannot possibly be effected in a less number.

N. N. E., New York.

Chess Novice.—Such mistakes are worth a great deal of unnecessary trouble, every one would, before, be glad to make.

OMEGA.—The annual subscription to the St. George's Chess-club is three guineas for town and one guinea for country members. The club year begins on the 1st of January.

H. W., Clifton.—It shall be examined, and reported on shortly.

[illegible] Mate in three moves, by Mr. Kipping, is very nice, and very now under consideration.

[illegible] Many thanks for what we have obliged. Some of the Problems in it are excellent [illegible] of a capital.

Von H. d. E.—Replied to by post.

W. De R.—See our last No.

G. A., Glasgow.—The Solution of Problem No. 593 was given among the Notices to Correspondents in the No. for Oct. 6th.

R., Holland.—The best plan is to give the initials of the men in capital letters, as W. h. B. q., and the like.

T. W., of Sunbury, DERBYON.—In Enigma No. 569, the White Bishop does not as standing on Q R 3rd should be placed on *Q B 3rd*.

EDEN HOUSE.—The Leeds Chess-club holds its meetings at the Mercantile New Rooms, Bond-street, Leeds. Address, the Secretary, Mr. Millard, who will furnish you with full particulars.

J. T. G., Clifton.—1. A player refusing to finish a game, must forfeit it. 2. See the Laws at p. 8 of the "Chess-player's Handbook." 3. Mr Horwitz probably alluded to error[illegible] tions in the famous analysis of a Rook and Bishop against a Rook. 4. There are [illegible] ormally played games recorded before the time of Philidor. 5. They [illegible] of a match 6. The tourney in question never came off. 7. Impossible. 8. Harry Wilson was not a player of Philidor's day. 9. The defence mentioned is not perfect. Stand

J. T. L., Baldock.—Open to all. If you wish an answer the same week, send early.

READING.—There are two Chess-clubs in the neighbourhood of Reading, one called the "Caversham Chess-club." President, the Rev. H. U. Brain, M.A.; Vice-president, John Wilmers and D. Vines, Esqrs.; Treasurer and Hon. Secretary G. Sumsion, Esq. The latter club meets for play every Tuesday evening at Mr Hunt's room, at the Caversham Bridge Hotel. The other club is held at Phillips' Athenæum.

F. M., Upper Tooting.—It shall be reported on shortly.

SOLUTION OF PROBLEM No. 614, by J. B. F., Diggory, Sheddon, W. P. [illegible] rival.

SOLUTIONS OF PROBLEM No. 615, by T. L., Glasgow; Alpha, Bristol; P. P., Leeds; [illegible] John, J. Mosley, Sheddon, Tumlan, A. L., [illegible] Rook, J. H. [illegible] Rook, J. D. D., Bristol; W. J. Brough, London; [illegible] Wyvern, Sheffield; C. J. W. Rev., F. R., Norwich; R. Smith, Chirurg.-Rurs, K. K. O. J. M., Twickenham, and [illegible].

SOLUTIONS OF PROBLEM No. 616, by Price of Bonar, F. R., Norwich, Alfred H., Tumlan, [illegible] Tarsdon, Canada, F. C., Derby, and [illegible] Rook, in Engraving.

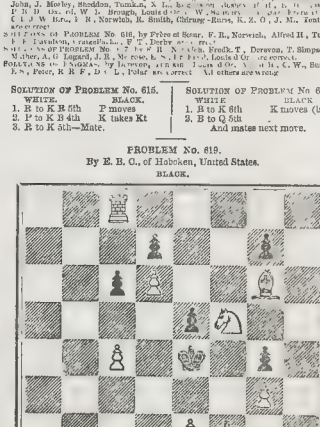
SOLUTIONS OF PROBLEM No. [illegible] H. Norwich, Frede. T., Dereton, T. Simpson, P. Maher, A. C. Logard, J. B., Mercer, [illegible], Louis d'Or, and several.

[illegible] Many thanks.—Jacobus, Sunbury, [illegible], Peter, R. R. F., D. L., Polar, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 615.		SOLUTION OF PROBLEM No 616.	
WHITE.	BLACK.	WHITE	BLACK
1. R to KR 6th	P moves	1. B to K 6th	K moves (best)
2. P to K B 4th	K takes Kt	2. B to Q 5th	
3. R to K 8th—Mate.		And mates next move.	

PROBLEM No. 619.
By E. B. C., of Hoboken, United States.

BLACK.



White to play, and give mate in five moves.

CHESS IN NEW YORK.

Lively game in a match lately played at the New York Club between Messrs. PERRIN and LOYD.

(Scotch Gambit.)

BLACK (Mr. P.)	WHITE (Mr. L.)	BLACK (Mr P.)	WHITE (Mr. L.)
1. P to K 4th	P to K 4th	18. K B to K 2nd	B to Q Kt 3rd
2. K Kt to B 3rd	Q Kt to B 3rd	19. K Kt to his 5th	Q to K R 6th
3. P to Q 4th	Kt takes P	15. P to K Kt 3rd (d)	B takes K B P (ch) (e)
4. Kt takes P	Q Kt to K 3rd		
5. K B to Q B 4th	Q to K B 3rd (a)	16. K to Kt 2nd	B takes R
6. K Kt to B 3rd	K Kt to K 2nd	17. P takes Q	B takes B P
7. Q Kt to B 3rd	K Kt to Q B 3rd	18. Kt takes Kt	B P takes Kt
8. Castles	K Kt to Q Kt 4th	19. Kt takes Q B P	P to Q Kt 4th
9. Q Kt to Q 5th	Q to K Kt 3rd	20. K B to his 3rd	R takes B
10. P to Q B 3rd	Castles	21. Q takes R	B to Q Kt 2nd
11. B to K Kt (b)	Q to K R 4th	22. Q takes B	Kt takes Q (f)
12. P to K 6th.	K Kt to Q B 4th (c)	23. Kt takes R,	

And after several more moves, preparatory to such an event, Black announced Mate in six moves.

Notes by Mr. C. Stanley, of New York.

(a) This move, we think, can hardly be commended. Instead of it the "Handbook" proposes—5. K Kt to B 3rd; and also, after the second move of Black, P to Q B 3rd, may also play P to Q B 3rd, and, as the subjoined variation shows, maintain a good defence.

5.	P to Q B 3rd	6 B takes Kt	Q to Q R 4th (ch)
7. Q Kt to B 3rd	Q takes K Kt	8. B to Q Kt 3rd	B to Q B 4th
		9. Castles	

This positions are about equal.

M'Donnell adopted the move in question against La Bourdonnais, under the following circumstances—

1. P to K 4th	P to K 4th	3. P to Q 4th	P takes P
2. K Kt to B 3rd	Q Kt to B 3rd	4. K B to Q B 4th	Q to K B 3rd

"It is ingenious, but gives an irksome and restricted position to the defence for a long time," says the "Handbook."

(b) Black now proceeds to place a group upon his adversary, which every struggle only tightens.

(c) Driving his adversary's Bishop in this way is only a manœuvre; surely.

(d) [illegible]

(e) Unexpected and ingenious, certainly, but not of steady strength; still less advisable to [illegible] a story.

(f) [illegible]

NEW OF LONDON, THREADNEEDLE-STREET.

ARCHITECTURAL embellishment has received little encouragement at the hands of the Banking interest south of the Tweed. Edinburgh and Glasgow can boast several magnificent structures devoted to banking; but London has yet to acquire the reputation of having contributed from the profits or business to the elevation of street architecture. The London and Westminster Bank in Lothbury was a step in the right direction; and that structure, although not faultless, has been generally considered as a great advance upon the architecture of Lombard-street—the wealthiest, but, architecturally, one of the most commonplace streets in the metropolis.

The same remarks are suggested by the course taken by the Directors of the Bank of London, the interior of whose large Hall we this week illustrate. The elegant building erected by the late Mr. Moxhay for a Hall of Commerce, admirably located and possessing every capability for banking, has been purchased by the Directors, who have determined to adapt it to their purposes, and to render it a credit to the metropolis and worthy of the flourishing interest to which they belong.

The history of this edifice and its site is interesting, as illustrating the changes in political, social, religious, and commercial—which have taken place in our country during twenty centuries. The site was originally occupied by a Roman building of some note, a beautiful tesselated pavement having been here discovered about twelve years since. This work of art, which was represented in our Journal, is now deposited in the British Museum.

"In the reign of Henry III.," says Stow, "a Jewish synagogue stood here, but the particulars obtained of the king that [illegible] to dedicate to our blessed Lady and [illegible] Augustine, occupied by one of the numerous religious communities also established here before the dissolution of the monasteries, called the Hospital of Saint Anthony; respecting which the following story is quaintly told by old Stow:—

The protectors of the house were to collect the benevolence of charitable persons towards the building and supporting thereof. And, amongst other things observed in my youth, I remember that the officers (charged with oversight of the markets in this city) did divers time take from the market people, pigs starved, or otherwise unwholesome for man's sustenance: these they did sell at the cart's tail, and the Proctors for St Anthonies tyed a Bell about the neake, and let it feed, on the Draughts, no man would hurt, or take it up: but if any gave to them bread, or other feeding, such would they know, and follow for, and daily follow, whining till they had somewhat given them: whereupon was raised a Proverb, Such an one will follow such an one, and whine as it were an Anthonie Pig: but if such a Pig grew to be fat, and came to good liking (as oft-times they did) then the Proctor would take him up to the use of the Hospitall."

The history of the hospital funds is not without parallel in modern times. Stow writes:

One John became a Prebend of Windsor, and then (by little and little) followed the spoile of this hospitall: he first dissolved the Quire, conveyed away the plate and ornaments, then the bells, and lastly put out the almesmen, from their houses, appointing them portions of 12 pence the weeke to each. But now I heare of no such matter performed; for their houses, with other, ben letten out for rent, and the church is a preaching place for the French people.

From the French Roman Catholics the church of the hospital passed in the course of years to the use of the French Protestants, who sought our shores on the Revocation of the Edict of Nantes: the building remained in such use until the year 1842, when it was purchased by the Corporation of London for the purpose of widening Threadneedle street; it was then taken down, and part of the site was sold to Mr. Edward Moxhay, who erected the present building in the pure Greek style.

Mr Moxhay's project of a Hall of Commerce not having succeeded with the merchants of London, the building has now passed by purchase into the occupation of the Bank of London, who have converted the spacious eastern hall into a banking office, as represented in our Engraving. This elegant hall is 103 feet long, 45 feet in width, and 55 feet high. The public counter and desks for cashier, ledger-keepers, and clerks, occupy the foreground: behind the screen which crosses the hall are the manager's, sub-manager's, secretary's, and waiting rooms: in the coved recess at the north end is the board room, lighted by a domical skylight; while behind the side-screens are retiring-rooms for the clerks, and other accommodation.

The Bank is presided over by Sir John Williams Shelley, Bart., M.P., John Griffith Frith, Esq. (of the house of Frith, Sands, and Co.), being vice-chairman. It was founded by Mr. Benjamin Scott, lately at the head of the City Chamberlain's office, a gentleman well qualified by his antecedents for such a task; his father and grandfather were likewise identified with London banking—the latter being a partner in the firm of Sir Peter Pole, Thornton, and Co., whose house succumbed in the year 1825, so disastrous to bankers.

Mr. Andrew Marshall, son of the chief cashier of the Bank of England, has been appointed manager: and, judging from the very satisfactory progress which has been made since the Bank was projected and opened, it would seem destined to enjoy a considerable share of public patronage: the Bank, although projected only ten months since, shows, by the last monthly return published in the *Gazette*, assets considerably over £300,000.

Mr. Edmund Woodthorpe is the architect under whom the alterations have been conducted; and the builders employed are Messrs. James Browne and Co., of College-hill.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

CAMP, SEBASTOPOL, 23rd Nov., 1855.

HAVING read an article in your paper of the 3rd inst., in which you attribute the taking of the 16-pound gun at Alma to the 33rd Regiment, I take the liberty of sending you a correct account of the capture of that field-piece. When the Light Division first entered the redoubt, two black horses were attached to the said brass gun, a driver was mounted, and attempting to drag it off. Captain (now Major) Bell, of the 23rd Royal Welsh Fusiliers, went up and laid the Russian on the man's head, who jumped off and ran away. The Captain then led the horses round the inside of the redoubt to the rear of our line: he was assisted by a soldier of the 7th Fusiliers. That gun was never retaken by the enemy. The horses were afterwards used in our Black Battery. The above fact was acknowledged by Generals Codrington, who saw the occurrence take place.

D. LYSONS, Colonel, Commanding 23rd Royal Welsh Fusiliers.

A VENERABLE MONASTERY.—The country became more beautiful as we advanced, and a lovely view burst upon us as we reached the river and saw the Monastery of Chelp perched upon a bank about 300 feet high, overlanging the stream. We ascended the steep hill, and, pitching our tents upon its summit, encamped in a glorious prospect. To the west a rich, wooded plain extended, without an undu ation, to the Black Sea, too distant to be visible. On the right we saw the broad, fertile valley of the Chopi winding away to the base of the Caucasian range, where fields of yellow maize bore testimony to its abundant cultivation; villages clustered among the woods which clothed its hill sides. These sometimes swelled gently back, at others terminated abruptly with a precipitous bank, which was reflected in the blue water at its base; until they gradually assumed a bolder character, and became at last lofty mountains, to be in their turn overtopped by the snowy summits of Elbrus. Immediately below us all was bustle and activity. The artillery is fording the river, and the opposite plain is alive with troops piloting their teams or collecting round their camp fires. Having feasted our eyes with the view, we go to inspect the Monastery, and find it inclosed by the crumbling wall of an old fortress, oval in shape, like the one before mentioned: but the tower here is surmounted by an octagonal belfry. The church is elaborately ornamented with rude frescoes of the saints on the inside columns, which at some former period seemed to have formed part of a Byzantine edifice, are built into the walls. It is evidently very old, but the venerable priest who showed us over presented nothing that can lay any claim to great antiquity when he assured us it was built 3000 years ago.—*Letter from the Turkish Camp, Nov. 18.*

THE FRENCH IMPERIAL GUARD.—The following are the terms in which the *Moniteur* announces the intended entrance of the Imperial Guard into Paris:—"The Imperial Guard and the regiments of Infantry of the Line which have just returned from the Crimea, are to make their triumphal entry into Paris on the 29th (to-day). The troops will assemble on the Place de la Bastille, at twelve o'clock, in complete order. The Emperor, followed by the Princes of the Imperial family and the Minister of War, will proceed to the Barrière Vendôme, where they will file off. The troops will follow the line of the Boulevards from the Place de la Bastille in the following order:—The regiments of Infantry of the Line; the Foot Chasseurs of the Imperial Guard; the Zouaves, the two regiments of Voltigeurs, the Artillery and Engineers, the two regiments of Grenadiers, and the regiment of Gendarmerie, all of the Guard, the Marshal commanding in chief the army of the East of France will march at the head of the [illegible], accompanied by all the Generals of the above army, and such other Generals as may [illegible] to it as they may [illegible] to join him. Battalions of the National Guard and of the Line will form on each side along the line of march. The troops will quit the Boulevards at the Rue de la Paix, and proceed through that street to the point where they are to file off before the Emperor and the Empress, who will place herself on the balcony of the Ministry of Justice."
